ments is chiefly admitted in the distaste of honest. Nearly all political controversy, and a great part of literary criticism, is anonymous, although the names of the principal contributors to periodical literature may be known in a limited circle. Political journalists would on good reasons be disinclined to accept badges and ribbons from any Minister to whom they were not unusually devoted; but the most faithful admirers and eulogists of great statesmen would only incur ridicule if they accepted such a reward for their enthusiasm. The popular opinion of the vanity of authors is not without foundation; but the vast amount of knowledge and the quality of intellect which find anonymous expression prove that the English virtue of pride, shared by some members of the literary community. The same feeling gives effect to the prohibition against acceptance of foreign Orders, which is thought by Lord Houghton to be mere usurpation. Although no penalty attaches to the use of Continental stars and ribbons, decoration which is not recognized by the English Court or Government seems to most persons not worth displaying. To sentimentalists it may probably appear a melancholy truth that the aristocracy and the upper classes have a general share with Royalty the power of depreciating the value of all honours which imply no advancement in social position. Lord Stanhope would probably shrink from the duty of wearing the Grand Cross of the Literary Order; and it might also be conferred on Lord Houghton, or on the Duke of Argyll in consideration of his work on the Reign of Law. It would be difficult to find half-a-dozen other peers who have published as many volumes; and it unfortunately happens that distinctions which have no association with rank are generally regarded with indifference. The Americans, the first establishment of the Republic showed good sense and good sense in not importing outlandish orders and decorations, and though a human love of titles has in the United States found other vents, every citizen who of himself Honourable must have held some honorary distinction; even the humblest citizen has a compulsory distinction.

A considerable body of the Comte would have been argued that to bring him to trial in the most certain means of establishing his guilt. Since that time the degree of M. RANC's proceedings of the Commune has been pretty well ascertained. It is not denied that he was a member of the Commune only for the first ten days of its existence, or that he resigned his place in it as soon as it was finally committed to overt hostilities with Versailles. To insist on his prosecution, therefore, is to maintain that these facts alone constitute a *prima facie* case against him. It is impossible that a party which holds this view should ever live at peace with its political adversaries. The whole doctrine and practice of proscription is involved in it. M. RANC is blamed because he did not at once admit to himself that no compromise was possible between Versailles and Paris, because he wished to find some means of saving the great city which had just been captured by a foreign enemy from undergoing further humiliation at the hands of its own countrymen. He tried to do what, if he had succeeded in doing it, would probably have gained enthusiastic praise from many of the men who are now foremost in denouncing him. The lesson which every Radical will draw from this is that the most violent counsels are the safest. If to have tried to moderate a revolution is a crime against the State, the safest course is to do your best to secure the impunity which belongs to successful revolution. In the same way the Prefect of the Rhône is absolutely careless of distinctions between one kind of civil funeral and another. It may be that all M. Beulé's allegations against the Lyons Free-thinkers are well founded. Their object may, as he alleges, be not so much to clear their own consciences from the appearance of consenting in death to a religion which they rejected in life, as to annoy persons of different views by making the numbers of those who repudiate Christian burial appear very much larger than they are. But all this may be granted without the Prefect's decree being rendered any the more tolerable. M. DUCLOS does not pretend to draw any distinction between burials which have no other object than to annoy and irritate and burials which merely give honest expression to man's convictions. The funeral of M. LITTAÉ, Lyons, and the funeral of a choir boy whose father was from his father by the Association of the Lyons Free-thinkers, M. DUCLOS's statement of the facts is a full and complete answer to the charges.

in the morning. The party which applauds this decree proves by so doing that it is as ready to offer insults to its adversaries as it is to resent insults offered to its own religion. While it professes only to be anxious that no one shall be buried without Christian rites who has not deliberately rejected them, it really desires that the bodies of those who deliberately reject Christian burial shall be subjected to all the indignities which can conveniently be offered them.

When we see what things are possible under the Duke of BROGLIE's rule, we are more than ever disposed to regret M. THIERS's precipitancy in resigning office. What could the Assembly have done, supposing that he had chosen to take no notice of the vote of the 24th of May? There were two courses open to him, either of which would probably have paralysed any action that the majority might have attempted to take. Either he might have fallen back on his constitutional rights and dismissed his Ministers, taking care of course that their successors should be equally ready to carry out his policy and no other; or he might have pleaded his own anomalous position as an excuse for continuing to govern without a Parliamentary majority. When once it had been made clear that M. THIERS did not mean to yield to the Assembly, a reaction would have set in in the ranks of the majority which would probably have given him the victory in the next critical division. The fact that he was willing, while the majority was not willing, to appeal to the constituencies, would have been a sufficient answer to any sneers about personal government, since readiness to stand the ordeal of a general election is as good a test as can be found of the genuineness of a ruler's belief that his policy is acceptable to the mass of his countrymen. M. THIERS preferred to take a course which is formally more unimpeachable, but he has taken it at the cost of handing over France to the intrigues of an unscrupulous coalition. An adherence to constitutional formulae of which the consequences are so immediate and so obvious hardly rises above political pedantry.

WOMEN GRADUATES.

THE question respecting the rights of women to be instructed and obtain degrees in the sciences has just been decided by the University of Edinburgh, which has just been decided by the judges, has raised some questions general in principle. In June 1869 Miss JEX BAKE and some other ladies of such the Senate of the University asking the Senate to recommend to the University Court, the governing body of the University, to sanction the matriculation of women as medical students, and their admission to the usual examinations, separate classes being formed for their instruction. The Senate decided to recommend that women should be admitted as medical students, and in November the University Court resolved that women should be admitted to the study of medicine—that is, that instructions should be given in separate classes, which the medical professors were permitted to hold, and that they should be subject to the general regulations of the University as to matriculation, attendance on classes, and examinations. These regulations were approved by the Chancellor, and thus acquired all the validity which the University authorities could impart to them. Several ladies subsequently passed the preliminary examination, were duly matriculated, and completed the first half of the course of study required for graduation under recognized teachers. In October 1871 two of the ladies intimated that they wished to undergo the first professional examination for a degree, were examined, and duly passed. So far things had gone with them tolerably smoothly, but now their difficulties began. In order to complete the study requisite for a degree, they had to go through another set of attendances on professorial classes, and they discovered that some of the professors declined to make up separate classes for them to attend; and, independently of this, the Senate intimated to them that, in the opinion of its legal advisers, women could not be admitted to degrees, being disqualified by their sex. The ladies had recourse to law, and they asked that the University authorities should be ordered to ensure their having proper instruction, and that they should be declared entitled to have a degree conferred on them when they had fulfilled the ordinary conditions as to attendance at lectures and passing examinations. Lord GLENELG was the judge who had to decide the case in the Court of Session, and he decided that, as the ladies had been admitted under the regulations of the University Court,

they had a right to graduation if they could but get the necessary instruction; but then the Court had no means of making the University afford any instruction, except in separate classes, which the professors might hold or not as they pleased. Both parties were dissatisfied with the decision, although the ladies, so far as it went, claimed it as a victory. But, in the first place, it was inoperative, for it left their receiving the requisite instruction a mere matter of chance; and, secondly, it grounded their claim to graduation on the special circumstance of particular regulations having been issued. They wished that the case should rest on broader grounds, and accordingly, when the Senate appealed to the full Court, the ladies asserted that women were exactly on the same footing as men for all purposes of University instruction and graduation, and that not in medicine only, but in law and theology, and every other faculty, women had at common law a right to be matriculated, to attend the same classes with male students, and to receive their degrees in the same way. The Lord Justice GENERAL, being also Chancellor of the University, was made a party to the suit, and there were therefore only twelve judges to give their decisions. All these twelve judges are agreed in saying that women have at common law no right to demand to share the studies of men at Universities, and no right to demand degrees. Five of the twelve, of whom Lord Gifford is one, think that it was a mere matter within the option of the University to let women study and take degrees or not, but that the University of Edinburgh, having chosen to do so in the faculty of medicine, is bound to give degrees to women who can obtain the necessary instruction, although no legal means exist of ensuring that such instruction shall be given; and seven are of opinion that the whole course of the University, so far as it has hitherto pointed to the graduation of women, is illegal, and that no Scotch University can of its own authority admit women to degrees.

Much of the case was that of a purely local and temporary character, and turned on the effect of a particular set of regulations; and this part of the subject need not be pursued further, except that it may be remarked that the Senate, although it acted with a want of caution and consideration in permitting women to matriculate and go through the first steps necessary to a degree without having determined whether it could or would grant degrees, yet was clearly justified in submitting to a law the importance of which, whether for women or for the University, was not clear. No one doubts that not only an Act of Parliament, but that the Crown by a mere exercise of its prerogative, could empower the Universities to grant degrees to women; but the ladies argue that no such new power is necessary, and that the existing constitution of the Universities is such that women can claim just as much as men can to have degrees conferred on them. To establish or to refute this claim it was necessary to go far back into the history of the Universities, and the industry of counsel collected a very curious and interesting mass of materials bearing on the point. A printed case was delivered on each side, and both cases, and especially that for the Senate, were drawn with great skill and care, and will henceforth constitute very valuable documents for all interested in University questions. The University of Edinburgh was formed on the model of that of Glasgow, and that of Glasgow was formed on that of Bologna. Much curious antiquarian research was therefore bestowed on the question whether, under the constitution of the University of Bologna, women were admissible to degrees. That there have been instances, though very rare, of women being appointed to teach in the University of Bologna appears certain, and it may perhaps be admitted that women received degrees from the University. But it is not clear that any woman ever received a degree without the special injunction of the Pope or Emperor that she should receive a degree; and it is not disputed that the Crown may interpose its authority either on behalf of any one woman or of women generally. There is, however, no trustworthy evidence to show that any woman ever studied at Bologna and obtained a degree as the natural sequence of her studies. The Scotch judges did not rest their decisions on what had taken place at Bologna. It was by a reference to Scotch academical history and by the interpretations they put on that history that they were guided. It is incontestable that no woman has ever studied and graduated in a Scotch University. The custom of centuries runs entirely in one way. What is the interpretation to be put on this custom,

allowed to prosecute their studies for a long time, and then disappointed of receiving a degree, this natural expectation disappointed. It is not to be seen that women generally who wish to be doctors are under a great disadvantage which should be removed if possible. No woman is allowed by law to practise as a doctor unless she can obtain a degree from some University in the United Kingdom, or a qualifying licence from a medical association. These qualifying licences seem practically very hard for women to get, and in any case a woman doctor cannot compete on fair terms with a man if he is to be allowed to get a degree and she is not. As the degrees of foreign Universities are not recognized here, a woman cannot get a fair start as the law now stands, if she wishes to practise as a doctor occupying a clear and undeniable legal position. It is true that she is equally debarred from practising as a barrister or solicitor; but then society has for the present made up its mind that it will not have women barristers or women solicitors. The peculiar hardship under which women wishing to practise medicine suffer is that, while they find that society admits that they ought to be allowed to practise as doctors, and especially in branches of medicine relating to their own sex, they are kept out of the profession by rules requiring them to take a degree, while no University will give them a degree. The minority of the Scotch Judges seem to have been struck by this, and to have thought that a University might give them degrees, making such regulations as it might think proper for preventing the scandal of mixed classes. Nor does any one doubt that a charter from the Crown would remove all the difficulties in the way of the Scotch Universities granting degrees to women. The real question, therefore, is whether the Universities should be empowered to grant medical degrees to women. That they should be so empowered appears the simple, but is not, we think, the true, solution of the difficulty. Degrees must be given not only after examination but after instruction under authorized teachers; for otherwise the standard of the University would be lowered, and women would not really be placed on an equality with men, as no one would believe that a mere examination was as good a test as an examination coupled with a certificate of having received proper instruction. Women must be enabled to study medicine as well as to take a medical degree. But the teachers whose time is occupied in teaching men cannot be expected to go over all their work again for the benefit of a handful of

them when the Church Catechism is taught—or whether a new and otherwise unneeded school shall be built in order that they may learn to read and write in a room the atmosphere of which has never been polluted by the recitation of sectarian formularies. But the latter way has the merit of being in conformity with the facts, which the former has not. The clergy of the Church of England are not, in the sense which Mr. DALE attaches to the term, a priesthood at all. The instances in which there is any serious attempt to pervert the secular education of children into an instrument of underhand or overbearing proselytism may probably be counted on the fingers. As Mr. FORSTER told the Rochdale deputation on the same afternoon, it is strange, if such breaches of the law are matters of daily occurrence, that they are not reported to the Education Department, considering that there are thousands of persons all over the country watching the operation of the Act, with the view of finding out whether it is strictly obeyed in this particular. Before the Dissenters' case can be made out to the satisfaction of any reasonable politician, it must be shown that the conscience clause is after all a failure, that it does not protect the conscience of the parent, or prevent him from being virtually compelled or cajoled to let his child be taught a religion which he himself disbelieves. Show me a single case, says Mr. FORSTER, in which the law has been disobeyed, and I will take care that the Parliamentary grant is withdrawn from it. A school from which the Parliamentary grant had been withdrawn on this ground would cease to be a school conducted in accordance with the regulations contained in the 7th section of the Education Act, and consequently would cease to be a public elementary school. The 3rd Clause of the Amending Bill provides that the Guardians shall not make relief or allowance dependent on the child's attending any public elementary school other than such as may be selected by the parent; but this leaves them the right to refuse relief or allowance if the parent sends the child to a school which has ceased to be a public elementary school. Mr. DALE will hardly deny that if the "priesthood" are to have the elementary education of the young in their hands, subject to a rigid conscience clause, they can scarcely make very much of their opportunity. Unless there is something occult in the influence of reading, writing, and arithmetic when taught in the parson's school, the first step to carrying out the Ultramontane conspiracy is to defy or evade the rule which limits religious instruction to certain hours, and leaves it to the parent to decide whether his child shall attend school during those hours or remain away from it. The Nonconformist organization must be worth very little if it is unable to bring cases of such defiance or evasion to the knowledge of the Education Department.

self Honourable must have held compulsory clauses from the present Bill. A considerable section of the Conservatives would have made common cause with the discontented Liberals, and though it is probable that the Government would have been able to carry their scheme, it is still possible that they might have failed to do so. It is clear that, in the long run, compulsion would have lost more by being absolutely rejected, even if only for a time, than it will lose by further postponement. Again, assuming that a Bill making compulsion universal had been carried, under what circumstances would the experiment have been tried? It would have been tried in a time of great languor on the part of the Liberals, and of immense unwillingness on the part of the ratepayers to pay anything more than they pay already. Whatever had been the machinery by which compulsion was brought to bear, it would have involved a certain increase of local expenditure and a corresponding increase of local burdens. Instead, therefore, of compulsion being tried, as it is now, by School Boards who adopt it of their own free will, it would have been tried by School Boards distinctly hostile to the experiment. On the whole we believe that, in spite of these drawbacks, elementary education would have been a gainer by the assimilation of the English to the Scotch Act; but there was enough to be said on the other side to make the reluctance of Mr. FORSTER's colleagues intelligible, if not heroic.

The Dissenters' objection was very fully stated—it has never had to complain of any omissions in this respect—at the Westminster Palace Hotel on Tuesday. Mr. DALE has discovered that Mr. FORSTER is an agent in the great Ultramontane conspiracy which has its branches in every country in Europe. This may be regarded as a new and improved version of the Jesuit in Disguise argument. We are familiar with it as applied to Mr. GLADSTONE or as stated by Mr. WHALLEY; but there is some novelty in its application to Mr. FORSTER, and in its employment by a Liberal of real ability and otherwise of perfect sanity. The real question at issue, says Mr. DALE, is the question whether the priesthood shall have the elementary education of the young in their hands, or whether it shall be under national control. This is a far more imposing way of stating the dilemma than to say that the question is whether little TOM or HARRY shall be allowed to learn reading and writing at the parson's school—with full right reserved to their parents to withdraw

The philanthropic objection to the Bill is founded on the notion that contact with the Guardians, even though the payment received from them be called allowance and not relief, will tend to increase the number of paupers. To us this objection seems of so little weight that we only regret that the Bill does not go further, and call the allowance made to enable a parent to obey the law in the matter of educating his child by the same name as is given to the allowance made to enable a parent to obey the law in the matter of feeding his child. The real danger lies in the opposite direction. In Manchester, for example, there are something like four thousand children receiving education at the expense of the ratepayers. It can hardly be doubted that, if the parents of these children were ranked as paupers by reason of their children's schooling being paid for from this source, the great majority of them would find means to pay the school fees. Suppose that the parents of a hundred children were unable to do this and became paupers, which is the more dangerous alternative—that the parents of a hundred children should become actual paupers, or that the parents of four thousand children should learn to regard the community as bound in some undefined way to take the burden of educating their children off their shoulders? Why this lesson should be less injurious where educating children is concerned than where feeding and clothing children is concerned, is more than we can understand. No doubt it would be a melancholy thing to see a parent who had been making a valiant struggle against pauperism succumb under the added weight of a school fee. But is it a less melancholy thing to see a parent who has been making a valiant struggle against pauperism succumb under the burden of having to feed his child as

well as himself? The spectacle of a man sinking into pauperism through no fault of his own, is always a sad one; and if it is avoided in the former case by calling the payment made to him by the Guardians allowance instead of relief, what can be said against avoiding it by the same easy process in the latter case also?

The ratepayers' objection, which has inspired Mr. TORRENS to move the previous question, is the weakest of the four. Whatever other charges may hereafter be removed from the shoulders of the ratepayers and planted on the shoulders of the taxpayers, it is hardly possible that the cost of educating paupers or semi-paupers should be amongst them. The educational allowance provided for in the Bill is sufficiently near akin to other forms of poor relief to make it essential to subject it to the restriction involved in local collection. If the money wanted to pay the school fees for children whose parents are too poor to pay them is ever drawn from the national exchequer, a national poor rate, and its inevitable accompaniment, national bankruptcy, will not be far off. Of course Mr. TORRENS does not see this—the professed friends of the ratepayer rarely do see the consequences of their own proposals; but any one who takes the trouble to follow the arguments by which the previous question will be supported will see for himself that they have only to be carried a little further to bear the construction here put on them. In the interests of sound finance, as well as of elementary education, Mr. TORRENS's amendment ought to be visited with summary and decisive rejection.

LORD STANHOPE'S PROPOSED ORDER OF MERIT.

AS Lord STANHOPE's sympathy with men of letters is undoubtedly genuine, he may be congratulated on the failure of his proposal to create a literary order of knighthood. An affected superiority to external distinctions would be entitled to little respect; and the great majority of writers of books probably share the tastes and feelings of the class to which they generally belong. The comparative rarity of titles and decorations reconciles ordinary Englishmen to the unadorned condition which is their inevitable destiny; but those whom birth, or fortune, or official rank, or the mere reach of titular promotion, display for the moment, feel a natural indifference to the labels which find their superiority to their neighbours. The aristocratic institutions and customs of the country have produced more or less regular gradations of a society which is essentially one. Professional or official precedence is almost exclusively valued because it usually confers a certain social rank. Even civic knights enjoy a local superiority over envious rivals; and medical baronets, both in virtue of their wealth and of their personal distinction, take their natural place in the hereditary equestrian order. After the cession of the Ionian Islands, the order of St. Michael and St. George, previously confined to officials who had served in the Mediterranean, was converted into a mode of recognising the merits of eminent colonists; and the Government of the day took into consideration the means of giving lustre to the new distinction. Accordingly several eminent Englishmen who had at different times served in the Colonial Office were induced to lend their names to the order as decoys. Since that time the colonists have appreciated a title which they might have despised if it had been strictly confined to themselves. An Order of Merit would only indicate the opinion of the Crown or of the Minister of the day that the recipient had attained a certain standard of literary excellence. Although opinions are changing, English taste would still be offended by an official appraisal of the abilities and performances of scholars, historians, and novelists. There is no objection to the occasional bestowal of a title on an author, a painter, or an architect, but it would be inconvenient that a decoration and title should be claimed as a right on pain of resentment and dissatisfaction. The rank of a Knight Bachelor is not highly exalted, but an Academician who is knighted is so far on a level with an Attorney-General or a Judge. The comparative estimation of acquired and of hereditary rank is curiously illustrated by the privilege claimed by sons of peers of declining knighthood when they are promoted to legal or judicial offices. The Order of the Garter has for centuries retained its acknowledged pre-eminence because it has with undeviating consistency been bestowed as a reward of rank, and not of merit. If poets and novelists were made Knights of the Garter, there would be often a

appreciating its greatest achievements. Mr. DISNEY, himself a brilliant writer, has neither cultivated the society of his literary equals, nor indicated in his books any knowledge of their works. Lord PALMERSTON's great abilities were compatible with an amusing ignorance of books. The only literary judgment which he is known to have formed or borrowed was the whimsical proposition that SHAKESPEARE's plays were written by BACON. Sir ROBERT PEEL, though he was a scholar, anticipated Prince ALBERT in his habitual preference of science to literature. Lord PALMERSTON's contemptuous indifference to genius and merit was conspicuously illustrated by the pension which he bestowed on an illiterate buffoon who called himself poet-laureate to an African savage. Mr. GLADSTONE would dispense the favours of the Crown more justly; but there is no security for the competence or honesty of his successors.

Among the lower rank of authors, the definition of a literary man is a man who makes a livelihood by some kind of written composition. There is no reason why a great author should not maintain himself by his industry; but minor novelists, collectors of gossip, and even manufacturers of rhymed burlesques, form the bulk of the class which in former times derived its name from its supposed residence. The so-called literary community frequently affects a democratic contempt for the rank and titles which have hitherto seemed unattainable; but the creation of an Order of Literary Merit would produce among the minor votaries of the Muses painful excitement rather than supercilious indifference. A careless Minister would find it easier to decorate BAVIUS and MÆVIUS than to be incessantly pestered with their sarcasms and complaints. It would be necessary to extend the distinction to women, who probably now write the greater number of novels; and it must be confessed that the greatest living novelist is a woman. Even if the Crown, on the suggestion of the House of Lords, had created the Order, its value would in the first instance have depended entirely on the willingness of the principal living writers to imitate the self-sacrificing Knights of St. Michael and St. George. If Mr. TENNYSON, Mr. BROWNING, Mr. HERBERT SPENCER, Mr. DARWIN, Mr. FROUDE, and Mr. FREEMAN had declined the honour, Grub Street would have been ashamed to accept the leavings of Parnassus or Acadamus. Another class of writers, of whom some are deficient neither in ability nor in influence, would have been

ments is hardly omitted in the distaste of the hour. Nearly all political controversy, and almost all of literary criticism, is anonymous, although the names of some of the principal contributors to periodical literature may be known in a limited circle. Political journalists would for good reasons be disinclined to accept badges and ribbons from any Minister to whom they were not unusually devoted; and the most faithful admirers and eulogists of great statesmen would only incur ridicule if they accepted such a reward for their enthusiasm. The popular opinion of the vanity of authors is not without foundation; but the vast amount of knowledge and the quality of intellect which find anonymous expression prove that the English virtue of pride is shared by some members of the literary community. The same feeling gives effect to the prohibition against the acceptance of foreign Orders, which is thought by Lord HOUGHTON to be mere usurpation. Although no penalty attaches to the use of Continental stars and ribbons, a decoration which is not recognized by the English Court or Government seems to most persons not worth displaying. To sentimentalists it may probably appear a melancholy truth that the aristocracy and the upper classes in general share with Royalty the power of depreciating the value of all honours which imply no advancement in social position. Lord STANHOPE would probably not shrink from the duty of wearing the Grand Cross of the Literary Order; and it might also be conferred on Lord HOUGHTON, or on the Duke of ARGYLL in consideration of his work on the Reign of Law. It would be difficult to find half-a-dozen other peers who have published as many volumes; and it unfortunately happens that distinctions which have no association with rank are generally regarded with indifference. The Americans from the first establishment of the Republic showed good taste and good sense in not importing outlandish orders and decorations, and though a human love of titles has in the United States found other vents, every citizen who styles himself Honourable must have held some public function; every Colonel and Major has been connected with a military organization, and the innumerable Judges sit or have sat on the Bench. Insular conceit suggests that in England the happy mean has been attained. Knight-hoods of the Bath, of the Star of India, and of St. Michael and St. George are cheap and legitimate rewards for public service; and the Garter supplies the exceptional want of an object of desire and ambition to those who have nothing else on earth to which they can aspire. The distinctions which may from time to time be fitly conferred on men of letters ought not to be of a kind exclusively appropriated to themselves.

MARSHALL OF WEAVERHAM.

THE hitherto undistinguished name which heads this article has been brought into sudden publicity by the proceedings at the Eddisbury Petty Sessions last Monday. On Tuesday morning Mr. WILLIAM MARSHALL awoke and found himself famous. But local notoriety is not enough for a spirit hungering after distinction, and Mr. MARSHALL's exploits deserve to be known and appreciated beyond the narrow limits of his own neighbourhood. We will say with frankness that we are not going to praise him. It may be fairly doubted, however, whether he has sufficient intelligence to distinguish praise from blame. Judging from his amusements, he probably belongs to that unhappy class which is given to brutal sports because it is dull, and dull because wealth which it does not know how to use has raised it above the necessity of making a living by unskilled labour. The mere fact that he is talked about may minister to the soul of Mr. WILLIAM MARSHALL all the excitement that it needs. So far as the matter rests with us, this modest craving shall not go unsatisfied.

The 23rd of May last was a high holiday at Weaverham. For weeks beforehand Mr. MARSHALL's energies had been devoted to the organization of a Great International Cockfight. The nations represented were England and Ireland, and the battle was to be fought out in Mr. MARSHALL's harness-room. The birds were brought in early in the morning, and at three o'clock in the afternoon Mr. MARSHALL and his friends were beginning to taste the sweets which cruelty and gambling yield when combined in judicious proportion. At this point the police were announced by means of a horn blown by a scout. Mr. MARSHALL had seen all his doors and windows properly secured, and hoped perhaps to stand a siege for several

hours. Unfortunately his walls were not so high but that they could be scaled, and by this means the police made their way into the stable-yard. Mr. MARSHALL's friends were too modest to care about being known. The organizers of a Great International Cockfight ought to have been superior to such weakness, but the facts that they all objected to their names being taken down, and that two of them jumped over the wall and ran away in time to avoid recognition, make it clear that in this respect these heroes were only human. We must do Mr. MARSHALL the justice to say that he himself was far above feeling any shame in the matter. He had been warned by the Police Superintendent that everything was known, and that if he persisted in going on with the cockfight he would be interrupted. But his spirit only rose under opposition. His proud answer was, "I will give the police a 'run up' for it," meaning, as the Superintendent tamely translated the phrase, "that he would persist in the cockfight, and that the police must 'catch them if they could.'" This is the first aspect in which this disgraceful case calls for notice. Mr. MARSHALL and twenty-six other gentlemen, many of them said to "hold high position in the county," have not only broken the law, but broken it after formal warning. With what face can men of the upper classes talk of enforcing the law against the lower classes when they themselves persist in defying it? Here are a number of persons—gentlemen by courtesy—detected in treating the law with as much contempt as could have been shown it by the professedly criminal class. Indeed, if the professedly criminal class had the advantage of a previous warning, it would usually be better advised than to persevere in its designs. The inevitable lesson which the criminal class will draw from the facts is that Mr. MARSHALL and his friends are allied with them in spirit, however far they may be removed from them in circumstances—a lesson which, however just it may be, is not likely to increase their reverence for the existing state of society. It is clear that some alteration of the law is needed to meet cases where the offence is deliberately committed after warning given and received. It is not the same thing to break the law thoughtlessly, and to break it of set purpose and with the avowed intention of taking the consequences. This kind of temper should be met by making the consequences very much more serious than they otherwise would be.

So far we have treated the affair as simply a breach of the law committed by persons who ought to have known better. There is another aspect of it, however, in which Mr. WILLIAM MARSHALL comes out to still greater disadvantage. To defy the law must always be an act deserving high blame; but whereas there are some actions which are only censurable because they are forbidden by law, there are others which are disgusting and degrading in their own nature. Supposing that Mr. MARSHALL had been a poulterer or bird-catcher, and had been detected plucking live fowls or mutilating singing birds, he would have been justly punished for his cruelty. At Weaverham equal cruelty was done, not to make a livelihood, but to amuse men too incapable of finding amusement in anything except the infliction of pain. It is conceivable that simple cockfighting might be defended on the plea that game cocks will fight even when left to themselves, and that there is no cruelty in letting them indulge their natural taste for warfare. But how about the preparation which Mr. MARSHALL's victims had undergone? The account in the *Daily Telegraph* describes it in these terms:—"The natural spurs were cut off" to be replaced with steel spurs—"the body completely plucked, the throat shaved, and the head denuded of everything in the shape of feathers which would enable the opposing bird to obtain a hold and so stop the fight. Matters were so arranged that the only way in which the bird could escape was by winning the battle." And the *Times*' account describes the floor of the harness-room—before the fight, be it remembered—as "covered with feathers"; and says of a man named MATTHEW HARFORD, who had come in charge of the Irish cocks, that "his face was scratched, and that he was nearly covered with down and feathers"—pretty good evidence as to the nature of his employment for some time before. It is of no more use, of course, to argue with Mr. MARSHALL or his friends than it would be to argue with the aforesaid poulterer or bird-catcher. Indeed, of the two, the tradesman would probably better repay the process than the gentleman. There is only one way in which Mr. MARSHALL can be reached; and that, though he has escaped for the time, we sincerely trust may yet be brought

to bear upon him. As we understand the short accounts given in the London papers, Mr. MARSHALL was summoned before the Petty Sessions on the charge of "permitting or suffering a place to be used" for the purpose of cock-fighting; and for this offence, subject to the decision of a case which was asked for in the Court above, he was fined 10*l.*, which in his case is probably equivalent to no punishment at all. But the facts disclosed suggest that it may be practicable for the Society for the Prevention of Cruelty to Animals to proceed against him for aiding and abetting in the preliminary barbarities. The poulterer detected plucking fowls alive would in all probability be sent to prison without the option of a fine, though to him a fine might mean serious inconvenience. If Mr. MARSHALL can be convicted of ordering or sanctioning the plucking of fowls alive, there will be far more reason for sending him to prison than there would be in the case of the poulterer. The originator of a Great International Cockfight enjoys no doubt inherited wealth—it is pretty safe to say that he has not made it for himself—and to fine him is merely to make his pleasures more costly, and therefore perhaps more agreeable. It is not uncommon for a magistrate to tell a poor man who has been convicted of grossly ill-using some animal that the case cannot be adequately dealt with by a fine. We submit that Mr. WILLIAM MARSHALL'S is precisely a case of this sort. Nature has probably gifted him with a happy insensibility to everything but bodily inconvenience; and imprisonment with hard labour does entail bodily inconvenience. One element of prison discipline, however, we would willingly spare him. Instead of being subjected to solitary confinement, he should work out his sentence in company with the six-and-twenty other gentlemen of Cheshire—"many of them," it is said, "occupying high positions in the county"—whose names have not yet been made public, but to whom we promise their full share in Mr. MARSHALL'S honours whenever they are made public. If it is worth while to have a law against cruelty to animals, it is worth while to show that it is a law which is no respecter of persons.

THE SHAH AND SOCIETY.

THE Keighley Republican Club, we learn from the newspapers, has passed a resolution expressive of disapprobation at the reception accorded to the Shah. The Shah undoubtedly represents all that is opposed to Republicanism; covered with the results of unproductive labour, he must be the bugbear of political economists and Free-traders. Shah-worship is incompatible with the prospect of an enlightened democracy; the Club is disgusted, and perhaps the Keighley gentlemen who compose it have a dim consciousness that the enthusiasm displayed during the past fortnight will be ascribed by their opponents to the influence of that Conservative reaction which is paralyzing the country. On the accession to office of the Conservative party mutual concessions will be made between the Shah and Mr. Disraeli, affecting the exercise of the franchise, and all persons objecting to despotism will receive one hundred blows on the soles of their feet. In these days nothing can be done without a deep reason to account for it. An Eastern potentate could not be led by curiosity alone to pay England a visit; nor could the English populace take such an interest in him were not hidden motives at work. What the nature of some of these motives is, philosophy has not been behindhand in explaining to us; and a lively writer in the *Spectator* informs the world that the explanation of the popular desire to see the Shah is to be found in "the symbolizing craving of the idealist feeling." There is nothing which conveys an idea so clearly as the use of present participles, and this interpretation leaves but little to be desired.

London has certainly never had such a lion; and if the largest ballroom in St. James's Square could have advertised the appearance of Joan of Arc or Aspasia, Joanna Southcote or St. Paul, the anxiety to catch a glimpse of our illustrious visitor would have left the room empty. Rational conversation has been suspended; had the countryman waited until the stream of Shah-talk had run by, he would have waited to eternity, i.e. for the fortnight during which he had secured rooms at his hotel in Albemarle Street. Cynicism has been silent; there has been so much to do and so much to stare at, that there has been no leisure to criticize. Yet English society was not prepared for this visit by any extensive acquaintance with the kingdoms over which the Shah rules. There are human beings who, like Lord Pollington, have been to Teheran; there are others who have read the travels Lord Pollington published when he came back; but the great mass of people who thrust their heads between bars, climbed up lamp-posts, gesticulated out of windows, and paid ridiculous prices for reserved seats, had neither been to Teheran nor read *Half Round the Old World*. The diamonds no doubt have a great deal to do with it. Treasures, whether hidden or revealed, exercise the strongest effect upon the human imagination, and the realization of wealth

has a special influence over all. "An emperor in his night says Goldsmith, 'would not meet with half the respect emperor with a glittering crown.'" The interest felt in the Shah may be traced on all sides. Stories relating to the Shah have resounded in obscure country houses within a week after they were current in town. To see the Shah was the first and highest object of life, but the next has been to hear stories told about him. His name excites the ardour of provincial etymologists. Does he like this? what does he think of that? what English institution will he found first on his return home? or will he not hire some country house near London, send for one or two wives in deference to our habits, and take his seat in the House of Lords? We may suggest to intending lessors that, in case of any damage done, they will not obtain compensation from the Government, as Mr. Evelyn did in 1698, when the sum of 150*l.* was paid to him on account of the state in which his house was left by the Czar after his three months' visit to Wotton. Knave might be given up to the Shah pending the proceedings now being taken—an arrangement which would be sure to recommend itself to its reverend and noble owner. Our late visitor has seen all we have to show—our fleet, our soldiers, the resources of our State, the pleasures of our leisure hours, our country palaces, our well-dressed society. He has run through in a fortnight what many men might not see in the course of years. Sight-seeing has been made as easy to him as that most laborious of occupations can be made. All classes of the community have shown the same interest in him. Even the emankments past which the express trains hurried have been lined by men, women, and children, who surely must have entertained a hope that the Shah would prove himself a worthy descendant of pre-historic man, which himself out of his saloon, and run along the tops of the carriages until he reached the engine. Unfortunately he has behaved much as an English gentleman would behave, and has sadly disappointed the expectations of those who were ready to chronicle any reversion to an Eastern type. One newspaper expresses an anxiety to see his diary. This is a natural wish, and in order to calm the popular mind we give the following telegram, as one which suggests itself as bearing the impress of truth upon it:—"Light of my eyes and thirty-first favourite, I write this from the metropolis of a distant island, where the ruler, following the course always adopted upon similar occasions, has lent me her palace. I have been to Stafford House and the Zoological Gardens, and have seen all the different classes of which this great and thriving country is composed. I will explain to you on a subsequent occasion the different modes of manufacture in vogue in the chief towns, the details of the last census, and the statistics of the proportions between the male and female births, which I learnt from the Lord Mayor and other municipal functionaries, at various entertainments given to me. I am much pleased by the many ingenious contrivances to economize labour, and I have bought for you a curious piece of mechanism, a black bear which shakes its head in a most interesting manner. Everything is done to gratify my search for information. The populace, mindful of the policy which has always governed my actions, and aware of the improvements I have effected at home, has testified its enthusiastic sympathy with my visit. The affairs of this nation are conducted by two Houses, which deliberate in the capital. One is the House of Lords, which plays and watches a game called Polo, of great utility to the people. The other is the House of Commons, which I am informed has done nothing during the course of this year but dine last Saturday at Greenwich. I have been wholly unable to understand the nomenclature of political parties; but the Grand Vizier is at present engaged in the task, and a Select Committee of the House of Commons has been appointed to supply him with information. Among the many useful and admirable institutions of this country, this, though not to be compared with Madame Tussaud's Exhibition and the Crystal Palace, has especially struck me, and I shall introduce it on my return home, and thus be always able to moderate and check the inroads of democracy by referring its demands to the consideration of a Select Committee. Two of my suite will explain to you the working of the press, or the free expression of thoughtful opinion. They are at present engaged in mastering a popular work called *Magnoll's Questions*, by the study of which many of the Ministers of this country have risen to eminence, by following in whose enlightened steps I shall be enabled to reign over a happy population. Keep my slaves in order, and let two hundred be harnessed in remembrance of me. Adieu."

Such has been the impression produced upon the Shah, the cost of telegraphy having exercised a natural effect upon the diction itself. As the telegraph becomes more widely known, pleonasm and titles must die out, as nobody would in these practical days pay an extra guinea to be called King of Kings. We have already seen that it is in obedience to its symbolizing craving that the populace has been in a delirium of excitement during the Shah's visit. *Plus sapit vulgus, quia tantum quantum quis est sapit.* The reason of the welcome given to the Shah by the leisured classes is no less clear. Society is governed by the necessity of providing occupation for its unmarried members. Unmarried women form the majority of every household, and nothing checks their steady increase from decade to decade and from year to year. Food is plentiful; neither famines nor fevers decimate them; Malthus is not read. To the elder succeed the younger, equally healthy and good-natured, equally unable to "dress on 15*l.* a year as ladies." London has grown unmanageable. The number of persons who accept are out of all proportion to the number of those who give, nor does society sympathize with the difficulties and disappoint-

means of those who endeavour to provide for its amusement. It is therefore only natural that the mother of a large and increasing family should find her symbol in the Shah. Just as Dr. Primrose represented the quintessence of monogamy, so the Shah represents the polygamic element, and suggests the one conceivable method of providing for our surplus female population. The politician may see in him a firm ally, the financier the gain of new concessions, but the mother will dream of fresh woods and of untrodden pastures, where the younger members of her family may browse in peace. Let the sceptic go to a London breakfast. The road is lined with carriages containing three or four women in each. With the exception of two policemen not a man is to be seen. The host has gone out of town for the day, and the hostess is in the garden eating bread and honey under a tree; the lawn is covered with gowns displaying a combination of colours which even without the intervention of the Shah would make the season of 1873 a remarkable one. Mankind is represented by an author or an editor, four boys up for a cricket match, and a friend who is paying a visit. The men who ought to be there are spurring little ponies, or shooting pigeons—noble pursuits through which an outlet is found for that surplus of physical energy which we are told cannot be restrained, and which has made England what it is. If the day is a wet one the entertainment is turned into a tragedy. The rain drops through the leaves and the guests are obliged to crowd into drawing-rooms. There is a smell of wet clothes, a cry for carriages not forthcoming, as the coachmen have not finished their breakfast at the neighbouring public-house. Nor is the evening free from similar troubles. There are girls enough for twenty bulls, and men enough for two. Even, therefore, if three take place upon the same night, the consequences are disastrous to some one. There are perhaps twenty houses in London to which nearly everybody goes who has not some real excuse for absence, but the one we are speaking of does not belong to this category. At half-past eleven there are three little boys at the foot of the staircase, trying to look as if they had not been there half an hour, putting on their gloves for the tenth time, unknown to one another, and disregarding the entreaties of the hostess, who, having heard of their arrival, has sent a servant to implore them to come upstairs. The two ballrooms have about forty women in them, and three fathers who are on their way either to the House of Commons or their beds. Those well-known faces fulfilling the functions of ball-room signs, beaming with a settled placid instinct, have already secured their seats for the evening. By the side of each a daughter stands, just come out, wondering whether the one man she knows in London, fed with frequent dinners at her father's house, and who never fails her, will dance with her this evening. Her fate is to stand there. He has gone first to the ball where the Royalties are, and then to the one which has the best supper. The room's "untrampled floor" is very sticky, and at half-past twelve the host is angry, and commits the fatal mistake of imagining he has some jurisdiction in his own house. Thirty more men, it is true, have come; but six do not dance, and four are at supper with the one young married woman whom the hostess asked. At half-past two the ball is over, and chaperons wake from their dreams of Teheran, and to the fact that the world is vanity. Such are too frequently the results of an expenditure of three or four hundred pounds; redress is needed, and the Shah is its symbol. Among the stories lately current, in which we place full reliance in common with the others we have heard, is one to the effect that the Shah has not an ancient dowager in order to discuss the question in all its bearings. The interview was most satisfactory, and a concession was granted, which, though upsetting to some extent the present relations between the sexes, is likely to remove all the difficulties against which society has now to contend. When the terms of the concession are made public, we shall comment more fully upon them.

EVESHAM.

IT used to be the boast of poets that warriors and rulers owed their immortality to them. It is certain that, in the long run, the immortality of the poet outdoes that of the warrior and the ruler. The Avon—the Avon, that is, of Mid-England—is, as we all know, Shakespeare's Avon; it runs by Stratford; it passes under the east end of the choir where Shakespeare is buried. It would be only a few here and there to whom the name of the river would suggest the thought that it also flows by Evesham, and that it passes under the site of the mightier choir where once lay the mangled relics of Simon of Montfort. It may perhaps even be needful to remind some admirers of Sir John Pakington that they will find him no better than a will-o'-the-wisp, if they go to Evesham to seek for what he once assured the House of Commons that they would find there, "one of the most beautiful abbeys in England." Any one who goes to Evesham, hoping to find either a living minister like Tewkesbury or a dead one like Glastonbury, will certainly come away disappointed. But he will find the site, and recorded history will enable him easily to call up the appearance in times past, of a monastery which stood high even in the monastic land of the Illicene. Nowhere were ancient religious houses thicker on the ground than in Worcestershire and Gloucestershire. And nowhere have their material fabrics been more largely spared. And it is precisely because they were ancient foundations that they have largely been spared, and also that, where they have not been spared, they have for the most part been utterly swept away. Worcestershire and Gloucestershire were as distinctly a Benedictine land as Yorkshire was a Cistercian land. Bristol was

the only house of much importance which belonged to any of the later orders. Hence, as a rule, the monasteries of this district either were planted in towns which already existed, or, when they were planted in the wilderness, towns grew up around them. Hence they either survive as cathedral or parochial churches, or they are utterly swept away. Besides the mother church of Worcester, the minsters of Gloucester, Bristol, Tewkesbury, Pershore, the Malvern, and Deerhurst still remain, whole or in part, as the living churches of dioceses or parishes. Winchcombe, Kingswood, and, we must add, Evesham, have perished.

When the battle was fought in the House of Commons over the bodies of the boroughs of Wells and Evesham, and when Sir John Pakington's imagination ventured on the daring flight about the beautiful abbey, it might have been remarked that the wager of battle was a very fair one, inasmuch as the two disputants were towns of essentially the same class. Wells and Evesham, like Lichfield, Peterborough, and a crowd of others, are towns which grew up under the shadow of some great church. Wells grew up under the protection of its Bishops, Evesham under the protection of its Abbots. And this fact is not without a bearing on the great event which has made the name of Evesham more famous than the names of Pershore and Winchcombe. The battle of Evesham was fought at Evesham purely by accident. It was fought there because it was there that the armies happened to meet. Evesham was not a walled town, or a castle, or a point defensible in any other way, which a general like Earl Simon would have chosen of set purpose as his permanent head-quarters. It is quite certain that, had he had the choice, he would never have picked out the battle-ground of Evesham to fight on. He was on a march; the town and its abbey made a convenient night's halting-place on the march, but they did not supply a post which he meant to defend or could have defended. At a smaller place he might not have been tempted to halt; at a greater place he might have been tempted to stay longer. As it was, had the battle not happened when and where it did, the Earl would equally have left Evesham on the day after he reached it.

The monastery had its beginnings in the first years of the eighth century. The legend told how Egwine, Bishop of Worcester, going to Rome to defend himself against certain false charges, fastened his feet with iron fetters, and cast the key into the Avon, at an uninhabited spot where a peninsula was formed by a bend of the river which was then all covered with brambles and brushwood. The name of the place the Latin writer gives as *Hethoum*. A comparative mythologist will say that it is the ring of Polykrates over again, when the story goes on to say that the key was found inside a fish which Egwine bought for his dinner at Rome, whither he had somehow got with the fetters still on his feet. This was of course a sign that he might unlock his fetters, and he accordingly came back, cleared of all crime, to become the abbot of the spot where he had thrown the key into the Avon. Improvements were at first only of a temporal kind; he cleared out the peninsula and set sheep to feed in it. Perhaps however they mystically foreshadowed a spiritual flock, and, when a divine vision was vouchsafed to one of his shepherds—his name is given as *Force*, though the *es* looks not a little like the sign of the genitive—he began the foundation of a monastery, and, in honour of the seer, changed the name of the place to *Eofesham*. Thus arose the famous abbey of Evesham, and under its shadow the little town grew and threw out a suburb called Bengeworth, on the other side of the Avon beyond the bridge. Here a church was built by Leofric and Godgifu; and here, after the Norman Conquest, rose a castle, which it was the great exploit of an abbot of the middle of the twelfth century to destroy and turn its site into a churchyard. But the town itself, its ecclesiastical buildings, and its now grass-grown streets, are to be found within the original possession of Egwine, on the right bank of the Avon.

The fortunes of the abbey—as the house was for the most part, though it did not always escape the common fluctuation between monks and canons—are described at great length in the local history, and sometimes they come across, or rather mingle with, the general course of national affairs. Thus the Abbot Æthelwig, who was in possession at the time of the Norman Conquest, plays a considerable part in the history of those times; and, if we have our suspicions of a man who showed such consummate prudence as to be in equal favour with Edward, with Harold, and with William, they are at least balanced by the munificent charity which he showed to the victims of the great harrying of the shires to the north of him. As usual, the Bishops of Worcester and the Abbots of Evesham did not agree; and a great part of the monastic history is taken up with disputes between the two churches, sometimes about estates which were claimed by both, sometimes about the Bishop's right of visitation. We should remember, with regard to disputes on this latter head, that a visitation not only shocked the feeling of monastic independence, but was a costly burden to the monastery or other church that was visited. Synodals and procurations are the survivals of a state of things when the entertainment of the Bishop and his train was no small charge even on the revenues of a rich abbey like Evesham. The history of the abbey in the early part of the thirteenth century is most minutely and graphically told by Thomas of Marlborough, a monk of the house who rose through various stages of monastic office to the dignity of abbot. He has recorded the struggles, in which he himself bore a great part, which the monks had to wage at once against the alleged encroachments of the diocesan and against the more undoubted mischief of a most scandalous and oppressive abbot, Roger Norreys by name, who they complained had been

forced upon them by Archbishop Baldwin. The whole narrative of this time is one of our most striking bits of local history, and it is something more than local, for it rivals the adventures of Giraldus himself as a picture of the doings at the court of Rome. Meanwhile building was going on vigorously, and our descriptions enable us to call up a picture of the fallen minster almost as clearly as if it were there still. The ecclesiastical buildings of Evesham, not reckoning the present church of Bengeworth, form a group like those of Coventry, though whatever might have been the precedence against the two minsters, the surviving churches of Evesham certainly cannot venture to compare with those of Coventry. Two parish churches, not very remarkable, except for the singularly beautiful vaulted chapel of late work on the south side of one of them, lay to the north of the abbey church, which has altogether vanished. The churchyard is approached by a gateway on the north, containing fragments of Norman work, and by another to the east, over which rises, as at Bury St. Edmunds, a stately detached bell-tower, the work of the last abbot, Clement Litchfield. This tower stood near the north transept of the minster, whose eastern limb projected into the fields rising above the river and a small tributary stream which joins it at this point, while the nave ran parallel to the parish churches. The grouping of the bell-tower with the spires of the two churches is still a striking one, and when the great abbey church itself rose proudly above the river, it must have been one of the most striking to have been found anywhere. Nothing now remains except part of the entrance to the chapter-house; but large portions, including some of the bases of the great Norman columns, are oddly enough preserved in the grounds of a house at a little way from the town, near the actual scene of the battle. The church, which thus in a figure still remains, and of which careful digging would very likely lay bare the whole extent, was begun in the days of the Conqueror. Abbot Æthelwig laid by great savings of money for the purpose, and his successor, the first Norman abbot Walter, who held the abbey from 1077 to 1086, actually began the work. Now it is to be noted that the church which Æthelwig designed, and which Walter began, succeeded one which was built by the former abbot, Mannig, between 1044 and 1054, and which was finished and consecrated in the latter year. It is inconceivable that so recent a building could have been already ruinous, or that it could have been deemed unsightly on account of any change in architectural style. It is plain that at Evesham, as everywhere else, the Norman and Normanizing prelates despised and rebuilt the English churches simply on the ground of their small size, though the church of Mannig is itself described to be larger than that which went before it. Walter finished the eastern limb only in about the same time that it had taken Mannig to build his whole church. A later abbot, Maurice, between 1096 and 1122, built the chapter-house and other of the ecclesiastical buildings. His successor Reginald freed the abbey from the dangerous neighbourhood of some knightly houses, and thought of surrounding the town with a ditch. From this he was dissuaded by his uncle Milo, Earl of Hereford, who told him that, if the town were fortified, the King would most likely take it to himself. In this abbot's time (1122 to 1142) the nave was begun, but it was not finished till the days of Abbot Adam, who sat from 1160 to 1191. This slowness makes it almost certain that the nave of Mannig's church still survived, and was pulled down bit by bit. Then came the bad times of Roger Norreys; but even then the tower was built by the personal sacrifices of the monks themselves. This was a central tower over the choir; for a few years later, in 1207, it fell and damaged the presbytery, but the damage was repaired and the tower rebuilt. A little later the presbytery itself was furnished with towers, perhaps only turrets, and it seems that there was also a detached campanile, probably a forerunner of that which is still there. This was a work of the thirteenth century, and it could have been of no great age when Earl Simon's barber, Nicolas by name, climbed it to look at the approaching army.

The church was consecrated, along with so many other great churches, in 1239, and we are thus able to get a general notion of the appearance of the abbey and its appurtenances as they stood when they sheltered the patriot army on the night of August 3rd, 1265. The Earl came from Kempsey, where he crossed the Severn; that place was a manor of the see of Worcester, and the patriot Bishop, Walter of Cantelupe, accompanied the army. The march from Kempsey must have led them by the town and minster of Pershore, a minster more lucky than that of Evesham, in that a noble fragment of its fabric is still standing, but whose monks, unlike those of Worcester, Gloucester, Tewkesbury, and Evesham, have made no contributions to English history. The bend of the river must have caused the host to enter Evesham over the bridge by way of Bengeworth, with the east end of the minster, its massive Norman majesty but little changed by the completion of the towers in the earliest form of Gothic, rising in all its stateliness above them as they drew near. But the march was made in the evening, and it is for astronomers to tell us whether there is any chance of the pile having been lighted up to yet greater solemnity by a rising moon. At the moment of the Earl's coming the post of abbot was vacant. We always picture to ourselves a Benedictine Abbot as the ideal of a Don, as a Head of a College magnified to a colossal scale. The prudence of such a dignitary might perhaps have caused the Earl to receive a less hearty welcome than he met with from the patriotism of the monks. In the train of the deliverer even the Bishop of Worcester was welcome.

The next day, as the Earl was making ready to march to the relief of Kenilworth, came the surprise, the fight, the martyrdom. The banners of Edward and his followers must have been seen on the ridge of the low hills to the north of the town, which are crossed by the road to Alcester and Kenilworth. A point called Battle-well, near the turnpike, preserves the memory of the fight. But, as the enemy drew near from three points, as the patriots were disordered and scattered—the Welshmen especially flying and seeking shelter in the gardens with which the hill-sides seem already to have been covered—the fighting was probably spread over the whole ground between the town and the crest of the hills; and there is nothing like the ascertained site of the standard on the hill of Senlac to mark where the second champion of England fell. The day of the battle was one of storm and thunder, and it was deemed that the elements showed their sympathy for those who were dying in the good cause. The monks of the abbey, who had welcomed the host the evening before, were allowed to bury the bodies of the slain, and what was left of the Earl himself, within the choir of their minster. By the fate which seems to have been in store for all the heroes of English history, the destruction of the church has carried with it the destruction of the tomb, and we should now look in vain for any sign of the resting-place of Simon of Montfort as for the resting-place of Alfred, Edmund, Harold, or Waltheof.

HOSPITALS AND CHARITY.

THE little debate which took place in Committee on the Rating Bill on the question of exempting hospitals helps to bring out some of the difficulties of dealing with these institutions. It is quite true, on the one side, as was urged by Sir R. Baggallay and other members, that the hospitals do a great deal of the work which would otherwise fall on the workhouse, and so far they tend to diminish the rates. On the other hand, however, as long as they are exempted from rating, they increase the amount which ratepayers have to pay. Each parish has to raise a certain sum in order to cover its expenses, and if hospitals are exempted, then the other ratepayers are taxed so much the more. It is possible that the ground on which a hospital has been erected may have been previously occupied by some private person, who had of course to pay his share of the rates; but as soon as a hospital comes into the district, all the ratepayers are taxed on its account. Mr. Gladstone merely stated a simple fact when he said that the exemption of hospitals from rating was tantamount to a compulsory levy on the population for their support. No doubt hospitals are public institutions, working for the public welfare, but then they are doing public work in a private and irresponsible manner. The truth is that hospitals do not fit in very well with the present state of things. Formerly the hospitals had the field all to themselves; but the theory of the existing Poor Law system is that provision shall be made for sick paupers at the public expense. It would appear, therefore, either that provision is made twice over for the sick poor, first by the ratepayers, and next by private charity, or that the hospitals accommodate a different class from that provided for in the workhouse infirmaries. Of course there is nothing to prevent private persons starting any number of hospitals at their own expense, but that is a very different thing from imposing a compulsory tax on the community for their support. It is already in the power of the Guardians, with the sanction of the Local Government Board, to vote contributions to such institutions; but it would be equally absurd and unjust for Parliament to oblige a parish to subscribe to the maintenance of any hospital which chose to set itself up in that particular district, whether the ratepayers liked it or not. Nothing can be more preposterous than that the public should be taxed for the benefit of institutions which are conducted in an entirely irresponsible manner, and are absolutely independent of all public control. And this is really the weak point of the system on which hospitals are at present carried on. Except in so far as the subscribers exercise a fitful and imperfect influence, the administration of the hospitals is practically free from any kind of check or supervision. The School Board system probably indicates the future of the hospital system. Hospitals which seek assistance from the ratepayers must put themselves under the supervision of boards elected by the ratepayers.

There can be no difficulty in determining the conditions on which the public should be taxed for the support of hospitals; but even as regards private subscriptions, it may be questioned whether the present system of management is likely to improve under the influence of Hospital Sunday. Some disappointment has been expressed at the comparative smallness of the sum which was collected on that day, and it seems to be assumed that the object of the collections is one which everybody must approve, and that it is only a spirit of stinginess and illiberality which has prevented people from contributing more handsomely. It is by no means clear, however, that there is not room for grave doubts as to the expediency of the arrangement which has just been set on foot. For our own part, we have the most sincere and cordial sympathy with the various organizations for the relief of human misery which are to be benefited by the subscriptions of Hospital Sunday; and we are quite willing to admit that, on public grounds, it is desirable that they should be kept up in as efficient and flourishing a condition as possible. It is only because we are afraid that Hospital Sunday will be apt to have a prejudicial effect on these institutions that we have our doubts about the wisdom of going

on with it. We need not enter into the details of the arrangements connected with this appeal. The general result is that the public is appealed to on a certain day in behalf, not of any particular hospital, but of hospitals generally, and that the money thus obtained is divided among a large number of institutions in proportions which have been fixed beforehand by an irresponsible Committee. It is obvious that there must be at the outset a considerable difficulty as to the distribution of the money, and it is scarcely possible to lay down any satisfactory rule on the subject. It may be plausibly argued that a great establishment in capital working order, which is really doing a vast amount of good work, is entitled to a larger share of public support than a little struggling affair that has a difficulty in keeping itself alive from one year to another. Yet the argument might just as plausibly be turned the other way. It might very fairly be said that the great institution had had a good start, and could almost take care of itself, whereas the little one stood in need of special protection and assistance. It is not to be supposed that no new hospitals are ever required, or that old hospitals will always be fully adapted to the wants of the age. There must be fluctuations in these things as in everything else. But can the Hospitals Committee be trusted to take these fluctuations strictly into account in apportioning the money of benevolent people? Will there not be a danger of old-established influential institutions securing a majority of votes in the Committee, and consequently the lion's share of the subscriptions, to the comparative exclusion of smaller bodies, which may possibly be more deserving of assistance? Assuming, however, that all this part of the business can be satisfactorily arranged, there still remains the question whether the money thus collected and divided will reach the hospitals in the way most calculated to promote their efficiency.

Whether the hospitals will obtain a larger amount of subscriptions by a general appeal than by separate efforts on behalf of particular institutions, is a question which can be answered only by actual experience. In any case, it may be taken for granted that, if Hospital Sunday is once fairly established, a considerable sum will be collected every year, and the amount will tend to an average. In some years it will be a little more, and in other years it will be a little less, but the average of a series of years will doubtless be a sum which can almost be calculated beforehand. Thus the different hospitals will be able to reckon pretty safely on receiving in this form a regular annual revenue, and the money will come to them without any effort on their part, and will be given by people who are influenced by feelings of general benevolence, but who take no personal interest in any institution in particular. At present the hospitals stand in direct personal relations with the people who furnish them with subscriptions, or at least with the majority of them. As a rule, a man who subscribes to a particular hospital takes some interest in it. It may not be a very active interest. He may have no share in the management of it, nor even any means of directly influencing or controlling the managers. But he probably reads such reports as may be sent to him, and listens to what is said about it in general conversation, and perhaps he even goes so far as to make some inquiries on his own account. If he feels very strongly about any part of the administration, he has no difficulty in bringing his views before the managers, who will naturally feel bound to pay some attention to the representations of a good subscriber. In any case it may be assumed that, even if no actual communication takes place between managers and subscribers, the former have at least a pretty good indication of the feelings of the latter in the state of the subscription list. It is well-known that, even as it is, the administration of some of the hospitals is by no means satisfactory. They are too often conducted in an extravagant way. Vast sums are spent in brick and mortar, and the staff expenses absorb a large share of the revenues. There is also a good deal of carelessness as to the classes to whom charitable relief is granted. There is little or no inquiry as to the circumstances of the applicants, and there is reason to believe that a considerable number of persons who are perfectly able to pay for medical attendance obtain gratuitous treatment, simply because the managers of certain hospitals are chiefly concerned in keeping their hospitals going, without caring very much who are the people who get the benefit of them. The hospitals which are also medical schools have a twofold function. They are intended to provide for the relief of the sick poor, and to furnish professional instruction to medical students; and the latter of these two objects is, we suspect, that to which the greatest importance is sometimes attached. We imagine, however, that most persons who subscribe to a hospital do so for the sake rather of the patients than of the students; and that their idea is that they are helping to relieve distress, not to provide cheap education for professional men. There is no reason, as far as we can see, why the education of medical men should be made a matter of public charity; but one of the results of Hospital Sunday will certainly be to relieve the managers of hospitals which are in fact medical colleges more and more from whatever check is at present imposed on them by the desires of direct subscribers, and to secure them a regular annual income free from any conditions whatever. We have no wish to speak disrespectfully of the managers of hospitals; but of course they are only men like the rest of us, and, human nature being what it is, it may be doubted whether it is good for them, or for the institutions under their charge, that they should be released to this extent from the very small amount of responsibility and control to

which they are now subject. If, as the promoters of Hospital Sunday hope, the subscriptions of that day go on increasing, we shall see a large annual revenue handed over, without any sort of check or control, to an irresponsible body of administrators, who can deal with it just as they choose, and who may perhaps apply it to purposes very remote from those set forth in the homilies of the day. Each hospital, as long as it can manage to get a good proportion of its friends on the Distribution Committee, will get its fixed share of the money. The people who give the money will give, as the Scotchman swore, "at large," without caring for one institution a whit more than for another, and the body of subscribers which is now attached as a sort of supervising influence to each hospital will in a great degree be broken up. Those who have any acquaintance with the present administration of the hospitals will hardly be disposed to think it well that a check which requires to be strengthened should be practically abolished.

We suppose that most people will admit that loose, indiscriminate charity is a bad thing; but it is difficult to imagine a more perfect example of this sort of bastard benevolence than the subscriptions which are given, on an appeal from a chance clergyman, to a comprehensive group of charitable institutions, regarding the individual merits of which the preacher has nothing to say, and probably knows nothing, and in which the subscribers take no sort of personal interest, most of them probably being ignorant even of the names of the establishments to the support of which they are contributing. Charity, we are sometimes told, like mercy, is twice blessed, for it blesses those who give and those who receive; but it is doubtful whether charity bestowed in this comprehensive manner from motives of abstract benevolence or the impulses of fashion might not prove to be something very different from a blessing to both parties to the transaction. As far as the givers are concerned, there can hardly be a more spurious or mischievous form of charity than that which enables a man to settle accounts with his conscience by the payment of a few sovereigns or shillings in a lump sum, without being troubled to exercise his mind in any way as to the respective merits of different institutions or the comparative necessities of human suffering.

THE COBDEN CLUB.

THOSE masters of the ceremonies who showed the sights of England to the Shah made one grave omission, for they did not take him to the dinner of the Cobden Club. He has seen how we fight by sea and by land, how we lodge our sovereigns and our princes, how we dance, how we dispense civic hospitality, how we forge guns, and how we rule England and India by counting *francs* in the House of Commons. But there is one absolutely unique English institution which he has not seen, and that is an English political dinner. He has not seen the solemn feasts in which we combine rhetorical devotion to the name of an eminent public man or to a stirring political cause with an absolute devotion to the handiwork of the cook. He has not seen the marvellous dexterity with which we can do honour to a stern political economist, a hater of unproductive expenditure, by eating one of the biggest and most luxurious dinners that the culinary genius of this country can set on the table, or that its wealth can buy. The Shah will have gone away from England with a pitifully inadequate idea of her political, culinary, and rhetorical resources, because he has not been permitted to measure the combined forces which lie in a superficial respect for the memory of Cobden, a fanatical zeal for the ministrations of the kitchen, and a touching eagerness to follow Mr. T. B. Potter. Still we invite the intelligent gentlemen of his suite to cast a glance back to this marvellously British combination before they finally sink into the stagnant ways of the East. We assure them that they will miss a considerable part of our civilization if they do not give a place in their minds to the scene which they might have witnessed at Greenwich last Saturday.

An eminent political man dies, and forthwith his countrymen seek to do him honour. They utter eloquent praises in the legislative assembly which he influenced by his keen intellect and homely rhetoric. They set up statues of him in the public places. They half canonize him in biographies. They form a Club to keep alive the memory of his name, his good deeds, and his principles. Nor could the most puritanic criticism find grave fault with these phases of hero-worship. But the Club is found on examination to be such an institution as it has never entered into the heart of any other race of beings than Englishmen to conceive. It belongs to a typical series of English institutions, and it is the most remarkable of the series. The Pitt Club gave the great constitutional statesman the incense of Tory convivialities. The Fox Club gave the great leader of the Whig party the incense of equally fervent, and equally inarticulate, tributes to the grandeur of the universal history which began with 1688. But the possibilities of culinary and vinous adulation were not exhausted until the combined genius of the Reform Club and the kitchen brought into being the Cobden Club. The authors of the triumph had to overcome what might have seemed an insuperable barrier to the twin gratification of their appetites and their economical sympathies; for their hero had lived an unusually simple life. His wine-cellar was never famous for its bottled stores of the sunshine which falls on France and Portugal. He never gained a reputation either as a gourmand or as a giver of good dinners. In fact, he rather leaned to the austerities of the anchorite than to the luxuries of a sybaritic self-indulgence. Nevertheless, the

combined devotion of the Reform Club could think of no more appropriate homage to his memory than a yearly ritual which should be recited at Richmond or Greenwich by Mr. T. B. Potter, which should annually cost each worshipper three guineas, and which should praise Free-trade with the fervour of whitebait and champagne. For the sake of appearances, it is true, the devotees have also published three or four books to prove the wisdom of buying in the cheapest market and selling in the dearest. They have put forth Mr. Cobden's own speeches in two handsome volumes. They have also published two volumes of essays which deal with economical subjects, and which represent what Mr. Cobden himself might have said if he had become a little bolder and a little duller. But these literary eccentricities cannot have cost more than a few shillings apiece, and the grand function of the annual three guineas is to fatten Free-trade by feeding the worshippers of Cobden. So the high priest of the ceremonies, Mr. T. B. Potter, arranges that they shall have what the Indians call a "big drink" in honour of Cobden and Free-trade before they go off to the moors.

The whole scene is typically and delightfully English in its grotesque oddity. A good dinner is a good thing, and it is only anchorites or pigs who can despise a good dinner at Greenwich on a cool summer evening, with the breeze from the river blowing into the windows of the banqueting-room; but, if we want such a luxury, let us take it manfully and openly instead of pretending that we eat our way through fifteen or twenty courses to show our devotion to the principles of economic science and to the memory of Mr. Cobden. The *Times*, it is true, kindly argues that the annual Cobden Club dinner may be used as a bait for drawing eminent Free-traders to England, and that they may thus be filled with an evangelical fervour for the propagation of the faith; but it is not easy to see how Mr. David Wells or M. Laveleye can have been filled with apostolic ardour for spreading the creed of Richard Cobden by the stimulus of turtle, whitebait, and Pommery *très sec*. They could profit, however, by the apostolic counsel of the Chairman, Mr. Milner Gibson, who is an old Corn Law leaguer. They had also the privilege of listening to Mr. Goschen, who has written a very puzzling book on the puzzling subject of foreign exchanges. They could likewise hope to gather counsel from the eloquence of Mr. T. B. Potter, who is supposed to sum up his economical tenets in the comprehensive clause that he who believeth not in Free-trade shall without doubt perish everlastingly. But we are very sorry for Mr. Wells and M. Laveleye if the Greenwich speeches are to furnish their most vivid memory of what Englishmen mean by Free-trade. Mr. Milner Gibson argued that the principle of Free-trade was unlimited competition, and hence that the Government was guilty of an economical heresy when it took the telegraphs into its own hands. It would be difficult to find a better specimen of the Manchester School Philistine. Mr. Gibson implies that Free-trade means unlimited competition; but unlimited competition between whom? Between individual men? If so, any company of traders is a corporate violation of Free-trade, for they restrict the possibilities of competition by massing together so much capital, and carrying on their business on so large a scale, that no single trader can enter the lists with them. The larger the company, the less are the possibilities of competition. And the tendency of our time is to fling trade more and more into the hands of large corporations, armed with enormous capital, and set in motion by a crowd of partners. Some of these corporations have got a kind of monopoly already. The Harings or the Rothschilds can beat smaller firms out of the market, and can exact their own terms within certain limits, because their enormous wealth enables them to command that certainty and that quickness of execution which may be all-important to a borrowing State. Mr. Gibson must believe the tendency of modern commerce to be essentially protectionist if he holds the principle of Free-trade to be violated by whatever lessens individual competition. And what does he say to the Bank of England, which is a glaring monopoly? What does he say to the London and Westminster Bank, which, although the fruit of competition, has gathered such power that no new joint-stock bank could hope to draw the same profits by offering the same terms? What, above all, does he think of such virtual monopolies as the Great Western, the London and North-Western, and the Great Northern Railways? We hardly suppose Mr. Gibson will say that there ought to be absolute "Free-trade" in railways. He would scarcely allow any set of adventurers to make a line from anywhere to anywhere. Even the great principle of unlimited competition would not soothe his nerves if half-a-dozen competing railways were to be run through his own property, and if his garden, his shrubbery, his park, his library, and his drawing-room were all to be handed over to an army of navvies. He would draw the line somewhere. He would admit that the State must exercise some control over the railway system for the sake of the public convenience—or, in other words, that it must create what is practically a monopoly in order to avoid worse evils. But the Manchester School has always denied that the State might reasonably do manufacturing or commercial work for the public, and Mr. Cobden's last speech in the House of Commons was a plea for the abolition of the Government dock-yards and arsenals, on the ground that their work could be more fitly done by private capitalists. The *reductio ad absurdum* of that principle was reached when Mr. Roebuck sarcastically suggested that tenders should have been invited for the work of capturing

Sebastopol, and that the Redan should have been taken by private contract. At all events the Government does a great deal of work which might probably be done more cheaply by private hands. The taxes might certainly be collected by private enterprise. The Post Office would of course go down in the whirlpool of unlimited competition. Nay, the system by which we regulate the succession to the throne is a glaring violation of Mr. Gibson's wholesome rule, for he must know many deserving young men who would gladly do the duties of the Prince of Wales for a mere trifle. Cobden's magnanimous offer to act as the King of England for three hundred pounds a year, and to pay his own cab-hire out of the modest stipend, showed a true appreciation of the Manchester gospel. We need not say that on the question of the purchase of railways by the State our practical conclusion is the same as Mr. Gibson's; but if such a measure were in itself feasible and desirable it would be absurd to object to it as being a violation of Free-trade. No such narrow definition of Free-trade was given by masters of political economy like Mr. Mill, who had looked at life and society far too broadly to let himself be blinded by such confused pedantry as that which drew forth the applause of the Cobden Club.

At the risk of shocking the members of that body, we must further ask whether Mr. Cobden is an idol who can be worshipped every year with profit. He was undoubtedly a very able and high-minded man, gifted in a wonderful degree with the qualities which draw forth the applause of counting-houses. He would have been the greatest statesman that England has ever seen, if England were nothing more than a great corn-exchange, and if the law and the prophets of legislation could be summed up in the maxim that we must buy in the cheapest market and sell in the dearest. But he seemed to be smitten with intellectual barrenness as soon as he left the broad and definite ground of arithmetical proportions. He was constitutionally incapable of understanding any question which was complicated by the subtle forces of national sentiment, historical sympathy, or religious passion. His mind was too much like a logical machine, and it was too little guided by wide and generous sympathies, to give him a true insight into the deeper problems of his age. He would have been a consummate master of statcraft if men were exclusively governed by the rules of arithmetic; but he too often talked like a foreigner, or like a man who had nourished his instincts only on bills of lading, when he was dealing with these passions and those yearnings of nationalities which create the real difficulties of statesmanship. He had "the completeness of a limited mind," and also the barrenness. Hence he has left no seeds of quickening influence beyond the narrow province of Free-trade. We should not dream of going to his speeches for guidance when we went to deal with those menacing forces of socialism, democracy, and apostolic zeal alike for religion and anti-religion which are keeping the Continent in a turmoil, and which may yet disturb our own insular calm. His measuring wand and multiplication-table seem a triviality and an impertinence in the midst of these passions. Such a man may be an admirable guide when a nation is arranging its finances in a time of profound quiet, and when statesmanship does not rise far above the atmosphere of the counting-house; but he ceases to be a hero in a season of volcanic heat. With a less symmetrical mind than that of his fellow-worker, Mr. Bright is equipped with a far wider range of sympathies and a richer glow of passion; and hence he has a readier and more general sagacity. Mr. Cobden is the hero of middle-aged statisticians. His fascination does not extend to younger men who are forming their creed by the light of all the influences which are shaping this age, nor does it reach those older men who are the products of a wide and rich culture. Nevertheless, he was a very eminent Englishman, and we could wish to see his name more fitly honoured than by merely making it an excuse for eating the most luxurious dinner of the season.

THE ENGLISH LAKES.

WE doubt whether the ordinary tourist gets half as much pleasure from his tour as he would willingly cheat himself into the belief that he enjoys. Unless, indeed, restlessness and happiness go easily together, his pleasure must be rather limited. He is constantly oppressed with the feeling that that which he has hurried on to see must be seen with all despatch, for that which lies next along the road loudly calls for him. He is overcome with the dread lest on his return home he may be put to shame by being forced to own that there was one sight which he had not seen. Instead of consulting his own happiness, and doing each day what seems good in his own eyes, he has laid down a law for himself which must on no account be broken. He has fixed the number of miles he shall travel each day, and rather than break through his plan he will pass through the finest scenery in a fog. We have often sat watching for an hour together a long stream of tourists, and have felt how many there were who, for all the real happiness they were getting, were disquieting themselves in vain. Now, though we ourselves profess to have attained in the highest degree the art of enjoying a tour, yet this knowledge we did not arrive at in a day. We remember the time when we hurried up a mountain in order to hurry down it, and passed a view, as we passed a milestone, on our way to the next. We remember the time when we had scarcely arrived at our comfortable inn before we began to fear lest we should be too late in leaving it, and never stayed long enough in any one place to feel it in any way homely. We are still as fond of walking as ever, as

much as ever delight in all the rights we have as "commoners of air," but we can say in the words of Dr. Newman's beautiful poem,

I do not ask to see
The distant scene; one step enough for me.

The time for autumn rambling is near at hand. Many a man weary with the din of this big world has his maps out in the evening, and forgets his long day's work in the excursion he hopes to take in August among the mountains. To those who do not value mountains as the old King of Prussia did his Guards, simply by their height, we would venture to give a few hints on the best way of seeing, and seeing with enjoyment, our own Lake district. We know that if we begin to talk of Cumberland to a member of the Alpine Club, he would impatiently reply,

Non omnes arbusta juvant humilesque myricæ.

We once indeed met a distinguished member of that illustrious fellowship who, having begun his education either at Winchester and New College, or at Eton and King's, and completed it on the top of the Jungfrau, naturally regarded the universe as an equilateral triangle, the three sides of which were formed by his school, his college, and the Alps, while he himself was the apex. There is this satisfaction for such as ourselves, that a race of mountaineers is rising who, having "done" the Caucasus, despise the Alps, while if we live a few years longer we may hope to hear the members of the Himalayan Club talk of the Matterhorn as an Alpine Club man talks of Scawfell. But there are many who do not care for excessive heights so long as they get mountain climbing, who ask only for wild scenery, and for solitude in which to enjoy it. Now the ordinary walker, we maintain, can get as much solitude in Cumberland as in Switzerland, and in a certain sense greater freedom. Any one who is a good walker, and who is at all able to use map and compass, can—unless perchance on the Scawfell range—go with thorough safety everywhere alone. We have in Switzerland constantly found our way barred by glaciers which we could not cross unaided. The passes where guides were not needed were often kept in by narrow limits, so that there was no escape from other tourists, or from the tormentors who with marmots, flowers, or horns, were anxious to get all our money. But in our Lake district there is nothing on the mountains to keep a man from striking to the right or to the left as he pleases. The range of cultivated land goes but a very short way up the hill-side, while there are no deer-prievers as in Scotland to shut up whole mountain ranges. The Lord of Ulva's Isle, by the way, with Lord Ullin's daughter would have had a bad chance at the present time, especially in the Braemar district, for while behind him "down the glen rode armed men," in front of him would be a band of keepers to stop him as a trespasser. But Cumberland lies open to everyone:—

Yet Nature's charms, its hills and woods,
The sweeping vales and foaming floods,
Are free alike to all.

It is curious how, with such complete freedom as this, the tourist keeps as much in beaten tracks as the ants that cross a garden walk. They toil along on a hot day between the stone walls which too often enclose the roads, while on either side of them, high up on the hills, they might have struck out for themselves a path which would equally well bring them to their destination. While, therefore, parts of the Lake district are overcrowded, there is the deepest solitude to be found for those who will look for it. How often can one walk for six or eight hours together and see no one but the shepherd on the fell across the valley! To how many a mountain top can one climb, so long as one avoids Helvellyn, Skiddaw, and Scawfell, and never meet a soul. But no doubt a tourist requires to have a certain familiarity with a district before he can easily, when alone, find his way into all its hidden beauties. It is for this reason, we think, that so much more real pleasure is got by a long stay in one or two places than by flitting from spot to spot. But besides this, he gains that greatest of all enjoyments of scenery, the enjoyment which springs from knowing a view so well that one almost looks upon it as a friend. Perhaps the best head-quarters for a man who can walk well are Grasmere, Buttermere, and Wastdale Head. At each he might stay for weeks together and never grow weary. The "Prince of Wales" Hotel at Grasmere is all that an hotel should be; but often enough there is not a bed to be had. Let the tourist, if such he finds to be the case, order a room for as early a day as he can, and pass over Silver How by Meg's Gill, into Langdale, where he is sure of a room. For, however crowded Ambleside, Grasmere, and Keswick may be, there is always a clean bed to be found in the inns up the quiet valleys. If a tourist, as is often the case when he comes to the Lakes, is on his first mountain tour, he cannot do better than take Mackereth, the Grasmere guide, to give him a few lessons in mountaineering, and some notion of the way the ranges lie. If, however, he is already free of the hills, let him get a copy of *Jenkinson's Guide* (Stanford), and he will easily find his way. So carefully, indeed, is this work executed, that we see on turning to it that it not only gives the clearest directions for going from Grasmere by Meg's Gill into Langdale, but also for returning. The writers of guides often forget that the directions which will take a man right one way are altogether useless if he should happen to come the other way. Some who seek the quiet of the everlasting hills may find Grasmere too full of passing life for thorough enjoyment. But from no place can a greater variety of mountain walks be gained, and

gained in a few minutes. The tourist has not only Langdale within easy reach, but Easedale, with Codale, most solitary of tarns, and Sergeant Man, which commands a view as fine as its name is curious. He has Far Easedale, leading either to Wythburn, or higher up to Blea Tarn, almost as lonely as Codale, or by Grasmere Gill into Borrowdale. He has the range of which Helm Crag, "with the dark hollows of its crater-like summit," forms the glorious end; while on the other side of the valley he has Helvellyn, too much trodden to please us, the Giredale Pass, and, better still, Greenhead Gill, the scene of *Michael*, the most pathetic of all Wordsworth's poems. Along the side of this Gill, most rightly called Greenhead, he can gain the whole Fairfield range and the most unbroken solitude. While the neighbouring summit of Helvellyn is beset with noisy tourists, Fairfield and Rydal Head, though offering equally fine views, are deserted, for no one can say—the metre will not allow of it—I climbed the dark brow of the mighty Rydal Head. From the top of these mountains there is a descent into the solitary valleys leading on to the Kirkstone Pass. But in trying to reckon up all the walks that Grasmere affords, we may cry out with the poet "*quo fessum rapitis!*"

From Grasmere let our tourist, sending his luggage by coach, make his way to Buttermere either by Far Easedale, Borrowdale, and Honister, or by Langdale, Rossett Gill, Esk Hause, the pass between Great Gable and Green Gable, and so to the head of Buttermere. The little "Fish" Hotel at Buttermere he can make his headquarters, with ranges of hills around him as solitary as can be. If he has only seen Buttermere between eleven o'clock and four, the time when tourists most do congregate, he does not know how quiet a spot it is for the rest of the day. This part of each day he can spend on the mountains round, returning to a quiet dinner in the evening on the char or trout from Crummock Water. The ranges round Buttermere are rarely walked over, and yet there are few mountain walks that afford finer views than the narrow range of Red Pike, High Stile, and High Crag. The ridge is so narrow that on one side one looks down into Easedale Lake as one walks along and the valley of the Liza, and, on the other side, into the valley where Buttermere and Crummock Water lie. Let the wanderer climb up the ridge early in the day, with his lunch in his bag, and he will with pleasure watch the shadows travelling round the hills till the last rays of the sun striking on Great Gable warn him that it is time to scramble down the steep descent to Scarf Gap. He may be glad as he passes Gatesgarth to prepare himself for the way that still lies before him by a glass of milk at the farmhouse, with its name so pleasantly suggestive of Icelandic legends. Another day he can spend on Grasmere, with its sides all in ruins, and its grassy top; and another on Great Robinson and the Dale Head, while Honister and Great Gable will give him enough to do for a third. Easedale, too, lies within a pleasant walk, with its quiet little inn at the end, and its churchyard, the scene of Wordsworth's poem of *The Brothers*. Each evening after he has rested, if he is fortunate enough to have a moon, let him not forget to spend an hour or two on Crummock Water. This lake not only, in our opinion, surpasses all the other lakes for natural beauty and grandeur of scenery, but also, happily, it has its beauties still unmarred by the hand of man. Whatever arguments may be advanced for or against small holdings generally, it is an advantage to have some of our finest bits of scenery each in the hands of one owner who will watch over them as a lover over his mistress. There are no steamers on Crummock Water, and no yachts. There are no villas or imitation castles along its shore. Its shores are pretty much as they have ever been, and its beauty is "bright as on creation's day." The day will come, we fear, when each one of our lakes will become, like Windermere, a second Thames at Richmond. Happily we have still left to us Crummock Water, Easedale Lake, and Wast Water. From Buttermere our tourist can pass over to Wastdale Head, and in the quiet old farmhouse just below the Sty Head Pass he can spend with pleasure all the fine days of an ordinary Lake summer. But space fails us here, and we must leave Wastdale and its walks to some better opportunity.

The great drawback of the Lake district is no doubt the rainy weather, but rain loses half its terrors to a man who is not restless to hurry on. Any one travelling as we recommend him can walk as much as the best, and can have at the same time a change of clothes always at hand, and half-a-dozen of his favourite authors into the bargain. But, above all, he will stay long enough in each place to see it in all its changing beauties. He will know it when the sun is in the east and the shadows are thrown one way, and when the sun is in the west and the shadows are thrown the other way. He will have seen it too in all the drowsiness of the second or third hour after noon. What man who has been fortunate enough to have known from his boyhood some beautiful spot of ground, however small, but must feel that he is ever discovering in it fresh beauties; and shall a tourist who arrives at Grasmere or Buttermere, or Wast Water, tired and hungry, pretend to have seen it—lake, mountains, valley, and all—in the three or four hours that he divides between his meal and his view? Those who have the keenest enjoyment of scenery will be found to be like those who have the warmest friendships, in that their love is not widely spread.

THE ANTI-CONFESSIONAL MEETING.

THE meeting of Monday last at Exeter Hall will no doubt be trumpeted by the organs of the Church Association as a great success. The Hall was full, though not crowded, and the applause was so persistent and uproarious as to elicit a formal remonstrance from the secretary of some Society assembled in the room below, though it may be observed that a sturdy minority, who lost no opportunity of testifying their disagreement with the speakers, managed to hold their own throughout. But the meetings held to denounce the confessional, even when it is expressly announced that "there will be no immoral allusions," are always numerous and noisy, and the combined attractions of Lord Shaftesbury and Mr. Newdegate—who stated that this was his first appearance at Exeter Hall—would alone command the enthusiasm of the No-Popery public. Moreover just at this moment the Bishops happen to be almost as "spicy" a subject—we believe that is the right word—as the confessional. There were, indeed, roughly speaking, two points that chiefly struck us in the tone of both speakers and audience. In the first place, one cannot help being impressed with the odd notions of reasoning which seem to prevail among this class of religionists. No well-informed and candid man, Roman Catholic or Protestant, will deny that the confessional is liable to grave abuse, and has before now been abused as well for immoral purposes as, far more frequently—especially under Jesuit auspices—for the indirect attainment of political or quasi-political power. This does not of course affect the theological merits of the question, or prove that confession is a bad thing; but it shows that it may be made a bad use of, and requires to be kept under strict control. Nor would it be difficult so to present the matter, by careful adjustment of some facts and considerations and omission of others, as to make out a very plausible case against the whole institution. But of this the speakers could not be expected to know anything. What does strike us as odd is that educated men should imagine that the constant reiteration of vague charges of "hideous bestiality" and "putting the priest in the place of God" can have the slightest tendency to convince any one who is not convinced already. Yet, with the exception of a running fire of abuse of the bishops and the Ritualists, and some ingenious attempts to prove that the form of absolution in the Prayer-Book is never meant to be used, being merely—as a friendly critic in the *Daily Telegraph* expressed it next day—"fossil remains," these were the topics on which speaker after speaker rung the changes. The second point that obtruded itself prominently on our notice, was the vehemently anti-episcopal tone of the Chairman and the meeting. Though Lord Shaftesbury drew down thunders of applause by comparing "the four hundred priests who signed the petition to Convocation"—they were everywhere else correctly described as 483—to the four hundred prophets of Jezebel, his repeated flings and sneers at the bishops were received with still more rapturous delight. His denunciation of the "mealy-mouthed" debates in the Upper House of Convocation on the "disgusting" petition which "they praised by faint condemnation"—instead of at once denouncing it as "a foul rag of Popery, stained with the pollution of the red lady of Babylon"—and of the "soothing syrup" of the Archbishop's letter to himself, and the significant allusion to the abolition of the episcopate or the removal of the bishops from the House of Lords, were among the most telling points of his lengthy discourse. When at the close he asked "Who was to blame for this attempt to pollute the Church of England?" the Hall resounded loud and long with cries of "The bishops!" and his final exclamation, "If the Church of England is faithless to the principles of the Reformation, let her go, and all the bishops with her," was received with applause, not inaptly reported as "tremendous." It was the same with the other speakers. Mr. Dallas Marston was severe on the bishops for not at once revoking the licences of all Ritualist curates, and met the obvious objection that it is unfair to punish curates for doing what cannot be prevented in incumbents, by the rather strange reply that "he maintained it was fair to Jesus Christ." Mr. Newdegate again made a great hit, by contrasting the "vigorous action" of Bishop Tait, in 1858, in suspending a London curate for hearing confessions (with the full sanction of the then Archbishop of Canterbury) with the apathy of Archbishop Tait and his successor in the See of London in 1873. Considering that the suspended curate is now comfortably settled in a Hampshire vicarage, and that the practice of confession is said to have alarmingly increased in the diocese of London during the last fifteen years, the inculpated prelates might perhaps rejoice that vigorous action had not proved as successful as could have been desired.

The meeting opened with a long and highly polemical prayer by Mr. Daniel Wilson, the matter and manner of which would have led ordinary hearers to suppose it was addressed in form, as well as in fact, rather to the audience than the Deity. At least it is difficult otherwise to account for its rhetorical and argumentative tone; but Mr. Wilson began by observing, "Before speaking to one another, we desire to speak to Thee." Then came Lord Shaftesbury's speech, of one hour's duration, which was the *chef-d'œuvre* of the evening. Of his savage attacks on the bishops and the "four hundred prophets of the groves" we have already spoken. But, in fact, more than half the speech consisted in an impeachment against the Archbishop of Canterbury, with whom his Lordship had been having a very unsatisfactory private correspondence, and his suffragans. The petition of the four hundred and eighty was "most preposterous, most inconceivable, most hateful," and "a positive scandal to Holy

Scripture"; if the rubric was in favour of confession, "what had the people to do with the rubrics? Let the rubrics go to the winds." No doubt "a rather large minority were in favour of these practices, but there were still seven thousand who had not bowed the knee to Baal," and who apparently were quite ready to emulate Jehu's treatment of the Baal worshippers. His Lordship proceeded to explain "the nature of the sacrament of confession" by reading out the anathemas of the Council of Trent on those who deny it; and then came of course the staple authority made and provided for all such occasions, that "hideous" and "bestial" Latin work in ten volumes, far better known on the platform of Exeter Hall than anywhere else, the theology of Peter Dens. And who, asked the speaker triumphantly, gave that work his *imprimatur*? The late Archbishop Murray, "the most liberal and innocuous of Roman Catholic prelates." Now we never read a word of Peter Dens, and can quite believe that, like many medical treatises, it contains some very unpleasant matter. But we should like to ask Lord Shaftesbury "who gave his *imprimatur*?" to a little work which we found ourselves obliged to read, much to our discomfort, some years ago, not in Latin, nor in ten volumes, nor addressed to experts, but an English pamphlet of about one hundred pages, sold for a shilling, addressed to the general public, and hawked about the streets of London for some months—till it was suppressed under Lord Campbell's Act—for the edification of every schoolboy or schoolgirl who chose to invest in a more racy shilling's-worth of filth than Holywell Street could venture to offer. It purported to be a collection of the most "hideous bestialities" culled from Dens and other kindred works, and collated much on the plan of the *Epigrammata Obscena* at the end of the celebrated edition of Martial, with the further attraction of an English translation, sometimes both in prose and verse, and English notes of an indescribable kind. This edifying manual for penitents, called the *Confessional Unmasked*, was published and circulated by the "Protestant Electoral Union," and warmly defended by Mr. Whalley; some fifty thousand copies had been sold before it was suppressed. We cannot help thinking that Lord Shaftesbury, whose sincerity and personal character are above suspicion, might profitably look nearer home before he again attacks the "bestialities" of poor Peter Dens and Dr. Murray's *imprimatur*. From Dens his Lordship passed to a very different writer, who is, we believe, a professed unbeliever, but whom he apparently supposed to be, or to have been, a Roman Catholic priest. It was certainly amusing to hear a long extract read out from Michelet's work of thirty years ago, *Priests, Women, and Families*, as giving the testimony of a writer "who had the widest possible experience of the confessional," and still more amusing to find the audience improving on the strange hallucination of their chairman, and testifying by indignant cries of "Who's his bishop?" that they supposed M. Michelet to be an Anglican confessor describing his own sacerdotal functions. Whether his Lordship's final suggestion, which was apparently meant for a joke, that those who honestly believed in confession ought to be ready to submit to the "test" of appointing female confessors, was derived from Michelet, we cannot say, but its point is not obvious. Even if Christianity, like Paganism, had its priestesses, the most ardent apostle of woman's rights might well scruple to entrust such a delicate task to their hands. Lord Shaftesbury thought so too, for he said that in that case "every confessional box in England would be broken up for firewood in six weeks." Granted; but, we ask with trembling, has Exeter Hall adopted the Jesuit maxim that the end sanctifies the means?

Three Resolutions, all directed against the recent Ritualistic petition, were moved and seconded, but the keynote is struck in the first, which we reprint entire:—

1st.—"That this Meeting views with sorrow and indignation the Petition lately presented to the Upper House of Convocation by 483 Clergymen of the Church of England; regarding such Petition not only as a defiant proclamation of false and Romish doctrine and practice, but also as a most reprehensible attempt to undo the great work of our glorious Reformation, and to bring the Church of England into re-union with the Church of Rome."

It was moved by the Common Serjeant, Sir T. Chambers, chiefly known as the indefatigable patron of those love-lorn swains who are consumed with a hopeless passion for their wives' sisters. The bishops, as well as the Ritualists, had rather a bad quarter of an hour with him too; but his great point, which was supported by a quotation from Mr. Fitzjames Stephen's *Essay on Liberty, Equality, and Fraternity*, was that confession was a monstrous interference with individual liberty; on which we should merely observe with the old schoolmen, *distinguebuntur*. If confession is imposed by law, as was formerly the case in the Roman States and other Continental countries, the objection is pertinent enough; but how voluntary confession can be an interference with freedom of action it is hard to see, except on Mr. Froude's principle that true liberty consists not in governing yourself, but in being governed by good laws. Only, in that case, a Roman Catholic Government may fairly send all its subjects to confession. Mr. Dallas Marston, who seconded the Resolution, gave a rapid sketch of the growth of "the Catholic movement," which ought to be called Roman Catholic, during the last thirty-five years, and mourned over the declining influences of "grand saints like Hugh MacNeils." He considered, however, as we have seen, that Ritualist curates might be summarily disposed of, and an alteration of the law to facilitate the ejection of incumbents must be made a hustings question at the next election. But the Rev. J. Bardsley, who moved the next Resolution, can hardly have thought any change in the law necessary, for he insisted at great length

that Ritualist and Roman Catholic teaching on confession are identical, and that the existing Prayer-Book excludes everything of the kind. Mr. Newdegate, who followed him, advised an appeal to the common law. He thought Ritualist incumbents should be proceeded against for breach of contract, and also, if we rightly understood him, for conspiracy. And he warmly commended the noble example set by the Vestry of St. George's, Hanover Square, which had that morning presented an address against confession to the Bishop of London. We must confess to having ourselves been irresistibly reminded by this procedure of the Resolution passed in the Papal Aggression year by the Vestry of one of the smallest parishes in Exeter, "That the Vestry of St. Mary-Steps defies the Pope and the Devil;" and we cannot help fearing that the result will in either case prove about equally efficacious. To be sure the Churchwardens of St. George's had one very practical object in view, for Mr. Fleming paid the Bishop the dubious compliment of expressing a significant hope "that his lordship would give a proof of his sound Protestantism," which is therefore not beyond suspicion, "by appointing to the vacant incumbency of All Saints (Margaret Street) a sound Protestant clergyman." We know pretty well what Mr. Fleming means by "a sound Protestant," and he must know well enough that such an appointment as he suggests would break up the large and influential congregation of one of the finest modern churches in London. But then "the principles of our glorious Reformation" must be vindicated at all costs, and the first of those principles is private judgment—that is, of course, the private judgment of "sound Protestants," not of congregations addicted to what the St. George's Vestry call "objectionable ceremonies, and superstitious practices," and worst of all, to "auricular confession."

What answer precisely Mr. Gladstone may intend to give on Monday next to Lord Sandon's demand for the introduction of a Government measure to put down Ritualism we cannot venture to predict. That it will be sublimely oracular is what experience would lead us to expect. Nor can the Premier well be blamed if he shrinks from meddling with a theological controversy which the united wisdom of the episcopate has confessed itself powerless to solve. To most persons beyond the sacred precincts of Exeter Hall and Printing House Square, the fact has long since become familiar that the Church of England is divided into three parties, none of which could be expelled without imperilling the very existence of the Establishment. Lord Shaftesbury himself distinctly admits that the Ritualists are "a large minority," and this is even more than he ventures to claim for his own followers, when he compares them to the faithful remnant of "seven thousand who have not bowed the knee to Baal." There is no need, however, for entering on a minute analysis of the relative numbers and strength of the rival sections of the Church. There are undoubtedly thousands of clergymen who never were a chasuble or waved a thurible who would raise a cry of *procurus ardet* if the Ritualists were to be forcibly ejected; and—what is still more important—they have a large and influential body of laymen at their back. Under these circumstances, it is not wonderful that the bishops, however favourably disposed, should hesitate to make themselves the tools of the Church Association. The "soothing syrup" of their utterances, as we have before now observed, is not a very dignified mixture, but the sort of theological Harvey which Lord Shaftesbury desires to substitute for it would hardly improve the hash. They will best consult both their dignity and their personal comfort by not barking too loud when they are not prepared to bite.

Meanwhile Mr. Newdegate has had another opportunity since Monday of coming forward as the champion of outraged Protestant liberties by moving for a fresh Commission of Inquiry into Monastic and Conventual institutions. There is, indeed, a closer connexion than may appear at first sight between the anti-confessional and the anti-conventual crusade. Convents and confession are alike abhorrent to the "sound Protestant," which is an excellent reason why he should keep clear of both the one and the other. But it is not equally obvious why those who conscientiously, however unreasonably, desire to confess their sins or take the veil should be precluded in the name of liberty of conscience from gratifying their wishes. The Commission of 1870 answered every reasonable purpose that could be alleged. One speaker on Wednesday paid Mr. Newdegate the ambiguous compliment of comparing him to Bismarck. But there is at least one important difference between them. Those who most bitterly condemn Prince Bismarck's "persecuting" policy will be the last to deny that it is thoroughgoing and effective, so far as such drastic methods can ever be expected to produce the desired effect. But the German Chancellor, while he strikes or persecutes those who are quite able to strike hard in return, and whom he professes to consider dangerous enemies of the State, would hardly condescend to an ignoble and profitless warfare with some hundreds of defenceless ladies, whose worst offence against society is that they have thought fit to leave it. Fortunately the House of Commons is a more impartial tribunal than Exeter Hall, and even the united eloquence of Mr. Newdegate and Mr. Whalley, who seems to have objected to any toleration of Roman Catholicism, failed to allure it into a stupid exhibition of injustice.

THE MILITARY OFFICER OF THE FUTURE.

UNDER the old system British officers, if not possessed of much book learning, nor profound students of the theory of war, were, as a rule to which there were few exceptions, fine, manly fellows, capital practical soldiers within the limits of

regimental duty, high-spirited, honourable, conscientious, generally well born, and almost invariably popular with their men. It is true that from want of inducements they were somewhat idle, and were apt to speak of professional work as a necessary evil, to be reduced by frequent leaves of absence as much as possible. They were not much given to troubling themselves about military science, for the natural reason that there were few instances of tangible profit having resulted from such an employment of their time. Off the parade ground, they were rather puzzled as to how they should handle their men, and, though tolerably well acquainted with the Field Exercise, were not very ready at adapting it to sudden emergencies, or modifying it to meet unforeseen circumstances. They were rather addicted also to self-indulgence and dandyism, till the rough conditions of a campaign forced them to adopt a more Spartan style of living; still, when necessity demanded, they could and did bear the severest privations cheerfully enough. Their favourite maxim, however, was that they should enjoy themselves as long as they had the means of doing so, and, when these were wanting, make the best of things. Always shirking uniform and getting away from the regiment whenever they could, they nevertheless were proud of their profession, and looked on the regiment as their home. In short, they were full of contradictions; for when things went smoothly, they never ceased grumbling, and, had they been quartered in Paradise, would have sworn they were bored to death, and that it was "a beastly hole"; yet, if they took the smooth ill, they put up with the rough in the most admirable manner. To outsiders they seemed to have few thoughts beyond racing, billiards, smoking, drinking, and dissipation generally, and to be a careless, not to say heartless, set. But, when really tested, they soon showed that they had been libelled. For unselfish devotion to comrades of all ranks, for gallant exposure of life whether in the battle-field or in the midst of an epidemic, for kindness and generosity to the poor and helpless, for conscientious performance of duty at any sacrifice, they were unequalled. The consequence was that, wherever British officers led, British soldiers followed; whatever British officers ordered, British soldiers promptly and cheerfully did, and the word of a British officer was acknowledged all over the world to be sacred and thoroughly trustworthy. He did, when in quarters, sometimes drink a little more than was good for him, but the excess was caused rather by sociability and hospitality than by a vulgar love of liquor. He was, when young, given to talk a good deal of nonsense about horses, and to affect a knowledge of the Turf, but he seldom was tainted by the mean vices which nowadays seem to be almost inseparable from racing. He was not a very intellectual gentleman, but he was a gentleman to the backbone, jealous alike of his own honour and that of the regiment. Another great characteristic of the British officer of what we may call his *camaraderie*. Every man who belonged to the same cloth was *primâ facie* a friend, and had a claim to his good offices; touch one, and the whole body of officers burst out into wrath. We speak of the British officer as he existed in the pre-Crimean days, but since then a great improvement has taken place. Drinking has gone out of fashion, swearing is, save in certain exalted places, no longer considered a mark of smartness, and essential to the securing of the proper performance of duty. Officers are now all fairly educated, while some are highly accomplished. The art of war is studied; not so much as it should be perhaps, but still the man who reads professional works and attends professional lectures is no longer an object of ridicule to his fellows. The mental vision has been trained to deal with cases for which no rules are to be found in the drill-book, and the British officer both thinks and writes rather more than is sometimes quite agreeable to his superiors. Without losing his old virtues, he has added new ones to those which he always possessed.

It is important to consider what change the recent revolution in military matters is likely to make in the character of our officers, for on this the efficiency of every army vitally depends. Most races can furnish good raw material for the rank and file, but the stuff out of which excellent officers are made is less frequently met with. The influence of good officers on an army is simply incalculable, and compensates for much that may be defective in other respects. Take our Indian sepoy, and contrast their conduct when fighting under the leadership of British officers with that which they displayed when, during the mutiny, their chiefs were of their own race. Compare the conduct of the ordinary Chinese troops with that of Gordon's ever victorious army. Without good officers the best army in the world will accomplish little; moreover, good officers are much more difficult to get than a fair rank and file. One great cause of the continual French defeats after Sedan was the scarcity of experienced leaders, and the chief explanation of the wonderful efficiency of the Prussian troops, notwithstanding their short term of service, is to be found in the excellence of their officers. If we hope to be able, in case of need, rapidly to expand our own army, we too must take care that the cadres comprise first-rate officers and non-commissioned officers, or expansion will only produce bulk without corresponding strength.

The question is, what constitutes a good officer? The answer is, that in addition to professional skill and experience, certain moral qualities and social circumstances are required. In this country at all events, it is essential that the majority of our officers should be men of the degree of gentleman. The British soldier, to use his own expression, "mortally hates" being commanded by a man who has risen from the ranks. The reason is not far to seek. Not only is the Englishman essentially aristocratic in his

feelings, but a gentleman, accustomed to the position of a superior, to possess authority and to be treated with respect, can usually be trusted not to abuse power or to assume an overbearing manner towards his inferiors. There is also a clannish feeling which makes men like to be commended by the sons or brothers of those who were the local magnates of their native districts. Then a man promoted from the ranks is often rough in his manner, endowed with the *fortiter in re* without the *suaviter in modo*. He is apt to be wanting in kindly consideration in trifles, and he not only knows too much, but wants the tact which would teach him when it would be wise to shut his eyes. The consequence is, he unintentionally harasses the men. Finally there is the men's natural jealousy of an officer who but a short time previously had been one of themselves. The best proof, moreover, that soldiers like to be commanded by men of good social status is that, whenever they wish to give the highest possible praise to an officer, they speak of him as "a perfect gentleman." Apart, however, from these considerations, it is not desirable that commissions should be extensively given to non-commissioned officers. The natural tendency of mankind is downwards, and it is to be feared that, if there were many promoted sergeants in a regiment, the tone of the whole body of officers would insensibly deteriorate. Fortunately there is little fear of any great influx of this class, for in peace time and out of India a commission is not regarded by non-commissioned officers as being really a prize. In dealing, therefore, with the question of the military officer of the future, we need not further trouble ourselves with that part of it which relates to promotion from the ranks.

Officers who entered under the old order of things seem to be anxious to quit the service as soon as their circumstances will permit them to do so. At the end of another ten years, therefore, it is probable that the large majority of regimental officers will consist of men who have obtained commissions under the new system of unrestricted competition. Now we should like the public to understand what this means; for hitherto, save in professional circles, the subject has attracted very little attention. Lord Vivian the other day, by a question asked by him in the House of Lords, caused a good deal of light to be unwittingly thrown on this point by the War Office authorities. It appears that, practically, almost any candidate not actually known to the police as an associate of felon very soon goes up for examination, and, if sufficiently crammed, will obtain a commission. Theoretically there is a check, but a little examination of its nature will show that it is quite delusive. According to the regulations, a candidate must present a certificate of good moral character from the clergyman of his last parish, or from the head of the college or school at which he has been educated during the two preceding years, or some other satisfactory proof that he is a well-behaved lad. But we all know that certificates, as a rule, may mean anything or nothing, and that clergymen, in their charity and fear of giving offence, will seldom refuse the moral voucher demanded of them, provided the asker wears a decent coat and is not a notorious evil liver. As to heads of schools or colleges, they can hardly, without stultifying themselves, decline to give a certificate to any youth whom they have thought sufficiently well behaved to be retained at their establishment. Many lads spend the year or two preceding the examination with a crammer, who generally troubles himself little with anything but their studies, and who is moreover in great measure dependent for pupils on the good word of those whom he has succeeded in getting through the ordeal. Then there is the case of the "other satisfactory proof of good moral character." We presume this means that the family doctor, any member of a recognized profession, a householder, or even a relation, provided that he does not bear the same name as the candidate, will be permitted to give testimony as to morality. But the chief difficulty lies in the impossibility of fixing any rigid standard of character, and in the ill results likely to ensue from allowing every one to set up his own standard. What is good moral character as relates to fitness to enter the army? An austere clergyman may say that the young gentleman is reputed to be not so particular as he should be in the selection of female associates. Sir Wilfrid Lawson would probably consider that a lad who drank wine habitually, and brandy and water occasionally, was disreputable. A man of the world would look on such practices as comparatively venial offences; and it is doubtful whether the authorities at the Horse Guards would think the worse of a young man for drinking, provided that he did not get drunk, or for licentiousness, if no public scandal had ensued. The other day six hundred candidates presented themselves for examination; consequently six hundred persons must have sent in certificates of good moral character, and it is probable that every one of the givers of those certificates entertained his own notions as to what good moral character is. We learn that out of the six hundred candidates two had previously been removed from the Royal Military Academy, Woolwich, for misconduct. If unfit to be cadets, they were certainly not proper persons to receive commissions as officers; and the fact that two students who had been removed for misconduct should have been allowed to compete speaks ill for the efficiency of the check which the Horse Guards officials pretend to exercise. Lord Lansdowne said that it was in contemplation to require from every candidate a list of the schools at which he had been educated since the age of twelve, in order that, if inquiry was deemed necessary, it might be made. It will be observed that it is not asserted that inquiry will be made, but

only that it *may* be made in some undefined contingency which may or not arise. But the fact is that no inquiries carried out either in the present or in the proposed manner can be deemed satisfactory. With regard to the two cadets removed from Woolwich, the Duke of Cambridge says that their characters were certified as faultless. "Anything more perfect than they were represented to be could not be conceived." It is also to be remembered that even if a lad is full of respectability and mathematical formulas, it does not at all follow that he is fit to be an officer. An officer should possess other qualifications than merely all the talents and all the virtues. He may have strictly observed the Commandments from his youth up, he may write Greek like a native of ancient Athens, solve the most difficult problems of mathematics with the ease of a senior wrangler, and know by heart the names of all Queen Elizabeth's courtiers, and yet not be a person to whom it is desirable to give a commission. His temper may be atrocious, his manners those of a boor, his associates from childhood upwards of the lowest and most vulgar description; and yet, according to the present regulations, such a man can insist on being made an officer.

Unless some change be made, there is nothing to prevent the army from being inundated with a class of persons who may be "officers," but certainly will not be "gentlemen." What we want is not a collection of mere crammed bookworms, but men who, in addition to being well educated, possess those other qualities which have hitherto caused the name of British officer to be respected throughout the world. Of these there is, we doubt not, an ample supply to be obtained. The great increase of work, and the manner in which the army has lately been dealt with, may render rich men less anxious than formerly to enter the service; but there are plenty of gentlemen, poor, but of good birth, many of them the cadets of noble families, who might easily be induced to apply for commissions. These are the men whom Mr. Cardwell should seek to attract. He does not, however, seem to care for them, and certainly no endeavour is made, either by raising pay or lowering expenses, to enable them to indulge in that costly luxury called serving one's country. Indeed it is said that, while on the one hand the Secretary of War patronizes clever "cadts," on the other the Commander-in-Chief makes no secret of his intention not to reduce the expenses of military life, so as to make it possible to men who have not independent fortunes. Mr. Cardwell has also broken up the officer's home—his regiment; so that altogether our anticipations as to the British officer of the future are far from being cheerful.

STAGE RIGHT.

THE prevailing practice of dramatizing novels gives increasing importance to a branch of the law of copyright which may be conveniently distinguished as stage right. There is at this moment a case pending in the Court of Queen's Bench in which the plaintiff and defendant are owners of two plays founded on the same story. This story was published in *Good Words*, and the author afterwards dramatized the story, and sold the play thus constructed to the plaintiff, but he neither published nor acted it. A few years afterwards the defendant produced upon the stage a piece which the plaintiff alleged to be an infringement of his right. We will assume the existence of that similarity between the two plays which must be necessary to found the plaintiff's case. Indeed, if both the plays were derived from the same story, this similarity could hardly be avoided. The plaintiff's claim of right may be founded either upon statute or common law. But the language of the Act protecting dramatic literary property is hardly applicable to the case. An author who has composed, but not printed and published, a play, has by the Act the sole liberty of representing that play; and any person who represents, without the consent of the author, "any such production, or any part thereof, shall be liable to a penalty, which may be recovered in an action by the author. It is obvious that this enactment was directed to the ordinary case of a play which is performed at a theatre but not published. It would prevent the employment by a rival manager of a short-hand writer to take down the words of a new play, as has been sometimes attempted. But in the case before us the plaintiff could not say that the defendant had represented his play, because his play had never been performed. A later Act provides that the sole liberty of representing a dramatic piece shall be the property of the author for the same time as is by that Act fixed for the duration of copyright in books. But this Act also fails to reach the case. It could not be said that the plaintiff was the author of the piece represented by the defendant. Thus the matter stands upon statute law. The author of a recent treatise on Stage Right contends strongly for the existence of this right by common law, and he is able to produce a recent decision of an American Court in support of his own view of what the law ought to be. But the existing law, we must confess, falls considerably short of ideal perfection. It is lawful, although shabby, to dramatize a novel without asking the author's leave. This, indeed, was what was done in the case now under consideration. A tale was published in a periodical, and a playwright seized it and turned it into a drama. If this is generally lawful, why should it be made unlawful by the fact that the author had himself constructed an unpublished drama out of his tale? The course which novelists who are also dramatists ought to take for their own protection may be seen in the example of Mr. Wilkie Collins. A play called the *New Magdalen*, was produced under

his authority almost simultaneously with the completion of his novel under the same title. No rival dramatist can now utilize this novel, because, although some of his work may be different from that of Mr. Wilkie Collins, the bulk of it will necessarily be the same, and thus he will offend against the statutes passed for the protection of dramatic copyright.

This treatise on Stage Right contains an interesting collection of cases, among which we find *Murray v. Elliston*, which occurred before the above-mentioned statutes were passed. Lord Byron's tragedy of *Marino Faliero*, of which the copyright belonged to the plaintiff, had been abridged by curtailing the dialogues and soliloquies, and had been represented by the defendant at Drury Lane Theatre. The advertisements described it as Lord Byron's tragedy. It was held that, as the law then stood, the plaintiff was entitled to no redress. Among modern cases *Reade v. Conquest* is one of the most remarkable. The plaintiff complained that his novel *It is Never too Late to Mend* had been dramatized by the defendant, and performed at his theatre, and the decision was that no action could be maintained for the alleged injury. This case, like that last cited, shows that authors have by English law only those rights which some statute gives them. The notion of copyright or stage right at common law, however it may have been encouraged by judges formerly, has been rejected in modern decisions which appear conclusive. There was a second case of *Reade v. Conquest*, in which the plaintiff sued for an alleged infringement of his right in a drama called *Gold*, which was the novel *It is Never too Late to Mend* in a dramatic shape. It does not clearly appear from the report whether this drama had been performed or otherwise published, but we assume that it had been. The plaintiff succeeded in this action, although he had failed in the former. The defendant alleged that he had taken his play from the plaintiff's novel, and not from the plaintiff's play; but the Court said that "a very considerable part of the plaintiff's play had been represented by the defendant." Mr. Coryton, the author of *Stage Right*, suggests, if we understand him rightly, that the second of these cases of *Reade v. Conquest* overrules the first. But if he means this, we do not agree with him. If A publishes a novel, and B dramatizes that novel, and publishes the play thus constructed, it may be that the publication of the play is an infringement of the copyright of the novel. But if B merely performs his play upon the stage without publishing it as a book, he is not liable to an action. But if A has not only published a novel, but has also published or performed a play upon the same subject, and B performs a play upon that subject, it will not be open to B to say that he took his play from A's novel and not from A's play. The Court will answer, "You are performing A's play, and are therefore liable to an action." In the case which we mentioned as still pending, A wrote both novel and play, but the play never in any way saw the light. Then B constructed his play from the novel and acted it. If, besides acting the play, he had published it as a book, he would perhaps be liable to A for an infringement of his copyright, as suggested in *Reade v. Conquest*. But this question cannot arise in the action, because the plaintiff is not the author of the novel and play, but merely an assignee of the play.

We believe that Mr. Reade, besides litigating questions interesting to authors, rendered to his brethren the further service of inventing the term "stage right," which Mr. Coryton has adopted for the title of his treatise. He quotes a curious account of the methods of protection which were adopted before any statute preserving stage right was passed. It was always the interest of the proprietors of a play to keep it out of print. There were two kinds of authors, paid authors and sharing authors. It was not the sharing author's interest to print his play, and the paid author lost the right to print his. The sharing author's parental feeling made him print eventually, but only when the theatre had worn the play quite out. The sharing actors, whose vanity sided with their interest, held the bought plays tight, and kept them out of print with the keenest jealousy. They kept them under lock and key; they hid them; they destroyed them. When all their precautions were outwitted, as happened now and then by double MSS. or shorthand, they applied to some great officer of State to restrain the printing, or they bought the printer off, or they closed their stage-door to the author. Printing enabled other theatres to play their pieces. Thus, the better the play, the less likely were the sharers to let it escape into print. No poet's work, unless he was a sharer, was safe. If Shakespeare had sold his plays out and out to a theatre, we should have lost many of them. It has been calculated that at least two hundred good plays of other writers have been lost from this cause. The case of Macklin v. Richardson, decided in 1770, is interesting in this connexion. Macklin was the author of a farce called *Lone à la Mode*, which was played at various theatres with his permission. He never printed or published the farce. When the farce was over, he used to take back the copy from the prompter. The defendants, who were proprietors of a magazine, caused the words of the farce to be taken down in shorthand and published part of it. The Court of Chancery granted an injunction to restrain the publication. The defendants argued that the representation of the farce on the stage gave a right to any one of the audience to carry away what he could and make any use of it. But this argument was rejected by the Court, and it was pointed out that an author does not by performing a play lose his literary copyright therein. The practice of keeping successful plays unpublished has descended to our own time. Many of the plays of the last ten years have remained unpublished, but the loss thus sustained by our national literature is tolerable.

The case of *Hime v. Dale* was an action for printing the words of a song called "Abraham Newland." Lord Ellenborough was inclined to think that such a publication was not protected by the Copyright Act then existing, but only because the word "book" did not apply to a single sheet. Counsel for the defendant drew the attention of the Court to what he called the libellous nature of the song, which he contended was such as to disentitle it to the protection of the law in whatever shape it appeared. "It professed to be a panegyric upon money, but was really a gross libel upon the administration of justice." He relied upon the words:—

The world is inclined
To think justice blind,
Yet what of all that?
She will blink like a bat
At the sight of friend Abraham Newland.

We should explain that Abraham Newland was an officer of the Bank of England, whose name appeared upon the bank-notes of that period. The Court remarked that the same argument would have applied to the *Beggar's Opera*, which was "sufficiently derogatory to the administration of public justice." In *Bosey v. D'Almeida* it was held that the adoption of "a considerable and recognizable part" of a melody was an infringement of the composer's right. It was said that the defendant's publication was adapted for dancing only, and that some degree of art was needed for the purpose of so adapting it, and that but a small part of the merit belonged to the original composer. "It was a nice question," said Lord Lyndhurst, "what should be deemed such a modification of an original work as should absorb the merit of the original in the new composition." It is the air or melody which is the invention of the author, and which may be the subject of piracy. You commit a piracy if, by taking not a single bar but several, you incorporate in the new work that in which the whole merit of the invention consists. It must depend on whether the air taken is substantially the same as the original. The original air requires the aid of genius for its construction, but a mere mechanic in music can make the adaptation or accompaniment. Returning to the case of plays, it may be remarked that a close adherence to the plaintiff's plot, with colourable variations only in the dialogue, names of characters, and scenes, would constitute piracy in the defendant. But the Court would hardly interfere if only the outline of the plot, however ingenious, were taken. This remark, which we borrow from Mr. Coryton, may perhaps be questioned, but it could not be thoroughly tested until some dramatist produces an entirely original plot, which perhaps is not very likely to occur. We all know that of the plays of Shakespeare there is hardly one of which the plot is not taken from a story already existing. "Servile copying," even of parts of a work, has been held in several cases to constitute piracy. An eminent judge has said that the test is, "Whether you find on the part of the defendant an *avowed* *faute*—an intention to take for the purpose of saving himself labour."

This little book contains both useful law and curious reading. If we think that the author's zeal for justice sometimes carries him a little beyond the strict letter of the decisions which he quotes, it is impossible not to sympathize with his desire to obtain the fullest means of protection for literary work. The subject is likely to continue to attract attention, as the conflict between novelists and dramatists will hardly be settled without further litigation.

REVIEWS.

THE FIRST LORD KENYON.*

LORD KENYON'S Life has been already told twice, with much fullness, and with a generally correct appreciation. There is a Life of him by Mr. W. C. Townsend, a diligent, fair, and able biographer, published in 1846 in the *Lives of Twelve Eminent Judges of the Last and Present Centuries*, of which Lord Kenyon's present biographer speaks well; and there is a second biography by John, Lord Campbell, which Mr. Kenyon complains of, and complains of, we think, without reason. Any Life bearing Lord Campbell's name would not be Lord Campbell's if it did not contain a certain quantity of oily twaddle and savoury innuendo; but in the case of Lord Kenyon praise really more than balances censure, and Lord Campbell cannot be justly accused of under-rating Lord Kenyon's merits. Lord Campbell's Life indeed is taken almost bodily from Mr. Townsend's, which makes Mr. Kenyon's dissatisfaction with Lord Campbell and perfect satisfaction with Mr. Townsend more singular; but the aggravations of Lord Campbell's more spicy style probably explain the difference. Lord Kenyon was a good man, moral and pious, and he was a learned lawyer, without cultivation or philosophy, and as a politician he was not only of mediocre ability, but also a very narrow-minded bigot. Mr. Kenyon, the present biographer, a feeble writer, seems to have fair intentions; but a relative is necessarily biased, and there are parts of Lord Kenyon's character—his parsimony, his strong temper, and his blundering in English and in Latin, which he was foolishly fond of inappropriately quoting on the Bench—on which Lord Campbell, following Mr. Townsend, amusingly expatiates, and on which Mr. Kenyon is naturally re-

* *The Life of Lloyd, First Lord Kenyon, Lord Chief Justice of England.* By the Hon. George T. Kenyon, M.A., Christ Church, Oxford. With Portraits. London: Longmans & Co. 1873.

served. Lord Campbell's is certainly the truer sketch. For the bulk of his Life he has been indebted to Mr. Townsend, the results of whose industry he has freely appropriated; and it follows that the Life of Kenyon is generally free from such inaccuracies as abound in other of his Lives, chiefly Lives of earlier Judges. There is only one inaccuracy of any consequence with which Mr. Kenyon charges him, and in this instance Mr. Kenyon does not make out his case. The Dean of St. Asaph, Dr. Shipley, was indicted by Mr. Fitzmaurice for publication of a libel which was a political and constitutional tract, written by Sir William Jones, the great Oriental scholar, then lately appointed an Indian judge. Such a prosecution in these days would be considered ridiculous and monstrous. The case came before Kenyon, as Chief Justice of Chester, in 1783. Erskine was brought special as counsel for the Dean:—

The Dean of St. Asaph [we quote Lord Campbell] made an affidavit, showing that the supposed libel, which was a very harmless explanation of the principles of representative government, had been written by Sir William Jones, and that the prosecution was maliciously instituted by an individual, after the Government, by advice of the Attorney and Solicitor Generals (Mr. Wallace and Mr. Lee), had refused to prosecute. The Chief Justice professed great respect for Mr. Wallace, with whom he had several times exchanged the office of Attorney-General; but was highly offended by his opinion being stated that the "Dialogue" was not a libel.

Mr. Kenyon refers to and finds fault with this as "Lord Campbell's assertion that Mr. Wallace was of opinion that the publication was not a libel." Lord Campbell does not give his own opinion, but relates a statement made in Court; and as to the statement in Court, it would have had much plausibility even if it were not strictly accurate; the fact being that the law officers had declined to prosecute, and there being in Lord Kenyon's possession the following letter from Wallace, now published by Lord Kenyon's descendant, which the same descendant regards as inconsistent with the statement he attributes to Lord Campbell. But is it so inconsistent? Mr. Kenyon, whose nature is fair and temperate, introduces this letter with a statement of his own which goes far towards annihilating inaccuracy in the statement which Lord Campbell simply reports:—

The Government declined to move in the matter, but Mr. Wallace seems rather to have inclined to the opinion that there was ground enough to warrant a prosecution, though he could not advise the Government to undertake it.

James Wallace, Esq., to Lloyd Kenyon, Esq.

July 31, 1783.

Dear Kenyon,—I was in hopes to have seen you before you went on your circuit, but it is now impossible, as I am this moment sitting out for Margate. I have sent you the copy of the indictment. Lee and I could not join in a report. We thought the publication too vague to admit of the construction imputed to it. I thought it calculated to incite the people to ~~disrespect of public grounds~~—however, I gave no opinion upon that, as I thought it an improper thing to take the prosecution out of the hands of Mr. Fitzmaurice.

I am, ever yours,

JAS. WALLACE.

In this trial Kenyon showed a strong bias against the defendant, and that political bigotry which was a bad part of his character, and animated many of his later judgments when he was Chief Justice of England; and there is an advantage in Lord Campbell's Life, which in this case, as in others, goes a long way to compensate for his biographical vagaries and inaccuracies, that he criticizes with authority, as a Liberal judge and a sound constitutional lawyer, Lord Kenyon's prejudices and peditaries.

An important and interesting chapter in this book is devoted to the question of Lord Thurlow's conduct in 1789 about the Regency Bill, when King George III. was first taken ill. Lord Thurlow's great friendship for Kenyon quite justifies the biographer's digression, and Mr. Kenyon is able to supply some new interesting data for discussion from Lord Kenyon's diary, and from a correspondence of Lord Kenyon's son, the last Lord, with Lord Holland, the nephew of Charles Fox, and himself an honoured statesman. Thurlow was Pitt's Lord Chancellor when the King's illness rendered it necessary to take thought of a Regency. The Prince of Wales, closely allied with the Whigs under Fox's leadership, desired to become Regent as of right, and without any restrictions. It seemed inevitable that, on the coming of power into the Prince's hands, he would make a new Ministry of Whigs. The Whigs, advised by Lord Loughborough, who looked to the Lord Chancellorship in the expected Whig Administration, espoused the Prince of Wales's views as to the Regency. The Prince earnestly desired the support of Thurlow, and hoped and expected to gain it by a promise to make him Lord Chancellor. Fox, who was out of England when the King's illness began, and found on arriving in London the Prince's mind made up as to an endeavour to gain Thurlow and sacrifice Loughborough, went into the plan with undisguised aversion. There is no proof that Fox went so far as to make a formal offer to Thurlow; there is certainly none that Thurlow formally accepted any offer, and all the circumstances go to show that he did not. The intrigue begins with a published letter of November 9, 1789, of Mr. Payne (stupidly called Captain Itayna by Lord Campbell in his Life of Thurlow, but when he came to write Lord Loughborough's Life, he got the right name), Private Secretary of the Prince of Wales, addressed to Lord Loughborough. Sheridan, in Fox's absence, entered into the scheme, but expressed in a letter to Lord Loughborough of November 12 great dissatisfaction with Mr. Payne's officiousness. Nothing was done till Fox returned on November 24. Fox then made up his mind to ask Lord Loughborough to waive his claims in favour of Thurlow. "I have swallowed the pill,"

he wrote to Sheridan; "a most bitter one it was, and have written to Lord L., whose answer of course must be *consent*. What is to be done next?" He wrote to Lord Loughborough, and the answer is a reluctant consent. Parliament met, after an adjournment settled before the King's illness began, on December 11. Thurlow then acted with his colleagues. There are some published letters of the interval, one from Lord Loughborough to Sheridan, a letter from Loughborough to Thurlow and Thurlow's reply (this reply now published for the first time by Mr. Kenyon), and a letter from Fox to Loughborough, which is printed with the date December 26, but there must be a mistake in this date, and probably the true date is December 6. This is an important letter, for it relates a conversation with Thurlow, and states that "the negotiation is off, with an express desire on his part that no more may be said to him on the subject till the Regency is settled, and *advice* to the Prince to make his arrangements without any view to him." This letter evidently must have been written before the meeting of Parliament. On December 11, the day of the meeting of Parliament, Thurlow spoke so as to convince Pitt's friends that he "meant to stand by his colleagues"; even before this, on the 7th, a letter of Mr. Granville says that, "whatever object Thurlow might at one time have had in view, he has now taken his determination of abiding by the present Government and supporting their measures with respect to the Regency"; on the 15th of December, Thurlow, opposing Lord Loughborough, made his celebrated peroration on the many favours he had received from the King, "which, when he forgot, might God forget him," and Wilkes, standing as a member of the House of Commons by the throne and near him, exclaimed, "Forget you! he'll see you damned first."

The conduct of Thurlow on this occasion has been very harshly judged, as a piece of deliberate and decided treachery to Pitt. That Lord Campbell should have made a strongly prejudiced, ill reasoned, and highly exaggerated statement against Thurlow will surprise no one who knows anything of Lord Campbell's style and manner of biography; but the adverse judgment of so fair and moderate a writer as Mr. Massey is of importance. The real truth seems to be that eager overtures made to Thurlow by the Prince of Wales's desire, and probably by the Prince himself, were listened to, and that a negotiation proceeded for some little time, Thurlow not committing himself; and not only was there nothing in Thurlow's position to prevent him from listening and discussing—for he was personally on bad terms with Pitt—but even more, he was the Lord Chancellor, and known as the King's friend, whom it was especially proper for the Prince of Wales to consult with; and there is no proof whatever that he entertained any proposal for his own benefit, or did more than consult with political opponents who sought him for the most beneficial solution of a grave and embarrassing question. Pitt and his friends evidently had great suspicion of him, but between him and Pitt there was personal estrangement. Thurlow's private interviews with the Prince of Wales are amply accounted for by his being Lord Chancellor and the Prince's being heir to the throne; and any reserve towards Pitt about them by those unhappy personal relations, and by Thurlow's having been for some time a private adviser of the King. Before he was Pitt's Lord Chancellor he had been successively Lord Chancellor under Lord North, Lord Rockingham, and Lord Shelburne. He had refused to be Lord Chancellor in Fox and Lord North's Coalition Ministry, because, as he told Fox, "as Mr. Pitt is very acceptable to the King, and is in an extraordinary degree popular in the country, I have connected myself with him." When a state of suspiciousness exists, little things are easily misunderstood, and made to swell into grave charges. Lord Loughborough, writing to Sheridan when whatever negotiation there ever was was going on, and with ill-feeling towards Thurlow, said, "His conversations with you and Mr. Fox were encouraging; but at the same time checked all explanations on his part under a pretence of delicacy towards his colleagues." But it is an enemy who says that the delicacy was a pretence. Why might it not have been real? Lord Kenyon was during the negotiation much consulted by Thurlow, and was also in confidential communication with Pitt; he attended several Cabinet dinners. Lord Kenyon has left on record his belief that the charge of treachery against Thurlow was without foundation. On January 17 Lady Kenyon, writing to her sister, says:—"They" [the Opposition] "have coaxed and courted the Chancellor every way, and by every person, but he will not join them." Mr. Kenyon's desire has been to clear Thurlow's character, and we cannot but think that an abler writer, well using all the materials at his disposal, might have effectively done so; his narrative is very feeble and confused, and we infer that there are more of Thurlow's private papers behind which would have been useful for thorough disproof of the charges against him. We cannot confide in Mr. Kenyon's judgment in the use of his materials. This question about Thurlow is an important historical matter.

We are disposed to think that Mr. Kenyon would have done a more serviceable work if he had published Lord Kenyon's Diary complete, and all that is material in his and Lady Kenyon's correspondence, with simple illustrative notes. Mr. Townsend's Life is a very excellent one, as indeed Mr. Kenyon admits. To lawyers and students of legal history Lord Kenyon's Life, as the Life of a Chief Justice, is interesting. To others his Life has no interest beyond his connexion with political history, and his relations with distinguished contemporaries, as Dunning, Thurlow, Erskine, and Eldon; he was much consulted by King

George III. and by Pitt and Thurlow, and there are interesting scraps of connexion and correspondence with more eminent legal contemporaries. Lord Kenyon himself is in no way interesting. George III. told him one day, he records in his diary, "that Sir M. Hale, Lord Holt, and Lord Mansfield were great men and good men, but he would rather have Lord Kenyon than them all." This must have been pleasing to hear, and a descendant naturally records it with delight; but what is the real value of this royal eulogium? The biography shows us nothing better than a hard-headed, narrow-minded lawyer, an obtuse politician, and a virtuous, passionate, parsimonious man. Lord Kenyon's life loses much agreeableness by the author's having interdicted himself from the free use of the many capital stories of Lord Kenyon's penurious ways and blundering Latin quotations and English rhetoric. Coleridge's story of his having turned Julian the Apostle into Julian the Apostle may be apocryphal, but it not the less indicates a general belief in Lord Kenyon's confused mind, which again is proved by numberless similar stories. The *Term Reports* contain this specimen of his incongruous rhetoric:—"If an individual can break down any of those safeguards which the constitution has so wisely and cautiously erected, by poisoning the minds of the jury at a time when they are called upon to decide, he will stab the administration of justice in its most vital parts." Of what Mr. Townsend and Lord Campbell justly call indecent parsimony there is only one glimpse in Mr. Kenyon's biography, where he puts forward even as a virtue his more than simplicity in dress:—

Lord Kenyon was simplicity itself in his dress. Indeed, if the accounts of his contemporaries are to be believed, the simplicity amounted to absolute shabbiness. Erskine used to say he remembered his greatcoat at least a dozen years. A witness who was under cross-examination before him as to his shoes, which had been stolen, snarledly answered the question from the Bench, "Were they at all like these?" with the telling remark, "No, my Lord, a deal betterer and betterer."

There is not the least reason to doubt the truth of the accounts of contemporaries, and these stories of Kenyon furnish a rich treat in Mr. Townsend's able *Life* and Lord Campbell's *réchauffé* of Townsend. Two or three of the jokes about Kenyon, proving the general fame which cannot be without foundation, are so good as to bear endless repetition. A brother lawyer having mentioned to Jekyll that he once went into Lord Kenyon's kitchen and saw the spits as bright as when they came from the maker, "Why do you mention his spit," said Jekyll, "when you know nothing turns upon it?" Another time Jekyll said of his hot temper and his stinginess, "It is Lent all the year round in his kitchen, and Passion Week in his parlour." A hatchment was put on Lord Kenyon's house in Lincoln's Inn Fields after his death, with the motto *Mors janua vitæ*, the painter making the mistake of painting a instead of æ at the end. The mistake was pointed out to Kenyon's successor, Lord Ellenborough, who exclaimed, "Mistake! It is no mistake; he left particular directions in his will that the estate should not be burdened with the expense of a diphthong."

THE CHRONICLES OF ANJOU.

ALTHOUGH the collection of Angevin Chronicles which forms part of a valuable series of works issued by the Historical Society of France has been for some years before the public, it seems to be little known on this side of the Channel. Even in such recent books as Mr. Freeman's *History of the Norman Conquest* the references are still to D'Achery's *Spicilegium* and the like, nor have we found as yet a single English instance of the use of M. Marchegay's collection, or of the new and very valuable materials he has brought to the illustration of the early history of Anjou. Important as the study of Angevin history must always be, whether in its bearing on the fortunes of England or on those of France, it is remarkable that the work is almost the first attempt which has been made towards a critical study of the story of the Counts. By some inexplicable ill-luck Anjou has fared worse in the matter of historical research than any of the provinces around it. For Poitou we have the masterly work of Bezy, for Brittany the great collections of Lobineau and Dan Morice. In later times the industry of M. de Jubinville and the Abbé Voisin has thrown a flood of light on the histories of Touraine and Le Mans. Anjou, on the other hand, remains without any adequate modern account of its past. The older books of Marolles and Bourdigne are of the most worthless sort, and the later narrative of Bodin is brief and superficial. As to the original authorities for Angevin history, they have remained till the appearance of the present work partly unprinted, partly scattered through the not very accessible collections of Labbé, D'Achery, and Dom Bouquet, while no critical attempt has been made to estimate their real worth or their relation to each other. Of the two volumes as yet issued, the first is by far the more important; its contents indeed comprise all the primary materials for the early history of the Counts—the autobiography of Fulk Rechin, the *Life* of Geoffrey le Bel, the account of the Lords of Amboise, the *Gesta Consulum*, and the history of the Counts by Thomas of Loches, a work printed for the first time, but in which the earlier Angevin history, as we have it now, really took its accepted shape. It is a considerable gain to get such a mass of materials as this, printed in a convenient form, and evidently edited with a good deal of care. Our gratitude,

however, is a little tempered by the absence of any prefatory statement either as to the manuscripts employed in the formation of the text or of the view which the editors have been led by their researches to take as to the relation and value of the works they have published. The omission is the more regrettable that the difficulty of ascertaining the real worth and inter-connexion of the authorities on which historians have for the most part relied in their account of the earlier annals of Anjou is very great indeed.

The first and most authentic memorial of Angevin history is the short autobiography of Count Fulk Rechin; and, if we believe its author, the information as to his predecessors which is given in it was derived from Geoffrey Martel, and represents all that the Comital House in the eleventh century knew of its origins. But this information, if we compare it with the accounts so glibly rendered only a century later, is of a somewhat startling sort. Fulk Rechin is diffuse enough about his own times; he has a good deal to say about Fulk Nerra and though he knows less about Geoffrey Grisgonnelle, he tells us of his Breton and Poitevin wars, and of his death at Marson. But of Geoffrey's predecessors he knows nothing but the names. "Quorum quattuor Consulum virtutes et acta, quia nobis in tantum de longinquo sunt at etiam loca ubi corpora eorum jacent nobis incognita sunt, digne memorare non possumus," says Fulk Rechin. It is plain from his words that the tombs in the cathedral at Tours, so well known in the twelfth century, did not exist in the eleventh. But more things had been built up in that interval of a hundred years than the tombs at Tours. If Geoffrey Martel and Fulk Rechin knew little of their own ancestors, the author of the *Gesta Consulum*, a century afterwards, knew, or claimed to know, a great deal. In spite of the falsehoods and inaccuracies which any one detects at a glance in this work, its historic claims have been generally admitted; Sir Francis Palgrave has transferred to his pages the story of a Breton woodman with which the *Gesta* open the annals of the Counts; and even Mr. Freeman, though correcting them at every step, allows them a certain authority. No one, however, has as yet investigated the question of the authorship of these *Gesta*, or of their relation to the earlier works on which they profess to be based. Now it is a remarkable fact that we appear to possess all the materials for the history of the Counts which were known to exist in the twelfth century. In the curious Proemium prefixed to the "*Historia Abbreviata Consulum Andegavensium*," printed in the volume before us (a preface which, as we hope afterwards to show, really belongs to another work), the writer thus reviews his authorities:—

Primus scriptor extitit Thomas Luchensis, qui breves chronicas nomine Odonis (or Adonis) abbatis intitulatas ut ab ejus ore audivi repperit, et multa que famâ vulgante cognovit addidit. Secundus, extitit Robinus Brito Ambiacensis qui ipsas chronicas emendaverunt, et quedam ad vivâ voce ab ipsis audivi addiderunt. Tertius ego ex multis historiis multa addidi.

It is plain that the last three works, that which followed this Proemium and its immediate predecessors by Thomas of Loches and Robin of Amboise, were simply expansions of the "breves chronicas," which bore the name of Abbot Odo or Ado—chronicles similar to, or it may be identical with, the earlier Annals of St. Albans, or the Chronicle of the Abbey of Vendosme, which are given by Labbé. Of the work of Thomas of Loches we know, till the appearance of M. Marchegay's book, only fragments such as those given by Dom Bouquet in his notes to the *Gesta Consulum*; but there were enough to suggest, what its publication in *extenso* proves, that it is to Thomas that we owe the main outlines of the story of the early Counts which the *Gesta* have made familiar. The forerunner Torquatius Tortulf at the Court of Charles the Bald, the adventures of Ingelger, the investiture of Fulk the Red, the piety of Fulk the Good—all, in spite of Fulk Rechin's ignorance of them, and the absence of every name before Grisgonnelle's from the short annals we have mentioned, make their appearance in Thomas. Geoffrey Greygown's own life is summed up in the two wonderful fights with Ethelwulf the Dane and Edalthing the Suabian; a mysterious Count Maurice, unknown to any other writer, is introduced between Geoffrey and Fulk the Black, and the account of the latter is made up out of extracts from Glaber and the queer stories of his adventures at Jerusalem. That of Geoffrey Martel is a little fuller; but here the work practically ends, for the three following Counts are dismissed in a few lines, and an extract from his biography by John of Marmoutiers, then just published, suffices for Geoffrey the Handsome. The character of the work in full is just what we might expect from the mention of it in the passage we have quoted; on the basis of the slight annals which bore Ado's name, and which were probably like those we possess, mere jottings of isolated events, Thomas of Loches has built up out of the stories of joster and jayvour a tissue of legends and fables which have passed ever since for the early history of Anjou.

As we remarked however before, this legendary matter has till now been known, not directly through Thomas, but indirectly through his copyist in the *Gesta Consulum*; a work which had the good luck to be printed by D'Achery in his *Spicilegium*, and which every historic scholar will thank the present editors for reprinting in this more accessible form. Now the *Gesta* as it stands is a rather mysterious production. First, we find it in a very odd place, serving as the second book of a history of the Lords of Amboise, which seems to have been put together soon after the accession of Henry II. to the English throne, and which we shall probably be pretty right in identifying with the production of Robin (or Robin) and Brito of Amboise.

mentioned in the passage we have before quoted. Before getting fairly to work on the story of the Lords of Amboise, Robin and Brito, if they are the authors, have chosen to indulge in two prefaces; the first, under the name of "De Compositione Castri Ambazie," being in reality an odd medley of jottings about Cesar, Clovis, Charles the Great, and Hugh Capet, while the second forms, as we have said, the work known as the "*Gesta Consulum Andegavensium*." Now the Counts of Anjou were overlords of Amboise, and a short account of them, such as the actual prologue to this second part promises, was natural and appropriate enough. "Nunc," says this prologue, "de Consulibus Andegavorum que scripta nimis confuse rudique sermone reperi quam verissime potero *paucis verbis, breviter et commode* enucleabo." But the puzzle is that the *Gesta* which follow in fulfilment of this promise are very far from being brief or in few words. On the contrary, they are long and verbose, nearly twice as long in fact as the main story which they prelude, the story of the Lords of Amboise. We believe that an explanation of this difficulty may be found in the very opposite difficulty which meets us when we turn to the "*Historia Abbreviata Consulum*" at the close of M. Marchegay's volume. As it now stands, this work is preceded by the elaborate Proemium from which we took the list of existing Angevin histories, and which promises us a work of some detail and elaboration. "Intentio igitur mea est," says the author, "vitam, mores, et actus antecessorum tuorum, Andegavorum Consulum in propatulo demonstrari." But this elaborate preface is at present followed by the "*Historia Abbreviata*," a brief summary of the character of each Count conveyed in a few lines. The probable solution of the whole matter seems to be that the two works have taken one another's place; that the so-called "*Historia Abbreviata*" is really the second portion of the work of the writers of Amboise, and that the Proemium, which now precedes this brief compilation, belongs to the *Gesta Consulum*. The more elaborate history of the Counts would naturally supersede the rougher and briefer tale of the *Chronicles of Amboise* in general popularity; and in this case it seems to have been doctored of its elaborate preface, and simply substituted for the earlier work without much care for the fitness of Brito's original prologue which was suffered to remain. If this be so, the authorship of the *Gesta* is settled, for John of Marmoutiers gives his name in the Proemium, and it is plain that we have in them a later work of the biographer of Geoffrey le Bel. The conclusion seems almost inevitable when we compare the character of the *Gesta* with the description of the work promised by John. "Tertius ego ex multis historiis multa addidi," he says, in the close of the passage of which we have already quoted an earlier portion, "et ad auctoritatem historie et studium audientium sive legentium nomine auctorum annotare curavi: I^{mo}. ex historia Francorum nonnulla; II^{mo}. ex historia Glabelli Rodulphi multa; III^{mo}. ex chronica Gualfredi Rechin aliquid; IV^o. ex dictis Magistri Rahini quidam necessaria; V^o. ex scriptis Gasterii Compendiensis, Majoris Monasterii monachi non negligenda." The promise of the Proemium tallies exactly with the real character of the *Gesta*. In the earlier portions of the work the romance of Thomas of Loches is simply dressed into historical shape by profuse quotations from Ainoin and Glaber, while his obvious errors are here and there corrected. The long account of Fule Nerra is drawn from the *History of the Lords of Amboise* and from the French chroniclers, but repetition and an utter defiance of chronology render it nearly worthless. On the other hand, the lives of Geoffrey Martel and of Fule of Jerusalem, with the latter of which John's work practically ends, are of considerable value. The whole work is in reality a bad specimen of the "classical history" prevalent in the twelfth century, and its author lies, exaggerates, fables, mis-dates, jumbles persons and events together in so wonderful a fashion that we can hardly wonder that the continuators of Bouquet resolved to exclude the *Gesta* from their collection, and were only driven from their resolve by the thought of their extensive use among historians.

Luckily for Angevin history we have, as has been seen, nearly all the authorities from which Thomas and John built up their tale, and from the middle of the tenth century the story of the Counts rests on independent and trustworthy sources. It is only the legendary period with which it opens which rests exclusively on the *Gesta* of Loches and Marmoutiers—in other words, on a series of monastic and poetic inventions whose origin we can pretty accurately date in the later days of Geoffrey le Bel. It is to the historic tastes of the Angevin Counts that we may very possibly attribute this perversion of their earlier history. Nothing is more remarkable in the series of rulers from Fule the Good to our own John and Henry III. than their strong taste for literature, and especially for historic literature. The autobiography of Fule Rechin stands almost alone among the historic productions of the middle ages. In one of the few characteristic stories of Geoffrey le Bel we find him studying Vegetius during a long and difficult siege, and turning his study to very practical account. The historical taste of Henry II. is remarked by most writers of the time, and his children seem to have inherited his liking for books. Richard and his nephew Richard, King of the Romans, were both troubadours. The literary side of John's character is almost the only one on which it is possible to dwell with anything but abhorrence. The taste of a Sovereign tells quickly on his Court; and as we may trace the influence of Henry Fitz-Empress in the great English historical school which sprang up in his later years, so the patronage of Geoffrey may have had something to do with the historical revival

in Anjou to which we owe the works of Thomas of Loches and John of Marmoutiers. But though the Counts may have encouraged it, the revival itself must be regarded as part of the great intellectual awakening of the twelfth century. The work of William of Malmesbury, however superior in historic and literary value, is a work of the same class with the *Gesta Consulum*. In both we see the same reaction against the jejune and disconnected annals which they aimed at superseding; the same endeavour to fall back on the models of classical history, which were again claiming the attention of scholars; the same effort after a literary style of composition; the same adoption of a literary rather than a chronological order of arrangement; the same tendency to enrich their work by sketches of character, by philosophical reflection, by the use of State documents, and above all by pretty stories, prose versions for the most part of the verses of ballad-singer or trouvreur. It is easy, of course, to dwell on the faulty sides of this movement, on the looseness and inaccuracy of statement, the muddle of chronology, the jumble of fact and romance which make us every now and then fling down our Malmesbury or *Gesta* in disgust; but the step from the annalist to the chronicler which they made really determined the shape which all after history was to assume. History has often since fallen back to the style of the worst chronicler, but it has never fallen back into the style of the mere annalist. Some attempt there has always been to trace events to their causes, to examine the influence of human character on the fortunes of men, to vary the story by episodes and poetic details; and every attempt of this kind we owe to the historic school of the twelfth century. Like most of the bold intellectual experiments of the time, it failed to realize its own conception, partly from the want of adequate materials, and still more from the utter absence of any defined critical method in the use of them. In England the poetic side was the first to be cast away. The cool scepticism of William of Newborough discarded romance, and the tendency of the great school of historians from Benedictus Abbas to Matthew Paris was to subordinate literary form and largeness of conception to an annalistic arrangement and documentary accuracy and fulness of statement. The more romantic element which the twelfth century had striven to introduce, on the other hand, crossed the Channel and flung off all restraints of truthfulness or morality in the gay and unscrupulous chit-chat of Froissart. Ever since the famous essay of Lord Macaulay it has been the constant effort of modern historians to bring together the discordant elements which William of Malmesbury and his rivals first dared to include in the scope of history. The effort has as yet been attended with very partial success, and the failure of one historic school to be accurate, and of another historic school to be human, may teach us a little indulgence even for such very bad specimens of the earliest attempts at a larger history as the twelfth-century chroniclers of Anjou.

BRENCHLEY'S CRUISE OF THE CURAÇOA.*

SINCE the appearance of *South Sea Bubbles* a lively current of interest has set in towards the islands of the Pacific. The vivid sketches brought home by the Duke of Edinburgh of the scenery, the people, and the goings on of the multitudinous groups which dot the Southern Ocean, together with the curiosities of art and nature exhibited by his permission to the public, gave an additional stimulus to this feeling. Mingled with the agreeable impression thus received of these favoured islands as abodes of native beauty, simplicity, and peace, there has been later still the thrill of horror caused by the atrocities of men-stealing adventurers, and the interest which follows the fate of thousands of French exiles among whom, together with much that was odious and criminal, there was much to claim and merit sympathy. The journal of a traveller of observation, taste, and feeling during a cruise among the various archipelagos of the South can hardly fail to keep alive the interest which had so much original matter to kindle it. The pleasure with which Mr. Brenchley's book, late as it is in coming forward, will be read, is marred indeed by the knowledge that the strong constitution of the writer had given way under the strain to which his passionate love of wandering, with its consequent fatigues, risks, and vicissitudes, had exposed him, and that—dying since the opening of the year—he was denied the satisfaction of seeing his work in print. Physically and mentally fitted in a high degree for the calling of a traveller and observer, Mr. Brenchley had devoted his energies for nearly twenty years to the personal survey of the globe, from China to Peru, from Oregon and the Rocky Mountains to the Sandwich or Hawaiian Islands, Australia, and New Zealand. The first four years of his roamings from 1849 were spent in company with the distinguished naturalist M. Jules Reiny, together with whom he visited California, the Salt Lake City, New Mexico, and the Southern continent as far as Chili. The joint work of the two travellers in French and English was deburred, in the opinion of their friends, from achieving the success it deserved, mainly by the expensive form in which it was presented to the public. A tour to the East after an interval was interrupted by the serious illness of M. Reiny at Ceylon, which deprived Mr. Brenchley of the companionship of his friend. Alone he visited China and Mongolia, made a trip to Japan, proceeding to Australia,

* Jottings during the Cruise of H.M.S. *Curacoa* among the South Sea Islands in 1865. By Julius L. Brenchley, M.A., F.R.G.S. With numerous Illustrations and Natural History Notices. London: Longmans & Co 1873.

and thence to New Zealand, which he reached towards the end of 1864. After being employed upon a short mission into the interior in conjunction with the late Lieutenant Mende, who afterwards published a spirited account of their ride through the disturbed districts of New Zealand, Mr. Branchley left Auckland for Sydney. Thence he proceeded on the cruise which is the subject of the volume before us. On his return to Sydney, where he excited much interest by exhibiting his collection of novel and curious objects, he once more started for China, making his way back to Europe by the great desert of Gobi, in the depth of winter. Of his collection, consisting of birds, fishes, insects, shells, canoe models, and native works of various kinds from Japan, China, Siberia, and Russia, a portion has found its way to the British Museum, but the greater part has been presented to the museum of his native town, Maidstone. Unhappily, he was scarcely spared to put into shape for publication the valuable notes and observations amassed by him during his Southern cruise.

Towards the end of May, 1865, H.M.'s steam-frigate *Caracra* was being fitted out at Sydney, under Commodore, now Admiral, Sir W. Wiseman, for the purpose of displaying the British flag among the island groups of the Western Pacific. An invitation to Mr. Branchley, who had just reached that port, to become his guest during the cruise was eagerly accepted. Norfolk Island and the lesser Islands adjoining it were first visited. Passing Raoul, or Sunday Island, the most northerly of the Kermadec group, lying N.E. of New Zealand, about five miles in length and decidedly of volcanic origin, rising to a height of sixteen hundred feet, the *Caracra* came next to Niue, or Savage Island, whence a number of canoes came off with spears, shells, fruit, &c., for barter. Among the natives was a young abino, whose reddish-yellow hair and fine clear skin led our author to accept him as of English blood. He was a pure-bred native, not knowing a word of English. The natives were found, for the most part, good-looking, strongly built, and of a cheerful and amiable disposition. The women, who seem modest and gentle, have splendid teeth, and soft hands, with delicate taper fingers. One young girl was met with in an island runble, fitted from head to foot to be a model for a sculptor. The missionaries have here had great success. Not a pagan exists in the island, and nearly every one can read and write. This result is the more noteworthy owing to the fact that Cook, who first discovered Niue in 1774, having been set upon by the natives, and re-embarking without inlicting bloodshed, took the innocent revenge of naming it Savage Island. The intermediate history of this people shows indeed that they were far from deserving, as a rule, the stigma thus cast upon them. For beauty and richness of scenery, though presenting a lower type of native physique, nothing can well surpass the Samoan or Navigator group, of which Tutuila especially won our voyager's admiration. The missionary who came on board with Muunga, the intelligent chief of Pango Pango, reported a strong desire on the part of the natives to be placed under British protection, which the commander felt constrained to set aside. Tree ferns rising to a height of forty feet are met with on the island. The soil towards the higher ground was found strewn with boulder-like masses of lava, so slippery as to require the hands in aid of the feet to effect a passage. The island, some seventeen miles in length and from two to five in width, appeared to Mr. Branchley to be in part composed of basaltic strata. The climate, having a tendency to develop brain diseases, as well as fever, with elephantiasis following, scrofula, phthisis, ophthalmia, and intestinal worms, is not to be regarded as healthy. A cascade called Pishi-tali, the Great Fall, reputed to be 2,000 feet in height, was found by Lieutenant Meade, though very grand and beautiful, not to reach half that height. From several of the mountain peaks seen as the ship coasted along, as from the little isle of Lattie, white smoke showed the activity of the volcanoes with which most of these island groups abound in greater or less degree, the most typical of all being apparently the regularly intermittent crater of Asur, in the Tanna Islands. Of the Tonga or Friendly group, including Hapai and Vavau, gathered thirty years back into a native monarchy under King George Tuboa, the most conspicuous feature consists of the social or domestic usages, in particular those connected with the periodical brew of "kava," the ceremonies attending which are given in full detail. The strange prehistoric monument of Tongatabu, figured in the book before us—two upright monoliths of stone, with lintel superposed, bearing a large circular bowl of stone, of a texture, the officers report, not met with elsewhere in the island—is supposed to have some reference to these ancient kava ceremonies. The population, which is dwindling, now amounting to some nine thousand souls, belongs to the great Malayan family, as do the Hawaiians, the Tahitians, the Marquesans, the Samoans, and the New Zealanders. Though nearly all can read and write, scarcely any advance has been made since Cook's time in handicraft or any industrial pursuit. The climate requiring no clothing, and bread-fruit, with other produce, being abundant, native indolence has its way, in spite of the energy and intelligence of the king. A poll-tax of five dollars a head annually is enforced with rigour. Constitutional government, introduced by King George in 1862, has beneficially supplanted the rule of the native chiefs. We fail, however, to find the regulations enacted by the first Tongan Senate, promised by Mr. Branchley as an appendix to his work.

The little island of Ovalau, the first reached of the Fiji group, rich and dense as was the vegetation along gorge and valley, was marked to the eye of a naturalist like our author by the strange absence of birds. The natives who flocked to meet the party were supremely ugly, with immense mouths and large pro-

gnathous jaws, resembling monkeys rather than men, though some among the crowd were tolerably robust and strongly made. Most of the women had the little finger of one hand, if not of both hands, amputated, and one of the men had likewise lost a finger, a custom which our author does not attempt to explain. On the main island of Viti Levu the voyagers were hospitably received by Thakumbau, the dignified sovereign of Fiji, whose open and good-humoured countenance made it hard to believe that he had been the out-and-out cannibal of earlier days, when he was in the habit of indicating with his club the bodies hung up by the feet in the royal harem which were to grace the repast of the day. Near the mission-house stands a great banyan-tree, the sacred *akau tabu*, or tree with the forbidden fruit, into the thick trunk of which is sunk a slab of stone five feet square by way of table for the cannibal feasts of old. On the branches of this tree used to be hung parts of the bodies of victims of both sexes, the tree being at times perfectly loaded with this singular and repulsive fruit. Behind this was a row of slabs, against which the brains of the sufferers were dashed, Thakumbau having been noted for his skill in catching up the children of his enemies by the heels, and dashing them at the slabs. Another gentle vagary was to race a victim by the leg and arm hand foremost along the dancing ground until his head was split against the stone, the surface of which, two feet or so from the ground, has been worn smooth by the thousands of skulls that have been dashed against it. It is a common Fijian saying that not all the waters of the ocean could ever wash away the blood with which the soil of the island has been saturated. Happily this is of the past. It is hoped that cannibalism will ere long cease to disfigure any part of Fiji. It has all along been indeed *tabu*, or forbidden, to the common people and to women, being the monopoly of the chiefs. Protests have already been made against it from many places, as Nakelo, on the Rewa river. Thakumbau in his converted state struck his visitors by the decorum and cleanliness with which his food was served, a general clapping of hands following upon the subsequent washing of the royal hands and mouth. An interchange of civilities ensued upon the entertainment, the King being so pleased with the Commodore's present of a Westley Richards as to give in turn his great kava bowl, of which the volume before us gives a woodcut, round which in heathen times the great ceremonies and mysteries of the kingdom were celebrated. It was in its presence that the ancestors of Thakumbau, and that monarch himself, if not actually crowned, were confirmed in their sovereignty. Many a sad tale could be told of orgies committed and scenes of carnage enacted, when the legs of this bowl were seen steeped in human blood. At Tanna, in the New Hebrides, cannibal practices still prevail to a frightful extent, human flesh being preferred to pork, and that of a native ranking with connoisseurs before that of a white, the latter having, it is thought, a salt taste.

New Caledonia, which was reached by the *Caracra* after visiting the Solomon Islands, is briefly described by our author, who shows a more lively interest in the state and history of the natives than in the development of French rule and artificial usage. We do not get many details of the condition or number of the convict population, which had not as yet been swollen by the influx of condemned Communists. Among the things of note to which he refers are the proofs of a more advanced civilization once having existed on this island. Remains of ancient aqueducts, in one case eight miles long, also paved roads and fortifications, are met with. Irrigation is carried out on a scientific plan, the slopes of the hills being covered with rectangular patches, round which water is made to flow by channels leading at intervals to the river. On the other hand, gross license and horrid habits, together with grovelling superstitions, have come down to the natives from their forefathers. Women go to battle, keeping in the rear till they see an enemy fall, when they rush forward, pull the body away, and prepare it for the oven. The priests go to battle too, but sit in the rear fasting and praying for victory. Their appetite for human flesh is, we are told, never satisfied. The teeth of old women are sown in yam patches as a charm to procure good crops, and the practice of setting skulls upon poles, which some would have it were the heads of friends kept as mementoes, has been similarly explained. The general impression left upon Mr. Branchley's mind by all he had seen of the various island races was one of hopefulness. There was evidence, to his view, of a power of spontaneous development, made manifest in their social organization, their creditable agricultural industry and skill, their progress in certain industrial arts, the decorum and even refinement of their manners, and above all in their capacity for absorbing the instruction and influence of a more advanced civilization. These remarks of his must of course be taken to apply only to the more select and leading tribes among the South Sea Islanders. As regards the fine arts, no words can speak so emphatically of their aptitude as the coloured drawing of a tie-beam from a village hall in Uji, one of the Solomon Islands, which forms the frontispiece, in which canoes, fishes, and other objects are figured in a style not a little suggestive of Egyptian patterns, whilst many of their weapons and utensils show a decided feeling for artistic decoration. The value of Mr. Branchley's book is very much enhanced by the correct and tasteful delineations of native birds, reptiles, fishes, shells, and insects, as well as by the admirable notices of them contributed by naturalists so eminently qualified for the task as Dr. Gunther and Mr. G. R. Gray.

THE LAST OF THE LYTHAMS.*

THE Last of the Lythams is a young lady with the romantic name of Vivia, whose disposition and general behaviour come so well up to the expectations raised in us by such a name that we are not in the least surprised when, in order to escape from an accepted suitor, whom she throws over in a magnanimous spirit on the appearance of a former lover, she disguises herself as a young man, and, evading pursuit in a manner as brilliant as it is unexplained, travels from what we may take to be the heart of England to a remote part of Ireland without hindrance or misadventure of any kind. Being probably unversed in the ways of novels, she is not so well prepared as the reader is for finding, when she reaches her goal, that she is face to face with the old lover for the sake of whose memory she has undertaken this remarkable flight. That such a meeting should take place in a lonely cottage on a wild night is perfectly in accordance with the theory of chances by which novels are guided; but the conduct of the two lovers afterwards is eccentric enough to be worthy of comment. The gentleman, who is held up as a model of good principle and breeding, no sooner finds himself in this rather awkward position, with the responsibility of taking proper care of Miss Lytham suddenly thrust upon him, than he finds a yacht excursion which he had projected "become almost a necessity. The dash of the foam and the rush of the wind were needed to reinspire him with that high strong spirit in which he had for some time been, and still proposed to be—the spirit of the mountains, not of the valleys—the spirit which rejected passion, and even in its philanthropy, was, unconsciously perhaps, contemptuous, doing its duty not for philanthropy's, but for duty's sake." To our ordinary notions the first thought of a gentleman should have been to set about rescuing Vivia in some way from her unpleasant situation; but we can scarcely expect a young man who habitually has been, and means still to be, in company with "the spirit of the mountains," as opposed to that of the valleys, and who from that proud eminence showers down benefits on the mortals beneath him with a lofty scorn, to be guided by any known usages of feeling or courtesy. And so the lady seems to think, for, far from expressing any surprise or displeasure at his intention, she insists upon accompanying him, and they perform together a wild voyage in which the author tells us the young man displays something like a Viking's enjoyment. From this we conclude that the spirit of the mountains is as much at home on the waves as on his native heights.

But we are plunging with undue haste into the midst of events which, in reading, we are supposed to work up to by slow degrees and with increasing interest. We first make the acquaintance of this lady, who has the honour of giving a title to the *Last of the Lythams*, as she rides through a wild part of Connaught with Everard Tylecote, the lover whom we have already mentioned. Part of this ride is performed with the gentleman's arm round the lady's waist, a method which we should fancy was better fitted for the sawdust of a circus than for the sand of an Irish coast. The author dwells with great tenderness on the scenes he is about to describe before he actually introduces us to the characters who are to take part in them, and informs us that "the pen is gently taken by Memory from the writer's hand, and thought reverts with an inseparable sadness and sweetness that gather round its retrospection." It might have been better for Memory to have adhered to her original inspiration, but she relents in favour of allowing us to witness a scene between these two young people desperately attached to each other, which, in consequence of a very mild objection made by the girl to a marriage against her guardian's wishes, ends in a quarrel of four years' duration. This guardian is her uncle Mr. Lytham, whose character, clearly intended to be the chief element of comedy in the book, might be called a burlesque on that of Mr. Collins in *Pride and Prejudice*, but that it lacks any trace of the humour which distinguishes that admirable conception of an opinionated and self-complacent fool. It may be amusing to meet in real life a gentleman who is at the same time so barren of ideas and so proud of the words in which he clothes them that he continually repeats those words; but the effect of reproducing this habit in print, where there is no real perception of the ludicrous to support it, is wearisome. The first speech uttered by this character is his best, and to give our readers an opportunity of judging what is the quality of the rest, we will quote a part of it:—"What I want," continued Mr. Lytham, expanding his dressing-gown with both hands, "is a nephew-in-law who will acknowledge—as everybody else acknowledges—my superior abilities, my insight into character, my extensive acquirements, my singular power of originating an entirely novel view of whatever subject may be under consideration." Wherever the writer seems to think that an infusion of high comedy is needed in his book—a thought in itself by no means ill judged—this unfortunate old gentleman is thrust forward, now planning a skittle-alley for the amusement of chaperons while their young charges are dancing, now scouring the country on horseback in pursuit of his niece, whose disappearance has abruptly broken up a fancy ball, in the full costume of Lord Hacon; at all times impossible and absurd. A better description than we can offer of him is given by one of the other personages, who justifies the character he lays claim to for penetra-

tion by calling him an old Pantaloon. This piece of unconscious satire levelled at himself by the author is put into the mouth of a Mr. Forster, whom Vivia is induced to accept as her betrothed, partly from weariness and a sort of liking for the man himself, partly from the assiduous recommendations of her uncle, whom the young man fools to the top of his bent—a task, as may be guessed, of no great difficulty.

It is of course to be expected that the acceptance of this young man should be the cue for the reappearance already mentioned of an older and preferred adorer, and that then should ensue the various vicissitudes without which no novel is complete, leading by tortuous ways and hairbreadth escapes, which we need not follow more minutely, to happiness and satisfaction to the author at last. We are introduced in the course of these adventures to a series of people more remarkable than life-like; a bishop who, having revoked a clergyman's licence for no apparent reason, replies to a gentleman who courteously inquires into the case by losing his temper, rising from his chair, and telling his visitor with a strident voice and an unpleasant look to leave the room; a set of match-making mothers, whose vulgarity rises to being repulsive; and a Yankee storekeeper, who gets drunk at a county dinner, and succeeds in obtaining a seat in Parliament without having been naturalized as a British subject. After this unexampled feat it seems quite in the proper course of things that, when there, he should threaten to gouge the Speaker's eye out. The chronicles of these persons' lives are relieved by frequent comments from the author, who appears as a sort of gently cynical chorus, railing from time to time with mild invective at the insincerity of the human race. This habit of continual reference to himself is one of the worst into which an inferior novelist can fall. It is only when such a master-hand as that of Thackeray pulls the wires that the reader can bear, without resenting it, to be reminded that the people in whom he is asked to interest himself are but the puppets of the author's brain. Even in the works of that most skilful artist, that so-called cynic, of whose superficial bitterness the rank and file of novelists (among them Mr. Baddeley) can reproduce some semblance, while they fail to see the deep pathos, the tender wisdom, the kindness that must be cruel—even in his works this practice has at times a jarring effect, such as is produced by the call before the curtain of a great actor in the midst of a stirring drama. We must, however, congratulate the writer whose book is before us on the extreme versatility of his style. He seems to us to be a person of an impressionable temperament, whose writing always reflects that of the author whose words are at the time most fresh in his memory. Thus, while we find him in one chapter revelling in a Swinburnian flow of high-sounding periods and alliterations, and telling us of "memorial (sic) sunshine that returns to slay us almost with its sweetness," in another he will affect a Tacitean terseness, and describe the movements of his characters in this fashion:—"Herself standing. Mr. Lytham reading a big book. Mr. Lytham and Forster arm-in-arm."

A little further on we seem to recognize the influence of the Guy Livingstone school, when, at a critical moment in the hero's life, a remark of Euripides flashes through his mind; and elsewhere we detect vague reminiscences of the Latin Grammar when the author coins the remarkable phrase—"It would have pitted you almost to see that face." This, however, is but one instance of a noble defiance of convention in the matter of grammar which runs all through the book. In the next page, for instance, to this strange sentence, we find one quite as unexpected:—"The mountains skirted the road no longer; looking back, their range appeared diverted, and trending away from the road under the opal sheen, which also showed, in front, a few scattered lights of a town." This we can confidently recommend to Civil Service Examiners as a test for correction to such men as they may wish to pluck. We are perhaps presumptuous in assuming that it is the opal sheen (of what we cannot hope to know) which shows the few scattered lights; but with this impression on our minds we were reminded of a German opera, the *Nachtlager von Granada*, in the course of which we saw the tenor take up a small candle to look at the moon.

Mr. Baddeley sometimes takes daring flights into the regions of technicalities, as when he tells us that his hero makes an application to a Court of Common Law with the object of procuring a "mandamus" or injunction, and that six law lords sit on the occasion. The author is probably not aware that he has used as synonymous two terms which are so far different that while the former means a command to do some specified act, the latter in most cases means a command not to do it. Perhaps, however, he has done this advisedly, conscious that amidst such events and such people as he describes, a serious employment of legal machinery would meet with about as much respect and be about as efficacious as a policeman in a pantomime. Yet we cannot help thinking that he has studied the language of Acts of Parliament when we read his definition of love:—"Love is the meeting of two spirits of which each invests the other with its own best attributes, having regard at the same times to the capacities of the spirit so invested." This only wants a "whereas" thrown in to make it fit for a place in any statute. It is in one of his serious moods that Mr. Baddeley gives this new and striking description—a mood in which he contrasts the conduct of his hero and his villain before they go to bed. Forster, the profligate adventurer, unable to sleep, "partially dressed himself, took out from a travelling case a small silver-topped bottle which he always carried with him—it contained curaçoa—and a work bound in a limp yellow cover, probably a French novel."

* *The Last of the Lythams*. By R. Whieldon Baddeley, Author of the "Village of the West," "Cassandra, and other Poems," &c. 2 vols. London: Chapman & Hall, 1873.

Why probably? Surely Mr. Baddeley ought to know the language and character of the book which his own villain reads. And why do villains always drink curaçoa? Meanwhile the hero is occupied with what the writer calls "seldom-born utterances of the soul"—is in fact praying.

We will not accuse Mr. Baddeley of profanity after the apology which he makes for dragging the most sacred names and subjects into the thick of a flippant novel, but we cannot acquit him of bad taste. In conclusion, we cannot do better than refer to a remark made by the author himself at the beginning of his work in a pretentious and high-flown passage:—"Hope is strength, but memory is sweetness." We can only say that when we came to this there was but little strength in our hope of the *Last of the Lythams*, and in its memory there is no sweetness.

DEAN ALFORD.*

WE have here the simple and loving record of a happy, industrious, and holy life. It is no doubt impossible for a near relative to form any but the most partial and imperfect estimate of the public or literary career of a dear husband or parent, or of the exact value of his labours when compared with those of others toiling in the same field. Mrs. Alford's good sense has prompted her to delegate this portion of a biographer's task to such as were better able to accomplish it; and not the least interesting feature of her volume is the insertion of letters, all bearing on that point, several written at her own request, and for the express purpose of this memoir, from her partner's early friends, Dean Merivale, Archdeacon Bickersteth, and Mr. E. T. Vaughan; from Bishop Ellicott, Dean Stanley, and Prebendary Humphrey, his colleagues in the work on which his heart had long been set, the revision of our Authorised Version of the Scriptures. Every other qualification for the office which she has undertaken Dean Alford's widow possesses to the full; deep and earnest sympathy with his character and with his manifold pursuits, an admiration of his higher qualities too judicious and true to tempt her to be blind to his venial faults; an intimate knowledge of all that appertained to him from the first dawn of childhood up to the hour of his departure from us, which has born the singular and rare privilege of one who was his cousin by birth, the trusted companion of his schoolboy and undergraduate years, almost a sister before she dreamed of becoming his wife.

Henry Alford was born in London on October 7, 1810, his father then practising as a special pleader, and making rapid progress in his calling. Left a widower a few months afterwards, he bade adieu to the law, took holy orders, and became an exemplary clergyman of the Evangelical school. Henry, then his only child, was "a tender delicate plant," but very precocious, wonderfully ready in acquiring learning, and fond of reproducing it in little books, some written as early as from six to eight years old, when his father was his teacher and spiritual director. Unlike most of his distinguished contemporaries, he never enjoyed the unspeakable advantage of the discipline of a public school, but was sent first to a small seminary at Charmouth, in Dorsetshire, then to another at Hammersmith, and at fourteen to Ilminster Grammar School, almost within sight of his father's house at Curry and his uncle's at Henle, with whose children he kept up that affectionate intercourse which so powerfully influenced his future life. Mr. Allen, the headmaster at Ilminster, deservedly enjoyed a high provincial reputation, and proved to him a skilful and conscientious teacher; but the ill effects of the absence of the sharp competition and thorough systematic training which could not be looked for in such a place must have been painfully felt, though never complained of, when he had chosen the Greek Testament as the study of his life. This defect of his education is lightly touched upon by one who perhaps may have known something of its drawbacks from his own experience, an honoured and zealous associate in the "Revision by Five Clergymen" (1856-61).

The Dean was from the first a thoroughly good scholar; but, if I may so express myself, he was so rather by instinct than by direct study of details. . . . Our frequent discussions did us all good, and especially our quick and clever colleague. He entered, I remember well, with the keenest interest into the delicacies of grammatical criticism. His fine perception made him appreciate distinctions, and his clearness of thought enabled him to express them with ease and precision. He became soon more than a match for most of us in our gentle encounters, and he acquired, with characteristic rapidity, that technical knowledge which up to the time he had not fully acquired, but for which he evidently had always a natural aptitude.—*Br. ELICOTT, Life*, p. 499.

Quickness of apprehension, indeed, was the special quality for which Henry Alford was conspicuous; it proved the source at once of his intellectual strength and of its weakness. Without it he never could have done the work he did; had it been counterbalanced by patience and mental self-control, his career as a writer would have been less versatile, possibly less popular, but would have produced more considerable, or certainly more permanent, results than can now be looked for.

One other characteristic of his early youth, yet more honourable than his ardent thirst for knowledge, is brought out very prominently in these pages, especially in his schoolboy, but hardly boyish, letters to his future wife—namely, the devout spirit which gave life and reality to his every word and action. In this respect he reminds us of poor Kirke White, for whose "Remains" he had a

genuine and well-grounded liking, and whom he so far closely resembled in that the religious musings of both are wholly free from the conventional tone of the narrow clique in which they were brought up, and from whose trammels the Dean in after times so effectually emancipated himself. No wiser, more delicate, or more tender letter was ever penned by a lad under fifteen to a girl of nearly the same age than that which he addressed to his cousin on her confirmation (*Life*, pp. 15-17), and which she may well be proud to make known to us. With him, in every period of his literary course, study and prayer went hand in hand. The more severe the mental toil, the more humble and thankful it made him. This inner life of the heart, of which the outer man gave no obtrusive intimation, was the well-spring of that frank gaiety of spirit which sometimes made him a little forgetful of the nice proprieties beseeching his ecclesiastical dignity, and gave a keen zest to his enjoyment of the domestic bliss and well-deserved prosperity with which his cup was crowned even to the brim.

After spending one year at Acton as a private pupil in the family of Mr. Bickersteth, the father of the present Bishop of Ripon, and of his friend the Prolocutor of the Lower House of Convocation, Henry Alford commenced residence at Trinity College, Cambridge, in October 1828, and there pursued the same course of industry and devotion which had marked his career hitherto. He complains at times of idleness, though it is hard to see how his self-reproach can have been deserved, only that the most diligent mind cannot be always on the stretch, and that it was ever one of his gravest errors to regard hours spent in wholesome rest as merely wasted. In his second year he gained a college scholarship, in his third year the Hall University scholarship, a little out of turn, and became one of a bright intellectual circle which included the younger Hallam and Alfred Tennyson. Of his degree, which came in due course (1832), he says that it "far surpassed his wishes in every respect"; he was thirty-fourth Wrangler, and eighth in the first class of the Classical Tripos—no inconsiderable rewards of a pure and well-spent youth.

Encouraged by his hardly-earned success, he soon left Cambridge for Henle, to make a proposal of marriage to his cousin Fanny Alford, having "three weeks before his arrival considerably written her a letter to prepare her for that step." He was not then twenty-two, but he writes thus in the journal which he carefully kept from boyhood up to within five days of his death:—

Let me look at the step which I have taken. The choice is for life. Can I live with none else to depend on, none else to trust in, none else to love? I think, with God's grace, that I can. Sixteen years of attachment have done surely their part to rivet my heart stronger upon hers; and though I know my faults of temper and of want of forbearance, and also hers in some points, yet I hope to be able, if to any one to her at least, to be loving and kind always and by all means.—*L*, 76.

The favourable answer, about which he could hardly have been very doubtful, was followed by three years of engagement. Next came his first publication, an anonymous little volume of *Poems and Poetical Fragments*, some of which he never cared to reprint. It had always been his set purpose to take holy orders, after the example of nearly all his family for several generations, and he prepared for the usual examination with more than usual faithfulness, in spite of the claims on his time made by seven pupils, and by his efforts to obtain that great object of a young scholar's ambition, a fellowship of Trinity; the prize being rendered all the more precious in his case, inasmuch as it had often been missed by men who had taken a higher degree than his. Just after completing his twenty-third year he was ordained as his father's curate by the late Bishop of Exeter, whose gracious yet solemn manner impressed the new Deacon, as it did every one else who approached him on like occasions. Next year came the final struggle for the fellowship, when, the number of vacancies happening to be as many as six, he was elected, together with the present Master of the College and Professor Birks. He was all the more gratified as he had well nigh despaired of success. "If they elect me Fellow, they must be grievously in want of fellows," he had written some months before, when poring over Berkeley's metaphysics, for whose subtleties he would have as little relish or capacity as most persons of equal calibre. This position gained, he now looks to gratify his long deferred wish. "Having got my fellowship," he assures his betrothed, "I shall now proceed to devise methods to rid myself of it as soon as possible." His own ambition soared no higher than a country curacy and pupils; but his kind college tutor, the good and genial Peacock, afterwards Dean of Ely, held with his post at Cambridge, as was then lawful, but never could have been desirable, the small college living of Wymeswold, in Leicestershire, of which he was glad to relieve his conscience by resigning it in favour of Alford. There was a bad house, a population of 1,200, and a yearly income of 110*l*., but the vicarage was thankfully accepted, the marriage took place early in 1835, and this obscure village became for eighteen years the residence of the wedded cousins. Over the details of their domestic life the lady's womanly reserve naturally throws a veil. Of their four children, the two sons, called by the saintly names of Clement and Ambrose, the great Fathers of the Church in Italy, were taken away from their parents, the latter when ten years old, and under circumstances peculiarly sad. Dean Merivale, in commenting on this happy union of those who had loved so long, speaks of it a little bluntly considering to whom his letter is addressed:—

Many a young man has done the like, and has not shown himself brave therein, but foolish, rash, and selfish. But it was not so with Alford. He

* *Life, Journal, and Letters of Henry Alford, D.D., late Dean of Canterbury*. Edited by his Widow. London: Rivingtons. 1873.

justified, I would say he glorified, his act by the unwavering courage and confidence, and the untiring exertion with which he faced and battled with the consequences.—*Life*, p. 438.

His friend would probably have rejoined that he saw nothing glorious in the matter, and as little that required justifying in any way. Mrs. Alford allows us one, and we fancy only one, glance at her husband's settled judgment on the subject twenty-six years later:—

Sunday, March 3, 1861.—The occupation of writing to you is ever for me a daily pleasure. I am holding intercourse with one who has been my choice, and God's choice for me, to brighten my childhood, to stimulate my youth, to bless my manhood, to cheer my advancing years; but I did not sit down to write a love-letter, so let me tell my tale.—*Life*, p. 318.

At Wymeswold, besides the care of the parish, and the weary labour of teaching six pupils, with no change in the lesson, but only in the learner, he undertook the restoration of the church, which was completed in 1846 in a fashion quite rare at that period. It was a work grievously needed, and severely tested his pecuniary resources, but one of its immediate fruits was to bring him under the most unmerited suspicion of a leaning to opinions with which he had less real sympathy than any other cultivated churchman of his day. Indeed, his dislike of Romanism, and all that seemed to him to approach to it, would do credit to the *Record* or the *Rock*. This sacred task had been preceded by others less congenial to his taste and habits, the building of a school and new vicarage house. All these approaching completion, his vigorous mind now directed itself to what proved in the event the great performance of his life, an edition of the Greek New Testament "for the use of Theological Students and Ministers," more worthy of the subject and of the existing state of Biblical scholarship than the slight volumes of Dr. Burton, or the dreary compilations of Valpy and Bloomfield. It is almost incredible, but for the well-known tendency of even experienced writers to underrate the time and labour required for carrying out their immature designs, to know that in 1843 and later he imagined that the work would occupy two thin octavo volumes, and might be finished in a year. This calculation, it hardly need be said, he soon found wide enough from the mark. He wanted help from the German commentators, and had to cultivate a more intimate familiarity with their difficult language; he was ignorant of many other things, the whole subject of textual criticism and the writings of our elder English divines being among them. These defects he hastened to supply with characteristic zeal and diligence, so that when his first volume containing the Gospels was published in November 1849, it took its place at once as the only veritable edition of these holy books deserving the name. The freshness and independence of thought, the outspoken treatment of difficulties, real or supposed, the vigour of his style, the unaffected piety of his tone, moved readers, learned and unlearned alike; and not the least those who were best able to perceive and lament his many errors and shortcomings. The great fault which pervaded this whole work was doubtless a certain almost petulant impatience in dealing with ordinary modes of interpretation and exposition, a prejudice which he hardly attempted to conceal against orthodox schemes for reconciling apparent inconsistencies, even when they might have very well commended themselves by reason of their intrinsic goodness. Other blemishes were removed in subsequent editions, anxiously, cheerfully, even humbly corrected, but this never; and the first impression which the young student is likely to receive from some of his speculations is the very opposite of what he would have himself desired; and this not through any doubt respecting revealed truth in general that ever clouded his mind, but merely that in the excess of candour he was willing to concede to the adversary all he could fairly claim, and something more.

For in faith as well as in practice Alford was emphatically a Christian man, too firm in his convictions to be shaken by every wind of controversial debate, even on subjects the most momentous. If his reviewers occasionally drew inferences which they deemed logical from his ill-considered expressions respecting inspiration and the inspired books, he never assented to their conclusions, and it must be confessed that the faculty of close and sustained reasoning was not one of his most prominent intellectual powers. As a freshman at college, he declared that he always estimated men in proportion as they estimated the New Testament (p. 35), and in his mature prime he somewhat perplexed a lay friend who spoke to him about modern scepticism by his unfeigned surprise that it could be seriously regarded as having any danger for God-fearing men; saying, with a quiet simplicity, "Well, I have never felt tempted to go from my anchorage" (p. 267). But the most remarkable proof of his calm assurance of belief is afforded in a letter to Dr. Colenso (September 15, 1862), who had ventured to send him the proof sheets of his first volume on the "Pentateuch," in the vain hope of gaining his sympathy and countenance. It is indeed a model of severe yet courteous rebuke:—

I have looked through a considerable portion of your book, and coming engagements will prevent my going on with it. So I return it by this post. I must say, that all your arguments do not seem to me to affect our position with regard to the Pentateuch. It seems to me that there are two ways of approaching and considering this subject. First, from the unbelieved point of view, proceeding thus to argue from the improbability or discrepancy of details to the unhistorical character of the whole; this method assumes that we understand all the details, and deal with them as ascertained and undoubted elements in the inquiry. Secondly, from the believing point of view, proceeding thus to argue from the acknowledged historical character of the whole to the existence of a key to difficulties of detail, provided we could thoroughly understand all circumstances regarding them; this view assumes Jesus Christ to have been the Son of God. If He was,

the Pentateuch is historical; for He treats it as such. The former of these methods, it seems to me, is yours. The latter I am content to be mine. I send you a volume of sermons which I have just published.—P. 356.

Our space is nearly exhausted, and we have yet left Alford at Wymeswold, struggling with the cantankerous parishioners for whom he had done his utmost, and ready at times to think that any new vicar would be more useful to them than they would let him be. His father, when dying, had counselled him to embrace some fair opportunity of getting to London. During his occasional visits thither another of his varied gifts had become known to his friends. He was a good preacher, not eloquent in the strict sense of that much abused term, certainly not too deep for his hearers, but intelligent, clear, interesting, earnest, and eminently practical. The office of minister of Quebec Chapel was put at his disposal in 1853 by Mr. J. H. Gurney, in whose parish of St. Mary's, Marylebone, it is situated; and after some hesitation in consequence of the scruples of his wife, who did not at once appreciate the advantages of the change, he left the village in which the eighteen best years of his life had been spent. His new position was not in some respects much to his mind; "the sort of soldier of fortune character of it," he once said, "would corrupt an angel with pride"; but he made the best of the ugly place and of its fashionable congregation. One novelty he introduced with excellent results. The custom of attending Sunday afternoon service at such churches had not then set in, when it occurred to him to commence a series of extemporary expositions at that time of the day which should embrace some definite portion of the New Testament, and, while mainly intended for those who were not acquainted with the original Greek, should be helpful and suggestive to such as were. The experiment was most successful, and many persons now in London, including not a few ladies, first acquired from these lectures a lively interest in Biblical reading which has been to them a solace and source of happiness ever since.

Three or four years of this life of hard study, mingled with active ministerial labour, brought him early in 1857 to his highest preferment, the Deanery of Canterbury. As this was among the most suitable, so was it the most popular of Lord Palmerston's ecclesiastical appointments, though Dean Alford hardly found in the post that abundant leisure for book work which one of his congratulating correspondents had promised him. A bishopric he would have thought it cowardly to refuse, but he knew its anxieties and oppressive load of routine duty too well to covet an office not peculiarly congenial to his habits and temperament. The first priest in the English communion for, *pace* a rival claimant, such the Dean of the Metropolitan See must be—he might well feel that he has reached the summit of legitimate ambition, and enjoyed his fresh honours with unaltered thankfulness and modesty. By reason of some stupid bungling in the early days of the Ecclesiastical Commission, the county of Kent has two Cathedral cities and no resident Diocesan. Hence the Deans of Canterbury and of Rochester are called upon to take a position in regard to the religious and civil business of their respective neighbourhoods which does not naturally pertain to them. Alford threw himself with avidity into this part of his duty, as into every other, while still prosecuting his Biblical studies, which comprised the completion of the Greek Testament in 1860, eighteen years after he had begun it, and several new editions of its separate volumes; his share in the "Revision by the Five Clergymen"; his *New Testament for English Readers*, wherein the information accumulated in the Greek Testament is reproduced in a more simple form; together with such a mass of miscellaneous papers in the *Contemporary Review*, which he edited from its commencement in 1866, and in other periodicals, as when seen enumerated in the Appendix to his *Life* is enough to sicken the heart, while we contemplate them almost with dismay.

For these incessant and varied labours were slowly, but surely, bringing the strong and energetic man to a premature grave. In 1870, the last year of his life, the sixtieth of his age, the Dean undertook two separate enterprises, one being an attempt to popularize the study of the Old Testament, as in his book for "English Readers" he had done for the New. This gigantic task he began with even less previous knowledge of the Hebrew literature than he had of Greek grammar and criticism twenty-seven years before. He intended, no doubt, as then, to learn as he went on, reserving corrections and improvements for subsequent editions. On November 15 he records in his journal "Finished Exodus xxv. and left off work for the present." That work was never resumed, nor will the portion which has been published since his death add much to his reputation. The second labour of the year could have cost him little trouble, and was full of pleasurable excitement. Immediately after putting forth a Revised Translation of the New Testament (of which 25,000 copies were sold in a few months), it became his duty to advocate in Convocation and to help in carrying out in person the Revision of the English Bible now in progress. He had hoped for and looked forward to it all his life long; he took his share in it with undiagnosed satisfaction. His short notices of the sessions in his journal are full of enthusiasm, though one of his colleagues seems to think that "in general he kept himself in the background, as if he felt that his suggestions were sufficiently before us" already. The truth is, he was ill, complaining of constant headache and sleeplessness, until at length, on the 16th of December, acting on imperative medical advice, he went to the Jerusalem Chamber in Westminster Abbey in the morning, took leave of the Revision Company, gathered up his books, patiently and quietly went home,

resigned to the Divine will in all things. He carried on other business after study had been interdicted, painted a little (for he had recently taken a fancy to water-colours, and had himself illustrated his last work, *The Riviera*), even preached in the Cathedral on New Year's Day, 1871, and on Sunday, the 8th of January, then took to his bed, and died quite unexpectedly on January 12, in the presence of his loving wife.

Authors there are, and those not the least deserving that honourable name, who deliberately postpone immediate popularity to the cherished hope of permanently enriching the literature of their country, or of making fresh accessions to the sum of human knowledge by their original researches. Such a one was not Dean Alford. His great aim was to influence for good the living generation, and in this effort few have succeeded so well. He essayed too many things to excel in all. In his youth his poetry had been spoken of in the same breath as Tennyson's; a few years later and he was nowhere in the race. But though his writings may be superseded or forgotten as time goes on, the example of his pure and simple life remains in this volume for the instruction and encouragement of all Christian students. A nobler spirit has seldom adorned the higher places of the English Church; no truer ally, no more generous and placable opponent, than he will readily be met with amidst the trials of life. To have known and valued Henry Alford will long be a source of heartfelt satisfaction to many others, besides those immediate friends whose names are linked with his in this beautiful and touching life by his Widow.

MURRAY'S DIALECT OF THE SOUTHERN COUNTIES OF SCOTLAND.*

WE think that we have not for a good while past had anything to do with the Philological Society, though we certainly have had a good deal to do with its offshoot, the Early English Text Society. But at any rate we are well pleased with the volume of their issuing which we have now before us. Mr. Murray, who has already come before the world as one of the Early English Text Society's editors, has gone into his subject thoroughly, fully, and scientifically, and, what is specially to be noticed, without the slightest trace of national prejudice. There is all the difference in the world between Mr. Murray and the people who write books about the dialects of their several districts by jotting down any words which would seem strange if they saw them in the *Daily Telegraph*, and then making some guess about Danes and Saxons, perhaps about Jews and Phœnicians. Mr. Murray, it is plain, is a real philologist, and he does not let his philology give way to any local point of honour. His subject is the dialect of the Southern counties of Scotland, and he brings out with all truth and clearness that that dialect is simply one form of English. If he had chosen to add that it is the purest surviving form of English, we should feel no call to argue against him. His historical introduction is one of the clearest expositions that we ever saw of the plain facts of the case, ethnological and linguistic. The case is of course a very plain one, but national prejudice on the one hand, and the confusion arising from the use of ambiguous words on the other, have tended to make it seem to many to be hard to understand. To any one who has the smallest knowledge of history or philology, there is of course no need to prove that what people commonly understand by Scotch is really only Northern English, and that the only true Scotch is the Gaelic or Irish. But there are many whose minds have been puzzled enough by the use of a confused nomenclature to make a clear and scientific statement like Mr. Murray's very useful. He goes through the whole thing from the beginning, fully taking in and fully setting forth the relations of the three parts of what is now called Scotland—the English, the Welsh, and the Irish parts—to one another and to England. It is no part of his business as an historian of language to discuss the claims either of the earlier or of the later Edwards in their political aspect, but he in no way shirks them so far as they bear upon his subject. He records the commendation of 924, and adds:—"Thus early began that theoretic recognition of the supremacy of the Bretwalda, or King of England, which another Edward tried to reduce to practice, and which was only finally repudiated at Bannockburn." The cession of Lothian is brought out with equal clearness, without Mr. Murray dogmatically deciding, as he was in no way called on dogmatically to decide, how far it belongs to the reign of Edgar and how far to the reign of Cnut. The state of things in the eleventh century is well set forth in the following statement, though we know of no evidence to fix the exact degree of kindred between Malcolm and the house of the Northumbrian Earls:—

The history of the Scottish kingdom during the tenth century exhibits the struggles of two dynasties, one of which was by marriage and sympathies more connected with Northumbria, and courted the English alliance; the other identified with the North-East, and more exclusively Celtic in its leanings. The Celtic or native line found its greatest representative in Macbeth, who, after the defeat and death of Duncan, ruled over the original Scotland, while the Anglo districts south of the Forth remained attached to the family of Duncan. It was rather as a king of Lothian, conquering Scotland, that Malcolm Ceannor, son of Duncan and the Northumbrian earl's daughter, at the head of an Anglo-Saxon army, overthrew Macbeth and recovered the crown of his fathers.

Later on in his introduction, Mr. Murray gives a good many

examples of the confusion which has been made, both in past generations and quite lately, through people not understanding that what they are in the habit of calling Scotch is simply the Northern English, the natural language of the whole country from the Trent to the Forth. He tells of the "vagaries" of the older inquirers who "asserted for the Scotch an origin independent of the Anglo-Saxon, which has been variously sought (and found) in the Pictish (whatever that might be), the Norwegian, the 'Sulo-Gothic'—anywhere indeed rather than in the old Angle or Northern English of Lothian or Northumbria." He then goes on to tell about men of education, both English and Scotch, who could not understand how the hermit Richard Hampole could have written his good Northumbrian—in their eyes "Scotch"—in the south of Yorkshire, and thought that he must at any rate have been a Scotchman settled there. He tells also of a learned Scotch judge who gave judgment in this sort on the *Pricks of Conscience*:—"You call it Early English, but it is neither more nor less than broad Scots." He shows, on the other hand, that, down to the fifteenth century, the most patriotic and English-hating Scottish writers, Barbour, Blind Harry, and the rest, never thought of calling the language in which they wrote by anything but its natural name of *English*. In those days Gaelic was called *Scottish*, but as, from the fifteenth century onwards, English began to be called *Scottish*, so Scottish began to be called *Irish*, a name against which there is of course nothing to be said. The change in the use of the names is nothing to be wondered at. As the English of Lothian, under the name of Scots, became politically quite separate from the kingdom of England—as the difference, became more and more marked between their dialect of English the dialect which formed the courtly and classical dialect of Scotland, and that other dialect of English which formed the courtly and classical language of England—it is in no way to be wondered at if they began to apply the Scottish name with which they were so familiar in every other way to their language, as well as to everything else that belonged to them. When John Fordun said that two languages were spoken in Scotland, "*Scotica et Teutonice*," the expression marks the transition stage. Patriotic Scotsmen were beginning to dislike calling their language English; so Fordun called it by a name which was at once vaguer and had a grander sound.

Mr. Murray gives us a map, in which he carefully shows the present boundaries of Celtic and Teutonic speech in modern Scotland, and further marks the extent of the several dialects of each. The Celtic area is still, in geographical extent, slightly the larger of the two, though we need hardly say that population would tell quite another story from that which is told by square miles; and, in order not to be unfair to the declining speech, Mr. Murray has marked as Gaelic every district where any Gaelic is really spoken by any portion of the really native inhabitants, even though English be the speech of the majority. This distinction needs to be carefully drawn, because there are places—the great towns, for instance—where there is a certain proportion of Gaelic-speaking immigrants. But while we speak of Gaelic as the declining tongue, we must not forget that there are districts in which it has shown itself as a conqueror. Having, for instance, wholly driven out the language of the Scandinavian settlers on the Western coasts and islands. The Gaelic he divides into three dialects—Northern, Central, and South-Western—the third of which runs a little way on to the coast of Ireland, opposite Cantire. This last district is, it seems, gradually lessening; but within it the connexion between the Gaelic language, as spoken in Ireland and in Britain, rises from close kindred to absolute identity. Of English dialects in modern Scotland Mr. Murray recognizes eight, which he arranges in three groups. The dialect with which he is more immediately concerned is what he calls that of the Southern counties, "including Annandale, Eskdale, Teviotdale, and Etrick Forest." This is the purest and most unmixed old Northumbrian; because it remained a purely local speech, while the dialect of Lothian and Fife became the courtly and classical type of Scottish-English. In both these districts the Northumbrian has the ground all to itself, and everywhere south of the Forth it has had it to itself ever since the sixth century. This district of course answers to, and is in fact a continuation of, the great region of Central and Eastern England from which the Britons altogether vanished. But as, all along the Western side of England, we have a greater or smaller area where the British language has given way to the English without a complete displacement of British population, so the same thing is to be seen in Scotland. Thus English is the universal tongue of Scotland south of the Firths of Clyde and Forth. But while, in the eastern half of this district, as in Central and Eastern England, English is in the strictest sense at home, in the Western half it has, as in Cornwall and in a large part of Wales, simply displaced Celtic dialects, British in Clydesdale, Gaelic in Galloway. Here the Celtic languages have wholly vanished, but not without giving a certain tinge in pronunciation and the like to the English spoken within them. Still more then in the North-East, where English is daily encroaching on Gaelic, the Celts who adopt English do not adopt it without modifying it in some slight degree. The Northern and Western dialects are in this way distinguished from the absolutely unmixed English of the South-East—absolutely unmixed, we mean, as far as anything borrowed from Celtic neighbours is concerned.

In the North-East Mr. Murray seems rather unwillingly to admit a Scandinavian element also; but he is wisely on his guard against that exaggerated belief in Scandinavian influences, either

* *The Dialect of the Southern Counties of Scotland; its Pronunciation, Grammar, and Historical Relations, &c. &c.* By James A. H. Murray, F.E.S. London. Published for the Philological Society by Asher & Co., London and Berlin. 1873.

in England or Scotland, which at one time was in fashion. We may surely look for some Scandinavian element in the North and North-East, but it should be always remembered that Lothian, like modern Northumberland and the bishopric of Durham, belongs to that part of old Northumberland in which the Danes did not settle. There is no more reason to look for any Danish element between the Tees and the Forth than to look for it south-west of Watling Street. The difference between the several forms of English spoken in Scotland seems still to be very considerable, especially in the matter of pronunciation. In this last Mr. Murray—who is a disciple of Mr. Ellis, and, as such, he sometimes gets into distinctions too delicate for us—marks off with great care the differences to be heard in distinct and sometimes very small districts—differences which sometimes make natives of other parts of Scotland altogether misconceive the meanings of whole sentences. Of this last Mr. Murray gives some amusing instances. Thus he mentions a small district of Berwickshire where *ch* in *chance*, for instance, is sounded as *sh*, and where, if we rightly understand Mr. Murray, men talk neither of the *kirk* nor the *church*, but of the *shursh*.

Of the purely English districts, especially of that which is the immediate subject of his book, Mr. Murray remarks that, both in its retention of old forms and in its adaptation of new, the dialect bears the character of a language which has, so to speak, lived by itself and has not been influenced by other tongues:—

The dialect of the Southern counties of Scotland is, as we have seen, distinguished by its proneness to develop diphthongs out of vowels which were originally simple in Anglo-Saxon, and which remain simple in other Scottish dialects; while, on the other hand, it retains a series of grammatical distinctions characteristic of the old North-Angle speech which the others have dropped, probably in imitation of the Erse, Pictish, or British idioms which preceded them. These facts indicate that the Teutonic speech has in this district come less into peaceful contact with pre-existent languages, and thus yielded less to their influence than the same dialect further west and north, and that, having been longer established on the soil, it has, in its system of sounds, received a fuller phonetic development here than elsewhere.

On the other hand, in the districts which answer to Cornwall, where English has supplanted Gaelic or Welsh, where the speech is English but where the local nomenclature is Celtic, we see the way in which the extinct language has influenced its successor. This comes out in some points of pronunciation and other details, and it is marked in another way in the local nomenclature of the Galwegian district to the South-West. In the English district the surnames are of the same class as those in England, the patronymic being formed by adding *son* to the Christian name, whether of English, Norman, or Hebrew origin. In the purely Gaelic country the Gaelic *Mac* is prefixed to names Gaelic by origin or by form, while in the Galwegian district the *Mac* is prefixed to names of the English class. Wilson, Macdonald, Macwilliam, are fair specimens of the three classes of nomenclature. Mr. Murray does not tell us the exact geographical limit of the class of names which is the converse of the Galwegian, names where the Teutonic ending is added to the Celtic prenominal, as in Donaldson and Ferguson.

We have made our remarks chiefly on the more general part of Mr. Murray's book. But we never saw a book on a local subject go more thoroughly or scientifically into its own subject. We should like to know something more about the Slogan of the town of Hawie, which is given as "Tyr-ibus ye Tyr yo Odin," which is explained as good North Anglian. "Tyr huc us, ze Tyr ze Odin." Now Odin, and Tyr too, are Scandinavian forms; if the Slogan had really been handed down from the times of North Anglian heathendom, we should rather have expected to find the gods bearing their English names of Tiw and Woden.

In one or two places we have been a little amazed to hear Mr. Murray talking about "Semi-Saxon." We had really thought that that decaying tribe had been so thoroughly cut off that even Mr. Furnivall had for some while shrunk from the perilous honour of their Ealdormanship.

AMERICAN JOURNALISM.*

MR. HUDSON has thought it necessary, with a view perhaps to raise the minds of his readers to a proper pitch of awe and admiration, to preface his history of American journalism with a collection of remarks made by various eminent men, from Mr. Anthony Trollope to Napoleon I. and Mr. H. W. Beecher, on the influence and value of the press. One of Mr. Trollope's characters, it seems, has somewhere observed that the editor of *Jupiter* is of much more consequence than the Lord Chancellor. Thomas Jefferson declared that he would rather live in a country with newspapers and without a government than in a country with a government and without newspapers; but it may be doubted whether Mr. Jefferson, if he had survived to this day, would really have thought that the opportunity of perusing any number of four-cent broad sheets was a sufficient compensation for having to endure the rapacious tyranny of New York Kings, or the anarchy of Louisiana. Those who are familiar with some aspects of American journalism may possibly be disposed to agree with Mr. Wendell Phillips in thinking it "a momentous, a fearful truth, that the millions have no literature, no school, and almost no pulpit, but the press; not one man in ten reads books, but every one, except the very few helpless poor, poisons him-

self every day with a newspaper." More recently we find the Bishop of Western New York asserting that "the Press is King," and asking, "if journalism is so powerful, who shall save us from such journalism as made the Commune possible in Paris?" When Mr. Henry Ward Beecher says that "in our day newspapers keep pace with history and record it," he scarcely does justice to the enterprise of some of the journalists of his own country, who, not content with keeping pace with history, occasionally succeed in outstripping its slow and commonplace movements. Another of Mr. Beecher's profound reflections is that "in the United States every worthy citizen reads a newspaper, and owns the paper he reads," and the sense of ownership goes perhaps somewhat beyond the possession of the sheet which has just been purchased. The position of a journalist in a democratic society is not very different from that of the court fool of another period. His relations with his master are intimate and confidential; he enjoys the emoluments and privileges of a favourite, and his tongue has also considerable license; now and then he can slip in a sharp word or two even about the great man himself, and to the great man's face; but he must be wary how he mixes criticism with flattery; his first obligation is to please, to humour, to amuse; and he must take care to follow his master's moods, and always to jump to the right tune. There is no country in the world in which the press fills so conspicuous and, in its way, so powerful a position as in the United States. There is a vast number of newspapers; they have an enormous circulation, and are eagerly read; and journalists hold prominent rank among public men, and often obtain official appointments of much dignity. And yet it is impossible not to see that, as a class, journalists in America are not treated with genuine respect and consideration. Something of contempt mingles with the patronage bestowed on them. Their eagerness to fall in with the popular mood and to pander to the passions and prejudices of the hour is too evident, and servility degrades their efforts to please. As a rule, an American goes to a newspaper, not for sober counsel or accurate information, but for mere amusement and excitement, just as a weary prince might turn to a smart storyteller. No doubt there are exceptions, and the gallant stand which was made by the *New York Times* against the scoundrelism of a paramount fiction whose misdeeds the other newspapers did their best to screen and palliate will be remembered as an instance of honourable and courageous independence. Journals of this class are, however, by no means common, and the familiar type of journalism would seem, unfortunately, to be still that of the *New York Herald*.

"Of all the newspapers published in the United States, very few comparatively," says Mr. Hudson, "live half a century. While the press is ever existing, ever increasing in number and power, individual newspapers are begun, thrive for a time, create a sensation, possess an influence, and then disappear." There are not fifty papers, it appears, in the country over fifty years old, and of these not a dozen are known beyond their own States. "Is not this a curious fact?" Mr. Hudson asks; and perhaps it is a fact which is not without its significance. According to the latest returns—those for 1870—574 daily papers were in course of publication in the United States. There were also 107 papers published three times a week, 115 twice a week, and 4,295 weekly publications. The circulation of the daily papers for the year was in round numbers 800,000,000, of the weeklies 600,000,000, while the aggregate issue of all the political and literary periodicals of the country was over 1,500,000,000 copies. The number of newspapers and other periodicals has more than doubled since 1850, and represents for the most part a fresh and recent growth. The oldest existing newspaper in the country is the *Portsmouth* (N. H.) *Gazette*, which dates from 1756, and the next oldest the *Newport* (R. I.) *Mercury*, which was started two years later. The earliest newspaper sheet printed in America appears to have been Harris's *Publick Occurrences* (Boston, 1690), which was intended to be published monthly, but of which only one number was ever issued. Mr. Harris in his prospectus stated that one of his objects was that "something might be done towards the curing, or at least the charming, of the spirit of lying which prevails among us"; therefore nothing would be published except what he had reason to believe to be true, and if any material mistake was committed, it would be corrected in the next number of the paper. And, further, Mr. Harris undertook that if any well-minded persons would trace out the name of the "first raiser" of any false and malicious report, he would expose the offender's name in his pages. "It is supposed," he said, "that none will dislike this proposal but such as intend to be guilty of so villainous a crime." It does not seem to have occurred to Mr. Harris that his "proposal" might be turned to account by the very class against whom it was supposed to be directed. It is interesting to know that the first newspaper in America was expressly started with a view to baffle and counteract the spirit of lying. Mr. Harris's excellent intentions, however, failed to satisfy the authorities. He had dared to touch on questions of civil government and military matters, and his first number was accused of containing "reflections of a very high nature." So it was ordered that it should be not only a first number but a last, and was instantly suppressed. The explanation of this summary proceeding is to be found probably not so much in the contents of the paper as in the character of the publisher, who had been known before he left England as a "brisk asserter of English liberties," having indeed published a book with that very name, and undergone fine and imprisonment. In 1704 appeared the *Boston News Letter*,

* *Journalism in the United States, from 1690 to 1872.* By Frederic Hudson. New York: Harper. London: Sampson Low & Co.

which was started by Campbell, the postmaster, and eleven years afterwards the *Boston Gazette*, the speculation of another postmaster, who had replaced Campbell. "I pity the readers of the new paper," said Campbell; "its sheets smell stronger of beer than of midnight oil. It is not fit reading for people." It would seem that the personal feuds of American editors are an old fashion. In 1721 the Franklins brought out their *New England Courant*, which, according to precedent, sneered at Campbell's print as "a dull vehicle of intelligence," and another paper war began. Benjamin Franklin, after having worked in composing the types and printing off the sheets of the *Courant*, was employed to carry the paper to subscribers. He also wrote articles for it, unknown to his brother, disguising his handwriting, and slipping his contributions at night under the door of the printing office. The elder Franklin was imprisoned for an alleged libel on the Assembly, and the *Courant* was also denounced by the Mathers for having insinuated that "if the Ministers of God approve a thing, it is a sign it is of the Devil," "which," said Increase Mather, "is a horrid thing to be related." He was afraid that, if the Government did not interfere, some awful judgment would come upon the land. In 1728 Benjamin Franklin established the *Pennsylvania Gazette*, which he managed for thirty-five years. He was bold and outspoken, and frequently in hot water. "My friends," he once said to some of his opponents, "any one who can subsist upon sawdust pudding and water, as I can, needs no man's patronage." The spread of revolutionary feeling gave an impulse to journalism, and towards the middle of the last century a number of new journals were established. In 1760 the *Boston Gazette*, which had been started five years before, appeared with a new device. Britannia was struck out, and Minerva substituted. The goddess held in her left hand a spear surmounted by a Cap of Liberty, while with her other hand she released a caged bird which flew towards the Tree of Liberty. This was ten years before the Boston massacre, and fifteen years before the fight at Concord. The Government had its own organs, but the populace had a ready way of answering their arguments. The office of the *Royal Gazetteer* was destroyed, and the publisher of the *Boston Chronicle* was driven from the county. Incidentally we come upon the etymology of the word "gerrymandering," meaning the arrangement of constituencies with a view to party votes. Governor Gerry of Massachusetts had been engaged in this work in 1811, and some one likened the shape of the districts he had marked off on the map to a salamander. "Call it Gerrymander," said another, and so the word passed into current use. The first daily newspaper in the United States was the *American Daily Advertiser*. It was published in Philadelphia in 1787 by Benjamin Franklin Bache, a nephew of Benjamin Franklin. There were then only thirty-seven newspapers of all kinds. In 1835 there were 1,258 daily, semi-weekly, and weekly papers; and though, as Mr. Hudson points out, American journals are apt to be short-lived, the fertility of the press is unabated.

One of the most striking features in the history of American newspapers is the danger to which those connected with them are exposed when they offend the public. In 1789 a band of armed Federals took possession of the office of the *Aurora* in Philadelphia, and beat the editor and his son within an inch of their lives. During the war of 1812-15 between England and the United States, the mob twice demolished the offices of the *Baltimore Republican*, which was opposed to the continuance of the war. In more recent days, Colonel Webb, the editor of the *New York Courier*, found it necessary to bring his West Point education into practice; he turned his building into a fortress, armed his porters, editors, clerks, printers, and friends, and quietly waited an attack. The mob marched down Wall Street prepared to demolish the establishment. They halted before it, but all within was still and silent. The mob was packed in a narrow street expecting the signal to begin the assault, when some one told them of Webb's preparations. In a short time the street was empty. During the "draft riots" of 1863 the office of the *New York Tribune* was surrounded by a mob of five thousand people, some of whom had got within the walls, and had begun to set it on fire, but the courage of the police and a timely scare drove off the rioters. Mr. Hudson's pages are also enlivened by historical notes on the duels of editors. The *Vicksburg (Mass.) Sentinel* is supposed to have been associated with the greatest numbers of duels. One of its editors, Dr. Hagan, fought several duels in consequence of a controversy about cotton. He had also desperate encounters in the streets with a rival editor, which ended in a duel. Afterwards he "became involved in more *rencontres* in the public thoroughfares, but he gave up the practice of constantly carrying arms." He was himself killed in the street by a man who took offence at an article reflecting on his father. The next editor was badly wounded in a duel with "yagers at fifteen paces," and his successor a day or two afterwards was attacked in the street and killed his antagonist. The succeeding editors were thus disposed of:—

James Ryan killed by N. E. Hammet of the *Whig*. Next, one Walter Hickey, who had several rows, and was repeatedly wounded; he was soon after himself killed in Texas. John Lowins was imprisoned for the violence of his articles. [Perhaps he thought the gaol was the safest place to live in.] Mr. Jenkins, his successor, was killed in the street by H. A. Crabbe. Crabbe was afterwards murdered in Sonora. F. C. Jones succeeded Jenkins, but soon afterwards drowned himself.

Most of these encounters occurred some twenty or thirty years ago, and of course duels and assassinations are comparatively rare now. But it does not appear that they have altogether

ceased. In 1868 the editor of the *Southern Opinion* of Richmond was shot at his office door; the assassin was tried and acquitted. In 1867 the editor of the *Warrenton (Ga.) Clipper* was shot in the street, and a band of the Ku-Klux revenged his death by breaking into the gaol where the murderer was confined, smoking him out of his cell, and lynching him. In 1870 a Chicago editor was cow-bided by an English actress who felt aggrieved at his criticism of her performance. Mr. Hudson describes the "moral war" which broke out in 1840 against the *New York Herald*, and gives a careful catalogue of the epithets hurled at that journal and its editor. "Obscene Vagabond," "Veteran Blackguard," "Moral Leprosy," were among the mildest of them. However, the *Herald* could use strong language too, but Mr. Hudson relates an anecdote to show that it is impossible to use language strong enough to produce any effect on some classes of the community. One day the *Herald* published a slashing article against some prize-fighters, one of whom afterwards called at the office in a friendly way, to say the "boys didn't mind." "You newspapers," he said, "can't use words strong enough to make the boys heed. Did you ever hear them talk among themselves? They mean business. No paper can publish what they say. Your article is milk and water. The boys won't notice it." Mr. Hudson does not omit to chronicle the fact that "interviewing" was first introduced by the *New York Herald*, at the time of the John Brown raid in 1859. It may be noted as an interesting feature in the history of American journalism that even before the middle of the last century a couple of newspapers were printed in German in Pennsylvania. There are now, it appears, one hundred and forty-two "superior journals" in that language in the United States, some of which have a considerable circulation, and exercise considerable influence.

KATHERINE'S TRIAL.*

WE scarcely know "Holme Lee" in her present book. Usually so quiet in her style, she has here at times adopted a certain roll and rollick evidently quite foreign to her nature, and has besides fallen into slipshod and the anti-nominative heresy to a bewildering extent. It is strange how a writer who hitherto has shown an appreciable amount of loyalty to good taste and good grammar should have suffered herself to write such sentences as "Kate's daily task." "Came an interruption." "Gardener was pruning the standard rose-trees that would be so beautiful in summer, looking in at the lower window." And "Kate's mutinous face" may be pretty-polite for pert, insolent, ill-tempered, but it is not English so much as translated French; and when "Rous tries to dissipate Kate's dolour," we involuntarily expect him to say "By my hallidame," or "By're lady," as the natural sequence. So when Colonel Eliot, speaking of his sick brother, says, "Does the young lady fear that we may withhold from our kinsman any succours he is capable of receiving?" we look for a grave and black-robed leech to enter the sick man's chamber, not an English doctor sent for by telegram; and when Joyce says, "The mistress talks that she has a fear upon her," we are inclined to call her Joyce the bower maiden, or Joyce the tirewoman, instead of the conventional lady's-maid, house-keeper, or nurse—all of which functions she fulfilled. But this odd kind of mediæval talk is common to all the characters. Rous calls Katie "sweetheart," which we imagine to be a very rare appellation from a nineteenth-century lover to his cousin, if even his *fiancée*. An old woman, speaking of Mrs. Eliot's former beauty, says:—

"The mistress is in a poorly fashion now-a-days, and what a grand-looking lady she was before you were born, Miss Kate! Many's the time I've said to Joyce, 'The mistress has never been her own woman since little Miss was born.' . . . She had a noble way with her before, an' carried her head like a queen. Now she goes creep-mouse, and her figure is that shrunken she looks straight up an' down, like a yard o' pump-water," &c.

Also, again, we would suggest for future consideration that a heart is not "gnawed upon" by a tooth, however sharp and malignant, and that "without ever setting foot on water" is an awkward expression, only to be equalled by "Rous was in the enjoyment of his good-natured spirits."

The book opens with the old theme of the rough running of true love:—

A February afternoon, purple and very still as it drew towards dusk. Rous Eliot made the road fly behind him on his way to Katherine. And for an hour before he came, Kate stood furtive at her window, watching. For he it known that these two were lovers, and that their love was forbidden.

A swift tall figure appeared under the limes. Katherine laughed to herself, and flew downstairs, crying in a joyous voice of well-simulated surprise: "I do believe that Cousin Rous is here!" And, in fact, there my lord was: wanting a welcome, but not wanting the coolness that can dispense with it where it is not offered.

After the meeting between the lovers comes the home dinner, when Kate dresses herself in a "sky-blue silk with a trimming of fringe, and white camellias in her hair and bosom"; and after the dinner comes a talk between Rous and his uncle the Squire, short and to the purpose, wherein the latter refuses his consent to the marriage of the young folks on the plea of cousinship. To all appearance, he refuses without much chance of obedience from the lovers. Rous, in reply to his uncle's assurance that he

* *Katherine's Trial*. By Holme Lee, Author of "Kathie Brand," "The Beautiful Miss Barrington," &c. London: Smith, Elder, & Co. 1873.

believes his love is quite disinterested though Kate is an heiress of no mean expectations, answers sturdily, "If we could change places on the spot, sir, I would have no wife but Kate." "And I promise you, Rous, that I will never marry while you are a bachelor," echoed a brave sweet voice at the door, and Kate, sent with a message from her mother, advanced into the light of the fire." After this we have the preparations for a hunt, with Rous "in pink, a perfect dandy, and in exuberant spirits," and a rivalry in horsemanship between a Miss Buxton on Sprite, and Kate on Bonnybelle, wherein the former beats. Of course the day ends with the inevitable accident. Was there ever a hunting scene in a novel that did not result in a "spill" of greater or less gravity? This time it is only the poor Squire who gets damaged; neither Kate nor Rous, as we feared in the beginning; and the elder gentleman's hurt is trifling in itself, though important in its consequences. But how is it that all the names of horses and of places in books seem so made up and so unnatural? One hunting lady may quite probably call her horse Sprito, and another may call hers Bonnybelle; a Slyboots also may "take his fences, Mitcham fences and all, like a bird"; but whether they are sweeping out of sight beyond Bently Furrows, cantering across Hollerby Wold, or craning at these same Mitcham fences, horses and men—the country gentlemen, parsons, lawyers, and doctors from Steepleton, the market town, with Robinson the landlord of the Swan Inn, one of the best mounted men in the field, and "ragtag and bobtail," in a sentence by itself, "in due proportion"—all look like figures cut out of cardboard, and with no more vitality in them than there is in those tin horses and their riders wherewith infant gamblers play the game of "Newmarket" for sugar-plum stakes, called by Holme Lee familiarly "goodies." There are certain things of which one can write at second-hand, and a hunting-field is one of them.

The author must forgive us if we tell the story and betray the little secret of *Katherine's Trial*. The work is so slight, the characters are so sketchy, and the leading circumstances so few, that we see no other way of dealing with it. It will not take us or our readers long to get to the end of it, for the whole plot can be put into a very few words. It is simply this. Katherine, who has been brought up as the daughter and heiress of Mr. Eliot of Bently, is not his child at all, but the motherless offspring of an artist, whom Mrs. Eliot and her confidante Joyce bought seventeen years ago from the caretaker, and fostered it on the Squire as his own. For what purpose the lady committed this crime is not very clear; seeing that she was fond of Rous, her husband's nephew and heir—"The poor lady loved Rous better than her girl," says the author. "He had been with her, a wilful (very) stout little boy, through those early years of disappointment when no Kate was, which accounted for it perhaps"—so that why she should seek another child, at such a cost and such a risk, is among the great unexplained motives with which novelists deal. The interest of the tale is centred, first in the decision of Katherine's father, when she finds him, as to whether he will claim and retain her, or leave her to her old life and the people who have been so long her true, if not real, parents; secondly, in the decision of Colonel Eliot, the Squire's brother and Rous's father, as to the marriage of the two young people. No longer cousins, the Squire's objections have fallen to the ground; but not being exactly equals, the Colonel's are in full force. However, everybody is supremely amiable; and even the Colonel, who seems at first inclined to play the part of a Bengal tiger, and make himself disagreeable, comes round before too late, and gives his consent and blessing with the rest. John Fenwick, Kate's father, having married again, and being but a poor man painting for dear life at Ravenna, thinking wisely enough that his hands were as full as they need be with his present wife and three children, declines to interfere with Katie and her arrangements; and beyond a good-natured liking and some artistic admiration for the strange daughter so oddly brought to life again, he seems to have cared but little for the adventure. The sketch of the artist in his Italian home, simple, poor, affectionate, and cultivated, is very well done altogether; and the contrast between Katie's nervous excitement and somewhat exaggerated sentiment and his coolness when they first meet is natural enough. The description of him as he appears when entering the "Golden Eagle," whether Mrs. Eliot has sent for him to come, reads like a personal sketch:—

He halted half a minute in the doorway, as if he thought there must be some mistake—a little gentleman in loose brown velvet clothing, a young man still, with a fine forehead, a ruddy complexion darkened by the sun, tawny hair and luxuriant beard scattered over his white waistcoat—an exquisitely neat and clean little gentleman, as English as if he had never been out of England.

Presently "Kate" is spoken of. "Mr. Fenwick glanced from one to the other in visible perplexity. 'Kate—who is Kate?' he asked in a low undertone, speaking more to himself than to them." On which he is told that she is his own daughter, and Rous goes for her:—

As she entered the room John Fenwick stood up, and stretched out his hands to her. There was not light enough to witness the finer shades of their emotion, but there was quite light enough for each to know the other again. They were silent for a full minute. Katherine thought she had a very young father. John Fenwick thought he had an amazingly pretty daughter, much too old for him, so he said: "Ah, well, we shall be play-fellows, that's all!" and Katherine said, "Yes," with April sunshine flowing over her face.

The cloud of her vagaries was dispersed. The neat little bearded gentleman was not embarrassed by the situation. Perhaps he was yet too astonished to be embarrassed. "I see a likeness over strong to be denied," he said, when they were set down. And then he waited with an air of deference for the poor Squire to speak again.

Then John Fenwick goes away, quite content that things should be as they are; and for his next meeting with his daughter appoints the chapel where he was working, as "the daylight hours were precious." All this is sober, unexcited, and prettily told, but the book is altogether too slight for anything to have much effect; and, above all, too much space is given to a kind of amateur handbook of Venice. We have a little bit of Murano and Salviati's great glass manufacture, which is neither a picture nor instruction; then we are taken to Torcello, where, if there had been "goodies" to buy, Katherine would have bought them for the ragged cherubs who begged of her, and where "Attila's stone chair, standing knee-deep in weeds," and the "ancient church that marks the site of the first city of refuge built by the people who founded Venice," are of course introduced. At the Academy we have the pictures, and the Grimani Miscel in the Ducal Library has a turn; the Scuola di San Rocco is somehow made subservient to the general plan, inasmuch as Katherine and "Maddie," her ancient French governess, Madame Roussel, an elderly lady with "a nice old face," go thither, to get out of the way when the Squire is taken ill; and so on. But we have a kind of uneasy feeling that we are being treated as children when they are ailing, and are having instruction administered to us in the form of amusement, just as they have japed hidden in their junn.

We have rarely to find fault with Holme Lee for an over-lax tone either of sentiment or speech, but *Katherine's Trial* has one or two blemishes which we do not like, and of a kind we scarcely expected to find in any work of our present author. Whatever lovers may do in private, and they all do silly things, authors should be as reticent as themselves, and as discreet as chaperons. They should either not allow familiarities at all, or they should not betray them. When Madame Roussel surprises "Kate sitting on Rous's knee, making him read out of the same book, and Kate only looked round and said it was 'Murray,'" we fancy that the old French *gouvernante* would have made some stronger remonstrance than she did, or that the lovers would have had more modesty in her presence. To be sure "Kate made a faint of moving, but Rous said 'Sit still,' and she was beautifully obedient." No wonder the old lady said, "You English lovers take a great deal of liberty." We do not think that all girls are granted quite so much liberty as Kate, or that fathers and old ladies allow them to wander about a foreign town alone with their lovers, morning, noon, and literally night; that they may stay out beyond stated times, be folded in arms, and kissed in company, not only at "good night" and "good morning," but "even when there was no occasion, when they were leaning on the window sill, feeding the pigeons." For our own part, had we a pretty, playful, mischievous-faced little girl of seventeen, like Kate, to take care of, we should be vastly more particular than either Mr. Eliot or Madame Roussel; and with every possible respect for the Rous of the occasion, we would keep her a little closer within bounds, and a little nearer under our own eyes than did they. Neither do we think any of the people concerned very wise in the open-mouthed publicity they gave to Mrs. Eliot's secret; and the way in which Kate was married to Rous, by what seems the Squire's death-bed, then taken off that very day alone to Ravenna, by her artist father John Fenwick, is funny, to say the least of it. On the whole, this is not Holme Lee's masterpiece; and it would not take a monstrous amount of genius to do immeasurably better.

FRENCH LITERATURE.

WE noticed some time ago the *Mémoires inédits* and the *Manuscrit de ma mère*, which form the first instalment of Lamartine's posthumous works; we have now to speak of the publication of the poet's Correspondence. The two volumes before us extend from the year 1807 to 1820*; they refer therefore to Lamartine's youth, and include the letters which he wrote between his departure from college and his marriage with Miss Birch. We gladly welcome this interesting collection, because it places the poet in a light altogether new to us. The works of his mature age and of his declining years—the *Mémoires inédits*, for instance, or the *Souvenirs et portraits*—gave us a kind of idealized Lamartine, very much touched up for effect, and in which the author of *Jocelyn* appeared as through a prism. The *Correspondance* is, we can clearly see, the simple reproduction of nature, and we like it all the better. We find the young man indulging freely in all the enthusiasm which liberty, love, and generosity can inspire; in the town or in the country, at Paris, in his excursions through Italy and Savoy, he fascinates us by his genuine appreciation of all that is truly great and beautiful. As years roll on, however, the necessity of settling to some definite employment brings down Lamartine for a while from the sphere of the ideal; he enters the *garde-du-corps*, then tries to become Secretary of Embassy, and, when difficulties present themselves, he falls, like Jean-Jacques Rousseau, into a fit of melancholy. At the same time he endeavours to establish his reputation as a *littérateur*; he writes a dramatic poem on the subject of Saul; he prepares a political tragedy the hero of which is to be Julius Cæsar; he even begins an epic composition entitled *Clovis*. At last the *Méditations politiques* are published, and M. de Lamartine finds himself at once Lord Byron's rival in glory. Here it is that the second volume of the Correspondence leaves him. The persons to whom these letters

* *Correspondance de Lamartine*. Publiée par Mme. Valentine de Lamartine. Vols. 1, 2. Paris and London: Hachette & Co.

are addressed do not form a very numerous group; M. Aymon de Virieu, M. de Bienassis, Madlle. de Canonge are the principal; the warmth of the poet's friendship for them is so touching that we would fain know something about the persons who could inspire such sentiments. Why does not Madame Valentine de Lamartine give us at least a few biographical details which might make us love them too? This is a desideratum which we should like to see supplied in a preface to the subsequent volumes.

The *Poésies inédites**, published in the same shape as the Correspondence, and forming part of the same series, are of very unequal merit. The tragedies to which we have above referred are interesting chiefly as giving the early promise of what the poet was to be afterwards. The fragments of the poem *Les visions* are more remarkable, because they introduce us to the scheme of a great work, two entire parts of which alone have been left complete; we mean *Jocelyn* and *La chute d'un ange*. As for the improvisus and album-verses collected here, we think they hardly deserved to be handed down to posterity. M. de Laprade's glowing preface is at the same time an *éloge* of the poet, and also an expression of regret at the taste of the present generation, which neglects the higher and purer style of composition for the moretricious beauties of occasional writing.

M. Léopold de Gaillard collects, under the title *Les étapes de l'opinion*†, the fortnightly political articles contributed by him to the *Correspondant* between June 25, 1871, and July 25, 1872. He thus gives us the history of a year which will ever occupy an important place in the annals of France; and, whilst he relates the events of those stirring twelve months, he shows how the weakness of the Government and the incapacity of the Emperor led to the disasters from which his country has so bitterly suffered. M. de Gaillard, making himself the mouthpiece of public opinion, represents M. Thiers as adding one more name to the list of statesmen of genius who have founded the historical greatness of France. This estimate bears date June 25, 1871; one year afterwards, our author, agreeing in this respect with General Changarnier, tells his readers that France is gradually, methodically, and legally drifting into Radicalism. Such are the two extreme points between which M. de Gaillard carries on his political criticisms. His book is written in a moderate tone, and will be found very interesting.

M. Feuillet de Conches, by the publication of a sixth volume, has brought to a close his series of letters and documents of every kind respecting Louis XVI., Marie Antoinette, and Madame Elisabeth.‡ We need not re-open the sharp controversy which this work has occasioned; but we may remark that, since the attacks of M. Geoffroy and other critics, M. Feuillet de Conches has been much more cautious in his selection of letters; and if all the previous volumes equalled in value the one before us, there would be little reason for complaint. The historical papers here printed refer to the years 1791-1793, and they illustrate chiefly the trials of the various members of the French royal family. Notes and explanatory documents abound, amongst which we have remarked an interesting account of the diplomatic negotiations which M. Feuillet de Conches had to undertake with the view of obtaining leave from the Austrian Government to copy certain letters preserved in the Vienna State Paper Office. This volume contains, besides six facsimiles of autographs, a portrait of the Queen and a drawing by Louis David representing Marie Antoinette on the way to the scaffold.

The cheap collection of dramatic works published by Messrs. Hachette & Co. for the use of schools § contained, up to the present time, only some of the *chefs-d'œuvre* of P. Corneille, Molière, and Racine. But the *répertoire* of the French stage is rich in tragedies and comedies which, though they cannot be placed on the same rank as *Athalie*, *Le Cid*, or *La Misanthrope*, are nevertheless very remarkable, and deserve to be studied. A selection from the plays of Voltaire, Regnard, Destouches, and Beaumarchais should, in our opinion, form an essential part of any series of French classics; and new editions of comedies such as *Le Grandeur*, *Le Légataire universel*, and *La Métempsichouse* would soon be very popular. By way of starting in that direction, Messrs. Hachette have issued a reprint of *L'avocat Patelin*, one of the most amusing specimens of the French mediæval stage, revised and modernized by Bruyès. This play is followed by several long extracts from the original farce, and illustrated by short notes, grammatical and historical.

M. Pelletan || is very angry with the Conservative party; he accuses them of cowardice, of selfishness, of betraying at the eleventh hour those to whom they had given their allegiance, and of being the champions of all desperate causes. He writes with such warmth, and his style is so animated, that many readers will no doubt be won over to his views, notwithstanding the unsoundness of some of his arguments. He awards all due praise to the English Conservatives, and finds in that very panegyric a fresh motive for attacking those who in France have endeavoured to carry out the same system of policy. A little reflection might have taught him that the historical antecedents of the two countries, differing so widely as they do from each other, must necessarily affect the attitude of political parties, and that the French Conservatives may think themselves called upon to follow a course of action which

elsewhere would be impossible. M. Pelletan cannot bear the idea that on the other side of the Channel the Republic should be regarded by many persons as existing only on sufferance; and in order to show the duty of establishing it definitively, he describes the various political opinions which now divide his country, taking Joseph de Maistre, Lamennais, Béranger, and Lamartine as the incarnations of Clericalism, Rationalism, Caesarism, and Republicanism respectively. These four portraits are brilliantly sketched, but it would be easy to raise objection on the score of likeness; and as for the epilogue, in M. Pelletan quite sure that all French Republicans understand the Republic in the same sense as he does himself?

The cause of materialism* has been pleaded so often lately in France, and with such apparent success, that a work written from the extreme idealistic point of view is quite a novelty. M. Paul Ribot goes almost beyond Bishop Berkeley, and maintains that we know absolutely nothing of the outer world. Form, colour, sound, distance, all the qualities which belong to matter, are, he says, mere modifications of our own thought, and it is our own individuality that we find in the various objects brought under the cognizance of our senses. It follows from this hypothesis that the limits of physical science are extremely narrow, and that we are in perfect ignorance of the fundamental laws upon which that science rests. On the contrary, as he contends, if we study our soul, we find ourselves immediately in a world every part of which we can readily explore, and the facts we thus master enable us to lay down a set of rules, or laws, indisputable in their character, universally applicable, and containing, if we may so say, the whole formula of life. M. Ribot's intentions are praiseworthy, and he has done good service in exposing the sophisms of materialist writers; but his own system, like that of Bishop Berkeley, is open to much criticism, and he falls into the error of taking for granted certain propositions which require demonstration, and which, we think, cannot be clearly proved. He is right, however, when he says in his preface that discussions bearing upon the existence of God and the immortality of the soul are never out of place. Whatever the scientific observers who share M. Auguste Comte's views may say, the study of phenomena is not sufficient to satisfy man's intellectual cravings.

M. Laugel's book on England† is one of the best we have read for a long time on the subject, and we have no hesitation in preferring it to the amusing volume of M. Taine. He knows our country more thoroughly, and a long residence amongst us has enabled him to acquire that accurate acquaintance with English institutions and manners which a few months' visit can never impart even to the most sagacious observer. For a superficial foreigner, and more especially for a Frenchman, the political greatness and apparent stability of England at the present time form a singular problem. How is it that, whilst the whole of Europe is convulsed by revolutions, Great Britain alone seems to weather the storm, and to advance steadily on the road of necessary reforms without being every now and then stopped by civil war? M. Laugel finds the solution of the problem in the welding together of the races which have made up the English people, and in the religion which the majority has adopted. The Celtic lightheartedness and the Teutonic "brutality," mixed so as to form a happy equilibrium, have, on the one hand, concurred to form a nation whose strong common sense is happily tempered by imagination and the spirit of enterprise; whilst, on the other, Protestantism has taught the English that the conquest of Heaven is not the only one which deserves the efforts of human activity. "The spirit of the Reformation"—we quote M. Laugel—"drives man into life, not as a victim, but as a warrior. . . . The best, the holiest, according to the spirit of the Reformation, are, or should be, likewise the strongest, the most skilful, the happiest; let us say plainly, the richest." This curious definition of Protestantism, as a ready and convenient scheme for making money and for getting on in life, recalls a famous ex-Chancellor's grateful recognition of the temporal blessings which he owed to the Christian religion.

After a series of journeys through Turkey‡ which have extended over eight years, M. Albert Dumont publishes the results of his observations. The Turks, the Albanese, the Slavonians, and the Greeks, are the four races settled in the peninsula of the Balkan; our author describes their moral and political condition, and endeavours to show how far the good qualities which distinguish them counterbalance and explain their faults. His book is full of interesting details on nationalities with which we are very imperfectly acquainted; the Bulgarians, for example, whose antipathy to the Greeks is one of the most curious expressions of the spirit of Pan-Slavism. If we may believe the Agram newspapers, classical civilization was in no respect whatever the work of the Hellenes; the fellow-citizens of Thucydides, Demosthenes, and Plato merely imparted to other races the beauty of their language, and the share generally ascribed to the Greeks in the history of the world belongs to the Slavonian people.

The history of the French stage during the mediæval period, such as we attempted to describe it a little while ago, is full of interest, and it can now be easily studied, thanks to M. Édouard Fournier. Coming down to more recent times, and following the chronological succession which takes us from the days of Villon, Clément Marot, and Marguerite de Navarre to

those of Corneille and Racine, we are glad to take again as our guide the excellent critic we have just named*, and to consult the texts published with so much care and elegance by Messrs. Sanchez & Co. Twenty authors are represented in this gallery, and the plays selected by M. Fournier from a very extensive *répertoire* have many qualities which recommend them to the reader. The leading characteristic of the dramatic productions now published is their want of originality; the classical writers of Greece and of Rome were boldly imitated by Jodelle and his contemporaries; the frequent intercourse of the French with Italy and Spain led playwrights to borrow from the poets of those two countries, and we know that Pierre Corneille's earlier comedies were cut out of the rich materials left by Calderon and Lope de Vega. Larivey's six comedies are perhaps those where plagiarism appears in the most barefaced manner. Odet de Turnèbe's *Les contents*, which M. Fournier has taken care to give us, is on the contrary one of the few specimens of real French style which the Renaissance presents us with; and, curiously enough, imitations of foreign models were so thoroughly recognized during the sixteenth century that La Monnoye, in his notes to Duverrier de Vanprivas, endeavoured to trace *Les contents* to Girolamo Parabosco's *I Contenti*, whereas the only similarity between the two plays is to be found in the title. One of the most amusing features of the volume before us is the introduction of two *farces tabariniques* as examples of a style of literature which, though far from dignified in itself, supplied Molière with many a useful hint. About Tabarin, the author, actor, and mountebank, little is known, and of the burlesque comedies with which his name is associated only a few extracts are fit for general reading; but still no *catena* of French dramatic literature would be complete which excluded at least a mention of the buffoon who three hundred years ago attracted audiences as large and as enthusiastic as those which gather around Punch and Judy. Rotrou and Bois-Robert, two of Corneille's contemporaries, supply the last pages of M. Fournier's volume with comedies which serve to show what had taste prevailed on the French stage on the eve of the production of *Le Menteur*.

It would be a great mistake, however, to suppose that even Pierre Corneille is from beginning to end an unexceptionable model of style and of correct taste†; on the contrary, we see him in his earliest works taking his models, not at home, but on the further side of the Pyrenees, and unravelling the complicated imbroglia of *La surmante* and *La reuve* in a language vigorous, it is true, but full of archaisms. *Polyeucte*, *Le Cid*, *Horace*, *Anna*, and *Rodogune* show us the poet arrived at the full maturity of his genius; but the decline soon follows:—

Après l'*Agésilas*—Hélas!
Mais après l'*Attila*—Hélas!

This new edition gives us, besides all the dramatic works of Corneille, his life by Fontenelle, and a glossary of obsolete words and phrases. M. Giffroy, the celebrated actor of the Théâtre Français, has added to it a series of full-length coloured drawings representing one of the leading characters in each play.

The limits of a single volume would have been much too small for the publication of any of Corneille's works besides his dramas; Racine, on the other hand‡, wrote less, and therefore his recent editors very properly reprint his *Œuvres complètes*. The poet's correspondence, his fugitive pieces, his history of Port Royal, are all in their way admirable; and we even question whether the interesting series of letters which he wrote to his son and to Boileau have not charmed many readers who fail to appreciate the beauties of *Britannicus* and *Phèdre*. As Fontenelle's biographical sketch of Corneille forms the indispensable complement of the poet's works, so no edition of Racine should be deemed complete which did not include the memoirs of his life written by the author of *La religion* and *La grâce*. They introduce very naturally one of the best instalments of M. Laplace's collection.

General Vinoy speaks on military subjects with the authority of long experience.§ His object is to explain the military position of France, and to show how the army can best be reorganized. What are the resources which the country can supply from the recruiting point of view? how did the old law operate? what will be the probable consequences of the new law? Such are the topics discussed in the first part of the present work. The author then goes on to examine the actual condition of the French army; and, after giving his views on the mobilization of the troops in time of war, he concludes with a few general remarks. The point upon which General Vinoy lays the greatest stress is the necessity of making each department a centre for the assembling of reserve forces. Under the old system, which is still adhered to, there are 258 depôts, and therefore, if we suppose that circumstances require the summoning of an army of 800,000 men, we shall have 480,000 reserve soldiers travelling from one end of France to the other in quest of their centres; whereas, if the system of departmental rendezvous were adopted, there would be only eighty-seven localities appointed, and the grouping of the soldiers would be much more quickly performed. Some of General Vinoy's suggestions may be open to objection, but his work is conscientiously done, and deserves to be studied.

M. Ernest Duvergier de Hauranne* is one of the most distinguished members of the moderate Republican party, and his articles contributed to the *Revue des Deux Mondes* have placed him at once amongst the leaders of what must be called, we suppose, the *centre gauche*. He believes in the ultimate triumph of the Republic, but that triumph, he honestly admits, can be secured only on one condition; no extreme policy, no leaning towards Radicalism on the one hand or Royalism on the other. Besides, as he says in his preface, although the friends of M. Gambetta and the supporters of monarchical institutions may call themselves *irréconciliables*, they are not so mad as they would make us believe. The most important thing to do at present is to dispel, if possible, the fears which many people entertain at the mere mention of the words "Republic" and "Republican." If it is true that all Republicans are not austere patriots and virtuous citizens, it is equally certain that they are not all necessarily soldiers of the barricades, thieves, cut-throats, or even dirty *sans-culottes*. Such is the argument of M. Duvergier de Hauranne's preface; the book itself consists of four chapters, besides a concluding *résumé*, where he gives us his scheme of government, which includes, besides a President, two Houses of Parliament, both elective. The prompt cessation of a provisional state of things is, we are told, a matter of necessity; but the only possible issue, says M. Duvergier de Hauranne, is the Republic, because it will transform at once a powerful majority of politicians from being conspirators into firm Conservatives, while the other parties—Radicals or Royalists—are so insignificant that they can give no cause for alarm.

Some years ago M. Naquet published a work in which, discussing certain important social and political questions, he merely treated them as hypotheses or utopias†, without any reference to the actual state of things in France. The volume he now gives us is, on the contrary, essentially *de circonstance*; for it professes to describe the best Constitution that our neighbours on the other side of the Channel can adopt. M. Naquet is a good deal more advanced in his opinions than M. Duvergier de Hauranne. According to him, there are two kinds of order: 1st. The fictitious or Monarchical order, necessarily resting only upon brute force and the stupidity of the population; 2nd. The natural or Republican order, arising from the harmony of interests. M. Naquet asserts, indeed, that natural order is to a certain extent independent of the form of government, but still he considers as absolutely null—he does not even deign to notice—the existence of constitutional monarchy in France between 1815 and 1848; much more, he absolutely refuses to the nation the right of re-establishing monarchical institutions. One Legislative Assembly, and a President of the Republic acting as a mere delegate of that Assembly—such is M. Naquet's system, reduced to its simplest expression. The members of the Assembly might, however, be inclined sometimes to encroach upon the rights of their constituents; accordingly our author proposes the creation of a supreme political court, enjoying the privilege of a "suspensive veto" against all unconstitutional laws; that is to say, he suggests something very much like the famous Committee of Public Safety.

We have already more than once mentioned the *Bibliothèque universelle et revue suisse*‡. The number for June, just received, contains, amongst several very interesting articles, an important one on Liberty, by M. Ernest Naville, and a capital sketch of the Genevese novelists and *chansonniers*, which is particularly worthy of attention because it introduces us to a number of literary characters who, although very little known out of Switzerland, are really writers of considerable merit.

THE SHAH AT PARIS.

THE arrival of the SHAH has been a source of great amusement and delight to the people of Paris. They have seen in his reception an occasion for many jokes, and at the same time an opportunity of exhibiting what the capital of capitals can do when it chooses. It is a long time since Paris has had a holiday, and it has been charmed to break the long dullness of its state of siege, its monotonous politics, and its hard times by a few days of childish gaiety. It has been impossible, however, for Parisians to treat the SHAH with the same gravity with which Londoners received him. They have never lost sight of the drollery of making so much of a petty Oriental prince. Nor was it possible that, in the present feverish state of the political world, the SHAH should not be made somehow or other the instrument of different parties. The Republican papers do not much like the frivolity which is so ready to stare at and admire a despot; and one ardent Radical, who was arrested for hissing at the SHAH as he passed, explained that his vehemence was to be accounted for by his belief that, in hissing the SHAH, he was hissing all the Kings of the earth. The Royalists of all shades are on the contrary charmed with the SHAH, and congratulate themselves on the eagerness with which the crowd rushes to look at any one who comes with the prestige of a sovereign. Paris, said one ardent politician, has been now nearly three years under a Republic, and when something like a King comes it is as pleasant as the first dish of new peas to a man who has been going on through the winter with nothing but potatoes. But when the SHAH, although he satisfies the thirst for Royalty, is much better fun than most Kings, for he and his Oriental ways are capable of being made the themes of endless pleasantry. In England we sometimes have reason to regret that there is too little reticence as to what Royal people do or do not do, and there are some occasions when the veil of private life is lifted by the hands of vulgar curiosity. But in Paris there is no notion that any reticence at all is desirable; and if it is sometimes difficult to procure information, it is always easy to invent. Whether the many anecdotes and foolish stories told of the SHAH are true or false it is impossible to say, for no one cares, and to be amusing, not to be true, is the aim of the aspiring journalist. The Parisian journals gravely announce that on the night previous to the date of publication the SHAH took his coffee at eleven and went to bed at twelve. This is interesting, and who is there to say it is not true? The Correspondent of one of the most enterprising journals entertained his readers on Monday with a long account of the heroic and at length successful efforts which he had made to get near the SHAH at Cherbourg. His irrepressible zeal had been rewarded by his being able to make and communicate a great discovery. This secret which he whispered so pleasantly to the Parisian world was that he had actually sat so near the SHAH that he could say positively that HIS MAJESTY had not been shaved for two days. To discover or invent this, and to let all Paris share the delightful secret, seemed to the writer the height of fun, and no doubt most of his readers thoroughly sympathized with him. A still better opportunity for light sportive writing was afforded by an incident, real or imaginary, which marked the SHAH's journey to Paris. There was a station where he was to stop, and everything was done to make the most of the great event. The Préfet and the Sous-Préfet and the Maire were there, and the military and the firemen, and the usual young ladies with bouquets, and the Maire was proceeding to read a beautiful address,

when it was discovered that the SHAH was asleep. No one dared to wake him, and he slept tranquilly till he was carried far away from the scene of the honours intended for him. The confusion of the eager provincials and their respectable authorities under a stroke of fortune so disastrous and so unexpected was a delightful theme for Parisian writing; and no one who did not appreciate the comic side which the SHAH's coming has presented to the Parisian mind could really understand how he has been received.

Paris, however, has not only had its little laugh at the SHAH; it has received him with a welcome intended at once to do him honour and to show him what Paris was like. Before he came to England, a story was adroitly started that he had confided to some unknown person that his really serious object in visiting Europe was to see England and make the English his friends. In the same way, before he got to Paris, the Parisians were informed that his dream of dreams, the desire that had carried him through weeks of sad exile, was to see and taste the delights of Paris. That he should have his wishes fulfilled and know the charms of the city of pleasure was the wish of all Parisians. They have not spent much money on their welcome. Most of what they have disbursed on his account will have gone in fireworks and gas. But then he has seen Paris, and there is no one in Paris who does not honestly believe that this is quite enough for a Shah. There is nothing which could happen under the sun that could for a moment shake the belief of the Parisians in their capital, or even dispose them to see any painful associations in anything or any person forming part of an exhibition in which they considered the glory of Paris to be involved. The SHAH entered Paris by the Arc de Triomphe, and was there received by Marshal MACMAHON. The Parisians managed entirely to lose the memory of the last entry into Paris made through the triumphal arch, and they determined to seem never to have heard of Sedan, and complacently assured each other that it must be a source of ineffable pleasure to the SHAH to find himself in the same carriage with that "great warrior," the Duke of MAGENA. The entry into Paris was a remarkably pretty sight. There were the flags and the troops to which visitors to Paris under the Empire have been so long accustomed; and there was an enormous crowd evidently and honestly delighted in at last seeing a spectacle, after the dismal period during which spectacles have been impossible. At Versailles the entertainment was as successful as anything in London; and it may be some comfort to Frenchmen to know that once in a way the desolate grandeur of Versailles has been put to some use. The Palace was there, and the magnificent fountains were there, and all that had to be done was to add some fireworks, and to turn on plenty of gas. Besides the superior beauty of the city, the Parisians have sought to show the SHAH two things in which they could boast a superiority over Londoners. They have devoted themselves much more than we did to Persian Lions and illuminations. Everywhere there is to be seen the extraordinary animal with a dagger in his front paw which represents the warlike majesty of Persia; and the illumination at Versailles culminated in a scene in which, according to the language of an enthusiastic journalist, the lion of Persia appeared in an "apotheosis of flame." The spectacle of the night fête to be given to-morrow will be magnificent, if the weather is favourable. The course of the Seine and the bridges will be lit with a variety of colours, and on the Trocadero the SHAH will be seated in a blaze of glory, and be honoured with an expenditure of gas which he would

doubly value if he could but understand how dreadfully dear coals are. The review of Thursday was an excellent opportunity of showing him how good an appearance the best part of the French army can still make, in spite of all the reverses of war. But the preparations for the review were the cause of one of those differences behind the scenes which unfortunately so often attend the arrangement of great scenes both in public and in private life. There were many deputies who did not like the way in which the Assembly was being treated. It was the Sovereign of France, and yet the members of this sovereign power were totally eclipsed by the Marshal, and by military men and officials. As a derisive Royalist journal said, the deputies who waited for the SHAH on Sunday on the steps of the Bourse Palace looked more like dealers in rabbit-skins than sovereigns. There was wrath at Versailles over this, and after a very warm and angry discussion the majority voted that at the review the deputies should have a tribune all to themselves, and should appear in official costume. What this official costume was to be it was impossible to say positively, and the same derisive journal assured its readers that immediately after the vote one of the deputies, whom it named, rushed off to buy, by way of official costume, the first black coat he had ever had in his life. As a sign of the times the assurance with which the monarchical journals at once proclaim the sovereignty of the Assembly because they think the present majority will favour their schemes, and ridicule the deputies for believing that the Assembly, as sovereign, is entitled to public honour, is worth noticing, and may give rise to some painful thoughts as to the future of France.

The French candidly avow that the visit of the SHAH has no political interest for them. Sometimes they talk feebly about the Chinese war, and the miserable settlement in Cochin China, and even go back to the Syrian Expedition, as they call it, and make believe as if they had a share more or less supreme in the fortunes of Asia. But the more sensible exponents of public opinion recognize that after the German war there is no real good in using language of this sort; and they even, with a quiet and dignified regret, refer to the recent treaty concluded at Berlin by which it is stipulated that Germany shall interpose its good offices if Persia is threatened by any European Power. Germany has been the conqueror in a great war, and they recognize that it is the privilege of a conqueror to claim a right of intervention in the affairs of distant nations. In old days France had the reputation of being at the head of military authority in Europe, and therefore it was then the right of France to see that other nations did not go to war without its permission; but times are changed, and this special glory of France has passed into other hands. No effect of the war is more marked than this indifference of France to what is going on outside France. Its own internal struggles and its domestic difficulties absorb its attention. Every incident is turned into an occasion of struggle between the Clerical and the Liberal parties; and even the visit of the SHAH has called forth a letter from General DE TEMPLE, a noted partisan of the Right, in which he deprecates the frivolity with which France honours a Mussulman Prince while it leaves the Pope beneath the yoke of his enemies. His countrymen have not the slightest wish to risk a son or the life of a soldier in order to give the Pope back what he has lost; but then, on the other hand, they make it equally clear that, in paying honour to a Mussulman Prince, they do not wish to protect imaginary interests, or to pretend that the key of the great Eastern question is in their hands. They prefer to dwell on the safe and incontestable influence which France exercises over distant nations by her manners and her language. They point with satisfaction to the fact that the only European language which the SHAH speaks is French, that the French language and literature are studied at Teheran, and that among the officials of the SHAH many Frenchmen are to be found. This is a source of gratification which no one can deny or grudge to the French, and there can be no doubt that the SHAH recognizes that, now that he is in Paris, he has reached the centre of a civilization which hitherto has been supreme in its pliability and its power of adapting itself to nations of the most different races and creeds.

THE GOVERNMENT AND THE CIVIL SERVICE.

IN the debate on the question of the salaries of Irish Civil Servants, Mr. GLADSTONE claimed with some reason for himself and Mr. LOWE the credit of being the only direct representatives of the public interest. There is no doubt that the House of Commons is often more lavish or more liberal than the Government; but it may be questioned whether uncompromising resistance to all demands for increased expenditure is the best mode of securing economy. Both Mr. GLADSTONE and Mr. LOWE laid great stress on the binding nature of the contract between clerks in the public offices and the State. Some of the Irish Civil Servants obtained their posts, as Mr. GLADSTONE asserted, in times when their friends were out the knockers of official doors in their urgency to provide for relatives and friends. Mr. LOWE contended that, if the cost of living had become less, the Government would not have made a corresponding reduction of salaries; and he inferred that, having taken the chance of variation in either direction, the malcontent clerks ought to acquiesce in the bad bargain which they now find that they have made. Mr. GLADSTONE, on the other hand, referred to a motion which was once made for the reduction of salaries on the alleged ground that the cost of living had at the time been diminished; but, on the whole, Mr. LOWE was justified by ordinary practice in his assumption that the clerks would have got the benefit of increased cheapness. It is odd that neither Minister perceived that he was proving too much; because, if contracts are to be considered as conclusive, no salary of an occupant of any office can ever be increased, except for the purpose of retaining his services when he proposes to resign. The alternative of retiring from an underpaid service is scarcely ever available. It is difficult to pass into a new profession or employment; and every public servant who throws up his appointment sacrifices his future right to a pension which he might have earned. It would scarcely be possible to make a rise of pay prospective by limiting the increase to new comers, who would consequently receive either actually or proportionally a higher remuneration than that which was allowed to their seniors in office. There must evidently be some point of reduction in the value of salaries at which the most fiscal Minister would find it necessary to make allowance for the increased cost of living. Mr. LOWE's general propositions afford no answer to the demand for better pay, if any case can be suggested to which they would be inapplicable. VOLTAIRE, in illustration of the parsimony of FREDERICK WILLIAM I., tells a questionable story of having given alms in the streets of the Hague to an ex-Prussian Ambassador. Even Mr. LOWE's sternness would give way to the spectacle of retired chief clerks applying for the tickets of the Modesty Society. There is no use in insisting on the sacredness of contracts between the State and those whom it employs, if public as well as private interests are sometimes promoted by adequacy of payment. It is perfectly true that salaries ought not to rise and fall directly with the price of provisions, for a young man who enters the public service knows that he is liable to suffer by the ordinary range of prices. Nevertheless, in accepting a salary, the substance of his contract is that he shall discharge his duties in return for wages which will enable him to live with a certain degree of comfort. If, in consequence of a change in the value of money, his expectations are disappointed, the State only adheres to the spirit of the bargain by replacing him in his original position.

The argument that there are numerous candidates for vacant places is equally inconclusive, though it may fairly be taken into consideration by a Minister. The audition for appointments in public offices is frequently founded on ignorance; nor is it possible to ascertain beforehand the quality of the candidates. Judicious employers never underpay their servants, although they might perhaps get their work done on cheaper terms. The manager of a great railway receives the salary of a Secretary of State, and the clerks and agents of wealthy merchants are far more highly paid than Civil Servants of equal qualifications. The social advantages and the certainty of the service of the State, as well as the contingent right to pension, are properly calculated as parts of the necessary remuneration; but, if official salaries are generally reduced in value through the rise of prices, the State can scarcely expect to compete with success for the services of the most highly qualified persons. If the guardians of the Treasury had relaxed from their systematic austerities, the House of Commons would have been more willing to remit the claims

of the Irish clerks to their discretion. Mr. Lowe indeed hinted at a possible readjustment of duties and of pay which would have involved the dismissal of some of the less fortunate claimants; but he still assumed that the total amount of Irish salaries was a fixed sum incapable of increase. The Commissioners who were appointed by the Government had reported in favour of a partial increase of salaries, and the Ministers might reasonably have consented to give effect to their recommendations. The vote of the House of Commons on Mr. PLUNKET's motion will probably induce the Government to redress in some degree grievances which might as well have been acknowledged in the first instance. The official Commission which has been instructed to investigate the case of the Irish clerks will almost certainly recommend some increase of pay. Mr. Lowe so far agreed with Mr. PLUNKET and the other advocates of the claims of Irish clerks as to hold that the pay for similar services ought to be as high in Ireland as in England. Mr. GLADSTONE added that the services were not in fact similar, because the greater amount of wealth and of business in England involved more laborious official duties than the simpler condition of Ireland.

In his evidence on the more general question of the cost of the Civil Service, Mr. Lowe laid unexpected stress on the importance of encouraging candidates from public schools, or, in other words, of imposing a social as well as a literary test of competence. It was, he remarked, inconvenient that public servants who are necessarily brought into contact with the educated classes should be ignorant of conventional forms or unable to aspire their vowels. The advantages of large schools of the higher class are undoubted and numerous; but probably Mr. Lowe might have little objection to domestic training if only it were given in a refined and cultivated home. When the system of competitive examination was first devised twenty years ago, all but the fanatics of the new creed foresaw that it might have a tendency to lower the average rank of future Civil Servants. It was highly desirable to promote habits of industry, and to require a certain amount of attainment; but it was possible that the loss might preponderate over the gain if the clerks in the chief public offices ceased to be gentlemen. Mr. Lowe seems to suspect that the process of degradation has commenced, though it may be admitted that the expense of education has to some extent excluded the lower middle class from competition. It is not known that many Civil Servants are condemned by the test of the aspirate; and their general capacity is probably neither greater nor less than that of their predecessors who owed their appointment exclusively to patronage. Even if Mr. Lowe's recommendation of an increase of salary at the commencement of service is adopted, the public officers are not likely to be filled with University prizemen. The Civil Service examinations are, like races of half-bred horses, adapted to second-rate capacities. If the heads of civil and military departments at any time require the services of the ablest men of the day, they must persuade Parliament and the Government to hold out inducements which may compare with the prospects of professional ambition. It is evident that for the transaction of ordinary routine business no rare faculties are necessary. Mr. GLADSTONE acutely observed that it is impossible to give an adequate reward to extraordinary merit, because the same scale of payment would immediately be applied to the encouragement of mediocrity. The prizes of the service are few, and many of them are properly left open to external competition; but certainty of subsistence, and the contingent chance of a pension, compensate in some degree for the dullness of an unambitious career. Zealous and active officials sometimes write to the newspapers to recommend for themselves and their colleagues harder work accompanied by higher pay, and even to denounce the whole system of superannuation; but there can be no doubt that the more prudent majority understands better the conditions of the service. Even in the interest of economy, Mr. Lowe is fully justified in his desire to maintain the social character of the Civil Service. In England, if not in other countries, it is found that an occupation which confers a certain rank is sometimes chosen with but little regard to pecuniary advantage. The list of candidates for the army is crowded, notwithstanding the scanty pay of officers, and the numerous vexations in the way of shifting rules and successive examinations which official ingenuity has devised. Before the abolition of purchase, the greater number of officers received in the form of pay but a moderate interest

on the sums which they had advanced for their commissions. The clergy, having for some generations been taken from the upper middle class, still retain, notwithstanding the relative diminution of their incomes as compared with those earned in other professions, much of the social consideration which was acquired in the days of pluralities and of ecclesiastical prizes. It is not improbable that a calling which offers so little chance of profit or of distinction will hereafter fail to attract the same class which has hitherto given the Church its worldly position. The same danger will beset the Civil Service if it is systematically underpaid.

The Government has, in deference to the vote of the House of Commons, properly undertaken to consider the alleged grievances of the Irish clerks. It may therefore be assumed that Mr. GLADSTONE's rigid construction of contracts, and the severe indifference of the CHANCELLOR of the EXCHEQUER to the price of provisions, are for the present waived. It was fortunate for the complainants that Irish patriotism always in similar cases overpowers petty distinctions of religion or politics. Mr. DOWLING sided with Mr. PLUNKET in his effort to obtain some further contribution from the Imperial Treasury to the relief of a special class of Irish necessities. It was in vain that the Ministers suggested the ingenious fallacy that some of the underpaid clerks were probably Englishmen or Scotchmen. It was well known that the majority were Irish, nor will they grudge the participation of their alien colleagues in any boon which they may be lucky enough to obtain. The precedent of the Prussian functionaries who have lately received a large increase of pay from the most thrifty Government in Europe was not explained away by Mr. GLADSTONE's well-founded statement that Prussian salaries had been before miserably insufficient. The Prussian Government has probably not modified its established estimate of the just price of official labour; but it has found that payment in a depreciated currency was equivalent to a reduction for which there was no reasonable excuse. As Mr. GLADSTONE observed, the low rate of payment could never have been maintained, if there had been in Germany the same professional and commercial competition as in England; yet there seems to be no reason why the proportion of English and German salaries should now be altered.

SPAIN.

THE Spanish Cortes have for two or three weeks occupied themselves during a season of unwanted tranquillity with the ostensible business of framing a Constitution; but, before they commenced their organic labours, they adopted the far more practical course of suspending the so-called constitutional guarantees which nominally restrain the power of the Government. It was thought to be the most distinctive excellence of the last Constitution, now three years old, that it positively prohibited the irregular practices which had prevailed during the entire reign of ISABELLA. As long as there were no political enemies to terrify or to punish, the ordinary laws were more or less scrupulously respected by the Minister of the day; but many months seldom elapsed without a real or imaginary conspiracy, which was followed by the death or deportation of the ringleaders at the will of the Government. The last Constituent Cortes not unnaturally fancied that laws might be so contrived as to ensure their own execution. As a security against periodical violations of law, they solemnly enacted that the law should never again be suspended. At that time both the country and the Cortes were seriously bent on effecting national regeneration; and perhaps it was thought that public opinion would secure the maintenance of the new Constitution in spirit and in letter. Some disappointment was probably felt when PRIM and his successors found it necessary to recur to the familiar methods of suppressing resistance and maintaining authority. As often as the Carlists in the Northern provinces or the Republicans in the towns began to be troublesome, the Government always proclaimed or practically established a state of siege, instead of referring political offences to the ordinary tribunals. The normal irregularity is perhaps indispensable; nor is it possible to conduct Spanish affairs in accordance with amiable illusions; yet there were probably a few enthusiasts who hoped that the establishment of the Republic would at last harmonize the doctrines of liberty with the necessities of government. Habitual malcontents or conspirators who had at last

attained the object of their efforts forgot that they would in turn be exposed to the jealousy and to the machinations of temporarily defeated parties; nor was it easy in the moment of triumph to recognize the wide differences by which the various Republican sections were divided amongst themselves. Since the proclamation of the Republic, several little revolutions have been accomplished at the dictation of the mob of Madrid. FIGUERAS, who had never ventured to resist popular force, finally retired from office under threats of disturbance. His successor has taken courage to demand from the Cortes the necessary power of maintaining order, and for the present he has impressed the armed rabble with a salutary conviction that, if they again attempt to usurp the functions of the Government and of the Cortes, they will be summarily shot down in the streets. The inevitable progress from anarchy to despotism has seldom been more conspicuously illustrated.

One curious result of the firmness displayed by PI Y MARGALL and his colleagues is the political isolation of the dominant faction. The Moderates and the Progressists have never affected to take any part in the government of the Republic; nor are either the respectable classes or the numerical majority of the Spanish people in any way represented by the Cortes. When the Assembly first met, it was found, like other bodies of the same kind, to contain a majority and a minority, and the supporters of the Government were, by the necessities of their position, compelled to be in a certain sense Conservative. The extreme or irreconcilable Democrats, though they found themselves outnumbered, might have exercised a limited influence in Opposition, if they had not shared the intolerance which characterizes all Spanish factions. It seems never to occur to Continental Republicans that Assemblies must be ruled by majorities, and that the weaker party must be content to be outvoted. It was natural that the political allies of the mob of Madrid should object to a measure which was professedly directed against their supporters; but, on the other hand, the Cortes might reasonably assert its own independence and the supremacy of the nation which it nominally represents over the populace of a single city. The irreconcilables were entitled to any credit which might attach to the ostensible champions of liberty, and, if they had been content to wait, they might probably have found opportunities of revenging themselves on the majority. Instead of taking advantage of their Parliamentary position to watch and to check the Government, the minority expressed their indignation at the suspension of guarantees by retiring in a body from the Assembly. As the PRIME MINISTER lately said, abstention in Spain means conspiracy, and there can be no doubt that on the first occasion the extreme democrats will conspire against the Government and the Cortes. That all the other parties are waiting the effect of divisions in the Republican ranks is not a consideration which weighs with the irreconcilable faction.

The most important article in the proposed draft of the Constitution is a power of suspending all constitutional rights to be exercised by the President. It seems that the Republicans, who have up to this time been in constant opposition to lawful authority, have during their brief tenure of office suddenly discovered that in the natural gradation of political necessities order takes precedence of freedom. The new article of the Constitution will, if it is adopted, be strictly analogous to Mr. LOWE's abortive Bank Notes Bill, which also was intended to regulate unavoidable irregularities. As it is perfectly certain that any Spanish Government which may be formed will, legally or illegally, suspend constitutional guarantees, it may be thought expedient to confer on the President a prerogative which he would certainly exercise if it were formally withheld. It seems hardly worth while to make so many revolutions for the purpose of ultimately arriving at the result of normal or periodical despotism. The future President, relieved from the necessity of breaking the law as often as a conspiracy is formed or suspected, will have more leisure to devise other occasions of exceeding or violating the Constitution; but it is perhaps unreasonable to discuss seriously the limitations of an instrument which is made to be broken and in a short time to be forgotten. The Constitution which will probably be adopted by the Cortes is not injudiciously framed on the most appropriate model. A Federal Republic naturally borrows its institutions from the United States, though the American Union was, as its name implies, a new combination of distinct elements, while Spain is about arbitrarily to split up into thirteen little States. It is proposed that, as in America,

the Lower House shall be elected by a popular vote, and that the members of the Senate shall be nominated by the provincial Legislatures. The Central Government will reserve to itself the control of the army, the coinage, and the Customs, while domestic matters will be committed to local legislation and administration. Like the Confederate States of 1861, the Spaniards propose to improve upon the American Constitution by rendering the President incapable of re-election after a four years' term. It will not be easy to devise any practical method of removing from office a President who, with the army and perhaps the people at his back, desires to extend his term of office. O'DONNELL, NARVAEZ, or PRIM would assuredly not have voluntarily made room for an incapable or hostile successor when they had all the reins of government fairly in their grasp. An American President can always be replaced without public inconvenience, and in a country which respects its own laws usurpation after the close of a term of office is wholly impossible. A President in Spain, if he desires to command respect, will not confine himself to the duties which may be prescribed by the Constitution. Unless he has real power, he will be unable to render useful service, and personal influence which cannot be transmitted to a successor may in many cases be the sole condition of effective government.

The adjustment or division of functions between the central authority and the provincial administrations will not be satisfactorily accomplished by legislation. If the Federal Republic at any time attains a real existence, the relation of the States to the Federation will be determined by a comparison of forces, and not by the speculations of ingenious projectors. It is not improbable that the main object proposed to himself by CASPIAR, who seems to guide the deliberations of the Cortes, is to limit as far as possible the operation of the centrifugal tendencies which he nominally approves. If Spain is to remain a nation, the fundamental institutions of society cannot be made dependent on the caprice of local Assemblies, which may perhaps be controlled by clubs. In Catalonia and in Andalusia Republican doctrines are by many of their adherents identified with the abolition of the rights of property, and with all the wild theories of the International Society and the Paris Commune. The Federal Government cannot, if it would, be neutral between parties which are separated by an impassable division. In all cases those who are defeated will appeal to their countrymen, who have not ceased to be Spaniards because they have been separated by novel divisions. If the President is vested with authority to maintain order in all parts of the Republic, the rest of the Constitution possesses but secondary importance; nor, indeed, will the legislation of the present Cortes exercise any permanent influence. By this time next year there will perhaps have been three or four fresh revolutions; nor can the greatest sagacity at present determine the future relations of parties.

ECCLESIASTICAL APPEALS.

THE amendment introduced on the motion of Mr. HARDY into the 18th Clause of the Judicature Bill will remove an anomaly which has been a cause of well-grounded annoyance to the thinking portion of the laity, no less than to a large number of the clergy. As the clause originally stood, in order (upon Lord SELBORNE's confession, in reply to Lord SALISBURY) that the Bill might not be overweighted, all appeals were to be referred to the Court of Final Appeal created by the Bill, "except appeals from any 'Ecclesiastical Court.'" Mr. HARDY proposed that this exception should be struck out, and that the same Court of Final Appeal should decide ecclesiastical and civil causes. The suggestion was warmly supported on both sides of the House, and cordially accepted by the Government. Some of the bishops may possibly take objections to the exclusion of their order from the final decision of ecclesiastical suits; but it may be hoped that an amendment introduced by one of the leaders of the Conservative party will be able to hold its own in the Lords' against any merely professional opposition.

The objections to the Judicial Committee of the Privy Council as a tribunal for deciding ecclesiastical appeals are twofold. In the first place, the Court is specially constituted for each trial; and, however great may be the care taken in the selection of the judges, it is impossible to keep the motive of the selection entirely above suspicion. Ecclesiastical persons can rarely be quite impartial, and they

naturally attributed to the secular authorities the bias which they feel they ought to exempt to show if they were themselves charged with the duty of making a Court. It is generally a Ritualist who is the object of ecclesiastical prosecutions; and if the judges chosen happen to be High Churchmen, or Churchmen of the GALLO order, it is at once asserted that the object of appointing them is to let the Ritualist defendant escape as easily as possible. If they happen to be Low Churchmen, a theory is at once started that the Government desires to make itself popular by getting a judicial condemnation of Ritualism. Consequently the judgment is discredited beforehand by the imputations cast upon the Court. It is impossible, so long as the Committee which is to hear the appeal is constituted in this way, but that these suspicions should arise. Religion is not a matter which is confined to the Law Courts; it is a matter on which judges may have, and may be known to have, opinions outside their legal character. When a man whose opinions are thus known is specially chosen to pronounce judgment in a case which concerns religion—which concerns probably some hotly controverted point in religion—it is useless to expect excited partisans to believe that there has been no thought as to the side which he will be likely to take when the votes of the Court come to be collected. Any one who cares to compare the opinions expressed by clergy of different schools upon the *PURDUS* judgment and the *BENNETT* judgment may convince himself that this is true. It is clearly desirable that the impartiality of a Court of Final Appeal should be unimpeached as well as unimpeachable, and happily the habit of respecting judicial sentences is so strongly rooted in the English mind that nothing but what looks like a distinct packing of the Court to suit a special purpose would be enough to break through it. It cannot be contested that the present mode of constituting the Judicial Committee afresh for each case it has to try has enough of this aspect to make it highly expedient to substitute a permanent Court.

The second objection to the present Court of Appeal in ecclesiastical cases rests on the anomalous mixture of the legal and clerical elements in the judges. A Court composed entirely of lawyers would be intelligible. A Court composed entirely of bishops would be intelligible. But for a Court composed of lawyers and bishops combined there is absolutely nothing to be said. A Court composed entirely of lawyers would understand that its sole business was to affix the precise legal sense to the formularies of the Church of England in all cases where to do so was both possible and necessary. The Judicial Committee has always asserted that this is the duty with which it considers itself charged. The meaning of a rubric or an article is disputed, and the Court has to decide whether the doctrine or the ceremony impugned can be taught or practised by a clergyman of the Church of England. This is a very proper function for a lay Court to perform. Nor would it be easy for the most rigid ecclesiastic to find any fault with its being entrusted to lawyers. If the point to be ascertained were what the doctrine and ceremonies of the Church of England ought to be, it might be fairly argued that it is one which belongs to the Church herself to determine. But as a matter of fact ecclesiastical suits never turn upon this point. A doctrine might be shown to be clearly contained in the Pauline Epistles or in the writings of a dozen Fathers, but if it were not also contained in the Book of Common Prayer, it might as well have neither authority in its favour. For the particular purpose of ecclesiastical trials, a line of the Book of Common Prayer or of the Thirty-nine Articles would outweigh all the Canonical Scriptures and the whole cycle of ecclesiastical tradition. The peculiar position of the Church of England as regards the civil power explains why this should be the case. It is part of the system upon which the Church is recognized as the exponent of the established religion of the country that her coercive jurisdiction over her ministers should be in subordination to the State Courts. The question asked on an appeal to the State Courts is not whether such and such a doctrine or ceremony is orthodox or expedient; it is simply whether it is consistent with the conditions under which the clergy enjoy the privileges and exemptions which mark them off from other men. These conditions are contained in the Articles and the Prayer-Book, and the interpretation of the Articles and the Prayer-Book has consequently come to be the sole matter with which the State Courts concern themselves in dealing with ecclesiastical cases. Now a bishop has no special fitness for this particular office; indeed it is quite possible that he may be specially unfitted for it. He has

probably more or less of sympathy with some one party in the Church, and the existence of each party in the Church is involved in the affixing of a preconceived sense to certain passages in the formularies. How is a High Churchman to admit that the Prayer-Book makes against him? How is a Low Churchman to admit that the Articles make against him? The occupation of either would be gone if he once acknowledged anything so disastrous. Supposing that a lay judge were to be convinced that this or that doctrine recognized in the Prayer-Book is subversive of the "principles of the Reformation"; he can thank his stars that he is a layman, and that it is no business of his to pull the Church through the difficulty. But, supposing that a bishop were in his secret heart to arrive at the same conclusion, how could he possibly announce the fact to the world? A bishop must either declare the Church of England perfect in all essential respects or take measures of some sort to make her perfect. The former is so much the easier process of the two that it is the one he is naturally led to adopt. But if he is to declare the Church of England perfect, he must interpret her formularies in the sense affixed to them by the party to which he belongs. A High Church bishop cannot say the Church of England is all that she should be, and immediately go on to say that the Church Association are right in their reading of the Absolution in the Visitation of the Sick. An Evangelical bishop cannot say that the Church of England is all that she should be, and immediately go on to say that Mr. BENNETT is right in his reading of the Communion Service. It is impossible therefore for a bishop to enter upon an inquiry as to what is the meaning of the Prayer-Book with a perfectly unbiassed mind; and the fact that it is impossible marks out a bishop as an unfit person to be a judge in ecclesiastical causes, as ecclesiastical causes are understood in England.

A question of some nicety was raised by Mr. VERNON HARCOURT in connexion with Mr. HARDY's amendment. Mr. GLADSTONE had said that the fact that the Judicial Committee delivered its judgments collectively was entirely out of analogy with the English judicial system, and it would seem natural that, when the jurisdiction of the Privy Council is transferred to a Court framed on the model of those in which the separate opinions of the judges are publicly stated, the rules of procedure should be altered at the same time. The same objection had on previous occasions been raised by Lord SALISBURY and other critics, and is, we believe, extensively felt. Mr. HARCOURT argues that it would not be an advantage, in the case of a conflict of opinion between the judges, to have public attention drawn to the fact. It must be admitted that one great use of knowing the reasons which lead a minority of the judges to dissent from the opinion of the majority is to decide whether it is worth while to carry the case any further, and this motive of course ceases to be operative as regards a Court of Final Appeal. The defeated party in an ecclesiastical suit will gain no personal advantage from knowing that the most able members of the Court were on his side if the decision of the less able majority cannot be challenged. But the defeated suitor is not the only person who has an interest in the matter. The judges themselves gain by the knowledge that their opinions will be set side by side with those of their brethren and weighed as well as counted against them; and the fact will have its weight in any future appeal upon a similar question. If there is any taint of partiality in a judge's mind—and where religion is concerned a lay judge, though he is free from the professional bias of a bishop, is not necessarily free from personal bias—nothing will so surely correct it as the knowledge that the reasons by which he professes to be guided will have to be explained to the Bar and the press, and to be compared with the reasons assigned for the opposite opinions given by other judges. No doubt the irrevocable character of a final decision is best expressed by a judgment which is in form unanimous; but a judgment is one thing, and the means by which each member of the Court reaches it is another, while the value of a final decision may be all the greater if it expresses no more than the authority which really belongs to it.

JUDICIAL PEERAGES.

LORD REDESDALE's proposal of conferring life peerages on three or four legal dignitaries found few supporters in the House of Lords. By a strange oversight, Lord REDESDALE, although he is the chief repository of the tradi-

tions of the Upper House, seemed to forget that, in accordance with the WENSLEYDALE precedent, a life peer appointed by the Crown would not be allowed to take his seat among the Peers. The constitutional objection which was rightly raised and maintained by Lord LYNCHURST and his coadjutors would in no degree be removed by the Address to the Crown which was the subject of Lord REDESDALE'S motion. The limits of the Prerogative can neither be restricted nor extended by the action of one or both Houses of Parliament, except in the case of some statutory provision; and it would be in the highest degree absurd to invite the QUEEN to create official peerages which would only confer on their holders a barren title and precedence. Mr. BRIGHT'S protest against attempting to tinker old institutions was both discourteous in itself and unseemly on the part of a Minister of the Crown; but the friends of the House of Lords may not unprofitably consider the advice of an enemy. The leaders of the House of Lords ought to be wiser than young Fellows of colleges who spend their time in writing pamphlets to prove that the revenues which they are fortunate enough to enjoy might be better distributed. In both cases revolutionary reformers desire nothing better than to obtain an admission that the reconstruction of Universities or legislative bodies is an open question. The House of Lords would derive no harm and little good from the accession to its ranks of three more judges; but Lord REDESDALE would thenceforth be reduced to vindicate the hereditary character of the peerage only on grounds of expediency. Official peerages would be preferable to life peerages granted at the discretion of the Minister of the day, because, as Lord SALISBURY said, the necessity of requiring professional distinction would serve as a check on the natural tendency of Governments to job; but the change, though it might be comparatively innocuous, is not worth the risk of disturbing ancient foundations. The bishops sit in the House for historical reasons, with results which, except to ecclesiastical and political fanatics, seem on the whole satisfactory. Chief Justices happen not to hold territorial baronies; nor is the secular atmosphere of the House of Lords necessary to dissipate their professional prejudices, and to make them more or less men of the world. The aristocratic contempt for professional rank is oddly illustrated by the rule which imposes on the bishops the necessity of wearing in the House a ridiculous costume and of sitting on a separate bench.

The opinion of the majority both outside and inside the House of Lords inclines at present to the creation of life peers; yet the discussion on Lord RUSSELL'S Bill showed that little or no practical benefit would result from the proposed change in the Constitution. The reasons which influence Lord SALISBURY'S judgment are intelligible, though complex; yet it is not easy to understand how an infusion of life peers would provide the House either with energy or with additional materials for industry. Lord SALISBURY'S sarcasms on the self-indulgent indolence of some of his colleagues were equally just and severe. No other function is so lavishly rewarded as that of a member of the House of Lords, though the remuneration for any services which he may render is not paid in money. It is intolerable that, in return for political influence and for social deference, a peer should grudge attendance in the House, or that it should be considered a favour to serve on public or private Committees. Impatience at the waste of time on business which would otherwise be wasted on pleasure is a proof not only of selfish frivolity but of political blindness. A statesman who excusably chafes at the restraint which his position imposes on his energy is justified in reproving the idlers and the coxcombs who shrink from the performance of easy duties. Lord MALMESBURY, though he protested against Lord SALISBURY'S censures, is not himself liable to the imputation of lowering the character of the House. The lawyers, the soldiers, and the politicians who might be selected as life peers would certainly not be careless triflers; but the House of Lords already contains many men of business, and a fair proportion of statesmen. Lord GREY, with true aristocratic instinct, suggested that, if Governments could create peers for life, they would perhaps be more chary in the distribution of hereditary honours. It was impossible to express more plainly the indisposition of the actual peers to recognize the equality of intruders who would be regarded as temporary assessors. The novel dignity would not be regarded as one of the highest prizes of ambition. It may be confidently asserted that, if Lord SALISBURY had not happened to be an hereditary peer, he

would greatly prefer a seat in the House of Commons to a peerage for life. It would be an affront to the owner of an ample fortune to offer him a life peerage; and a rank only bestowed on persons in narrow circumstances would be liable to disparagement.

The WENSLEYDALE decision has fortunately rendered it impossible for the House of Lords to try rash experiments without the concurrence of the House of Commons, and the more prudent peers will not be in a hurry to submit their constitution and privileges to a discussion which might not improbably be hostile. A curious case which is now pending may possibly throw further light on the extent of the Royal prerogative with respect to the creation of peerages. It is generally thought that the Crown has the power of imposing any limitations on the succession; but a peerage which shifts from the elder brother on his elevation to a higher rank to the younger is a remarkable novelty. The House of Lords will decide, under the guidance of the Law Lords, whether a peer who has been admitted to take his seat can during his lifetime be deprived of a barony in such a manner as to enable his successor to sit and vote. The peerage first conferred on Lord WENSLEYDALE was in one respect a more serious innovation than the BUCKHURST patent, because there was no limitation to heirs. On the other hand, a transfer of a peerage from one holder to another seems to be a greater anomaly. If the claimant is admitted to a seat, it may be plausibly contended that a limitation, not to heirs, but to official successors, would be equally within the power of the Crown. Lord REDESDALE'S scheme, indeed, included the further innovation of allowing the incumbent of any of the offices which were to confer a peerage to retain his rank and his seat for life after his retirement. Bishops who have resigned their sees are, for all but titular purposes, relegated into the condition of commoners; and even during their tenure of their offices they transmit no reflected dignity to their wives and children. Distinctions of this kind are to a great extent accidental, and they are tenable because they involve no semblance of principle, although they generally admit of historical explanation. Deliberate attempts to pour new wine into old bottles are liable to failure, not because they are necessarily indefensible, but because a dozen alternatives would be equally plausible. Extreme believers in the efficacy of competitive examinations would not be unwilling to apply their favourite device to the selection both of peers and of members of the House of Commons. Less extravagant projectors of reforms, though their proposals are not equally absurd, are nevertheless merely theorists.

It is possible that the results of the Judicature Bill may at some future time render it desirable to provide for the creation of a sufficient number of legal peerages. As the duties hitherto discharged by the Law Lords will be transferred to the Court of Final Appeal, the necessity of ennobling a certain number of eminent lawyers may perhaps become less apparent; yet it would be a cause for regret if the House were deprived of legal assistance in legislation because it will no longer exercise judicial functions. The House of Commons has been in the habit of paying much deference to the decisions of the House of Lords on questions of legal reform, because it generally happens that the House of Lords includes several of the greatest lawyers of the day. If for any reason Chancellors ceased to be peers, and if no other judges were raised to the peerage, it might be expedient to restore them to the House of Lords in a new capacity. A Chancellor who was a peer for life would hold an inferior position in the House of Lords, but he would be more highly esteemed than a life peer who might owe his position to personal interest or to the caprice of a Minister. It is not impossible that more sweeping constitutional changes may in the course of time render the whole controversy superfluous. There are many other possible modes of appointing a second legislative body besides the English hereditary system; and the only defect which has been found in modified copies of the English Constitution is that Legislative Councils are elsewhere, with few exceptions, utterly powerless. The House of Lords is a cause and a consequence of the aristocratic organization of English society; and it derives the power which it still retains from its peculiar composition. All discussions on life peerages imply a preponderance of hereditary peers, which again would reduce the life peers to comparative insignificance. If the system is to be modified, it would perhaps be more judicious to attach peerages to offices than to make the new dignity

into a badge of second-class merit. The innovation will probably be introduced, and perhaps it will produce no bad result; but the hope that the House of Lords will derive strength from the admixture seems wholly chimerical.

THE BOMBAY NATIVE PRESS.

THE Government of Bombay treats the Native press in a manner which does the highest credit to it as a paternal and despotic power. It does not interfere with the humble organs of local opinion, or bully the editors or writers, or put in force any of those systems of censorship which, under different forms, seem to have so perpetual a fascination for the Governments of Continental nations. It merely makes what use of native journals it can for its own instruction and guidance. A native official is appointed who translates every week into English all that he can find in fifty native papers which can edify the Government, and especially all complaints which are made against it and its officials. These translated extracts are printed in the shape of a weekly Report, and thus the Government knows what its subjects think, wish for, or resent, so far as the native press is an adequate and faithful representative of their opinions and feelings. The result is a very curious repertory of materials, which must seem of a routine and hackneyed character to men long familiar with India, but which to an English reader have the interest that attaches to everything that reveals the minutiae of foreign life. At this distance it is only very general and very vague information about India that most of us are likely to possess; and the natives are mere names and shades to us; whereas these Reports give us something like a Dutch picture of at least one side of native existence. Three numbers of the Reports taken at hazard, being those for the 19th of April and the 3rd and 10th of May last, will suffice to show the sort of things which the native press says, and which are collected by the Government for its own benefit. On the whole, the tone of criticism is friendly to the Government, either from policy or genuine conviction; and although there are occasional bursts of protesting and indignation, it is always assumed that the Government would do right if it were but better instructed. One paper complains loudly of the mode in which the Lushai expedition was conducted, and states that in the vengeance wreaked on the Lushais no distinction was made between the refractory and the innocent villages, and that "wherever the British force appeared there it committed 'havoc by sword and flame'; but then it goes on to hope that the enlightened, humane, and Christian Indian Government will keep its hand unsoiled by such crying iniquities for the future. Another paper is moved to wrath at the fact, for which it vouches, that Englishmen had lately been killing pigs in a sacred place; but it admits that any one who did not very well understand native usages might have failed to understand that it was a sacred place. Where a complaint is to be made there appears to be no shyness about making it. An instance is given where an invalid appealed against a sentence condemning him to six months of simple confinement, and got his sentence altered by the Appellate Judge into rigorous imprisonment for five months; a mode of treating the case which, it is ironically suggested, will probably lead to a great saving of public money, as, if this is the way applicants are treated, no one will appeal, and so the Appellate Courts may be shut up. When, however, the remonstrances of the press have been, or are supposed to have been, attended to, a warm recognition of this attention is made, and a paper which had busied itself with invectives against the Small Causes Courts is filled with grateful delight at being able to state that the Government has directed a formal inquiry to be made as to the working of those Courts. So far indeed is the native press from ignoring what it finds good, that one of the most enthusiastic pieces of writing in the Reports is devoted to an appeal to the natives generally not to let the occasion of the abolition of the Income-tax pass by without a unanimous expression of opinion on the part of all the natives of India, which shall adequately convey to "the good VICEROY" how much is felt to be due to him for his wise, generous, and courageous measure.

The subjects on which comments are made are at once very miscellaneous and very small. The natives seem to think that in the English Government they possess a friendly and superior sort of elephant, who is well known to

be able to tear up forests, but whose principal business is to pick up pins. One zealous adviser comes forward to give notice that some old buildings he knows of are not quite safe, and "if the authorities do not get them pulled down, their sudden fall may destroy many human lives." Another suggests that the operation of the Contagious Diseases Acts should be extended to private families, and although he frankly owns that he is "aware of the insuperable difficulties and dangers of carrying out his suggestion," yet he thinks the Government ought to have the benefit of knowing his views on the subject. Very little indeed in the way of facts to go upon suffices to start the pen of these ready writers. One journalist has heard some complaints against a contractor who has undertaken to keep a ferry-boat going on a river, and requests the attention of the sub-magistrate to this vague rumour. Another writer does not find his letters come to hand punctually, and imagining that the reason must be that the letter-carrier belongs to the district, and so has a home to go to, in which he mischievously stays, suggests that the carrier shall be transferred, and another carrier appointed, who, being a total stranger, will have no domestic attractions to prevent his walking about without intermission. Bad roads are a very frequent cause of complaint, and indeed, if it be true that one of the roads out of Poona is full of small pits, it is not to be wondered at that "passengers experience much pain from its uneven condition." The schools, too, are a favourite topic of criticism, and it must not be supposed that natives have any wish to spare natives, or to conceal their misdoings or shortcomings. The schoolmasters generally are stated in one paper to be very bad, and to be subject to no inspection; the Government is blamed for this, and asked to be more vigilant, although what is requested must be acknowledged to be kept within modest limits, when we find that the Government is merely called on to "remove from their offices schoolmasters who are hopelessly irreclaimable." Certainly there seems room for some alteration in the conduct of schools, if scenes are at all common such as that described by a writer who relates that "a grown-up boy was suspected of a theft, and one of the assistant-masters accused the boy of the above crime, at the same time calling him an ass, and dealing him a blow, which the accused and insulted boy returned." Native magistrates and officials again are not unfrequently assailed, and one special charge is made against a sort of Government bailiff, who, finding that a private creditor had placed an attachment on property from which the Government was looking for dues, immediately prosecuted the private creditor for theft, and a stupid magistrate actually sentenced him to fine and imprisonment, not seeing, as the acute journalist sees in a moment, that the whole accusation was invented by the bailiff to get his rival out of the way. It may be interesting, too, to those who watch with some apprehension the introduction into India of novelties not even adequately tested in England, that a native paper records that the great invention of competitive examination was suddenly applied in Surat, and broke down completely. A vacancy having occurred in a clerkship in a District Court, and there being about sixty applicants, it was resolved to dispose of the place by a competitive examination. Most of the candidates were "matriculated young men," but the examination, though very simple, was too much for them, and the indignant journalist pronounces the result "disgraceful to the matriculated students, and to the University which has matriculated them."

But the two great themes of hostile declamation are not of quite so minute a character. What the Government is more particularly called on to notice is the inefficiency of the police, and the abuses that are tolerated in the administration of small native States. One paper complains that a certain police-station is shut during the day, and no policeman is to be found there. It happened that not long ago a sudden fight was got up, but no policeman was in the neighbourhood. Anxious defenders of order sped to the next station, but with the same sad result. There, too, no policeman was forthcoming. A writer in another paper observes that it is a usual occurrence for policemen to absent themselves from their posts while assaults are being committed; and he notices as a circumstance unfavourable to the reputation of the police, that notoriously as soon as it is evident a crime is going to be committed, the guardians of the public safety disappear, just as if they had been paid for their connivance.

But the malevolence of the police goes further than mere passive acquiescence in crime. Policemen are stated to have a most unpleasant habit of throwing a complainant into utter confusion, either by expressing their total disbelief in his story, or by politely insinuating their conviction that, if the crime has been committed at all, the real culprit is the wife or the child, or some other member of the complainant's family; so that if he persists in his accusation, the next step must be the arrest of some one whose arrest would give him the greatest possible pain. Even policemen, however, do not appear to awaken so deep an indignation as misbehaving native chiefs. What, for example, it is asked, could be more monstrous than the conduct of a petty chief, who not only taxes pilgrims as if they were householders, but actually charges for each room the pilgrims occupy as if it were a separate house? Then there is a misdoer called the Jám, who has done something unsatisfactory, and whose conduct gives rise to a fine Benthamite sentiment:—"The case and pleasure of one ought to have no regard whatever when it is opposed to the happiness of the many; and if the Government recognizes this sentiment, it ought not to hesitate to exercise even some severity on the Jám." There is an even worse miscreant, called the Gúkwád, whose behaviour is such that "beautiful women of Baroda curse their personal charms, and try to hide them as soon as possible." The native press does not at all mince matters. It thinks that the Government can do everything that is good, and ought to do it. All that is necessary is that the Government should understand that the police are bribed, and that the petty chiefs are petty villains. The sum and substance of all these complaints is that a paternal Government, whose good intentions and whose power are beyond dispute, must be shown what is really going on, and then all will be well. It is scarcely possible that a greater tribute than this to the substantial merits of British rule should be paid by those who assume to speak on behalf of the millions who are ruled.

THE EDUCATION DIFFICULTY.

JULY is a month of evil omen for Bills which have not passed their second reading, and the Education Act Amendment Bill has enemies who will not be behindhand in making the most of the advantage offered by the lateness of its introduction. A good deal of pressure will be put upon the Government to withdraw, if not the Bill, at all events the controverted 3rd Clause. The Education League have apparently determined to accept the fact of their weakness in the present House of Commons, and to fix their hopes on that coming day when, having broken up the Liberal party and sent the present Cabinet about their business, Mr. DIXON and Mr. RICHARD will set about forming a Government. Still, though present defeats may be only the prelude to future victories, they are for the moment not joyous, but grievous; and the Dissenters have had so many of them that they may be forgiven if they wince a little at the very thought of going to a division. Besides, to be obliged to withdraw the Bill would perhaps be even more annoying to Mr. FORSTER than to be beaten on it, and for the last year or two to annoy Mr. FORSTER has constituted the Whole Duty of Dissenters. A good number of Conservatives would also like to see the Bill withdrawn, because in this way a certain undefined discredit would be inflicted on the Government without the Conservatives being saddled with the responsibility of helping to throw out a measure of educational extension. For some reason best known to itself the *Times* would not be sorry if the Bill were out of the way; and the *Daily News* has already urged Mr. FORSTER to reduce it to that colourless sort of affair which the *Daily News* could support without either enraging its Dissenting subscribers or having a finger in the disruption of the Liberal party.

We sincerely hope that the Government will be strong enough to resist these solicitations, prompted as they all will be by latent enmity in one form or another; and we appeal to those on both sides of the House of Commons who really value education to give it their best assistance in so doing. The clause which Mr. FORSTER is asked to withdraw does three things. In the first place, it extends compulsory education to some two hundred thousand children of the class for which compulsory education is especially necessary. The child of an outdoor pauper is of all children

perhaps the least likely to be voluntarily sent to school. His parents are so poor that they can neither find the money for the school fee nor forego the money which the child may earn by selling matches or turning somersaults. Again, the child of an outdoor pauper is bred up amid all the lounging, shambling associations which cling round pauperism, and the only chance of supplanting them by better associations is to be found in his being sent to school. Consequently, compulsion is especially necessary for him both because he will never get to school without it, and because away from school he will get no education except in vice, or in the shiftlessness which is usually the precursor of vice. If the Education Act Amendment Bill passes with the 3rd Clause uninjured, this compulsion will be effectively applied. The Guardians will have no power to give relief out of the workhouse to any parent who does not provide elementary education in reading, writing, and arithmetic for such of his children as are between five and thirteen years of age; and, if any further relief is necessary to enable the parent to provide such education, the Guardians will be bound to give it. When the numbers and character of the class affected by this regulation are taken into account, it would be difficult to exaggerate the importance of the change in the law. It will get at least two hundred thousand children to school, and these the very children to whom school will do most good, and who, without such a change in the law, are the most certain not to be sent to school. A man professing to be a friend to popular education who, for party reasons, allows a Bill containing this clause to be shelved and defeated had better keep his professions to himself for the future.

Secondly, the 3rd Clause of the Bill does away with the system under which the School Board can, if it chooses, pauperize the poor of its district by taking for granted that they are unable to give their children the minimum of education which the law prescribes. Happily the dislike to a very high education rate operates in most cases as a check upon this most mischievous process. To give free education to the children of every man who thinks it pleasanter to spend his money in an extra glass of beer or an extra screw of tobacco than in the payment of school fees is necessarily a costly process, and economy consequently averts the mischief which uncalculating philanthropy is ready to inflict. But in some cases, as notably in Manchester, uncalculating philanthropy has carried its point, and the result is that the School Board sees inability to pay the school fee where less enthusiastic persons would only see indisposition. Administered in this way, a bylaw for enforcing school attendance becomes a system of free education of the worst kind. If all elementary schools were free, it might be argued that the expense of providing schools was rightly distributed over the whole community, because in one way or another the whole community profits by their being provided. But when inability to pay for a child's schooling is made the ground for giving free education, there is the same necessity for caution in determining what constitutes inability as there is in the corresponding case of inability to pay for a child's food. There can hardly be a doubt that, if the circumstances of the four thousand children now on the rates in Manchester were closely inquired into, the parents of the majority of them would turn out to be perfectly capable of paying the school fees, though not perhaps without some self-denial. If the Education Act is to be made an excuse for releasing parents from the obligation of denying themselves for the good of their children, the evils of the training it will give to adults will go far to counterbalance the value of the training it secures to children. The only possible way in which this evil can be prevented is by handing over the administration of educational as well as all other relief to the Guardians of the poor. The power of granting this sort of relief must be vested in some one, because if it were withheld altogether the application of compulsion would become impossible. You cannot punish men for not compassing impossibilities, and if a parent, on being ordered to send his child to school, could truly plead that he had no money to pay the fee demanded by the managers, the severest magistrate would find himself powerless. It is impossible, again, to limit relief to the remission of fees at a School Board school, both because the Church of England—which is still as powerful as all the other denominations put together—would not endure the slight thus put upon schools provided by the voluntary efforts of its members, and because the ratepayers would not endure the burden which the obligation to provide

School Board schools in every parish would necessarily throw upon them. Thus, by an exhaustive process, we arrive at the conclusion that the power of paying school fees must be retained, and that it must be vested in an authority which really knows the circumstances of those who apply for relief. The Guardians are the only body who answer to this description, and as such they are rightly substituted for the School Boards in the 3rd Clause of the Bill. Those who do not wish to see the problem of pauperism needlessly made more complicated than it is will do their best to carry the Bill through.

It cannot be contended for this 3rd Clause that it disposes of the religious difficulty. But it makes the religious difficulty less prominent. Under the 25th Clause of the Education Act each School Board is left free to choose whether it will pay the fees in voluntary schools or not. If it decides that it will pay them, it probably does so after a debate, and probably a division, which operates as a sort of challenge to public attention. After this challenge has been given, another authority has to be asked to pay the school rate; and here, though the experience of the Birmingham School Board will probably prevent matters from being again pushed to the extremity of actual refusal, there will still be an opportunity for further discussion, and for threats of violent action which in their influence upon the peaceful prosecution of the work of education may be almost as mischievous as violent action itself. Under the 3rd Clause of the Bill public attention will not be specially called to the question. There will be no room for debate amongst the Guardians whether a man who has truly pleaded inability to pay for his child's schooling shall have $2\frac{1}{2}d.$ a week given him for the purpose, for the law will leave them no choice in the matter. There will be no means of discriminating the infinitesimal fraction of the Poor-rate which is spent in this way from the rest of the charge, and a refusal to pay any part of the Poor-rate will cause such extreme inconvenience to the Guardians that they may be trusted not to show it any mercy. The result of all this will be that educational relief will be given where necessary with little or none of that irritation which now occasionally attends the process, and though the Education League may have the power to break up the Liberal party, they will not have the power, as under the 25th Clause of the Education Act it is possible they may yet have, to bring educational progress to a stand. This is the third reason why all true friends of education should use their best and most united efforts to get the Bill made law.

CHOLERA AND THE LOCAL GOVERNMENT BOARD.

MR. SIMON'S warning trumpet has again been blown to a people not, it is to be feared, very much better prepared against the enemy than when its attack was last imminent. Cholera has in some respects become more formidable in proportion as it has become less mysterious. When it was supposed to come and go as it listed, we were at all events ignorant of the danger until the disease had actually appeared. Now it is known that wherever there are certain well-understood forms of sanitary neglect, there cholera, if it comes, will find a mansion ready prepared for it. Mr. SIMON'S instructions contain nothing that is not familiar to sanitary students. The disease, he reminds us, is not likely to spread "unless in proportion as it finds locally open to it certain facilities for spreading by indirect infection." "The great sources of danger are the discharges of choleraic patients. Wherever these are thrown without disinfection into any cesspool or drain, they communicate the poison to all the matters that they find there." If this were all, the danger would not be very great; for, though the effluvia evolved by the matter thus infected is probably itself infectious, the great source of mischief is drinking water; so that, if this were kept pure, there would not be much chance of the disease spreading. But "if by leakage or soakage from cesspools or drains, or through reckless casting out of slops and wash-water, any taint, however small, of the infective material gets access to wells or other sources of drinking-water, it imparts to enormous volumes of water the power of propagating the disease. . . . Even a single case of cholera, perhaps of the slightest degree, and perhaps quite unsuspected in its neighbourhood, may, if

"local circumstances co-operate, exercise a terribly infective power on considerable masses of population." Wherever there is any leakage or filtration from sewers or cesspools into springs, streams, wells, or reservoirs, cholera, should it come accidentally into the district, will have the greatest possible inducement to remain in it. This is the precise assemblage of conditions which it most loves.

In an appendix to the Second Report of the Local Government Board there is a tabular statement which is of remarkable interest in connexion with this subject. It contains a summary of the Reports sent in by the Local Government Inspectors in eighty-one cases as to which inquiries were directed during the year 1872. We propose, even at the risk of wearying our readers by repetition, to describe some of those cases in which the conditions above mentioned were found to be present. At Abingdon the Report is, "Water supply mostly from surface wells in porous soil soaked with excremental and other filth." At Andover the water supply is obtained from wells "many of which are exposed to excremental pollution." At Bingham the surface soil is "saturated with excremental filth." At Bruton both soil and water are "polluted with sewage." At Bruton Latimer the water supply is "obtained from wells polluted by soakage from privies and cesspools." At Chatterley the water supply is "insufficient and polluted." At Ecton the wells are "polluted by soakage from privies and pigstyes." At Great Milton the water supply is "liable to contamination from excremental and other filth." At Hawkesbury Upton there is "sewage habitually soaking into wells." At Hersham the water comes from "wells polluted by soakage from privies and cesspools." At Hucknall Torkard the water is obtained from wells "which are in a porous soil and liable to pollution from privies and surface drainage." At Huddersfield some of the water supplies are "largely polluted with sewage." At Leigh polluted water is used "from wells close to drains, privies, and middens." At Monmouth the river is "polluted by sewage" and river water is supplied by the Company unfiltered. At Nunney the water supply is "obtained chiefly from a brook largely polluted by sewage." At Olney the soil round the well is "sodden with soakage from privies." At Porchester the water supply "is obtained from shallow wells into which the sewage soaks." At Rotherham "air, soil, and water are polluted with sewage." At Swanage "nearly all the inhabitants drink water exposed to pollution by sewage." At Swinton there is "soakage of excremental filth into the wells." At Tunstall the water supply is partly "drained from wells liable to pollution," and in another part of the district is "in part polluted from cesspools, privies, and pigstyes." At Wath the water supplied by Company is contaminated by sewage "and other filth." At West Auckland the wells are "contaminated by surface drainage." At Whitchurch water is "obtained from wells sunk in porous soil, saturated with sewage." At Urncantun the water is supplied from a polluted reservoir. At Bucknall, Chittlehampton, Clifton Keynes, Emberton, Knutton, Idanally, Melborne Port, New Hincsey, Pool's Dam, Radford, Seabridge, Tre-wolda, Wellington, the water "is polluted." It must be borne in mind that these inquiries were instituted, so to speak, accidentally, because of some special outbreak of disease in the neighbourhood. Probably a more systematic investigation would disclose hundreds or thousands of cases of the same kind. In fact, to drink water polluted by sewage is the normal condition of an Englishman, except in some few large towns where unusual pains have been taken to obtain water from a pure source, and to protect it against pollution on the way from the source to the houses. In every one of these hundreds or thousands of cases cholera can require no more favourable conditions than those which years of neglect, or partial and unintelligent improvement, have succeeded in creating.

The Local Government Board say significantly that the matters to which these inquiries related were usually of a sort in relation to which the local authorities have definite statutory powers and obligations, and they point to the Inspector's Reports as containing materials on which a judgment may be formed as to the extent to which these powers had been exercised and these obligations fulfilled. What the judgment so formed will be it is hardly necessary to say. There has in every instance been absolute default. It may be conceded, however, that, though the local authorities have had definite statutory powers and obligations, there had been down to the time when these inquiries were

undertaken considerable confusion and uncertainty as to who the authority was. The legislation of last year has put an end to this state of things, and in every district there is now one sanitary authority and one only. Consequently in every one of the places the condition of which has been described, there is a body of officials who have the power to remedy the evils in question, and who are bound by law to use their powers. It is just possible that an outbreak of cholera this autumn might frighten them into doing their duty without further delay. But, assuming that cholera keeps away for another year, it is safe to assume that the great majority of the places mentioned and of those not mentioned in which the sanitary conditions are identical will be no better off twelve months hence than they are to-day or were twelve months ago. The same indifference to the commonest laws of health which has prevailed hitherto will continue to prevail, and it will probably be confirmed and strengthened by unwillingness to do anything that will increase the local rates. Though sanitary improvements are economical in the long run—as the Guardians who have to support the orphans of the poor who have died from cholera occasionally find—they are costly in the first instance, and the ridiculous policy of refusing to make improvements which it is admitted ought to be paid for either out of the taxes or out of the rates, until it has been settled out of which of the two funds they are to come, which has lately been aired in the House of Commons, is too thoroughly parochial in its tone not to be sure of adoption in the country. The really important thing to know is not what the local authorities will do but what the central authorities will do. The matters to which these inquiries related are of a class in relation to which the Local Government Board, equally with the local authorities, has definite statutory powers and obligations. It has at its disposal certain means of compelling the local authorities to do their duty or to submit to having it done for them at their own expense. The corresponding tabular statement which will appear in the Report of 1873 ought to contain another column giving the action of the central authority in all cases in which the local authority has failed in its duty. It may be that the powers of the Local Government Board will turn out to be insufficient for purposes of coercion; but even a well-founded suspicion of this fact will not be a sufficient ground for inaction. Until the experiment has been tried on an adequate scale, it is impossible to say with certainty whether the existing law has or has not given the central authority a weapon of sufficient keenness to penetrate the mass of ignorant and interested opposition against which it has to contend.

MR. GLADSTONE TURNS THE OTHER CHEEK.

IT was said of an eminent man who was remarkable for his blandness and courtesy that, if by any accident he chanced to give offence, it was really quite a treat for the person offended, so sweet and soothing were the apologies which were applied to salve the wound. Strange things happen from time to time, and perhaps nothing stranger has happened for a long time than that the recollection of this courtly person should be suggested by anything that Mr. GLADSTONE might say or do. It is certainly startling to think of Mr. GLADSTONE in this connexion, but that only makes it the more delightful. If anybody was disposed to lament the odd sort of bungling by which the Government wantonly brought about a danger of collision on a question of privilege between the two Houses of Parliament, he would now be almost tempted to regret that these things do not occur more frequently, in order that we might become accustomed to Mr. GLADSTONE in the sweet and engaging character in which he has just presented himself. It is impossible to conceive how such a question as that relating to the Scotch and Irish appeals should have in the first instance failed to receive the serious attention of the Ministry, and it is even more difficult to understand how, if they had given two thoughts to the subject, they should have come to a decision one day which the next day, on the impulse of a moment, they were ready to cast adrift. It appears to be unnecessary to discuss the question whether the House of Commons has or has not a constitutional right to legislate on matters affecting the House of Lords. The Parliamentary history of our country shows clearly enough that questions of constitutional privilege have usually been determined by the balance of power between the bodies concerned. If, by perverse and

persistent mismanagement on the part of the Government, a conflict had in the present instance actually arisen between the two branches of the Legislature, all that the House of Lords could have done would have been to go on rejecting the obnoxious measure, and all that the House of Commons could have done would have been to go on sending it back to the House of Lords year after year, until one or other of the disputants got tired of an irritating and undignified quarrel. That there should have been even a momentary danger of such a conflict is sufficient to justify grave censure on the Government. There can be no doubt that in recent times the House of Lords has occasionally submitted on the initiative of the House of Commons to legislation affecting itself, which it would most assuredly have resented and rejected at another period of its history; and it is impossible to say what it might not now submit to if the Lower House were sufficiently resolute and persistent, and if it had the support of the constituencies at its back. Even if we were to admit the force of Mr. GLADSTONE'S precedents as applicable to the present occasion, that would not in the least affect our opinion of the mischievous muddling by which, without the slightest necessity, and out of pure wantonness and levity, the Government has rendered such a crisis imminent even for an instant.

However, apparently the clouds have rolled away, and we are basking in cheerful sunshine. After the novel and pleasing exhibition of Thursday evening, we are tempted to say that all is well that ends well. Mr. GLADSTONE'S pretty epilogue was all the more agreeable because it was rather unexpected. It is not every day that Mr. GLADSTONE appears under the influence of a "constitutional and prudential spirit." This was the soft, sweet opening note of his discourse, and it was delightfully maintained throughout. He himself gracefully described the performance as "an act of courtesy and consideration," and the phrase may perhaps be thought by light-minded people to recall the "acts" of another sphere which delighted their early days. Everybody must recollect the startling transition when MARS or VULCAN at full spin round the circus suddenly flung off his characteristic habiliments in order to witch the audience as a smiling and seductive APOLLO. Mr. GLADSTONE, while "most respectfully" doubting the soundness of the view which some members of the House of Lords were understood to have taken of the privileges of that Assembly, offered to alter the Bill to meet their wishes. The Court of Appeal will be fitted up with accommodation for a sufficient number of judges to deal with Scotch and Irish as well as with English appeals; but it will be left to the House of Lords, on its own initiative, to surrender the remnant of jurisdiction which it has preserved to the new body. If the House of Lords had been an American Ministry, Mr. GLADSTONE could scarcely have made a more meekly abject surrender of what, in his own opinion, are the undoubted rights of the body he represents. It is natural to wonder what has been the cause of this startling change in the mien and manners of the head of the Government; and, in seeking for an explanation, it is impossible not to be struck by the contrast which is presented by the austere arrogance of a few years since and the honeyed meekness of to-day. Coincident with this transition may be observed a significant decline in Mr. GLADSTONE'S authority. At least once a week the Government is defeated by its own supporters; and the Opposition has been angrily attacked for not attending in the House of Commons in sufficient numbers to defend the Ministers from the assaults of their friends. Sweet indeed are the uses of adversity. Conscientious Liberals will of course be anxious that the greatest Liberal Minister of modern times should have a powerful majority at the next election; only the moralist will reflect with a sigh on the deteriorating influence which a brilliant electioneering success would too probably exercise on Mr. GLADSTONE'S character. It may be feared that a little prosperity would undo all the good that has been brought about by a series of salutary humiliations, and in place of the servant of servants, we shall see again the haughty and uncompromising political dictator of five years ago.

WASTED INTELLECTS.

AFTER a certain period of life it becomes a very interesting study for anybody who has been educated at a large school or University to look back upon the promising friends of his youth, to observe which of them have fulfilled and which have falsified the

anticipations of their contemporaries, and to endeavor to select the secret of their career. In most cases the result is rather melancholy. There are few men whose biographers will be able to record with truth that from boyhood to old age they were recognized as both leaders of thought and of action. Biographers, indeed, frequently make some such assertion; but their biography, like history, is but too often an account of what might have happened rather than of what actually happened. It would be difficult to say whether we should receive with most incredulity the statement that a man showed unmistakable genius from his cradle, or the statement that the future genius began life as a dunce. As a rule, we are perhaps entitled to presume that unusual intellectual power gives symptoms from which its existence might have been inferred even at a very early age; but the question whether it was actually inferred is a very different one. If the biographer relies upon the testimony of his hero's mother, or of the hero himself, he will usually find grounds for asserting that even the dullest of mankind gave high promise; but maternal or self-regarding judgments are of small value at the time, and that value becomes infinitesimal when they are coloured by subsequent events. When, on the other hand, the judgment comes from the schoolmaster of the genius, it generally takes the opposite form. A schoolmaster is apt to be a timid animal. He does not like to pledge himself to the future eminence of a promising lad, for he knows how often such guesses fail to be verified, and of course he is inclined to condemn the vigorous plant which will not develop after the normal standard. What he has not seen cannot have existed, and the genius not revealed to the pedagogue must really have been a dunce in early life. The judgment of independent contemporaries is the hardest to obtain, but one might expect that it would be the most trustworthy. A boy's schoolfellows are tolerably impartial observers, and they are not guided by so exclusive a standard as his teachers, whilst at the University it is probable that whatever intellect he possesses will have begun to show itself.

Yet when we test the value of those early verdicts by comparison with actual results we shall probably find a very wide discrepancy. We think of some youth who was the delight of all his teachers, whose exploits at solving problems or writing Latin verses still furnish a traditional standard of success, and are fondly described by examiners indulging in professional gossip. We had fancied that the possessor of such brilliant talents had only to signify his choice of the sea or the place in the Cabinet which he would prefer. Nothing has happened to him; he has not broken down from ill health, or taken to immoral courses, or been unfairly weighted in the battle of life. And yet somehow he has failed to make any mark in the world. He has sunk into a commonplace respectable parson or lawyer, and been hopelessly passed by men who never astonished an examiner in their lives. Competitive examination, we may perhaps say, does not provide a sufficient test for genius; it levels the man of original power with the man who is a mere channel for the transmission of cut and dried knowledge. We have made the common mistake of confounding mere facility with power, and supposed that a man must be a great teacher because he was admirably docile. Moralists are fond of telling us that a habit of obedience is the best qualification for command. This doctrine may be true; or, like most such doctrines, may contain a half-truth; but certainly it does not seem to apply in the sphere of intellect. Rather, we should say that the ruler of later life is made out of the youthful rebel. Our greatest thinkers have first shown their power by kicking against established rules; and we are therefore looking in the wrong place when we seek for great intellectual power amongst those who have accommodated themselves most easily to the recognized tests of merit. If, however, we go further, we do not always make more satisfactory discoveries. Our memory recalls young men who showed their independence of mind by plunging into some pursuit not recognized in the narrow rules of our old system of education. They declined to master the Latin grammar, but they wrote what they took to be poetry, and we fancied that we recognized the Shelley or Byron of the coming age. Scarcely any modern poet of eminence has won high academical honours; and it is quite in accordance with precedent that the great singer of the future should be something of a *mauvais sujet* in his earlier years. And yet our private Shelley has not become a cosmopolitan Shelley. His verse-writing has sunk from being the aspiration of a great soul to be merely the elegant accomplishment of a cultivated gentleman; and he contents himself, according to the established formula, with being a moderately good critic instead of a creator. Or, again, we remember rash youths who muddled their immature brains in the labyrinth of metaphysical inquiry; and who have not yet given any final solution to the problems round which philosophers have been vainly gyrating for the last few thousand years. Or else our youthful genius felt himself born to command the applause of listening senates, and began his operations by denouncing things in general to the mimic parliament of the Union. He is not, however, able to read his history in a nation's eyes. Doubtless he had in some sense a great facility for stringing words together; and we need not go beyond the present Parliament to show that many such orators have succeeded in later life in astonishing a wider circle than that which listened to their first youthful eloquence. But not unfrequently we may hear the orator of our youth acting as dinner-bell to the House of Commons, or plodding contentedly through the ordinary round of pulpit commonplaces, and eschewing any flight

into the regions of passion or imagination as scrupulously as though liveliness were a deadly sin.

You will find, it has been said, in reading the biography of any great man, that he was acquainted with some one who appeared at the time to be greater than himself. Either the great man was generous enough to clothe his friend with his own imagination; or the friend, though really admirable, was a failure through some incidental cause. It may be doubtful which is the commoner cause of the disappointments which are undoubtedly numerous. The original judgment is of course constantly erroneous. People are apt to form a very inaccurate estimate of the qualities which are really most conducive to success, and, especially in early life, to overvalue pure intellectual capacity as compared with the force necessary to set it in action. The path to such success as can be obtained in our school days is free from many of the obstacles which overpower a man's energy in the rough uphill struggle of later life. Gray's contemporaries were right when they said that he was potentially a poet of a very high order. And yet the excessive delicacy of his temperament made him the least productive of all considerable poets; and, if it had been very slightly increased, might have entirely choked the productive impulse. He succeeded, and only just succeeded, in squeezing out a few lines which are amongst the most perfect in our literature. With his wide reading and exquisite taste, he might have produced other writings of permanent excellence. Enough was fortunately executed to give us some measure of his power; with a little less fastidiousness he might have produced far greater results; and with a little more, the spark which was so nearly quenched might have been altogether extinguished. A trifling excess, that is, in one of the ingredients in his composition might have reduced him to be mute and inglorious, though a considerable quantity was necessary to qualify him for poetical excellence. Few, if any, people can judge accurately on such delicate points of mental chemistry; and a slight error in their analysis may be fatal to the correctness of their judgment. A similar difficulty occurs in such a case as that of Coleridge. Who could have ventured to say with any decision whether his love of speculation would make him a great philosophical light, or cause him to degenerate into a mere intellectual voluptuary? The early friends who were dazzled by the extraordinary brilliance of his conversation would regard it as treacherous in any one to suggest that such vigour of thought could be neutralized by a deficiency of volition. If men like Gray and Coleridge have so narrowly escaped shipwreck, it is impossible to say how many men of equal powers may have been entirely cast away; and therefore how frequently these early vaticinations may have missed fulfilment, not because they involved too high an estimate of the positive qualities, but because they failed to take into account the baneful but occult influence of counterbalancing defects. Such errors of the judgment are still less surprising when we remember how much depends upon circumstances which could not have been foreseen. A man in every way qualified to command success may fail, not merely from downright calamities to life or fortune, but by some perversion of fate for which we are slow to make allowance.

We complain that the man whom we suspected of high abilities has never reformed the world or introduced a new philosophical method, because he has been vulgarized by partial success. He has been content to aim at a low mark, and to turn his talents into money instead of fame. The case is frequent and lamentable; but we ought to have been prepared for the contingency. A good many promising reformers, political or religious, have been spoiled for such purposes by marrying an attorney's daughter, or by the early falling in of a College living. And perhaps they ought not always to be condemned too strictly. We often hear complaints that this or that man whose first works gave high promises of genius is writing himself out for the edification of an indiscriminate public, and giving us mere weeds because he will never allow his intellect to lie fallow. And yet we may be passing too severe a judgment. Perhaps the poor man has a wife and twelve children. Is his first duty to his family or to the universe? Should he pay his bills or be a world poet? It is given only to a few to reconcile the two careers. He ought not, you will say, to have had the wife and children, and the remark is often well founded. But it is a hard doctrine for an affectionate person; and perhaps, after all, it is as well to be a meritorious father of a family as to throw double or quits for fame. Perhaps, after all, he was a modest man, and may even have taken the true measure of his abilities when he declined into the safer path. However this may be, such facts are enough to suggest how exceedingly complicated a problem we undertook to solve offhand when we assumed this or that promising lad to be the coming man. Give him the will, and the intellect, and the right conditions, and he may succeed; but to produce a genius of any high order, and to employ him worthily on an adequate task, you must secure the concurrence of so many circumstances, depending partly on himself and partly on his surroundings, that it is a kind of marvel when they all unite upon one man. To explain the opposite case, to show why the people whom we took to be dunces turn out to be distinguished men, would perhaps be more difficult, though it cannot be called very difficult to account for any degree of misconception in the partial judgments which we are able to form of each other.

There is, indeed, the gratifying reflection that our judgment of what constitutes success is to the full as fallible as our judg-

ment of the talents by which it can be commanded. Many of the men whom we calmly set down as failures may have been doing as much as those who have made ten times as much noise in the world. A great deal of the best work in the world is anonymous, if we do not confine the term to writing. The rising genius who has sunk out of sight may have profoundly influenced his generation, though we cannot trace the channels through which it has operated. A man who might have been a bishop and has become a quiet clergyman in a retired parish is popularly said to have failed; but even quiet clergymen may frequently sow the seeds of thoughts and works of which they will never reap any conspicuous harvest in this life. And fortunately the power of doing good service unobtrusively is not confined to the clergy.

LORD DE ROS ON MARS' HILL.

WE heard some time ago of a family who were so lacking in energy either for good or evil that it was said that it would take three of them to commit a sin. The number which it took to do a righteous action we did not hear; but it is charitable to believe that such an act might, by an effort, be got through by two of them. In the like sort we should have thought that it would have taken more than one man, even more than one peer of the realm, to make such a wonderful exhibition as was made by Lord De Ros on Monday night when talking about examinations at Woolwich. We should have thought that no one pair of shoulders could have borne so remarkable a load of ignorance. At any rate a man wishing to distinguish himself in the art of blundering— or rather in that more delicate art which, without exactly blundering, contrives to show off a more refined ignorance than any more blunder can— might lay in a good stock of materials by simply following Lord De Ros and picking up what falls from him, like the slave who picked up the stray dardies when Demokleides was admitted into the treasure-house of the Great King. There really is an art in these things, and we suppose that a man who has achieved something in this way, as in any other way, is anxious to show off his achievement to the world. Otherwise why should Lord De Ros, who got some reputation from a fairly-put together little book about the Tower of London—no connexion with Mr. Hepworth Dixon's bigger book on the same subject—have been so eager to explain to the world that he knew nothing about either the Athenian Areiopagos or Milton's *Areopagitica*? Whatever may be done to the candidates at Woolwich, no one would have thought of examining the Lieutenant of the Tower about any such matters. It would never have come into our heads to think whether he knew about them or not, if he had not sounded a trumpet before him that we might all come and see how thoroughly he did not know. But, as Lord De Ros has thought good to announce to the world a fact which he might so easily have kept to himself, we will venture to go a little further in the process of mental anatomy. We will at least try to point out the very remarkable and complicated state of ignorance which is implied in Lord De Ros's speech—a degree of ignorance which, as it is something to be first in anything, it is really a creditable exploit for a single man to have reached.

It appears that among the books used at Woolwich for examination are Chaucer, Spenser, the Epistles of Horace, and "other authors." In a former year Shakespeare was one of the subjects for examination, and Lord De Ros seems to have been much troubled in mind at the Woolwich candidates being put on in *Romeo and Juliet*. His only comfort was that so practical a man as Sir Lintorn Simmons had had nothing to do with choosing such dangerous writings. We do not know whether any of the plays of Shakespeare lurk this year under the phrase of "other authors," and we are left to guess what may be the amount of Lord De Ros's familiarity with any of these authors, named and unnamed, as he discreetly veils his opinion of them in a somewhat oracular formula. They are "authors from the perusal of whom a taste was likely to be formed in after-life, but who inspired distaste when imposed on young men who saw in them no immediate practical utility." We do not know whether Lord De Ros, as an Irish member of the other House is said once to have done, "spoke in Italics"; but on the whole it is more likely to be the *Times* which, by putting the name of Horace in Roman type and those of Chaucer and Spenser in Italic, seems to imply a belief that Horace was a real man, but that Chaucer and Spenser were only the titles of books. But directly after comes the great exploit, the record of which we must give in Lord De Ros's own words, or at least in those of the *Times*, which we trust has not misrepresented him:—

He also noticed the *Areopagitica*, which, though he was aware that the Areopagus was a Greek tribunal, puzzled him, and it was not till after vainly consulting several dictionaries that he found it to refer to a trial for homicide conducted by twelve gods and goddesses, when six being on one side and six on the other the accused was acquitted. This seemed a precedent for the recent proposal of a noble earl (Russell) as to Irish juries. (A laugh.)

The laugh may possibly prove that there are other noble lords who were as much in the dark about these matters as Lord De Ros himself. But let us see all that this little speech proves about the speaker. First of all, as Lord De Ros was puzzled at the name of the *Areopagitica*, it proves that he is not a reader of the prose works of Milton. In this perhaps Lord De Ros would be very far from standing alone. But Lord De Ros's puzzlement

proved more than that he had not read the *Areopagitica*: it proved that he had never heard of it. Now this is far more serious. There is a large class of writings, ancient and modern, which nobody is expected to have read, but of which it still is decent to know the names, and to have some general notion what they are about. We are afraid that with most people the prose works of Milton, with some perhaps his poetical works also, would come under this head. But Lord De Ros had not even reached this stage. All he could think of was that the *Areopagitica* must have something to do with the Areiopagos, and all he knew of the Areiopagos was that it was "a Greek tribunal." This may seem to imply that Lord De Ros not only does not read Milton, but that he does not read Lord Macaulay. The *Areopagitica* are mentioned several times in Lord Macaulay's writings, and mentioned in a way which might give any one who knew no more of the book than Lord Macaulay says of it a general notion of its object. After this, it is perhaps less wonderful when we say that Lord De Ros's confession shows that he has never studied Greek history or Greek literature either at first hand or second hand. A man who could not read a word of Greek, but who had read any History of Greece, we will not say Grote or Thirlwall, but the very worst History of Greece he could find, would surely have found out something more about the Areiopagos than this. We write from the memory of many years past, but we think it is Oliver Goldsmith who tells us that Perikles lessened the authority of the Court of Areiopagos, and that he did it out of jealousy, because the Court was made up of all those who had been archons, and, as he had never been archon, he could not get a seat there. Now the notion of Perikles wanting to be archon is something like the Frenchman's picture of the Duke of Wellington still dissatisfied in the midst of all his honours because he had never been Lord Mayor. But, setting aside the odd conception of the motives of Perikles, Goldsmith's mere statement of facts is perfectly accurate. Had the studies of Lord De Ros gone even as far as that, he might at least have learned that the Areiopagos was made up of mere mortal judges. He could hardly have thought that the archons were the same as the Twelve Gods, and that Perikles was disappointed because he could not, like Cains or Dometian, get people to make a God of him while he was still alive. Lord De Ros doubtless reads the newspapers; if so, he can hardly fail to have sometimes come across some such flourish as "the Areopagus of Europe." What that means we cannot reasonably expect Lord De Ros to know; because we certainly do not know ourselves, and we strongly suspect that those who talk in that kind of way do not know any better. Still, the oddness of the phrase might, one would have thought, have stirred up any one who, like Lord De Ros, had got so far as to know that the Areiopagos was a Greek tribunal, to go on a little further and find out whether it really exercised such sublime but rather vague functions over Greece, Europe, or the world in general.

But if Lord De Ros does not read Milton or Macaulay or the newspapers, we are at least bound to believe that he sometimes reads the New Testament, if not in the original, at least in the English version. Surely education at Woolwich has not become so strictly undenominational that Lord De Ros or Sir Lintorn Simmons or anybody else would object to the study of the Acts of the Apostles, at all events as an historical document throwing light on the early days of the Roman Empire. In that book we find an account of how St. Paul was led unto Areiopagos, how he stood in the midst of Mars' Hill, and there made a discourse which had the effect of winning over several of his hearers, and among them one of the Areiopagites themselves, to the doctrine which he taught. Lord De Ros can hardly be of a very inquiring mind if he read this account and never thought of finding out any more about the place in which or the body before whom the Apostle made that famous discourse, than simply that it was "a Greek tribunal." But if Lord De Ros, after his searching in the dictionaries, chanced to look back to the Acts of the Apostles, his state of puzzlement, instead of being lessened, must have been greatly increased. The setting forth of strange Gods is not exactly the same as a trial for homicide, but the main point is, before whom does Lord De Ros think that the Apostle was brought? According to his own account, it would seem that Lord De Ros must believe that St. Paul was arraigned before a tribunal of Twelve Gods and Goddesses. To say the least, this seems rather like setting one of the parties to be judge in his own cause, if the setting-forth of strange Gods is called on to appear before the old Gods themselves. But it certainly says something for the impartiality of the Olympians that the Apostle departed uncondemned, and must therefore have had at least six votes in his favour; nay, more, he would even seem to have made a convert on the bench. It is possible that there may be some text in which the name of Dionysios appears without the last *i*, and it may be held in Lord De Ros's mythology that it was the God of Wine himself who founded the bishopric of Paris and wrote the famous treatises on the Heavenly Hierarchy. If, as we were some time back taught by a grave divine, Woden founded the Church of Chester, we see no reason why Dionysos may not have founded the Church of Paris.

One word about the search in the dictionaries. We think that we have been able to go a little way in the track of Lord De Ros. We do not know whether Lord De Ros looked in the English Dictionary of N. Bailey, *οἰκολογος*. He would there have found, under the article "Areopagites," how they were "Judges of the Court of Athens, where malefactors were tried, and so called from a place near that city, where they sat, called *Areopagus*, or *Mars's*

Hill. The word "malefactors" is a little too vague, and to talk of the Areios Pagos as being near the city is an archaic way of speaking, savouring of the days when the Akropolis alone was the city. Otherwise one might say of this account that, like the nursery rhyme which sums up the whole reign of Henry the Eighth in the fact that he "was as fat as a pig," it is hardly adequate, but that it is true as far as it goes. But we suspect that we have lighted on the source of Lord De Ros's notion about the Twelve Gods in the larger Dictionary of Ainsworth. It was, we think, Sir Roger de Coverley who, when some ancient worthy was mentioned, chimed in with the remark that, when he was at school, he had read his life at the end of the Dictionary. The same way of seeking after knowledge which Sir Roger practised when he was at school Lord De Ros seems still to follow in his riper years. At the end then of Ainsworth's Dictionary we find two articles bearing upon the subject which Lord De Ros has taken in hand. The first is headed "Areopagita" and the second "Areopagus." We cannot help thinking that Lord De Ros must have failed to read the first, which we rather wonder at, as the word "Areopagita" looks more like "Areopagitica" than "Areopagus" does. But under "Areopagitica," besides the information, on Ainsworth's own authority, that "they judged in capital affairs with the greatest impartiality," it is stated, on the authority of Cicero, that "Solon primum constituit Areopagitas." Now we cannot suspect either that Lord De Ros cannot construe so easy a piece of Latin as that, nor yet that, if he could construe it, he would think that Solon created the Twelve Gods. So we are driven to think that Lord De Ros got his notions wholly from the next article, where "Areopagus" is explained to be "Mars's court at Athens," and the comment is added:—"They say it had its name from Mars's trial here for homicide before the twelve chief deities, on which occasion he was absolved by six votes; for, the votes being equal, judgment was passed in favour of the accused, 'Judicium capitis Areopago primum actum est,' Plin. 7. 56." Here, it is plain, is the source where Lord De Ros found his learning; but we think that he has hardly done justice to the great lexicographer, for Lord De Ros seems to think, if not that the trial of Ares was the only trial which ever took place before the Areopagos, yet at least that none but Gods and Goddesses ever sat there as judges. But Ainsworth clearly understood that the trial of the homicidal God before twelve of his peers was only the first Areopagitic trial among many, and that in after-times, as is implied in the quotation about Solon, mortal men were tried there by their peers also. Altogether we wonder why, in a military discussion, the Court of Areopagos should have aroused such undeserved dislike. It would surely have been a more ingenious and appropriate perversion to have taken for granted that a Court held on Mars' Hill must needs have been a Court-martial.

FIVE O'CLOCK TEA.

IT is not quite clear whether women expect, when they have got their rights, to keep their privileges also. When their education is completed, and they find themselves able to argue on an equality with men, do they expect always to have the last word? When they have ceased to claim or accept the protection of men, and have set up for themselves, are they still to be allowed to make personal remarks? When they are successfully competing with men in all the superior walks of life, and are driving them to emigrate, to scrub floors, and to jump off Westminster Bridge, do they hope still to get the corner seat, the clean side of the road, the first help, the front place, and the pick of everything? When all the public and private business of the country is in their hands, will they still find time for three meat meals in the day? And, above all, will they then still retain their most cherished privilege of tea and talk at five o'clock in the afternoon? As members of any profession, except perhaps the clerical, women can hardly expect that their day's work will ordinarily be finished before five o'clock, or that they will be able, as a rule, to make such a break in business between four and six as to get home regularly to five o'clock tea. Unless we are to presume a thorough change in office hours, in the times of the departure of the mails, and in all the business arrangements of the country; and, unless, along with all this, we are to reckon upon an entire exclusion of men from any share in settling such arrangements, it is difficult to see how five o'clock tea can survive the emancipation of women. We do not forget that some of the champions of woman's rights consider that, with her superior natural abilities and her extreme docility, supplemented by the right use of method, the emancipated woman will be able to perform all that man now does, without giving up any of her present feminine occupations; will be able to attend board meetings without abandoning any of her duties to her infant; will find time for interviews as well as for visiting; will superintend the clerks at her office while keeping due control over her domestic servants; and will conduct the affairs of her regenerated country without neglecting her painting, her music, her flowers, her pots, her drawing-room, or her dress. All this may be possible. It may be that woman will contrive to economize her time and her forces by a considerable development of what may be called household mechanics. There is perhaps no reason why, as she already has the sewing-machine, she should not have also the letter-writing machine and the dinner-ordering machine. We can even imagine that, by the application of some kind of power to a contrivance combining the

bottle and the baby-jumper, she may be able to hand over one of her most natural, but most unmanly, duties to a nursing-machine. And when machines have been invented for all the different household duties of women, it is of course perfectly conceivable that they may all be combined in one great domestic engine, warranted to do the work of an automaton housewife, or complete mechanical mistress and mother. Or perhaps it may be that emancipation will have such an effect upon woman that the glorious creature will find herself able to do what, since the world began, both men and women have been vainly trying to do—namely, to get two days' work out of one. There have always been people who have believed it might be possible to do this, just as there have always been people who, in spite of arithmetic and repeated failures, have maintained that "what's enough for one is enough for two." Mr. Kingsley, indeed, in his *Water Babies* went so far as to give us a formal prescription for getting two days' work out of one—namely, by "sticking to the good old Cambridge hours of breakfast at eight and dinner at five." But this, like any other prescription which fails to show how to double the length of the day, is a mere delusion for doubling the day's work; as any one may soon ascertain who will put himself to the extreme inconvenience of trying "the good old Cambridge hours." It is, however, futile to speculate by what means women propose to rise superior to the embarrassing conditions of time and force which at present regulate the lives of men, and to assume the cares and duties of men without dropping those which at present belong to them. All we know is, that the champions of woman's rights repudiate the hypothesis which used to be so cleverly illustrated by the late Mr. Leech, that the assumption by women of men's work, or, as it was then called, "Bloomerism," necessitates the employment of men in woman's work. Evidently they feel perfectly competent to do the one, and yet not leave the other undone.

Whether woman's work is, or is not, to survive the triumph of the new Bloomerism, it seems impossible that woman's leisure can do so. And with the loss of woman's leisure goes the loss of that special pleasure of women, five o'clock tea. Five o'clock tea is a rite for the due observance of which leisure is essential, and of which leisure is the most characteristic condition. The cups and saucers, the bread and butter, the new bonnets, the specimens of lace, the music, the talk, and even the very drink from which it is named, are all accidents of five o'clock tea. Nothing that is eaten, nothing that is drunk, nothing that is said or done at five o'clock tea, is so characteristic of the institution, considered as an art, as this one fact, that it is a mode of passing spare time. The art of taking five o'clock tea is, in fact, a branch of the great art of using leisure—an art which, if the rank and file of middle-class Englishmen ever possessed it, they have now completely lost. Englishmen of the professional and commercial classes have no experience of leisure. They know what it is only from hearsay; or, at the best, from recollections of their boyhood. The pressure of competition and the force of habit have turned all of them who are past thirty into mere working machines; and, though they are always longing for leisure, not one of them in fifty would know how to use it if he got it. It is not the least of the graces which charm us in woman that she is not drilled down into the same file with ourselves; that she is still allowed to have leisure, and that she still retains the art of using it. If a busy professional man gets a half-holiday, he has only two notions as to how he shall spend it. One is to work off arrears of private business, the other is to tire himself out with physical exertion. And he is quite right. He has lost the art of doing nothing, and he could not do it, however much he tried. Give him the prettiest corner of the drawing-room, a couple of his best friends, security from casual callers, and all the other most favourable conditions of an artistic five o'clock tea, and you will still find him quite incompetent to take it like a woman. The ease, the grace, the quiet, the repose, the absence of hurry, the charming aimlessness, the indescribable air of inaction, with which a woman takes her five o'clock tea, are all entirely beyond his powers. Let any one who doubts this, and who has a really charming woman for his wife, contrive an opportunity of watching her, himself unseen, while she takes her afternoon tea. He will then learn how great and how beautiful is the art of idleness.

Five o'clock tea has, of course, like every other art, some among its followers who fail to catch its true spirit, and seek to degrade it into a handicraft. Some women make a meal of it. Others try to make it do duty for a dinner-party. Some treat it as a religious or charitable institution, and meet together to make garments for the poor heathen—garments which, by the way, the poor heathen could not possibly wear, but for which they may get a trifle from some half-caste dealer—or to distribute tracts among our heathen poor. Others, of a more enlightened spirit, look upon it as a means of regenerating society, and meet to discuss, in the comparative privacy of their drawing-rooms, those more intricate and nasty problems of social life with which it is necessary that they should make themselves thoroughly acquainted in order that they may lend a helping hand to Professor Newman and Mr. Jacob Bright. One of the worst abuses of five o'clock tea, as most men will agree, is to turn it into a meal. There are women, happily not numerous in London, but dwellers chiefly in small country towns, who use five o'clock tea as an opportunity for gormandizing; and who systematically exchange visits at that time of day for the purpose of eating something that is newly in season, such as strawberries, or something for which they have a sneaking appetite, such as muffins. Men are of course carefully excluded from these orgies. Married women take care not to keep the feast in their

own houses, except on days when they are secure of their husband's absence. Edwin tears herself from Angelina, and goes forth on his day's work, deeply touched by the affectionate solicitude with which she puts to him the question, "Is there no chance of getting you back before seven, my love?" Could he turn back from the station ten minutes later, and see the little notes being sent out to Mrs. Doubledose, the doctor's wife, and the two little Misses Pumpkin, written thus:—"I shall be quite alone at five to-day. Do come and eat a muffin"—the current of his meditations would be changed. Rumour says that occasionally an uxorious Edwin has turned up an hour or so earlier than he was expected, and has felt himself to be, like the prophet of Pethor, a man whose eyes are opened. The disordered appearance of the drawing-room, the bonnet cast down here, the parasol there, the pocket-handkerchiefs, the neck-kerchiefs, the knitting, the tatting, the shawls, and the overshoes that lie in tangled masses over the chairs and floor and bestow every corner of that place, sacred, as he thought and as Cowper sang, to neatness and repose; the half-emptied cups and sloppy saucers, the strawberry stalks, the fragments of solid food; the embarrassed air of Mrs. Doubledose, arrested in the middle of her newest and liveliest bit of scandal, and the outraged look of Angelina—have, it is said, formed a tableau such as Edwin would long remember. Of course such complete exposures as this are comparatively rare. Usually the fragments that remain have been gathered up, the drawing-room has been smoothed down, and all traces of the revellers have been effaced, some twenty minutes or so before the unsuspecting Edwin applies his latchkey to the door; and the only evidence that remains of what has been done is to be found in Angelina's utter incapacity for dinner. "I have got one of my sick head-aches," she says, and Edwin, even in his most ungenerous moods, looks for no more approximate cause of her want of appetite than a too liberal luncheon, and seldom thinks of suspecting the true criminal, five o'clock tea.

Our limits do not permit a discussion of the other misuses of five o'clock tea. They are, no doubt, many and serious. But it does not therefore follow that the institution is in itself an evil, any more than it follows, because some women abuse their leisure, that all women ought to take to hard work. Nothing, says the proverb, is so bad as debased good. The corruption of the best thing is the worst. And it may be that the very villainy of five o'clock tea, when so abused, is an evidence of its value when uncorrupted.

NERO AND NAPOLEON III.

NOT the least interesting parts of M. Renan's curious book on Antichrist are those chapters which touch on the affairs of contemporary France. With the skill of a consummate literary artist, he draws or suggests a series of historical parallels such as used to be the most potent resources of sarcasm in the days of the Empire. Now that the Emperor is gone, and that the Empire only illustrates the irony of fate, there might seem, indeed, to be no reason why protests against the Napoleonic system should be veiled under descriptions of the ruin which the Cæsars brought to Rome. But M. Renan thinks differently. He is not more eager to prove that the Antichrist of the Apocalypse is Nero than he is to trace, with strokes of subtle and cruel irony, a likeness between Nero and Napoleon III., to draw a parallel between the Rome of the one potentate and the Paris of the other, and to point the defence of Jerusalem against Titus with such hues and tints of sarcasm as to bring into view the defence of Paris by the Commune. It is true that he does not once mention Napoleon III., that he makes only a slight and passing reference to the showy splendour of Paris, and that he does not say a word about the fanatics and ruffians who fought under Ferré and his colleagues; but his meaning is made all the more trenchant by so artistic a suppression of obvious names. And although M. Renan had no reason to fear that he would be punished if he should speak with open scorn of Napoleon III., or with open detestation of the Commune, he thought no doubt that it would add to the force of his satire if he so painted the past as to make it seem like an anticipation of the errors and the crimes which had been committed by his own countrymen in his own time.

The parallel between Nero and Napoleon III. is not of course intended to suggest that the Emperor of the French was as great a monster of depravity as the Cæsar, or indeed that he was a monster at all. The likeness is drawn between the artistic vanity of the one and the literary vanity of the other. Nero is painted as he appears in the pages of Suetonius and Tacitus. He is painted as a man who, while standing on the most giddy height of power on which any civilized State ever placed a human being, yet disdainfully flung away the dignities and gravities of empire to share in the triumphs of singers, sculptors, and all the other ministers to the passion for artistic beauty. Leaving the army to the care of powerful and treacherous pro-consuls, and placing the Empire at the mercy of armed ambition, he fiddled, danced, sang, and lived only for art. We are reminded how he was disgusted by the Romans because they did not appreciate the charms of his harsh and feeble voice; how he became enthusiastically fond of the Greeks because they obsequiously hastened to praise him as a master of music; how he went on with his singing and fiddling even after he heard that the legions of Gaul had revolted; how he consulted the Senate respecting a newly-invented

musical instrument in the midst of the tremendous peril which had come to the Empire and himself; and how in the moment of death he could think only of the magnificent voice which should be lost to the world when he should be gone. Nero's atrocities are painted by M. Renan with a burning pen, and the force of the satire is deepened by a subtle plea that Nero was not animated by the same tiger-like thirst for blood as the annalists of the Cæsars ascribe to Caligula. "Far from being incapable of friendship, he was often a good comrade." But, we are told, it was just that capacity for friendship which made him cruel, since he wished to be loved and admired for his own sake, and he was angry with those who did not pour out upon him their affection and their homage. He was indifferent to the rights of others, destitute of pity, and ready to slaughter thousands of innocent men and women to gratify a whim, because he had no moral sense; and he had no moral sense because he was essentially an artist. He proclaimed every day that the only serious concern of life was art, and that all virtue was a falsehood. The contempt of M. Renan goes so far as to picture such a personage as befits the *mardi gras*—a compound of fool, simpleton, and actor, clothed with the functions of an absolute ruler, and charged to govern the world. He was an Emperor of the opera. He was a *mélomane* trembling before the pit, and making it tremble. To such a being the government of the greatest State or the command of the mightiest army was a trivial matter in comparison with the symphonies of the lyre or the lines of a statue. And, pointing the finger full at Napoleon III., M. Renan bitterly adds that, although Nero's talents did not rise above mediocrity, he had some artistic endowments; for he painted well, and he was skilled in the art of sculpture. His verses were also good, although they had a schoolboy air, "and in spite of what has been said by calumny, he did compose them himself; for Suetonius saw the first copy of the Imperial manuscripts covered with erasures." Nero was wont to console himself with the reflection that his artistic talents might some day gain him a livelihood if the throne of the Cæsars should be taken from him, or if he should weary of its gilded trivialities. "One of the things which most flatter the vanity of those men of the world who occupy themselves a little with art or literature is to imagine," says M. Renan, "that if they were poor they could live by their talents." And the diseased fancies of Nero were quickened by the depravity of his time. It was an age of shallow rhetoricians, of gaudy artists, and of sensualists, who had lavished on vice the dignity, repose, and rounded completeness of art itself. An exaggerated importance was given to the practice of declamation. Buildings or statues were deemed great because they were gigantic. The Roman people craved big buildings, big statues, big gladiatorial shows, and big words. They were gorged with spectacles, and surfeited with blatant eloquence. The most typical character of Imperial Rome during that reign of transcendent immorality was Petronius, who gave the day to sleep and the night to business and amusement. "He was not one of those prodigates who ruin their constitution by reckless debauchery; he was a voluptuary profoundly versed in the science of pleasure." A fascinating friend, he did not lack ability, and, when it was the good will of Nero that he should die, he died with the nearest approach to Socratic dignity that lay within the reach of a philosophic voluptuary. Opening his veins, he discoursed with his friends, not about the immortality of the soul, but about the trivialities of the day, and the light airy songs of society, as if to show how much he despised both life and death. Then he rewarded some of his slaves, and caused others to be punished. And then he leaned forward in the sleep of death. M. Renan calls him a "sceptical Mémère"; and he certainly does recall the Academician whose scepticism was as complete as his culture, whose irreverent epigrams were the delight of literary epicures, and whose own passion for rounded beauty of phrase amounted to a kind of sensuality. Mémère passed through life saying, "Let us eat of the best and drink of the best, let us polish our French and coin our epigrams, let us flatter each other when we meet, and satirize each other when we are separated, for to-morrow we die." But on one side of his nature Petronius was also like M. Octave Feuillet's *Monsieur de Camors*, which has unhappily more than one original.

M. Renan does not intend of course to suggest more than a very limited parallel between Nero and Napoleon III. So far from despising state-manship, the late Emperor of the French risked everything in one effort after another to seize the supreme power in France, and, in his own way, he was eager to build up a reputation which should give him a place in history. But he had also a passion for the honours of literature. He toiled for years at the composition of one dull book in the hope that he might thus get a place in the Academy, and secure those personal honours which are given to men of letters, and yet are withheld from kings. Like Nero, he made his artistic tour in search of appreciation, fiddling as he went, and inviting all men to judge of his performance. He won his garlands also, for several pens saluted him as a great historian. Satire was also busy, it is true, and Sainte-Beuve left behind him in manuscript perhaps the bitterest passages that he ever penned on the old Cæsar and the new; but, if we knew the annals of Greece as well as we know those of contemporary France, we should find no doubt that Nero, too, was secretly made the victim of the bitterest ridicule which lay at the command of a decaying race. Nero did not go to Athens for plaudits, fearing perhaps to submit his pretensions to the severity of taste which still lingered in the chief home of art; nor did Napoleon III. invite the suffrages of the French Academy, lest the political partialities which had welcomed

even more flagrant mediocrities than himself should suddenly become jealous for the honour of literature if they could thus insult a Bonaparte. The French ruler did not consult the Senate about the construction of a musical instrument, but he brought out his own musical snuff-box whenever he addressed the representatives of the nation. His speeches were rhetorical exercises. They were the compositions of a man to whom the form of the expression was as much a matter of concern as the thing expressed. They were filled with the devices of the phrase-maker. They revealed a man posing for the sake of effect. He is like an actor to whom applause is the breath of life, and who carries his thirst for praise from the stage to the dinner-table and the clubroom, so that all his waking hours are spent in the exaction of homage. The literary vanity of Napoleon III. was fostered by the atmosphere of Paris. M. Renan's description of Rome might serve, and was of course intended to serve, for a description of the French capital. The Parisians place an exaggerated value on the art of rhetorical expression, and, as M. Renan himself has admitted elsewhere, they are more eager that a thing should be well said than that it should be worth saying. Their Academy is a manufactory of fine phrases and poor thoughts. They crave a succession of fine shows, huge buildings, and gaudy exhibitions; and thus the artistic author gave them the biggest work, the biggest opera-house, and the biggest Exhibition in the world.

Not content with suggesting a parallel between the old Cæsar and the new, M. Renan goes out of his way to read a direct lecture to those princes who seek to compete with men of letters, and it is easy to see that he is speaking for a moment to the Duke of Aumale and the Count of Paris. Indeed, it is difficult to disguise the conclusion that he is also satirizing M. Cuvillier-Fleury, who was the tutor of the Duke of Aumale, under cover of the half-contemptuous sketch of Seneca, who was the scholastic guide of Nero. Although he himself is one of the best of living writers, and although he usually speaks of his art in a sufficiently high key, M. Renan betrays in his new book something like contempt for its graces and subtleties. He thinks that nothing could be more mischievous to a governor than tastes and aptitudes for the practice of literature and art:—"Le gouvernement étant la chose pratique par excellence, le romantisme y est tout-à-fait déplacé. Le romantisme est chez lui dans le domaine de l'art; mais l'action est l'inverse de l'art. En ce qui touche à l'éducation d'un prince, le romantisme est funeste." M. Renan calls to mind no doubt those visionaries of the First Republic whose qualification for governing France in the greatest crisis of her history was a literary habit of playing the despot on paper, as befits men who, in the empire of their study, were armed with first principles and a belief in their omnipotence. He must also recall those turbulent masters of a loud rhetoric who in his own time seem to fancy that France can be regenerated by big phrases and marks of exclamation. But he has chiefly in view Napoleon III., who was fundamentally a man of letters rather than a man of action, and whose dreamy mind went in search of the ideals that naturally rise before a bookish recluse. His natural tastes and his early training instinctively made him think of how a thing would look on paper. He was perhaps the most "viewy" monarch who ever governed a great Empire for twenty years. If he had not been "viewy," it is true, he might never have gained the throne, although the probability was that the turmoil of France would in any case have brought a Bonaparte to the surface; but it was his "viewiness" more than any other infirmity which cost him his power. He was "viewy" when he went to war for the sake of Italy, and he did not display practical sagacity, but only his habitual indecision, when he stopped before the work was half done. He was still more "viewy" when he tried to found an Empire in Mexico, to restore, as he said, the balance of the Latin race. That was perhaps the maddest scheme which in modern times ever tried to cloak itself under the guise of practical statesmanship. He first tolerated and then resisted the gigantic growth of Prussia in a "viewy" way. His resistance to the nomination of the Prince of Hohenzollern was "viewy," and so was the flimsy pretext on which he went to war.

M. Renan describes the result of Napoleon's "viewiness" in his chapters on the defence of Judæa and Jerusalem against Vespasian and Titus. Jerusalem is of course Paris; Hassan is painted as a man of moderation, who knew that resistance was hopeless, and yet who held out rhetorical hopes of victory, in order that he might keep the Jews from rushing into the worst excesses of fanaticism. Few people, therefore, deem him a traitor; and he is the Trochu of Jerusalem. Vespasian may stand for the Thiers; Titus is the MacMahon. The fierce, fanatical Jews who defended Jerusalem and the Holy of Holies against the Versailles of Rome did the work of the equally fierce and fanatical Communists. Simon, the son of Gioras, who commanded the city, represents such Communists as Ranc; John of Giscala, who, with his assassins, was master of the Temple, may typify Ferré or Raoul Rigault, who had neither resources nor fear, but only passion; and Eleazar, the son of Simon, who belonged to the priestly race, anticipates Delescluse, a fanatic to whom Communalistic Republicanism was a religion. M. Renan has undoubtedly strained the parallel between Judæa and Rome on the one hand, and France on the other; but he has nevertheless penned a curious satire on his country, and his irony will be found, after all due abatement, shaded with much of the gloom of truth.

INTERNATIONAL ARBITRATION.

ON a hot evening in July the House of Commons occupies itself with affirming after debate that it prefers international arbitration to war. It in effect desires the Government to signify to foreign Powers that this country has been "done" once, and would like to be "done" again. We may observe for the comfort of Mr. Richard that the settlement of international disputes cannot be difficult if one party will give, and allow the other to take, everything. Mr. Richard is doubtless impervious to ridicule as well as insensible to fatigue and heat. It was perhaps because his motion was raised above party considerations that so many Conservatives absented themselves from the discussion of it. The working-men have "thrown themselves into the movement" for international arbitration with "remarkable ardour," which it is our own fault that we have not remarked. The only perceptible emotion aroused by this subject has been at the Court Theatre, where the proposal to refer to arbitration the King of Bonny's claim to Scotland still excites laughter. However, we are ready to believe that upwards of one million of the working classes have spontaneously signified their adhesion to the principle of Mr. Richard's motion. Indeed, we should think that with adequate organization and expenditure the million might be made two. There can be no possible harm in resolving that arbitration is generally desirable, and the question whether it is practicable in a particular case must be left to the decision of Government. Mr. Richard argues that great wars have arisen out of small causes, which he thinks might have been removed. But he fails to see that, if the particular pretext for war between France and Germany had been taken away, some other pretext would have succeeded it. If Mr. Richard, or his million of followers, or the bishops and ministers of religion to whom he appeals, can persuade France to abandon the purpose of fighting it out with Germany at the first convenient season, by all means let them do so. He may rest assured that this country will not enter into European war unless compelled, but circumstances may arise to which arbitration would be inapplicable, unless as a decent contrivance for surrendering that which can only be preserved by fighting. Lord Clarendon obtained from a Congress held at Paris the expression of a wish that States would, before appealing to arms, have recourse to the good offices of friendly Powers, and no doubt mediation might be useful where war is not predetermined. However, Mr. Richard concurs with Mr. Gladstone in thinking that it was "a great triumph" to have elicited this declaration from the Congress. It is a pity that some other equally harmless platitude could not have been adopted by the House of Commons, so as to save the trouble of dividing.

Mr. Richard wishes the Government to represent to foreign Powers that we think arbitration is a good thing. The foreign Powers, if they felt called upon to behave civilly, would probably answer that they thought the same, and that is the utmost that would be done. Mr. Gladstone did not consider that this was worth doing, and we entirely agree with him. There is a practical difficulty in recommending the Geneva precedent, because the Powers which we address will naturally inquire whether we expect it to play England or America in the proposed drama. Mr. Richard considers the Geneva Arbitration highly honourable to England, but perhaps his opinion might not be generally accepted on the Continent. Lord Russell has always been a valiant penman, but we doubt whether even he would have the courage to omit from the Foreign Office a dissertation on the magnanimity of England in carefully and anxiously providing for an award against herself to the tune of three millions. We can conceive the polite sarcasm which such a despatch would evoke. Some years ago a public banquet on horseflesh was announced, and a person who was invited to it answered that, although he had occasionally eaten that viand when he could get nothing else, yet it had not occurred to him to boast of it. The view which many persons are disposed to take of the Geneva Arbitration is perhaps of a similar kind. But Mr. Richard desires that Lord Granville should invite the Ministers of Russia, Germany, and France to observe the placidity of the sheep under the shearers. It might be fairly answered by a Continental politician that the precedent, even if creditable to England, is inapplicable abroad. Besides, it must be confessed that recent experience does not tend to promote confidence in the efficiency of any international tribunal. However, Mr. Richard carried his motion against the Government, and as his supporters are probably not readers of the *Morning Post*, they may never become aware that he was indebted for his success to the fashionable entertainments which drew members away from the debate. Mr. Gladstone quoted with good effect from a work of M. Laveleye, who, desiring equally with Mr. Richard to preserve the peace of Europe, recommends, as the surest means of doing so, that Belgium and England should adopt a system of compulsory military service. Mr. Gladstone was careful to protest that he did not follow M. Laveleye in this opinion, but he cannot deprive the recommendation of the weight which properly belongs to it. It depends upon ourselves alone to carry out this recommendation, whereas Mr. Richard's plan requires the co-operation of other Powers. The only solid basis of influence abroad is security at home, and we shall never occupy our proper place in Europe until by some means we largely increase our defensive force. "For the sake of liberty itself, considerable armaments must be maintained." This is the judgment of M. Laveleye, and he must, as Mr. Gladstone says, have been pressed by powerful motives to adopt a conclusion so painful to him. If nothing else comes of the debate, it will be useful as a means of urging on the

progress of the country towards a condition of security. The growing cost of professional soldiers will gradually compel all citizens to share the burden of national defence.

The country is congratulated by Mr. Gladstone on having shown by accepting the decisions of Berlin and Geneva that its attachment to the principle of arbitration is not a vulgar and sordid attachment founded on a confident expectation of success. The world is invited by Mr. Gladstone to look forward to the gradual formation of a code of international law, and to the eventual creation of an International Court. But Mr. Gladstone would hardly represent this prospect as near or definite. Even Sir Wilfrid Lawson, who supported Mr. Richard, had the good sense to see that England had been "perhaps a little done" at Geneva; but he did not perceive the absurdity of our exhorting other nations to go and be done likewise. The most civilized nations of Europe have been exerting themselves lately to persuade the Shah of Persia that each is stronger than the other. As Sir Wilfrid Lawson says, we exhibited to the Shah our ships, our guns, our soldiers, and even our prizefighters, but we did not take him into a church. Sir Wilfrid Lawson fears that the Shah has been taught to drink champagne, and has been insufficiently impressed with the value of the principle of international arbitration. We so far share this apprehension as to believe that the Shah would be likely to see much more virtue in a big gun. The "Woodwich infant," like the principle of arbitration, requires a good deal of nursing, but we think it promises better to repay the care bestowed on it. Mr. Richard declares his conviction that, if the Award at Geneva had been the other way, the people of the United States would have willingly accepted it. We do not say that they would not; and if we think that they would have liked to tussle with us for the *Alabama* damages on the principle of "heads we win, tails you lose," it must be owned that in this respect they are only too like ourselves.

Although Mr. Richard has carried his motion, he must not expect that anything will come of it. He may console himself under disappointment by remembering that we can at any moment instruct and delight the world by exhibiting to it a second edition of the Geneva Arbitration. There are always open questions between us and the United States, and we can generally ensure the settlement of these questions by arranging arbitration upon terms unfavourable to ourselves. Providence, says Mr. Gladstone, has endowed England and America with advantages and facilities for the propagation of the principle of arbitration. If Mr. Gladstone had fully explained himself, he would probably have ascribed to America a readiness to base and to England a willingness to give. He might have truly added, that the mischief of war would be to both countries more serious than the price of any concession which could be made by one country to the other. At this point we think the parallel between the case of England and America and that of Continental countries fails. The French desired to march to Berlin in order to prove that they were the first military Power of Europe, as they used to be. The Germans desired to march to Paris, in order to cripple France, and to prevent her from troubling the peace of Europe in time to come. Lord Clarendon, with his "tact, good feeling, and ability," and his offer of mediation, was merely futile under such circumstances. When Germany prescribed the terms of peace to conquered France, some faint attempt at mitigating their rigour was made by England, and it was treated with contempt. Mr. Gladstone apprehended that, in endeavouring to check his friend Mr. Richard in his career of benevolence and philanthropy, his own conduct might be viewed unfavourably. A Minister must be patient and courteous to every one, and Mr. Gladstone could only hint that the speech which he censured was unpractical. "He did not wish to damp or chill the generous aspirations of the speaker." We may suspect that, if Mr. Gladstone had had a majority at his back, he would have treated the generous aspirations of Mr. Richard with rather less consideration. He saw great value in the motion, and he hoped that it would be withdrawn. Mr. Cobden once made a similar motion, and Lord Palmerston invited him to withdraw it, which Mr. Cobden declined to do. On a division Mr. Cobden was beaten, whereas Mr. Richard has succeeded. We shall of course be told that this fact shows that the principle of arbitration has made great progress since Mr. Cobden's time. But it rather shows that the independent members of the Liberal party are less than ever to be depended on. The present Government has sustained so many defeats and humiliations that one more does not greatly matter. The resolution can have no practical effect, and perhaps we may have next year a Parliament in which the "aspirations of philanthropy" will be chilled by contact with common sense.

LORD SANDON AND THE CHURCH ASSOCIATION.

OUR anticipations as to the kind of reply likely to be given by Mr. Gladstone to Lord Sandon's demand for a Bill to suppress the Ritualists have not been disappointed. The Ministerial statement was even hyper-episcopal in its diplomatic caution, and would certainly have established the reversionary claims of the Premier on the next vacancy of the see of Canterbury had he chosen a different line of life. And yet it is difficult to see what substantially different answer could have emanated from the Treasury Bench, even had the First Lord been a less accomplished master of the art of language. It was inevitable of course that Lord Sandon should consider it "unsatisfactory," and natural that he should gallantly propose to throw himself into the breach,

where prelates and premiers are alike afraid to tread. We spoke just now of episcopal caution, but it must be admitted that the two Archbishops, if they prudently excused themselves from the responsibility of action, have not been altogether felicitous in the phraseology of their now too famous reply to the sixty thousand remonstrants. One sentence especially, on which we took the liberty of commenting at some length the other day, has supplied the key-note as well of the frantic oratory of Lord Shaftesbury and his friends at Exeter Hall as of Lord Sandon's preliminary interpellation and of the Resolutions of the Church Association. Their Graces, it may be remembered, asserted that a considerable minority of the clergy and laity of the Church were endeavouring "to subvert the principles of the Reformation," and the cry has been taken up and re-echoed by all the organs of the Recordite party ever since, though neither those who originated nor any of those who have so loudly repeated it have attempted to answer the question we ventured to suggest as to what "the principles of the Reformation" are. A morning paper which is equally conspicuous for its uncompromising devotion to the Establishment and its intense dislike for all "extreme" parties, and especially for extreme High Churchmanship, frankly admitted last Tuesday that it was quite unable to describe these principles, though it was none the less indignant with the naughty Ritualists for "subverting" them. Whether Lord Sandon is better informed on the subject we cannot say, but at all events he kept his knowledge to himself, and contented himself on Monday with again quoting the indictment of the Archbishops without offering any explanation. He also referred to the four hundred and eighty clergymen denounced at Exeter Hall as priests of Babel, whom he rather inaccurately described as petitioning Convocation "for the revival of sacramental confession in the Established Church." It may fairly enough be presumed that the petitioners are in favour of such a revival, but they could hardly ask Convocation to restore a practice which they expressly alleged to be already "widespread and increasing," and what they actually did ask the bishops to do was to take steps for the "training, selection, and licensing" of fit persons for confessors. Of course, if confession is to be allowed to go on, this request would appear to be not unreasonable. The question really is whether confession ought not to be put down altogether; but meanwhile the bishops admit this to be beyond their competence. Neither, indeed, did Lord Sandon, though he pointedly included confession in what may be called the preamble to his inquiry, seem to be prepared with any practical remedy. His final demand had reference exclusively to a Bill providing a speedy and inexpensive remedy for parishioners against the introduction of objectionable ceremonies into their parish churches. To the preliminary inquiry Mr. Gladstone could of course only reply that the Government had no official knowledge of the Archbishops' letter to the Church Association, or of the clerical petition to Convocation, and that it had no responsibility in the matter. Lord Sandon's second question as to the intentions of the Government alone required a direct reply.

What the nature of that reply would be no sensible man could for a moment doubt. Mr. Gladstone would not of course commit the Government as to what measures it might introduce in the next Session of Parliament; nor was he likely to pledge himself to bring in a Bill based on the Report of the Ritual Commissioners in 1868. But Lord Sandon's reference to the Ritual Commission enabled him to deliver the highly oracular utterance which appeared so unsatisfactory to his questioner. He understood the recommendations of the Commission to be based on the principle of protecting members of the congregation against alterations in the ritual introduced against their will by the sole authority of the clergyman, and he considered that to be a sound principle. He did not add, what both he and Lord Sandon must be perfectly aware of, that a Bill based on that "principle"—unless indeed a trio of "aggrieved parishioners" are to be allowed, as in Lord Shaftesbury's defunct measure, to override the bulk of the congregation—would fail to go to the root of the matter at all. No doubt there have been foolish incumbents, and no doubt there are some still, who are willing to purchase what a high authority rather irreverently termed a display of "ribbons" at the cost of emptying their churches. But Lord Sandon can hardly be ignorant that a Ritualist incumbent is frequently egged on by a Ritualist congregation, while in a large number of cases he is partially or wholly dependent on his congregation for the maintenance of his parochial and ecclesiastical machinery, ribbons included. So clear indeed is this to Lord Sandon's admiring critic in the *Standard*, that he insists that, "whether a clergyman be subverting the principles of the Reformation in defiance of, or in collusion with, his congregation, he is equally guilty," and ought equally to be punished. He must not be allowed "to persevere in practices which are not legal, because they are acceptable to the people." The fiercest speakers at Exeter Hall the other day virtually said much the same. They did not merely complain that the prophets prophesied falsely and that the priests bore rule by their means, but also, what was worst of all, that the people loved to have it so. But this opens up a further difficulty. The *Standard*, to be sure, is quite ready with a solution. "The Established Church of England" is fully equal to the crisis, and can meet the aggressions of either Romanism or Ritualism if only she is allowed fair play; but that can never be the case under a Liberal Government, which "paralyzes her energies and undermines her influence." Let us have a sound Conservative Government, which will "strengthen the Church of England, strengthen her

episcopate, respect her Universities, protect her, in the enjoyment of all those rights and institutions which our forefathers so wisely conferred upon her," and all will yet be well. In other words, re-establish the Irish Church, restore University tests, give fresh powers to the bishops, whom the House of Commons has, on the motion of a leading Conservative, just decided to exclude from the new Final Court of Appeal in ecclesiastical cases, and in short repeal nearly all the ecclesiastical legislation of the present reign, and then the Establishment will be strong enough to stamp out Ritualism. Perhaps it would; but there is one element in the question which these advocates of the "thorough" policy always manage to overlook. Whatever rights the Established Church of England may possess by laws human or divine, it is composed, like all other Churches, established and unestablished, of the aggregate of its members, who happen just now to be divided into two or three large parties at mutual antagonism with one another, and to eject any one of them from its pale would be to endanger the entire fabric. The "principles of the Reformation," whatever they are, may be a very excellent thing, and we gather from Mr. Whalley's supplementary question to Mr. Gladstone that he is anxious to introduce a Bill for giving the laity, instead of the bishops, the power of enforcing them. But as the laity are quite as much divided as the bishops, that would merely be to give one party among the laity of the Established Church the power of expelling another. On the whole it is not very wonderful that, as Mr. Gladstone observed, "neither the present nor any former Government has ever been moved to bring in any Bill on the subject."

We need not expend many words on the reply of the Council of the Church Association to the letters of the two Archbishops, which virtually reiterates the demands of Lord Sandon and of the speakers at the recent Exeter Hall meeting. The Council naturally takes full advantage of the unguarded statements of the two prelates, which it, moreover, gratuitously assumes to "express the opinion of the whole Episcopal Bench." As it happens, one at least of the bishops has written a separate and, as many persons will be inclined to think, more temperate and sensible, reply of his own to the memorial of the sixty thousand. For itself the Association claims, in language which, if somewhat ambiguous, has the merit of boldness and originality, to represent "the great mass of the unattached laity of the Church." After congratulating the Archbishops on having "at last arrived" at an agreement with its own views, it proceeds to remark that "a body of persons in the Church (like the Ritualists), banded together in close union to accomplish its overthrow, is, in fact, engaged in a conspiracy which, if it related to the State instead of the Church, would justly be branded as treason." This sounds very like a truism, nor can the Archbishops wonder at the application immediately subjoined, to which their own language has, to say the least, given a great appearance of plausibility. "It seems inconceivable that, when the fact of such a conspiracy is known to the guardians and leaders of the Church, they should not feel irresistibly constrained without a moment's delay or hesitation to adopt the most effective measures in their power for the removal of these conspirators." Yet "the Council fails to discover any indication on the part of their Graces or of the bishops" of their intending to take any such steps. The fact of course is that their Graces are too well informed to entertain the extravagant notion which they have allowed the memorialists to attribute to them; but it may be admitted that the charge of looking on quietly while "the enemy is openly and actively sapping the foundation and laying a train to blow up the edifice," is unanswerable as an *argumentum ad hominem*. In this dilemma the Church Association generously comes to their rescue, and suggests a short and easy method of dealing with the "conspirators." In the first place, the licences of all Ritualist curates should be summarily revoked; and, in the next place, all Ritualist incumbents should be prevented from officiating out of their own dioceses. That such a policy would be widely resented as oppressive and unjust is more certain than that it would answer the proposed end any better than the brilliant suggestion of the *Times*, that bishops should decline to confirm in Ritualistic churches. Accordingly still more stringent measures are ominously hinted at, for the Archbishops and bishops are "most earnestly exhorted to rise to the greatness of the emergency; it may prove to be their last opportunity." Certainly, if they were to make any serious endeavour to carry out the programme sketched out for them by the Church Association, their last opportunity of acting in their present capacity might not be very far distant. For what with the conspirators "laying trains to blow up the edifice," and the guardians and leaders taking "new and vigorous" measures to blow up the conspirators, the hapless Establishment, sore beset by friend and foe alike, might be expected before long to tumble about their ears, and to involve both parties in a common ruin.

FLAGS.

WHEN an illustrious foreigner visits England, we line the streets through which he passes with all the flags that we can find; and if the colours are pleasing, we neither know nor care whether they signify anything or nothing. Variety of colour and arrangement is necessary for distinction of signals, and a man-of-war carries for the performance of ordinary duty the means of ornamenting herself for festal days. The extent of the code of naval signals may be estimated by the fact that a flag existed in the signal-books for every word except one of Nelson's message, to the fleet

before Trafalgar. In Nelson's time the signal for close action was familiar to the British navy, and the most welcome sight to the lookout man at Portsmouth or Plymouth was a cruiser in the offing with "The enemy at sea" flying from her masthead. If the British fleet was in port when that news arrived, the admiral would hoist without delay Blue Peter, of which signal the meaning will be best learned from the French name of it, "pavillon de partance." The system of telegraphing by flags depended on a clear atmosphere for success, and many instances are recorded of signals being imperfectly understood. Nelson on a memorable occasion pleaded the loss of an eye as his excuse for not seeing a signal which he was determined to disobey. It may be doubted whether simplicity and clearness have been sufficiently regarded in framing existing codes of signals. It would be easy to arrange so as to help both eye and memory more than appears to have been thought necessary. The existing codes are probably to a great extent traditional or accidental, and they display far less symmetry than would be expected in a modern work. If we take, for example, the alphabet, excluding vowels and *x* and *z*, we need only eighteen flags, and it would seem to be easy to select these flags upon some system which should require only three colours. Thus we might take vertical bars of blue, white, and red, and make six different arrangements of them; and, again, we might take horizontal bars and make six different arrangements. Thus we should get twelve signals, and the remaining six might be formed with only two colours. Such a system would help memory; but perhaps it might be said that a signallman has nothing to do except to remember flags; and as regards the use of more colours than are needed, some admiral's wife may have thought them pretty. Night signals are necessarily restricted both in colour and arrangement, and yet they are made to answer the purpose. To take a more familiar instance, the Post Office telegraph employs only two signals, the dot and the dash of the Morse system, or the corresponding signals of the needle or the bell. Yet, by combining and repeating these signals, all the letters of the alphabet, and not merely consonants, are transmitted. Having regard to the necessary simplicity of this system, it is rather surprising to find both the Royal Navy and the Merchant Service indulging in gorgeous combinations of colour, as if for the sake of making ships look pretty on a holiday.

A magnificent collection of *Flags of All Nations* has been printed by Messrs. Housell Brothers, who, as flag-makers to the Admiralty, have the means of ensuring perfect accuracy in their work. Our remarks on the unnecessary complication of commercial codes of signals will, we think, be supported by an examination of the pages of this work. But it may be admitted that, if all the flags in the book were hoisted at once, the effect would be very pretty, and this during a gala period, like the Shah's visit, is principally important. We understand that Messrs. Housell's representation of the standard of Persia has been declared by the highest authority to be accurate, and they have doubtless taken equal pains to ensure correctness for the grotesque emblems of the nationality of Cochin China. Their language is open to occasional criticism. Thus their description of the Union Jack is evidently incomplete. It ought to contain, and does contain, three crosses, for St. George, St. Andrew, and St. Patrick; but, taking the description literally, it only contains the two former, and the latter would seem to have disappeared, perhaps through the baleful influence of the *Upas-tree*. We read in a book of heraldry that "Constantine the Great carried a red cross in a white field, which is now the ensign and flag of England, as the blue field and white cross or saltire is the flag of Scotland." If we examine the Union Jack by the light of this passage, we shall find in it a red cross in a white field for England, a white saltire cross in a blue field for Scotland, and a red saltire cross on a white field for Ireland. The two first crosses were combined previously to 1707; the third was added in 1801. The name "Union Jack" is supposed to be derived from the signature "Jacques" of King James, who ordered the combination. We doubt whether the term "American Union Jack" is not a misnomer. The British Union Jack, placed in the corner of a red or blue flag, constitutes the red or blue ensign. The American national flag was doubtless designed on a certain analogy to that of England. The white stars on blue ground answer to the Union Jack, and the bars of white and red make up the complete flag which answers to the red ensign. But it is carrying the analogy rather far to treat the stars in the firmament as representing union, when they may quite as well signify independence. We find in the same volume the "red ensign of Victoria," which is the ordinary British ensign, with five white stars on a red ground, signifying, as we conjecture, the five Australian colonies, which are united neither in fact nor disposition. The leading ideas of the designers of the flags of Christian nations appear to be the cross, the star, and a combination of three colours. France and Holland use different arrangements of blue, white, and red; Italy uses green, white, and red; Belgium uses black, yellow, and red; and the North German Confederation uses black, white, and red. All these are adaptations of the same idea. The tricolour is still regarded as the symbol of liberty and progress, although it has been too often used to consecrate despotism. The Spanish flag, once well known and formidable at sea, consists, or did consist, of mingled stripes of red, yellow, and red, with the castle and lion surmounted by a crown on the yellow stripe. As this flag is manifestly unsuitable to a republic, we shall perhaps see one more variety of the tricolour. Both Denmark and Switzerland bear a white cross on red ground. Norway and Sweden have crosses compounded of red, white, blue,

and yellow. Greece has a white cross and white stripes on blue ground. Austria combines black, yellow, red, and white. Russia for some purposes uses a cross of blue and white, and for other purposes superadds red; but the Imperial eagle or some other mark distinguishes this cross from any that is used by England. The Portuguese ensign bears a coat of arms upon a flag composed equally of blue and white. The Turkish ensign is a white star and crescent upon a red ground.

An interesting history of flags might be written to accompany these representations of them. The flag of the Trinity House, which is probably ancient, represents a ship carrying merely a red St. George's cross on a white ground. This flag was carried by the ships of Kings Edward III. and Henry V. The man-of-war of the present day carries, or would carry if she had a mast, the red St. George's cross on a white ground, with the Union Jack in the upper canton. This flag is the white ensign. The blue ensign is a plain blue flag with the Union Jack in the upper canton. It is carried by hired transports and other vessels which are employed in the Queen's service, without regularly belonging to it. The red ensign is formed similarly to the blue, and is the proper flag of the British merchant service. The Admiral of the Fleet carries the Union Jack at the main. It was thus carried by Earl Howe on the 1st of June, 1794, and by Earl St. Vincent in 1800 and 1806. An admiral carries the red St. George's cross on a white ground at the main, and a vice-admiral and rear-admiral carry the same flags at the fore and mizen respectively. Formerly there were three classes of admirals in each rank, distinguished by the colours of their flags, and it was usual to form a fleet into divisions similarly distinguished. Thus Nelson was a Vice-Admiral of the White at Trafalgar, while Collingwood and Lord Northesk, who served under him, were respectively Vice-Admiral of the Blue and Rear-Admiral of the White. The order of rank was blue, white, red, corresponding to the rear, van, and centre of the fleet. The British navy, both royal and mercantile, is supplied with flags which contain no reference to the Royal arms. The Admiralty flag is a yellow anchor on a red ground. The Prince of Wales's flag bears the Royal arms with a distinguishing mark which ought to be described in heralds' language if described at all. There are in this volume two flags, one marked "Persia," and the other "Shah of Persia." The former bears the lion and sun, which have become tolerably familiar to British eyes; the latter bears stars, crescents, a scimitar, and other symbols not easy to describe. The most simple flags are the best. An old writer on heraldry, from whom we have already quoted, says:—"Observe, that the plainer the coat, the nearer antiquity, and the simpler the form, the more gentle the person. Therefore labour to keep thy coat close girt to thee, which is the final cause of all countenance." The fleur-de-lis of old France was simple, and the oriflamme was so. The tricolour is also simple. The flags of the Ottoman Empire, and Austrian Empire, are inconceivably complicated with eagles and other devices not easily discernible. The simplest of all flags is that of plain red, which is still borne by Morocco, although no longer the terror of the Mediterranean, and which a party in France would substitute for the tricolour. It is remarkable that the crescent and star are found not only on the flags of Turkey and Persia, but also on the banner of Buceleuch, which Scott has made so famous. We all remember the prophecy that the young heir of Buceleuch

Should tame the unicorn's pride,
Exalt the crescent and the star.

The same devices were borne in banners on the field and in flags on shipboard. The raven of Norway was known and feared alike in the rivers and in the plains of the countries which the sea-kings invaded. "St. George's banner, broad and gay," has floated both from donjon tower and masthead of line-of-battle ship. Clan Alpine's pine waved equally over lake and hill. When the warlord of Brankome looked forth from his tower, he did not need a pair of spectacles and a book of heraldry to distinguish enemies from friends. The white lion of Howard on the one side and the bloody heart of Douglas on the other were easily seen and known. Naval colours are required sometimes to disclose, and at other times to disguise, national character, and for either purpose it is convenient to use something that can readily be recognized. The use of standards and the whole science of heraldry as thereon depending is derived by the learned in this science from the East. We read in the Book of Numbers:—"Every man of the children of Israel shall pitch by their own standard with the ensign of their father's house." The writer who quotes this text tells us in the next paragraph that at the siege of Troy Hector bore on his surcoat of silk "sable two lions combatant or." This information was probably derived from the same source as was open to Shakespeare when he brought the tale of Troy upon the stage. Alexander the Great, says the same authority, bore a lion rampant, and the ancient Persians a bow and quiver. If heraldry came from the East, it is not wonderful that military titles should have followed. We exhibited the fleet at Spithead to the Shah as the most national of all sights, but he might have reminded the Admiralty who entertained him that the title which they bear is Arabic. If the Shah is not King of Kings, the First Lord of the Admiralty is certainly Lord of Lords. Ptolemy, Patriarch of Alexandria, writing in the tenth century, calls the Caliph Omar Amīr al-Mumēnin, which he translates Imperator Fideiūm. Thus both the name of admiral (el omar) and the cross which he bears upon his flag came from the East. The Union Jack and the tricolour of France are combinations of the same "three bright colours, each

divine"; but the French flag was invented at a time when Christianity had been temporarily superseded. England has walked steadily in the old path, and her fleet has sailed under the cross as long as it had a masthead from which it could fly an ensign. During many centuries, whatever other banners were carried by English armies, the banner of St. George was always foremost in the field. It was not without significance that the lion of the Kings of England, which was the emblem of strength, followed the cross of the nation, which was the emblem of faith.

HONOUR IS SATISFIED.

IT is difficult to write seriously of the duel between MM. Paul de Cassagnac and Ranc. Modern French duels are hardly ever mortal, unless some blunderer happens to be involved in a quarrel, as was the case when an Englishman named Dillon was killed a few years ago. He had never had any lesson in fencing until after the challenge had been given and accepted; and it was said that his master taught him only one thing—namely, the guard which is technically called *tierce*. It has been often said that a slight knowledge of the use of the sword is worse than none, and that the best chance for a novice is to go in resolutely at his antagonist by the light of nature. Irishmen succeed in this plan in novels, but the odds would be heavily against them in an actual encounter. Happily the combatants of Monday last had had long practice, and neither was likely either to kill his antagonist or to be himself killed. It would have been safe to bet on this result, and perhaps the principal object of the duel was to obtain notoriety for the performers. O'Connell began his political career by a duel, but he fought with the pistol, which is much less manageable than the sword, and he killed his man. A report, apparently published on authority in the *Gazette*, tells us that this duel had been expected for six or seven years. The performers had doubtless carefully rehearsed their parts, and were prepared to "satisfy honour" at a moderate expenditure of blood. The same sort of thing used to be done in a less pretentious way among ourselves. An extant handbill of the year 1709 contains a challenge and acceptance to meet and exercise at sword and dagger and other weapons. James Harris, master of the noble science of defence, who formerly rid in the Horse Guards, and had fought for a hundred and ten prizes, and never left a stage to any man, declares that he will not fail, God willing, to meet the brave and bold inviter George Gray, at the time and place appointed, desiring sharp swords, and from him no favour. We by no means suggest that this was a "put-up thing" between Messrs. Gray and Harris; but live and let live is a wholesome maxim in all trades. There would be much threatening, posture, and clashing of steel, the spectators would feel that they had their money's worth, and Messrs. Gray and Harris would live to fight another day. Sometimes arrangements were made beforehand, as appears from a letter in the *Spectator* stating that the writer overheard two masters of the sword in an alehouse agreeing to quarrel on the next opportunity. The following dialogue ensued:—"Will you give cuts or receive?" "Receive." "Are you a passionate man?" "No, provided you cut no more nor no deeper than we agree." All this may have been said, and when not said it was implied; and if you change the weapon to the rapier, and the scene to a café, you will get a tolerably correct idea of the sort of tacit understanding on which duels among French journalists are now conducted.

The reporter says that "the slightest mistake would imperil the life of him who committed it"; and no doubt this is true, but the performers had been practising for six or seven years in order that they might not commit mistakes. We know nothing of the source to which they may have applied for instruction, but we do know that the art of fighting duels without serious results is taught in Paris, and we also know that if a party of two principals and four seconds go out to fight in the early morning, preparation for breakfast for six is usually made at an adjoining tavern. An eminent member of the English prize-ring was once heard to say that he was never so much injured in a fight but that he could do a good deal of harm to a beefsteak within twenty-four hours after the battle. If two strong men untrained and beery fight with fists, one of them may kill the other. But a fatal result hardly ever ensues from a scientific prize-fight. It is much the same with the bullies of the French press. One account represents that M. Gambetta was confident that his friend M. Ranc would kill M. de Cassagnac. We should have felt tolerably confident that he would not. The only redeeming feature of these political duels would be the possibility of occasionally getting rid of one of the parties to them. But this possibility is very remote. The space covered by the movements of the combatants was only eighteen yards, and there is a tradition that two fencing-masters began a duel at one of the gates of Hyde Park and finished at the other. Some of the best descriptions ever written of duels with the sword are to be found in Scott's novels. The feats of horsemanship which he makes his heroes perform are astonishing and incredible, but their performances with the sword are like pictures from actual life. One feels inclined to quote the duel in *Peveril of the Peak* in reference to M. Ranc and his friend M. Gambetta. Julian Peveril runs Long Tom Jenkins, the Duke of Buckingham's man-of-all-work, through the body, and the Duke, inquiring into the particulars of the combat, is informed that the hostile sword "fortunately avoided the vitals" of Long Tom Jenkins, to which the Duke answers "Damn his vitals!" That combat was fought in a street of London

in a ring formed by watermen. The recent duel, in which also the vitals of the combatants were avoided, appears to have been fought on turf, which is by no means suitable for a display of scientific fencing. It would have been more convenient, alike to performers and spectators, if a public room with a nicely boarded floor could have been engaged for the purpose. The arrangement for the neutralization of Luxemburg was lately mentioned by Mr. Gladstone as creditable to the diplomatic talent of Lord Derby. The authors of that arrangement will doubtless be gratified to learn that they have provided an arena for the gladiatorial exercises of French journalists. We do not quite understand why the performers took the trouble to travel to such a distant theatre, unless it was to give greater *éclat* to the performance. The present Government of France depends, according to the declaration of its chief, upon divine and military power for its support; and we question whether either of these powers need feel obliged to interfere with a duel between MM. de Cassagnac and Ranc, even if the interesting event should be announced to be "brought off" on French soil.

It must be owned that the journalists of Paris have not always avoided serious consequences in their duels. Dujarier was killed by Beauvallon, and it was said that Lola Montez, who was to be married to Dujarier, offered to take her lover's place, and would have fought Beauvallon with either sword or pistol, if she had been permitted. She was mistress of her weapons as well as of much else; while Dujarier could wield only the pen. In the trial which arose out of this duel Dumas appeared as a witness, and referring to his own dramatic writings, received from the President of the Court the retort which has become proverbial—"Il y a des degrés." Dumas stated that Dujarier came to his house and told him that he was going to fight a duel, and taking up a sword which lay in the room, Dumas saw that he did not know how to hold it. He advised Dujarier to choose pistols; but afterwards learning that Beauvallon was to be the opponent, retracted this advice, his motive being that, as Beauvallon was an expert swordsman, he would perceive Dujarier's incapacity and disarm him. Unfortunately Dujarier became aware of Dumas's motive, and, thinking his honour concerned, insisted on pistols. There was next an attempt to invite the interposition of Grisey, who was one of the first fencing-masters of the day, but this failed for the same reason. Dumas then sent Dujarier with his own son to a shooting gallery, where he made shockingly bad practice. It was his first duel and his last. Dumas was asked at the trial whether a swordsman of reputed skill could honourably exercise that skill upon a novice, and he evaded the question by remarking that there are "dark" swordsmen who practise elsewhere than in public rooms. Being pressed further he answered that, when you get upon the ground, questions of generosity and delicacy, which are very fine questions, disappear before the question of existence. The history of French duelling would furnish many amusing chapters. General Ornano was so good a shot that after the first fire he addressed his antagonist, General Bonnet, with the question, "What, sir, are you not dead?" It appeared that the ball had been turned by a five-franc piece in Bonnet's pocket, on which Ornano remarked, "Vous avez bien placé votre argent." An important branch of the business of the old fencing-masters was the teaching to a pupil some secret *coup* by which an opponent might be disabled. It is still possible to impart mysteries, or at least to pretend to do so; but one Parisian fencing-master would hardly undertake to show to another a new thing. The resources of a science which is necessarily finite must have been exhausted long ago. The really formidable fencers are the men who do common things with superior quickness and force. It is difficult for the most accomplished veteran to contend against the life and agility of youth. This was well seen in the year 1851 when Pons and Prevost, two of the best men of their time, came to London as an essential part of an exhibition of the results of civilization. Pons had carried a lance in the campaign of Moscow, and was therefore considerably over fifty years of age, while Prevost was in the prime of life. There has not been so good a match seen in London since; but as it cannot be doubted after this week's experience that the sword is an important agent in modern society, we shall expect that the best French artists in duelling will be invited to the International Exhibition. We observe with regret that the literary side of modern duelling has been inadequately developed. The writer in the *Gaulois* is a poor hand. He should take for his model the columns of *Bell's Life* during the palmy days of prize-fighting. Every movement of every round was pictured, so that the instructed reader could see the men as if he were on the ground. This style has now become obsolete, and perhaps the chief masters of it have been engaged as Special Correspondents of the daily newspapers, and have brought their power of close observation and accurate description to bear upon the movements of kings and emperors. "The duel had lasted fourteen minutes." This statement of the *Gaulois* is rather too much in the style of Falstaff's "whole hour by Shrewsbury clock." The writer could hardly be ignorant that a combat with swords could not be maintained with vigour and without pause for anything like that time. The combatants came up smiling, just like the pugilistic heroes of *Bell's Life*, but the picture of their movements is a mere daub. It is impossible to judge whether the performers in this, which is to our eyes a grotesque proceeding, will obtain applause or ridicule from Parisian society. We think that if Frenchmen cannot do without duels, they might at least fight upon their own soil. Luxemburg exists under a sort of

arrangement of the Great Powers of Europe, who may thus be regarded as keepers of ropes and stakes for the convenience of French gladiators. Perhaps Mr. Richard, or some other member of the Peace Party, would move an address to the Crown on the subject of applying arbitration to the quarrels of French journalists. Lord Granville might be instructed to write a despatch on the impropriety of turning Luxemburg into a cockpit.

SCULPTURE IN THE ACADEMY.

THE common verdict of inferiority which has been passed this year upon the picture galleries of the Exhibition does not seem to us to be deserved by the sculpture. This is not below the average—a low average it must be allowed—of recent years. If Mr. Foley, beyond comparison the best on the list of full Academician sculptors, as usual, is conspicuous by his absence, two or three of our least satisfactory artists are not obtrusively presented; and, considering the difficulty of this art, where there is so little middle ground between real excellence and complete failure, the number of pieces deserving more or less of praise, it will be seen, is fair. We should not expect more from any foreign contemporary Exhibition. Yet the unideal character of the art of the day, which has been of late the subject of so many criticisms, reveals itself here also in the fact that one of the most popular statues shown ostensibly belongs to that "realistic" school which is with justice held to be antagonistic to the loftier and more truly sculpturesque conception of the beautiful.

Portrait busts, although of course numerically the most important portion of the display, need not detain us long. If there be few of merit, those need not be surprised who do not take that Utopian view of art and its possibilities which secretly underlies the severe attitude towards English artists lately assumed by some of our critics. Really good portraiture—portraiture which adequately renders the most characteristic expression of a man, and places his best soul before the eyes—must always be a very rare thing. Even in painting it is so, with its comparatively larger range of expedients; how much more in sculpture! Thus if with two or three genuine portraitists in marble, we have a crowd who supply the inevitable demand in a manner which, if satisfactory to the sculptor, must be satisfactory to him alone, we pronounce no severe criticism in duly pointing out the fact. The demand seriously outruns the supply of ability. Only a secret wonder must be reserved why, when this manifestly is so, sitters and their friends do not take warning by the state of the market, and refrain from an annual waste of money on wares which have no artistic right to existence.

Under the above head we must class three busts by Mr. Williamson—Sir W. S. Maxwell (1439), Mrs. Norton (1421), and Lady Roslyn (1426); all poor and empty pieces of work, with little rendering of character or technical skill. Mr. Boehm's terra-cotta of Mr. Whistler (1410) is feeble and convulsive; his marble bust of Lord H. Russell (1515) tame and heavy. M. Carpeaux has an unsatisfactory head of M. Gounod (1415), which he does not redeem by work in the inventive direction; his "Spring" in the Central Hall being a disagreeable piece of crude naturalism. This artist once promised better things—a category under which we cannot include some familiar exhibitors—Mr. Theed (Sir A. Clifford and Sir H. Holland); Mr. Adams Aton (1573 and 1575); Mr. Durham (Model for the Lord Mayor); Mr. Brodie (Mrs. Haugh); Mr. Noble (1573); and Mr. Summers (Duke of Edinburgh). This last is "executed for the Art Gallery, Melbourne," where it will be a trial to the loyal memories of the inhabitants.

The "Lord Lonsdale" by Mr. Stephens (1566), though not carried far, brings us to a better class of art. A female head by Mr. Griffith (1418) is ladylike and pleasant; his other bust (1440) shows some character. Two by Messrs. Malempré and Thomas (1448 and 1450) also deserve notice; and there is a pretty, natural air about Mr. Handley's bust of a Child (1493). Several pleasing medallions in low relief are exhibited by Mr. Bruce-Joy. There seems to us to be in his work a tendency to protuberance and over-smoothness, perhaps almost inevitable in the material; but it has some real refinement and look of character. This sculptor's bust of Professor Adams (1583) also has merit. Miss Thorneycroft's medallion of a Lady (1595) should be noticed, and the likeness of Mrs. Anderson (1577), by the late Miss Durant—an artist whose life was unhappily not spared to do justice to her ability. Mr. Woolner's bust of Professor de Morgan (1549) shows much power and massiveness; the truth to nature which marks his work gives the surfaces a play of light and shadow, which in its turn communicates to the head the inestimable look of vitality. This quality, similarly obtained by the artist's mastery, distinguishes Mr. Butler's powerful bust of Mr. Pulling (1556). These two heads detach themselves at once from their neighbours in the row by their superior lifelikeness; and the effect is the more remarkable because both appear to have been executed under the great disadvantage and difficulty attending posthumous work.

Of monuments the display is singularly scanty. The figure of Sir G. F. Seymour, by Count Gleichen, is a fair specimen of the "recumbent" class—a style, to our thinking, recommended rather by its sentiment than its sculpturesque effectiveness. Wolfe's lines on Sir John Moore may have been present in the artist's mind when modelling the Admiral's figure; he lies in his cloak with a look of repose and of likeness to the living features. The treatment wavers between "realism" and "idealism," without exactly com-

binning them, and the modelling shows some indecision. More study seems to be here required. We must express a strong hope that the model for a monument to Lord Mayo by Mr. Forsyth (1487) does not represent a commission actually tendered. Although this artist has been not unfavourably known for mural or architectural sculpture, nothing that we have previously seen of Mr. Forsyth's has shown natural power or acquired training in any degree adequate to sculpture of the high monumental class; and this model promises only failure. A feeble Britannia and India (apparently) are seated back to back below the pedestal carrying a simple equestrian figure. It is obvious that there is nothing here beyond average churchyard ideas, and words are not required to prove the total inadequacy of the design to the commemoration of the honoured Viceroy.

The "Whewell," by Mr. Woolner (1516), takes its place, we suppose, in Trinity Chapel as a companion to the Macaulay exhibited some few years since. Whether as the representation of a more sculptural figure, or as the artist's maturer work, we should rank this as his highest achievement in the style. The action is simply that of a student breaking off from his book to enter upon argument—one characteristic enough of the late distinguished master—yet the whole figure has an air of such mobile vitality, that, like the famous old statue at Florence, one would expect it to answer if spoken to. This result, which testifies to what we might call the complete vitalization of the material, is due in part to the lively likeness in the head, in part to the perfect truth to natural form which underlies every part of the draperies, in part to the skilful arrangement of the lines. Every fold has its intention, and plays its portion, recognized or not, in the total effect. Dr. Whewell was a man who truly deserved a monument of this character, and the College which he served so faithfully may be congratulated on the addition of so grand a work to those which already have made their Antechapel famous in art, not less than in its associations. Let us remark on this statue, what applies to the Outram to be presently noticed, that the presence in each of modern dress in no serious way interferes with the grandeur and beauty of the respective designs. They have not the added advantage which the Greek sculptor hence obtained; but they are sufficient to prove that the so-called "impracticability" of modern costume is only a mode of expressing the inadequacy of a sculptor. The "realistic" and the "ideal" are so intimately blended, that the eye is neither offended by commonplace nor cheated by unreality. This is the true ideal of a personal monument.

It is a descent from this, the only conspicuous specimen of the "great style" in the Exhibition, to turn to the scanty group of ornamental work. Not that fair pieces are wholly absent; but those which are of ideal character lack force, and those with force lack poetry and elevation. These latter are the qualities the deficiency of which, however little regarded in the present day of general low aim in art, prevent us from fully endorsing the popular verdict on M. Dalou's otherwise meritorious "Pyssame" (1560). Terra-cotta, indeed, lends itself with peculiar facility to work of this "naturalistic" kind, with its abrupt angles and general raggedness of surface; yet the liveliness and feeling of M. Dalou's group would have lost nothing by a more poetical rendering. There are also some coarse touches—the mother's foot, the animal eagerness of the infant's mouth—touches true indeed to life, but, we will add, not true to the sphere of art, except art of a lower character than has been the artist's aim. Yet the arrangement of the figures and the mother's expression are so charming that M. Dalou has decidedly made good his claim to be looked on as a man of promise in a region where promise is rare. Naturalistic sculpture is, indeed, far below the "terribil via" of great art; yet it is desirable that we should have it at its best. Let us hope that he may follow the "better way," and not vex our eyes again with such figures as the "Music" and "Painting" (1528 and 1529), which are of an almost incomprehensible ungainliness in expression and attitude. His two other statuettes (1600 and 1601) have also little to recommend them.

There is some simplicity in Mr. Lawson's "Girl and Tortoise" (1467), although the treatment is too smooth; insipidity being the counter danger to coarseness in this branch of the art—witness Mr. Marshall's "Tiddlers" (1538). This, however, has grace and understanding of the art; it is happier than Mr. Stephens's "Eve's Dream," of which the best point is that it renders the sleeper's uneasiness with truth. A little terra-cotta by Mr. McLean (1483) is a pleasing imitation of the antique. Mr. Halse's "Girl Sketching" (1506) is pretty, but, like Count Gleichen's figure, wavers in style between the "ideal" and the "naturalistic." Mr. Fuller, happily abandoning for once that showy and sensuous mythology by which he gained some reputation, has given us nature and expression, though not as yet fully mastered, in his pleasing figure of "Little Nell" (1543). It is much praise to have dealt with a subject of this nature with the good taste here shown.

Let us add a word of welcome to Mr. Foley's equestrian group of Outram—although placed without Academical walls—the most spirited recent work of the kind in the sculpture produced here, or, so far as we know, on the Continent. Highly as we have always rated Mr. Foley's ability, reckoning him indeed as one of the few, the very few, artist-sculptors in the true sense among us, we had not known that his art was likely to reach a point of such masterly animation. Yet, animated as the group is, it does not transcend the rule that repose is of the essence of sculpture. It is the momentary pause of a rested action which Mr. Foley has given, "the wave at the instant of bursting," as we have seen it somewhere characterized. What a difference between

this noble work—noble only because true at once to nature and to art—and the tameness of such an equestrian group as Chantrey's in Trafalgar Square, or the spasmodic pretension of the "Cœur de Lion" at Westminster! The least educated eye can unconsciously feel the contrast. We put this group quite in the first rank among its rivals. Only the prestige of the antique could rank it below the Aurelius of the Capitol. The modelling of the body and limbs of the famous "Colloone" horse at Venice is sharper and abler; but the figure there is unworthy of the bearer. Some small points may be observed in the Outram open to criticism. But, on the whole, considering what this arduous art has been in old days and is now elsewhere, we think that Englishmen (and the Academy also) may be well satisfied with a school which has produced in the same year two pieces so grand in style and so masterly in technical rendering as Woolner's "Whewell," and Foley's "Outram."

REVIEWS.

JACOB BÖHME.*

THE mystical shoemaker of Görlitz, who contrived to make his voice heard pretty clearly through the din of the Thirty Years' War though he wrote on subjects utterly unconnected with the day's politics, is now chiefly known in England through the medium of a translation of his chief works by the Rev. William Law, author of the once popular book, *A Serious Call to a Religious and Devout Life*. The translated works fill four quarto volumes, and are illustrated with plates which are not only exceedingly well executed, but curious to the highest degree, some of them elucidating the mysteries of the German Theosopher by virtue of a contrivance similar to that often employed in the construction of valentines, but much more elaborate—one plate, in some cases, opening eight or ten times to show symbolically the whole process (say) of the Fall and Regeneration of Man. Nothing corresponding to these plates is to be found in the German edition of Böhme; they seem to have been exclusively the work of the English translator, whose task, be it observed, was in every respect admirably executed.

In the latter part of the seventeenth century the influence of Böhme was manifested in England by the writings of John Pordage, Thomas Bromley, and Jane Lead, which will still be found on the shelves of a certain class of theological booksellers. In France he had a more recent and more celebrated disciple, Saint-Martin. But nowhere did he acquire such high celebrity as that bestowed upon him by the leading German professors of philosophy about two centuries after his death. With Schelling and Hegel he was one of the mightiest precursors of modern metaphysics, and it is scarcely too much to say that he and the long-ignored Spinoza were lifted up about the same time, and by the same hands, to unanticipated glory. When Böhme had preached of an abyss (*Ungrund* or *Urgrund*) as the common source of good and evil, whence emanated discordant principles that were afterwards to be reconciled, he could scarcely fail to be recognized as an intellectual ancestor by the post-Kantian teachers. He has also no doubt another class of readers who, although in his time he was preached against as Antichrist, approach him as a writer of good books to be venerated as the *Pilgrim's Progress* is venerated here by most of the orthodox Dissenters. Such a class, however, has little influence over the world of independent thought, and it is to his speculative admirers that his new fame is to be solely attributed.

It is not our intention here to attempt a reduction of Böhme's widely dispersed thoughts into the dimensions of an outline. Even with a few hundred pages at command, it would be difficult to elicit a semblance of order out of the mass of chaos; the *rudis indigestaque moles*, consisting of theology, metaphysics, astrology, alchemy, and Cabbalism, thrown together in the most wondrous confusion. To the biography of Böhme we here chiefly confine ourselves, making use of a book compiled with singular industry and research by Dr. Fechner of Görlitz. To those of our readers who have not read this particular book we believe the information afforded will be entirely new. The Life prefixed to Law's translation is meagre in the extreme, and is evidently derived from the least trustworthy resources.

Jacob Böhme was born in 1575 at Altsoidenberg, a village near the small town of Seidenberg, in Upper Lusatia (Oberlausitz), situated on the borders of Bohemia. His parents were opulent persons, belonging to the better class of peasants; and, according to documentary evidence, his name may with equal plausibility be given in eight different shapes (e.g., Bohem, Bohem, &c.), which, however, do not comprise the name "Bohmen," accorded to him by his English admirers. His paternal grandfather Ambrosius owned a considerable estate, and held the municipal office of *Gerichtschöppe* (assistant judge). His father, also named Jacob, was the sixth of Ambrosius's seven children, and the youngest son; and he himself was the fourth in a family of five, to which Jacob senior, by virtue of a second marriage, added three daughters. On the death of Ambrosius in 1563 his estate descended by law to his youngest son, Jacob senior, who bought out the other heirs at the price of six hundred marks. From this somewhat obscure

* *Jacob Böhme*. Von Dr. Hermann Adolph Fechner. Görlitz: Oberlausitzische Gesellschaft der Wissenschaften. 1871.

record we may conjecture that something like the law of Borough-English prevailed in Lusatia, accompanied by a recognition of some claim on the side of elder children. These dry facts, though they relate to a number of very obscure persons, are so far interesting that they are opposed to a common opinion that the Theosopher sprang from the lowest depths of poverty. This opinion is derived from Abraham von Franckenberg, the most elaborate of Jacob's biographers. He was an ardent admirer of the inspired shoemaker, and the account of his life which he wrote in Latin in the year 1637, and which was afterwards translated into German, is the authority commonly used when information respecting Böhme is desired. Nevertheless his authority loses much weight when we find that he did not become acquainted with the Theosopher until 1623, that all he knew about Jacob's early life was obtained through conversation held in that and the following year; and moreover that his information was not committed to paper till about thirteen years afterwards. It should be added that Franckenberg always shows a decided predilection for the marvellous, laying himself open to the suspicion that he would instinctively attribute an event rather to a miracle than to a natural cause. There is something that smacks of the patriarchal days of Israel in the story that, while Jacob Böhme was tending his father's cattle on the Landskrone, the mountain opened before him and he was favoured with his first vision; but Dr. Fechner, who knows all about the country, quietly observes that the Landskrone is about four leagues distant from Altseidenberg; and, far from being open for common pasturage, it belonged at the end of the sixteenth century to the municipality of Görlitz. The combination of a desire to extol the spiritual worth of Böhme with a wish to depreciate his social status is very natural. The more abject the ignorance of the prophet, the more unquestionable is the value of the supernatural gift.

The fact is, our information respecting Jacob's early days is most scanty. He was sent by his parents to the town-school at Seidenberg, and there received what was considered a good plain education, chiefly because it was understood that, on account of his delicate health, he could not pursue the calling of his father, but must become a tradesman. In his fourteenth year (1589) he was apprenticed to a shoemaker in Seidenberg, and after becoming a journeyman, and going through the proscribed "Wanderjahr," he settled down (1599) as a master of his craft in Görlitz, and shortly afterwards took to himself a wife, by whom he had six children, and with her lived in uninterrupted felicity for five-and-twenty years. It is a great mistake to regard him as a mere dreamer. For a long time he worked hard at his trade, and in about eleven years (1610) had saved up enough to buy a house. When, however, his fame as an inspired writer had been established among an aristocratic clique (of whom anon), he gave up business and relied on the assistance of his newly acquired friends. The supplies, though liberal, were not always sufficiently prompt to meet the demands of an honest man with a wife and five children: so he was forced now and then to have recourse to some material work, and for several years made woollen gloves, some of which he sold to the peasantry of the district, while with the rest he paid a yearly visit to the market-place at Prague. On one of these occasions he witnessed the triumphant entry of the unfortunate Elector-Palatine Frederick into the capital of Bohemia, in 1619, and recorded the fact in a letter still extant. Another letter, written three years afterwards, refers to the horrors of the Thirty Years' War.

By this time he had advanced in theosophy, for in a letter to a friend written in May 1621 (or 1622) he gives a list of his principal works as already in existence, and his earliest book, called *Aurora*, was the result of twelve years' meditation. The observation of the mixture of good and evil in the world seems first to have set him a-thinking. He fell into a heavy sadness, as he tells us in the book just named, when he beheld "the great deep of the world, also the sun and stars, also the clouds, the rain, and the snow, and contemplated in spirit the whole creation of this world." Therein he found in all things, animate and inanimate, in wood and stone as well as in man and beast, evil and good, anger and love. When he reflected further on the "little spark" man, and considered what might be his relation to the Universe, and found that in this world the godless thrive as well as the pious, and that barbarous nations occupied the best countries, he became more melancholy than ever; and he believes that at this crisis the Devil filled him with heathenish thoughts, which, however, he forbore to communicate. After a severe struggle, the description of which exactly corresponds to the "wrestling in prayer" familiar to our Methodists, his spirit burst through the gates of hell to be received into the "innermost birth of the Deity" (*die innerste Geburt der Gottheit*), and this triumph resembled a resurrection from the grave.

In this light [he proceeds] has my spirit forthwith seen through everything, and in all creatures discovered God, who He is and how He is, and what His will is; and forthwith in this light my will was mightily impelled to describe the Divine Essence (*das Wesen Gottes*).

That, in the belief of Böhme, his theosophy, which comprised theology, metaphysics, and a sort of natural science, was immediately derived from Divine inspiration, there is no doubt; but his frequent assertion that his knowledge does not come from man must not tempt us to the conclusion that he never read the works of other authors, or was entirely free from their influence. In his letter of May 1621 he comments on the opinions of other thinkers, especially Valentin Weigel, who was more than thirty

years his senior, and with whom and Paracelsus he is frequently classed.

At the time of which we are now speaking only two forms of Christianity were legally tolerated in Lusatia—namely, the Roman and the Lutheran Churches, which were frequently allied with each other during the Thirty Years' War against the Calvinists, whom they regarded as a common enemy. Crypto-Calvinists, who attended the Lutheran service and agreed to the Lutheran ritual of baptism, and also, from one of their early leaders, were sometimes called "Schwenkfelder," were so far negatively heterodox that they avoided the Lord's Supper. They chiefly consisted of the nobility of the rural districts, who, thrown out of their old sphere of activity by improvements in the art of war which rendered their military services in a great measure useless, and by suppression of the robberies in which they had once indulged, had betaken themselves to theology and literature, seasoned now and then with a little alchemy. That the Crypto-Calvinists could have been at all admirable in the eyes of the open Calvinists of Scotland or Geneva we may naturally doubt. It is certain that, although Böhme remained true to the Lutheran Church, which hated him to the end of his days, his illumination no sooner became known than the Crypto-Calvinists, the theosophers, the alchemists, and the prophets gathered round him as round a common banner, and regarded him as a source of heavenly light. Among the populace, and even the tradesmen of the town, he had no adherents whatever; and it is worthy of note that the names of the sponsors to his children, who belonged to that class, are not mentioned in any of his numerous letters. His patrons were exclusively aristocratic and professional, a few physicians of the school of Paracelsus numbering themselves among his pupils, chiefly on the supposition that they had found a brother alchemist. The nobles were apparently more wholesome company than the doctors, for it was through his intercourse with the latter that he fell upon a notion of an odd sort of philology, which combines the theory that there is a natural connexion between verbal sounds and the things to which they refer with the patriotic belief that the German tongue is the one in which the association between sound and sense was most clearly expressed. Let him not, however, be accounted an early father of that comparative philology which is so widely cultivated at the present day. He simply represents a mongrel branch of Cabbalism, which prescribes the chopping into syllables of certain German words, and attaching a distinct meaning to each of the separated particles. We have a notable instance of the method in his second work, the *Three Principles*, where he thus discourses of the German word *Himmel* (Heaven):—

The syllable "*Him*" proceeds out of the heart, as out of the form of the Father, or out of the soul's essence, and puts forth upwards into the *Ternarium-Sanctum*; then it compresses itself with both lips, and brings down the angel's name, inasmuch as the syllable "*Mei*" denotes the humility of angels, that they do not exalt their heart, flying with pride into the Trinity; but, as Isaiah says, &c.

Of such deep meaning is the simple fact that the short vowel "*i*," impelled by the aspirate, is checked in its course by the labial "*m*," which is followed by the obtuse "*e*." That stuff of this sort, whereby anything may be made to signify anything, can in no way advance the cause of science, we need not explain, and unfortunately stuff of this sort is very largely to be found in the pages of our Theosopher. Such passages are the most damaging element in his works, for they sorely tempt even an expectant reader to fling aside books in which the oracular teacher seems anxious to proclaim himself "no philosopher at all," after the most approved fashion of Pope's parrot.

At the head of Böhme's noble friends stood, perhaps, Karl von Ender, to whom many of his letters are addressed, and who, having read the *Aurora* with delight, had it copied at once, and circulated it largely among his acquaintance. To his name many others are to be added, and it may be surmised that he not only taught but learned much from his patrons, who were all more or less liberal and enlightened, and distinguished themselves in an intolerant age as the upholders of toleration. The opinion has, indeed, been expressed that Jacob, far from being an original thinker, was merely the mouthpiece of others; but this depreciation seems to have been excessive, since on the authority of Heggenicht, one of his most trustworthy biographers, it was never doubted during his lifetime that he was really the writer of the works that bear his name. In contributing to his creature comforts Böhme's noble friends were most valuable. He often resided for weeks upon their estates, and when at home was liberally assisted by them with money and articles in kind, which through the pressure of the war could only with difficulty be purchased.

Toleration was not, however, generally prevalent in Görlitz, where the mob consisted for the most part of orthodox Lutherans, who dreaded nothing so much as a union with Calvinism, whatever that word might denote. A great man among the clerical chiefs of the populace was their "Pastor primarius," Gregorius Richter, in a battle with whom the theosophical shoemaker was engaged during many years of his life. One of the copies of the *Aurora*, industriously circulated by Karl von Ender, had fallen into his hands, and he made it the theme of abusive discourses from the pulpit, greatly to the surprise of the author, who did not know how he had incurred so much animosity. In the course of July 1613 the outcry against Böhme had become so violent, in consequence of the stimulants administered by Richter, that the Municipal Council, seeing that there was imminent danger of a

riot, felt obliged to take cognisance of a matter which it would gladly have ignored. The Councillors, it should be observed, were the least fanatical men of the town, and when on the 26th of July Jacob was summoned before them, it was with the view, not of persecuting, but of protecting him. After an examination he was dismissed, having handed over to the Council the MS. of his *Aurora*, which was safely locked up, and having promised to abstain from authorship in future. The forfeiture of his MS. did not greatly affect him, since, as we have said, there were other copies of the book in circulation; but the prohibition against writing more was a heavy affliction, inasmuch as, convinced of the sanctity of his mission, he felt that, in obeying man, he was rebelling against a higher authority. At last, urged by his friends, he resumed his theosophical labours, and towards the end of 1619 had sent the greater portion of his *Three Principles* to Karl von Fñder. The difficulty caused by this act of disobedience would possibly have been overlooked had not his noble friends the Herren von Schweinichen caused two of his treatises, which afterwards formed a portion of the collection headed the "Way to Christ" (*Der Weg nach Christo*), to be actually printed in 1623. By this act of covert rebellion the wrath of the Pastor Primarius was awakened anew, and he denounced Jacob, not only as a fanatic, but as a drunkard, who imbibed brandy all day except when he varied it with beer and wine. Richter himself had not the best character for sobriety, and the shoemaker was able to repay him in his own coin:—

The Herr Primarius [remarks Jacob] says that I am fond of drinking foreign wine and brandy. There he judges me by himself, thinking that others do as he does. No; we poor people can't afford wine, we must put up with a drink of beer, if we can even get that. The Herr Primarius, forsooth, must have his foreign wines, if we little people must content ourselves with something weaker. We can see by the wine-blossoms on his face that he drinks stronger wine than I do; for no such spots are to be found on mine. He drinks more foreign wine in a week than I do in a year; but I know where the shoe pinches. He knows that by the Divine Ordinance I am often invited to the houses of great nobles, and therefore he thinks that when we meet, we sit tipping together, just as he does with his companions.

This choice little passage is enough to show that Böhme could write with unquestionable perspicuity on occasion. That he was proud of his high company will be seen more clearly presently.

The little printed book which had brought him into trouble is one of the least characteristic of his works. The Councillors before whom it was laid rather liked it than otherwise, and even many citizens of the better sort regarded it with admiration. But the rabble of Görlitz were under the leadership of the indefatigable Richter, and the poor shoemaker had no sooner returned home from a visit to one of his noble Silesian friends, Herr Hans von Schweinichen, than in March 1624 he was again summoned before the Council, who were merely doing their best to please all parties. He confessed the authorship of the book, but pleaded that he was innocent of the printing. A mild warning that he should settle elsewhere at his earliest possible convenience was the result of the proceedings.

At the period when these events occurred the Lusatian provinces had recently been pawned by the Emperor to the Elector of Saxony, who was then their sovereign prince. Now the fame of Böhme, greatly increased by the persecutions of Richter, had reached the Saxon Court. The higher clergy thought that a shoemaker who had written a book was a sight worth seeing, and the report that he was a dangerous heretic, in a fair way to become an heresiarch, was certainly not of a kind to damp curiosity. Alchemy was also in fashion, and the Elector (John George I.) maintained a physician, who was also an alchemist, to superintend his laboratory. An invitation from Benedict Hinkelmann, the Court Alchemist, who regarded Jacob as a brother craftsman, was most welcome to him; for though the official prosecution was little more than nominal, he was so frequently mobbed and hooted in the street that his spirit was nearly broken. On the 9th of May he set off for the Court of Dresden, where he was hospitably received by Hinkelmann, and became the nine-days' wonder of all the courtiers, who read his little book with avidity. *Der Weg nach Christo* is altogether free from the peculiarities which shine out in the earlier works, and the most pious clergymen failed to discover wherein its heresy consisted. The most important event that occurred to Böhme during his sojourn at Dresden was his formal "Colloquy" with the Upper Consistorial Court in the presence, some say, of the Elector. Unfortunately there is very scanty information respecting this Colloquy, so little indeed that sceptics have been found to doubt whether it was ever held at all. Dr. Fechner arrives at the conclusion that, though the date of the meeting is not accurately known, the Colloquy certainly did take place, albeit not in the presence of the Elector. It resulted in what may be called the acquittal of Böhme, and a disapproval of the conduct of the Primarius expressed by high authorities. But there was one mystery which the Theosopher could not penetrate—namely, the law by which fashion is regulated. Petted for several weeks, and elated by his triumph over his adversary, he thought of residing at Dresden on a handsome competence, held in high respect for the rest of his days. But it had been discovered that he could not make gold; and, utterly forgotten by his Dresden friends, he returned to Görlitz, where, during his absence, his windows had been broken by the mob at the instigation of the Primarius. He again visited his old friends; but after a few months was sent home dangerously ill, and desired to receive the Sacrament in the Lutheran form. His persecutor Richter had died some time before—namely, on the 24th August, 1624—but the spirit of persecution was not

extinct, and the last offices were but unwillingly performed by the clergy. Before the Sacrament was administered he was severely examined as to his orthodoxy, and the questions and answers that were respectively put and given on the occasion are recorded with the signature of the minister. Early in the evening of the 17th November, 1624, he expired, his last words having been "Now I go into Paradise."

HADDAN AND STUBBS'S COUNCILS AND ECCLESIASTICAL DOCUMENTS.—VOL. II.*

WE cannot open this volume without a feeling of sadness, as we think that it is a posthumous work of the great scholar who had taken it in hand. It will be remembered that the first and the third volumes of the series have been already published, but that the second, on which Mr. Haddan was engaged, was kept back on account of his weak state of health. "When," says Professor Stubbs, "in 1871, the third volume of this work was published, a hope was entertained that the second, which had been delayed by the illness of the editor, might soon follow it. The death of Mr. Haddan," he adds, "by which the whole Church of England suffers a severe loss, has summarily disappointed that expectation." The loss of such a man as Mr. Haddan, a scholar of the true breed, one as far as might be unlike the courtly and popular pretenders of the day, one who loved learning for its own sake, and who gave himself up to seek after learning with equal industry and acuteness, is indeed one which it will be hard to make up. And when we see that such a man as this remained up to his death the hard-working pastor of a poorly endowed parish, when the highest title that can be put in his title-page is the dreary sham of "Honorary Canon of Worcester," we are inclined to cry out against the disposers of English Church preferment. It is for men like Mr. Haddan that Deaneries and Canonries are meant, but it is not to men like Mr. Haddan that they are commonly given. Rectors of large parishes who find their work too light for them, College Heads who have not any work at all, Professors whose incapacity is detected, sometimes by their hearers, sometimes by themselves, find such things to be nice bits of plurality which are very convenient for filling the pocket. Such men are not only promoted once, but are moved on anon from stall to stall, as may be most comfortable. But to apply such things to their right end, to give a great ecclesiastical scholar the means of carrying on his studies—we believe we might say of saving his life—is of course not to be thought of. Only we should like to know what are the feelings of those who divide the comfortable revenues of Christ Church and Westminster and Rochester, when they think that Mr. Haddan died an "Honorary Canon," and that one of the prebends of which they receive the revenues as mere appendages to duties elsewhere would probably have saved so valuable a life for English scholarship.

In Mr. Haddan's former volume, the first of the series, he brought together all that is really known about the ancient British Church. In so doing he scattered to the winds a mass of dreamy talk which had done much to confuse our early history. His most important argument was negative; he showed how very little there was to know. But when a vast shadowy superstructure has been piled up upon no foundation at all, this negative service is the most valuable that can be done. In the present half-volume he has carried on his inquiries through the other Celtic parts of our island, what we may call Scotland and its appurtenances, British Strathclyde and English Lothian. Did anybody ever ask himself why the two archiepiscopal provinces of England differ so widely in extent; why Canterbury rules over so much wider a territory than York? The cause is simply that, while Canterbury has contrived to establish and maintain its authority over all the lands to which it ever laid claim in theory, the greater part of the lands to which York laid claim in theory has contrived to escape from its authority. The theoretic claims of Canterbury took in Wales, and Canterbury did conquer Wales. The theoretic claims of York took in Scotland, but York never could conquer Scotland. It not only could not conquer the proper Scotland; but as the Scottish name and power advanced, and took in a good deal of what had been England, the borders of the York province actually fell back. In the original conception of things, Eadwinesburgh by the Forth, the most northern fortress of England, was part of the most northern diocese of England, that of Lindisfarne or Durham. As the land between Tweed and Forth came to be reckoned Scottish, the English Bishop and his Metropolitan lost this portion of their territory. To the west too the old Northumbrian diocese of Whiturn or Candida Casa also gradually became Scottish ground, and fell off from its English allegiance. The only one of the distant suffragan sees of York which showed any zeal for its metropolis was the Scandimvian Church of Orkney. And that was doubtless because it was Scandinavian and not Scottish. As Scotland never came in, as Lothian and Galloway fell away, as Orkney was transferred to the metropolitan jurisdiction of Trondhjem, York was cut short indeed. The latter part of the present volume is largely taken up with disputes about the jurisdiction of York over Scotland, just as a large part of the first volume was taken up with disputes about the jurisdiction of Canterbury over Wales. It is

* *Councils and Ecclesiastical Documents relating to Great Britain and Ireland*. Edited, after Spelman and Wilkins, by Arthur West Haddan, B.D., and William Stubbs, M.A. Vol. II., Part I. Oxford: at the Clarendon Press. 1873.

only the result which was different in the two cases. The long dispute which the controversial vigour of Giraldus has made famous ended in the overthrow of any traces of the ecclesiastical independence of Wales, while the last document in the present volume is the Bull of Clement the Third which established the ecclesiastical independence of Scotland.

Two stories then, in their formal aspect, are the same, with this wide difference in their result. But we must not forget one important practical difference between the two cases; the relations between the English Church and the Northern Celts were in one important point very different from the relations between the English Church and the Western Celts. Canterbury did not in any sense or in any degree get its Christianity from the Briton, while York very largely got its Christianity from the Scot. Add too that the succession of the Metropolitan Bishops of Canterbury went steadily on from the beginning under Augustine, while the York succession was interrupted almost as soon as it began, and the metropolitan position of the Church of York was not for some time fully established. Altogether the Northern metropolis has been much less lucky than the Southern; but it is worth remembering that it started in theory from the same point, and that they were meant to divide the Isle of Britain equally between them.

Mr. Haddan begins with the Northern British Church, that of Cumberland or Strathclyde. He treats this in the same way as he did in the first volume, beginning with a chronological summary, then giving the documents with such notes as he deems needful, and lastly appendices carefully recording all existing monuments, such as inscriptions and the like, which bear upon the matter. For the early history of Cumberland, the most perplexing part, we do not hesitate to say, of all British history, Mr. Haddan finds exceedingly little to put together. But, as in the case of the Southern Britain, it is something to know how very small our real materials are. Then comes the second period, from the beginning of the tenth century to the end of the twelfth, marked by the rise of the see of Carlisle, and the gradual separation of the sees of Glasgow and Galloway or Whithorn from the jurisdiction of York. This however went on longer in the case of Galloway than in that of Glasgow. For Galloway was not mentioned in the list of Churches separated from York by Clement the Third, and it may be remembered that in the Register of Archbishop Walter Grey, which we reviewed some months back, there was still a good deal about the relations between the Churches of York and Whithorn.

This part of Mr. Haddan's work is strictly a continuation of the former volume in which he dealt with Welsh matters. It winds up the history of the British Churches in Wales, Cornwall, and Cumberland. But before he leaves this branch of the Celtic race, he has a division of the "British Churches abroad." First comes the Armorican Church, which leads to the famous dispute between the Churches of Tours and Dol as to the claim of Dol to Metropolitan rank. A dispute in which Gregory the Seventh and William the Conqueror took a part comes within the range of general history. This controversy, which of course was in the end settled in favour of the Frankish metropolis, was part of the same story as the like controversies between the Celtic and English Churches in British. The metropolitan claims of Dol are the exact parallel to the metropolitan claims of St. David's. With the Scottish case the parallel is less exact, as no Church in Scotland made any claim to metropolitan rank till long afterward.

But Dol and its fellows—we suppose we must not say its suffragans—do not form the only case of British Churches beyond the sea. The diligence of Mr. Haddan has found out a British Church in Spain, that of Brutoña in Galicia, which is spoken of in the acts of the early Spanish Councils as "*Ecclesie quæ sunt inter Britones*." In 830 the city was destroyed by the Saracens, and the see seems to have merged into that of Oviedo. We should like to know how many scholars of our day beside Mr. Haddan and his colleague would have been able to fish up such a fact as this. But this is not all. Mr. Haddan takes occasion to find out other British settlements on the Continent, and to discuss the "*Brittia*" and the "*Bretannia*" of Procopius. Then, with all this, we have a record of every early monument in Cumberland and in Brittany, and of every British saint who appears in Armorica. Mr. Haddan did indeed go thoroughly into his subject.

But the greater part of the volume is devoted to the ecclesiastical history of the proper Scotland and of that part of Northern England which gradually came to be merged in it. Here we have all the documents, historical notices, monuments, and references of every kind, from the first vague mention of Christianity among the Picts in the year 400, till the final separation of the Scottish Churches—Galloway, of course, not being reckoned—from the obedience of York in 1188. The first period, before St. Columba, has no documents to show, and all the notices of it come in less than a page. Yet the period is not without existing monuments; for, to mention no other, it takes in the famous Catstane, which Mr. Haddan duly enters in his list, but does not even stop to refute the belief that it commemorates a genuine grandson of Woden. In the next period Mr. Haddan comes across the Ouldees, about whom controversialists on one side and another have had so many dreams, but of whom Mr. Haddan, who writes in the interest, not of controversy, but of truth, makes rather short work. The true spelling, it seems, is "*Keledei*," that is, according to the more probable derivation, "*Servi Dei*." We understand therefore that Mr. Haddan rejects the derivation from "*Cultores Dei*," and—though we tremble a little at venturing ourselves where we may get lost in an Irish bog—that he takes the first

syllable to be that "*Gille*" which is found in so many proper names, and with which some people are to this day familiar in the form of *gilly*. Keledei, Mr. Haddan says, were first heard of in Ireland in 792, and the word was "*at first merely an Irish appellation for a monk (Céle-dé), and is first found as the name of a monk of a special and more strict rule, differing however in no way whatever from the doctrine and ordinary discipline of the then Church.*" In some later cases the word seems to have meant something more like secular canons living according to rule of Chrodegang. They are first heard of in Scotland about 800, and about 1150 they began to give way to monks and canons of the usual orders under the Anglicizing influence of David. Traces of them however are found as late as the middle of the fourteenth century, and it may be something to know that grants to the Keledei of Loch Leven are among the few historical acts of those two grossly calumniated persons, King Macbeth and his pious wife Gruoch.

We need hardly say that Mr. Haddan's collection of Scottish ecclesiastical matter has an interest which is by no means purely Scottish or purely ecclesiastical. More than half of this volume is really made up of materials for the history of the formation of the kingdom of Scotland—a formation which of course includes a large dismemberment of England and the swallowing up of the outlying Northern Wales. There is no department of the history of Great Britain on which such a collection as this does not throw light. The book is as wonderful in its workmanship as it is wonderful in its results. The combined industry and acuteness with which Mr. Haddan knew both how to find out and how to make use of every scrap of knowledge in any quarter which could in any way bear upon the subject, has often made us wish to see how Mr. Haddan would have succeeded in direct historical narrative. It is sad to think that that hope can now never be gratified, but it is also some comfort to think that his work is left in the hands of the only living Englishman capable of carrying it on.

ADAMS'S NEW BRUNSWICK.*

HAD all our officers of either service the intellectual energy and cultivated taste of Mr. Leith Adams, there would be no more complaints of the tedium of up-country or foreign stations, or of the hopeless monotony of a voyage by sea. The love of nature and the ardour for accumulating knowledge would seldom fail to find material for beguiling the traditional ennui of country or colonial quarters, whilst the desire for increased familiarity with natural objects would grow with what it fed on. Over two-and-twenty years with the 22nd (Cheshire) Regiment have given Mr. Adams scope for exercising his knowledge and industry as a naturalist on a wide and most varied scale, and he has a right to speak as one of authority as to the spell which lies in pursuits of this pure and elevating class to beguile the ills of climate or social seclusion or professional stagnation. He has been always at work in his wanderings to and fro. He has made observations in India and Thibet, the Nile Valley, and the Maltese Islands, and he has brought back with him no less thoughtful or instructive jottings from his rambles by field and forest in the comparatively little known and unhaunted regions of Eastern Canada. Without pretending to the compilation of an exhaustive or systematic treatise on the natural history of New Brunswick, his diligent labours in field work have enabled him to bring together a mass of valuable, and in many respects novel, facts in illustration of the physical features, the zoological, vegetable, and geological wealth, and even the ethnological characteristics of that portion of the Canadian Dominion. It is especially in what naturalists call field studies that the least has been done by scientific labourers in the New World. For, although almost every animal and plant and rock has been precisely named, classified, and described, very little, as our author pleads, is known of their geographical distribution, dependent as this knowledge must be upon correlating and harmonizing the labours of local and independent observers. Here the knowledge of botany, physiology, and chemistry, combining with that of human anatomy to make up the curriculum of a medical education, has stood our author in good stead, as the varied nature of his observations amply proves. Even as bearing upon the elucidation of obscure and puzzling forms of disease, with their causes and remedies, the study of the grand principles of the structure and functional agencies of the lower organisms, as well as of surface geology and even mineralogy, has its place among the inquiries of the physician. A glance at the natural history map of New Brunswick which Mr. Adams has prefixed to his work will show the multiform and comprehensive research which he has bestowed upon his subject. The distribution of beasts and fishes—the bear, the beaver, the lynx, the mink, the many kinds of salmon, sea and lake trout, the herring, the cod, the oyster, the lobster—will be seen at once. Coal seams are indicated by black lines, and arrows point out the directions of glacial scorings. Nor are the tides omitted, rising in the instance of the narrow bight of Miramichi to the unparalleled maximum of 53 feet. Ancient Indian kitchen middens have their sites specially marked along the coasts and inlets, as near St. George and St. Andrews, at the terminus of the Woodstock Railway, on Deer Island, Campo Bello, and the Grand Manon. In a district where the Stone age can hardly be said to

* *Field and Forest Rambles; with Notes and Observations on the Natural History of Eastern Canada.* By A. Leith Adams, M.A., M.B., F.R.S., &c., Staff Surgeon-Major. London: Henry S. King & Co. 1873.

have passed away, the study of palæolithic implements and weapons is attended with peculiar interest, while the habits, modes of living, and physical aspect of the Stone folk of both Europe and America receive instructive illustration from the study of the existing races of this Northern region of the New World. Mr. Adams's remarks upon the native Indians and half-breeds whom he came across in his rambles, of specimens of whom he has made lifelike sketches, show both acuteness and sound sense. Whatever of romance or chivalry still lingered around the red skins whom Fenimore Cooper loved to draw for us has long ago vanished, and with it almost all hope of any thorough or permanent elevation of these tribes to civilization and brotherhood with the white population. The white man, however, should at least try to enable his poor brother, "whom his own imported vices have in the main brought to demoralization and doom," to die out in a respectable manner.

Mr. Adams's professional experience has enabled him to put on record valuable details touching the influence of a sub-frigid climate like that of New Brunswick upon the European settlers at large as well as upon the troops under his medical charge. To one newly arriving from Northern Europe there is something, he remarks, disappointing in the aspect of the middle-aged of both sexes. Instead of burly, well-nourished farmers in a land where the materials of good living so abound, sallow, weather-beaten countenances, and spare, emaciated frames predominate among men of forty, while the pallid faces of the women indicate often ten years in advance of their real age. Important causes in connexion with habits of life, food, and climate are here at work. Close stoves, salted provisions, ill-baked bread, even if not aided by alcoholic excess, combine with the natural vicissitudes of extreme and suddenly changing temperature to undermine the stamina of life. The most trying times of the year are the thaws of spring and the setting in of the cold months, at the rapid transit which passes for autumn. Consumption and other pulmonary diseases are most fatal at midsummer, after the variable weather. In winter pneumonia, the characteristic disease of the climate, is most prevalent. The deterioration in physique so much remarked upon in the existing settlers is traced by our author in part to the fact that the first immigrants and reclaimers of the woods were an exceptionally hardy and vigorous race, their successors feeling less demand upon their bodily energies; and in part also to sameness of food and the listlessness induced by extremes of climate. Closeness of intermarriage, especially among the French settlers, has brought about the most frightful of evils. Elephantiasis, or Greek leprosy, has become a settled plague among the poor creatures. Nothing can well be more repulsive than the aspect of the group pictured here from the leper hospital of Tracadie. In a valuable appendix Mr. Adams furnishes convincing proofs from the records of this lazaretto connecting this shocking malady with the consanguinity of the inmates. That settlers of English origin had caught and died of this disease was a report the truth or falsehood of which he was unable satisfactorily to ascertain.

The migration of birds formed a prominent part of Mr. Adams's observations, and the facts he has set down are such as have much value for the naturalist. Following up the general principle, laid down by Professor Baird, referring the geographical distribution and periodical movements of the birds to the combined influence of climate and the physical characters of the continent, he divides North America into two grand ornithological regions, the Eastern or Atlantic, and the Western or Pacific region. His sketch-map of the continent shows how their respective lines of flight are determined by the set of the mountain ranges and the local elevation of the land, as well as by the shore-lines and valleys. A great advantage is possessed in these respects by the New World in the mountain chains, bays, rivers, and depressed lands having a northerly and southerly trend, instead of one from east to west like the Alps and the Mediterranean, across the track of the winged wanderers, as well as the migrations of land vertebrata or denizens of the sea. Enormous flocks of Canada and Brent Geese and other wild fowl pass over New Brunswick in spring and autumn to and from their breeding grounds north of the fiftieth parallel of North Latitude, the main body reaching Southern Florida by the end of October. Flights of golden plover have been observed to pass over the city of St. John like a cloud of locusts from dusk nearly throughout the night. Something like eighty species of North American birds are found choosing Cuba for winter quarters, that island and the Bahamas standing in much the same relation to these birds as Malta and Sicily do as resting places to the migratory birds of Europe. Perhaps the most striking fact is that of the humming-bird being born so far North, and winging its way alone to Mexico and the West Indies. Its instinct in this respect must be regarded, Mr. Adams reasons, as inherited, these tiny birds not being gregarious. A drawing of one of these lovely harbingers of spring, the ruby-throated humming-bird, from the master-hand of Mr. Gould, appropriately embellishes the title-page.

Well may a naturalist like our author dwell with ecstasy upon the beauties and the winning ways of these delicate creatures as they fit among the orchises, the peach blossoms, or their favourite currant flowers, to the discomfort of their scarcely tinier rivals, the humble bees, the males chasing each other in courtship of the more plainly attired female. Mr. Adams never found their nests, although he has watched a pair for hours. They build indeed, he says, in gardens and orchards, affecting the same fruit tree for years, the nest having been seen by some observers built upon the horizontal branch of an apple-tree, disguised by a covering of moss. The dull green of the female forms a protection from the eye of birds

of prey. The purple and the cliff swallow are said to have been unknown in Eastern America until shortly before the Revolutionary War—an instance of the influence of civilization on the distribution of birds. They are now regular summer visitors along the Bay of Fundy. None of the swallow tribe lag much beyond the end of August in the more inland districts, barely remaining three months in the country.

The effects of abnormally cold seasons both upon animal and vegetable life furnish many interesting particulars to an observer from more temperate climes, while the grand traces of glacier action open a field of inexhaustible inquiry to a geologist. Experience of the still more stupendous phenomena of the Himalayas has been of service to our author while speculating on the significance of glacier markings and boulder deposits as evidences of the height and distribution of the ice masses of a former period. To the theory of icebergs and floating ice-islands as the cause of these flatings or depositions, as advocated by Dr. Dawson, Mr. Adams is strongly opposed, though admitting to a great extent the effect of the glacial sea, and of the gradual depression of the land at the close of the Glacial period. To his mind, having witnessed far grander phenomena from the Indian hills, it is no stretch of imagination to conceive a vast field of ice at one time pouring down the slope above St. George into the long fiord below, calving there its bergs, which floated away laden with rocks and *débris*. That the whole, or a tithe even, of New Brunswick and Northern America was wholly submerged he has no belief, albeit a depression to some extent undoubtedly took place. With reference to the vexed question of the opposite directions of striation on the rocks of the Saguenay River and elsewhere, who knows, he asks, whether there may not have been a centre or centres of dispersal far out in the present bed of the Atlantic, which sent their glaciers in opposite directions, as now seen in the case of the Alps and the Himalayas? The book abounds throughout with evidences of careful observation and thoughtful suggestiveness. Its completeness is greatly enhanced by a list of the mammals, birds, reptiles, amphibians, and fishes of the province, in which the writer's own experience and study have been supplemented by the aid of scientific friends and the reports of official observers. The meteorological figures for a year will moreover be found of much service towards estimating the range and the effects of climate in a province which is so exceptional in many important respects.

PASCAREL.*

NO one can deny that Ouida has a certain kind of power, and no one can grant her any kind of delicacy. Like the traditional *supérior*, no subject is sacred to her, and she rushes into the heart of themes which better writers than herself and bolder thinkers fear to handle. She uses only the strongest and most violent colours for her work, and she lays them on with a trowel; of the harmony produced by half-tones and tender shading she knows nothing, and as little of delicate pencilling or suggestive indication. Everything with her is done with a barbaric lavishness of material the net result of which is a coarse and fatiguing glitter; but, though we know of no author who is so clever as she is in endowing intrinsically worthless elements with an appearance of richness, we know of none with equal pretensions who is content with such paltry materials. Her chief literary quality is a flux of words and her dominant characteristic audacity. If we analyse her rushing gorgeous sentences, full of sound and colour as they are, we find only some poor, meagre, little thought as the residuum; and even when her phrases are sentimental, the action of her stories too often appeals to a prurient taste. Her ideas are like an artist's lay figure, the same thing draped up in a dozen different costumes, but always the same thing underneath, and that thing wooden.

Pascarel is scarcely what its second title implies, "Only a Story." We would rather call it only a wordy rhapsody on Italy, art, and love; each in turn and all commingled, with a small accidental thread of narrative running through as the excuse. But, though the story is slight and the *dramatis personæ* few in number, it is odd how many in proportion are improper people. The father of the heroine, Mr. Tempest, is an English gambler, *roulé*, cheat, and vagabond. He broke the heart of the mother of his four children—an actress, who was not his wife—and he left those children themselves to starve, if so it should please Providence and their old nurse Mariuccia. Pascarel himself, the strolling actor, who wanders about with his plump little mistress Brunotta, two lads, three poodles, and a monkey; who has been a student at the University at Pisa, and who talks the loveliest rubbish imaginable, whole pages full of high-sounding nonsense; who is the people's friend and the people's favourite, tender to weakness, courteous to poverty, inflexible in self-respect before ruck and wealth, poet, artist, warrior, patriot, with whom the heroine falls so madly in love, and who repays her love with such chivalrous devotion—even Pascarel himself is only a shaky kind of Christian, on some rather vital points, of which one is that old-fashioned virtue called cleanliness of life. But this is evidently not one of Ouida's ideal characteristics, and the cynical frankness with which she narrates her hero's exploits in the way of mistresses suggests an odd estimate of moral character. He has one actual mistress in the present, another in the past; he loves "L'Uccello," Miss Tempest, the heroine; and between times he takes up with "painted women," Astra and L'oppea, when he is deserted

* *Pascarel: Only a Story*. By Ouida, Author of "Chandos," "Tricotrin," &c. 3 vols. London: Chapman & Hall, 1873.

by Brunotta and discarded by L'Uccello. As a set-off, however, he improvises with graceful passion, has a fine voice and a handsome face, talks art and artistic history as fluently as a river runs, is simple in his gastronomy, and does not need much sleep; and thus he is in every way a fitting hero for the unreal, fantastic world which Ouida evolves out of that undigested chaos of thoughts and perceptions which she would probably call her imagination if she had to give it a name. Then there is a certain dark-eyed insolent cousin who woos L'Uccello with that fierce yet dastardly kind of love which consists in passion and insult, and who, to force her to his will, betrays the fact of her illegitimacy, and receives a blow for her answer; and, further, we have glimpses of orgies, highly-coloured and improper, and ridiculous exaggerations of Italian Bohemianism and Italian life, wherein poverty is made the nurse of every virtue, and to be a vagabond without a roof to cover you or a crust of bread to eat, is to be joyous and free, innocent and loving, as no one can be who is hampered by the cares of respectability and the duty owing to clean linen. It all sounds very fine; but we suspect the reality would prove quite as far removed from Ouida's representation as the high-souled brigand, standing on a rock, looking up to the lurid sky, and discoursing on the vanity of men and the emptiness of life, is different from the brigand of real life, the dirty, cowardly ruffian who joins the brutality of a cut-throat with the craft of a pickpocket, and leads a life of filth and wretchedness. To wander about with a booth and a troop of dogs may look well enough when the little scene is set, and the flash and flare of the entertainment are answered back by the shouts of the peasants and the finer giggle of the townsfolk; but the reality of cold and hunger and fatigue, even in sunny Italy, must often prove penance enough for all the ordinary sins of the trade. Ouida will probably set us down as Philistines for thinking that any man of education and refinement who could take up such an occupation, and find his happiness in it—and in a Brunotta—must be wanting in all that makes humanity noble, or raises it above the grosser instinctive pleasures into the orderly dignity of civilization.

The heroine, L'Uccello, the fair daughter of the scampish English gentleman and his mistress, is one of those impossible characters which writers every now and then please themselves by offering to the public as studies of human life and social possibilities. Left by her father to the care of old Mariuccia, her nurse, always in the direst poverty and generally hungry; suffered to run to the right and left about the streets, and finding her sole playmates in the sons of the people—barefooted geniuses, beautiful as angels and ragged as scarecrows; the favourite model of a knot of impecunious artists, "good lads" as she calls them, who crown her with tinsel and give her, on account of her beauty and her voice, the sobriquet of L'Uccello; absolutely unguarded—in Italy, too, where the very peasant girls are looked after by their mothers—she comes to the age of fifteen as innocent as *Fleur de Marie* herself. She dresses in the rich purple velvets and embroidered satins of her mother, the actress, and trails about the streets like a cabinet picture by Veronese a little the worse for wear. When reduced to the last extremity, she and one of her chums, a rugged brown-legged boy, by name Raffael, dressed in the loose shirt and red sash of a Venetian gondolier, stand by the Duomo at Carnival time and sing, and make a good thing by it:—

The answer came from a hundred hands at once—from above and around, on every side.

Paper money fluttered to her feet; loose silver rolled like sugar-plums; here and there a piece of gold flashed like a star through the air; flowers and toys and gilded horns of sweetmeats, and ribboned playthings of the pageantry were all showered upon them from the balconies above and from the throngs around, until their arms ached with stretching for the gifts, he his red berretta, and she her amber skirts.

Great ladies, leaning in the draped galleries of old palaces, cast down money with lavish hands; white-coated soldiers, laughing over their wines at the marble tables, tossed bright florins to swell the store; a child-noble in his gala-costume of white and gold and powder and jewels, ran down some palace steps and shyly thrust a roll of notes into the singer's hand, and hastily lifted his soft smiling mouth to kiss her cheek; the poorest of the people sought in their leather pouches for some copper pieces to give.

In vain the boy and girl, being honest, protested, laughing and crying both at once—"Basta, basta!—enough enough!"

In vain; the golden shower did not cease until, in the distance, as the first of the patrician pageantry appeared on the entrance of the square, there arose a glad shout,—"The Gala! the Gala!"

And the populace, kindly of heart, but fickle of temper, turned to the new pastime, and the little noble ran to his people, and the great ladies looked the other way, and the golden chariots rolled under the historic walls, and the sea of the bright masque surged outward; and the children were forgotten where they stood.

After which comes by a man with "the dark, poetic, historic face of Florence," who gives L'Uccello an old seal ring, an onyx cut with the heads of the Fates, "dropped into her amber skirts, amongst the violets of Parma and the daffodils of Tuscany"; and who, passing her again, delivers himself of an aphorism, then dashes onward into the shadow chased by "a gay and giddy throng of masks thrashing each other with coloured bladders, and chasing him with tumultuous shouts as of a band of mummies to their chiel." This is Pascarello, or Pascarel; and of course the meeting is a case of love at first sight, as becomes a heroine who begins life in a purple hood and amber satin skirts, singing in the streets for money, and so innocent of evil that when she forces her way into a disreputable masked ball she knows nothing of the significance of what she sees, and only wants to know what "Pascarel" means. That she should not know the name of the most popular strolling player in Italy was, to say the least of it, strange for a young lady whose life seems to have been mainly

passed in the streets with the people. But we suppose we should have no stories written at all if common sense and probabilities were necessities; and when heroines are of the kind which an unfriendly fortune lets loose on the world at an early age, we must believe in the existence of some good spirit which hoodwinks them as young hawks are hoodwinked, and acts the part by them of Ulysses with the Sirens, stopping their ears so that they shall not hear what every other street child hears twenty times a day, or, hearing, shall not suffer by the lessons conveyed. When L'Uccello, whose real name seems to be Speronella, is at the Veglione in her "yellow skirts stained with many a crushed fruit and bruised flower in the old glad days of her wanderings," her "hot little hands" holding the onyx ring to her breast, her "cheeks burning like wild poppies," her "hair in a lustrous tangle"—it was fair hair and it curled—"her eyes like burning lamps, in the thinness of her hunger-worn small face," her "mouth scarlet and parched with excitement," innocent as a young nestling, but woman enough to know so well that she "looked handsome," and "that the people would look at her and say 'bellina'";—Mariuccia is dying by the cold hearth and the empty cupboard, because of which la donzella had sung in the streets that day. Speronella sees her hero of the onyx ring, and he rescues her from an insolent Mousquetaire who "lifts her from the ground and plunges into the wild gallopade that was rushing down the boards like a troop of riderless horses on San Giovanni's day in Florence," and who is none other than her future cousin; and the hero, "in a flash of ruby and white," like the Florentine Florindo, talks sentiment and biography to her, and takes her home and kisses her hand—so she has not lost her time, though she does come to such sorrow over-leaf. After Mariuccia's death Nella gathers all her possessions together and sets off for Florence vaguely, to find her father. She falls into evil case by the way, and has her little purse cut which contains the whole of her wealth, sixteen florins all told. While she is lying on the ground crying, Brunotta comes up to her through the trees to console her; and then Pascarel appears in his true character, but beautiful as ever, as the strolling actor, formerly the tinker's son, travelling from place to place with his lads, his beasts, and his supposed sister. Nella joins them, though she does nothing to help the general funds, only moons about with Pascarel, exchanging sentiments of marvellous length and spasmodic form, and falling daily deeper in love with the gifted tinker's son, he doing the same by her on his own account. Then Brunotta, in a not unnatural fit of jealousy, tells L'Uccello that she is Pascarel's mistress and not his sister, and politely intimates that she must be a fool not to have seen it before, and so begs her to go away and not interfere with her any longer, nor try to take her place. No heroine who wore amber satin and purple velvet, and who respected herself, could forbear to fall ill on such an announcement, and consequently Nella runs away and falls ill; but instead of being taken to a hospital, she is picked up by a generous old creature who gets her living by darning silk stockings. When she recovers she gives Pascarel his dismissal grandly. Then she is reclaimed by her father, dressed like an old picture, and taken to balls in a dress whereof the train is cloth of gold, and the scarlet skirt beneath sown with little diamonds; and then after submitting to the insolent addresses of her father's cousin, and learning that she is illegitimate, she strips off her finery, and once more runs away; this time to find Pascarel as the returned hero, whom they make up their quarrel, and agree to undertake life together, on the basis of "a little laughter and a great love."

We have been obliged to leave unnoticed the rich bits in this *pot-pourri* of fine words and poor ideas. "The stream, hot and red, like the blood from a murdered man's throat," is however less fine than nasty as a simile for bronze-casting; and the light of the sky, "always tender and dreamful like the eyes of a woman who lies awake and remembers the kisses of her lover," is simple nonsense. But nonsense is Ouida's stock in trade—nonsense masked in high-sounding words which clang and clatter, as she would say, "bravely," but which will not bear close examination either of manner or matter, and which weary all but the very vulgar and the very ignorant, people whose coarse palates must be tickled with highly spiced food, and whose empty minds are satisfied with the semblance, not the substance, of thought and poetic feeling.

EARL RUSSELL ON CHRISTIANITY.*

EARL RUSSELL'S *Essays on the History of Christianity* are only worthy of attention because it is he who has written them. In themselves they are dry performances, far richer in quotation than in argument, and showing that their writer has travelled, in a fashion, over a large field of inquiry and speculation without any correspondent enlargement of mind. It might be said of a different kind of man, if he had written such a book, that he had a mental coldness which froze the surface of the subject with which he was engaged, so that he was able to glide easily over it without perceiving either its depth or its difficulty. But the essays are attractive as the work of a statesman whose whole course has been marked not so much by high ability as by a certain acrid and penetrating sincerity, and who has played an important part both in general politics and in politics as related to religion. We cannot forget, if we would, his famous Durham

* *Essays on the Rise and Progress of the Christian Religion in the West of Europe, from the Reign of Tiberius to the end of the Council of Trent.* By John Earl Russell. London: Longmans, Green, & Co. 1873.

Letter, and its issue in the Ecclesiastical Titles Act, a measure which proved so wholly inoperative that it might have taught Earl Russell not to trust much in his rheological researches to isolated literary documents. Earl Russell, again, was answerable for the appointment of Dr. Hampden to the Bishopric of Hereford; and in this case also his act produced at the time a lively sensation, but led ultimately to no remarkable result. But when he looks back on his distribution of patronage, he is able to congratulate himself both on the purity of his motives and, all things considered, on his success. More far-sighted, as he hints, than the State, he aimed at paying a conspicuous homage to science by conferring on Sir John Herschel the office of Master of the Mint, which had been held by Sir Isaac Newton. As to ecclesiastical appointments, he offered the Deanery of Carlisle to Dr. Tait, and thus helped him forward on the road to the Archbishopric of Canterbury; he advanced Dr. Milman to the Deanery of St. Paul's, thereby indirectly facilitating the study of Church history; and by recommending Dr. Dawes to the Deanery of Hereford, he called attention to the fact that not only reading, writing, and arithmetic, but elementary knowledge of various kinds, may be taught successfully in an elementary school. On these points Earl Russell has been careful to refresh our memories, and if he had not taken the trouble of so doing, we should freely have admitted that he is a remarkable man, whose opinion is worth having on any subject with regard to which he may choose to express it.

Earl Russell, with the simplicity and candour which are among his most favourable characteristics, gives in the preface to his essays a list of the works on which he has principally relied. First and foremost come Dean Milman's *History of Latin Christianity* and Jortin's *Remarks on Ecclesiastical History*; in another rank are Mr. Matthew Arnold's *St. Paul and Protestantism*, Dr. Newman's *Grammar of Assent*, Mr. Lecky's *History of the Rise and Influence of Rationalism in Europe*, and Dean Alford's *New Testament for English Readers*. He has of course consulted other works; thus he quotes at some length Dr. Samuel Clarke as an authority on the Christian faith, observing at the same time, with a pleasing ingenuousness, that "his Arian heresies may as well be omitted." Gibbon is also referred to, and so is Bishop Butler, not to mention a variety of modern writers; and the Bible is used freely in a broad and uncritical spirit. But when these qualifications have been made, it will still appear that Earl Russell is quite right in placing Milman and Jortin at the head of his authorities, and giving a secondary but yet important place to Mr. Arnold, Dr. Newman, Mr. Lecky, and Dean Alford. The list of books is one which points to fearlessness and openness of mind on the part of the inquirer who uses them, rather than to thoroughness of research. Earl Russell may have read them, and in some sense have mastered them, without any approach to mastering his subject. We can imagine that he would not feel obliged to pay particular attention to an octogenarian divine who claimed to have a definite view of politics on the ground of having studied some such books as Clarendon's *History of the Rebellion*, Macaulay's *History of England*, Mill on *Representative Government*, Mr. Disraeli's *Life of Lord George Bentinck*, and Mr. Moncreux Conway's *Republican Superstitions*. It is of less importance what has been read than what are the results of reading and reflection; and to Earl Russell's results, and the nature of the evidence on which they rest, we may now briefly proceed.

Early in his essays he sees his way to asserting that the religion of Christ has three main foundations; the first foundation being, that God is a spirit, the maker of heaven and earth; the second, that Christ was sent from God, and revealed to men the message of God; and the third, that Christ died for mankind. The assertion of these three foundations is introduced with long quotations from the Gospels, in which, however, there is no peculiar relevancy to the form of Earl Russell's statement. No popular preacher could quote passage after passage more unsystematically, or leave the text to produce its own impression with less assistance from orderly and intelligent comment. Earl Russell, in fact, is essentially uncritical in his use of Holy Scripture. He accepts the canon as it stands, without any appearance of independent investigation, and he does not seem to know how many questions debated among learned men he assumes when he writes "The treatment of heretics is thus prescribed by St. Paul in his Epistle to Titus, the first bishop of the Cretans." There is no strict conformity to Scriptural language in the statement just quoted from his essays; for, according to St. Paul in an undoubtedly authentic epistle, other foundation can no man lay but Jesus Christ, whose religion therefore has not three foundations, but one. Earl Russell's position, again, if tried simply by its contents, is far from being obviously true or consistent; for if, as is generally supposed, the spiritual nature of God is part of the message of Christ, the first of the two foundations disappears by absorption in the second. In fact, we have nothing here given us by Earl Russell but a general view, put in somewhat careless language, and incapable of proof or disproof.

Following the example of our author, we pass on naturally from the foundation, or foundations, of the Christian religion to the formulae in which Christians have endeavoured to express its principal truths. He soon reaches the Nicene Creed, and disposes of it with remarkable rapidity. Six pages give us a history of the Nicene Council, and an estimate of the results to which its decision has led. Earl Russell sums up as follows:—"One thing

signal for centuries of bloodshed. Thousands of human beings died to confirm or contradict a doctrine which none of them understood." If he means to assert that no Christian whatever understood, or was capable of understanding, the great issue raised and ruled one way at Nicæa, he is greatly and transparently in error. The question was whether Christ was really God, or the first and greatest of created beings; and on the answer to this question depends now, as it did in the fifth century, the distinctive character of Christian worship. It is by no means clear that, if the Nicene Council had left the matter open, one drop less blood would have been shed, or that the speculations of Christians would have been confined in consequence to subjects which Earl Russell thinks intelligible. On the contrary, the controversy might have been prolonged without losing its bitterness, and it might have been discovered after all that nothing better could be done than to state a clear and decided belief in clear and decided terms.

Having briefly disposed of the Nicene Creed, Earl Russell proceeds to the Athanasian. Here again it will be as well to quote some of his own words. He says:—

It will be found that the schoolmen always preferred the logic of Aristotle to the word of Christ. Indeed, their object was not so much to follow Christ as to build a new edifice of theology with the materials which they borrowed from the Greek philosophers. The consequence was the Athanasian Creed, of which the author is unknown. It has been adopted by the Church of Rome and the Church of England, and has been made the condition of salvation by the ingenious schoolmen who preferred logic and metaphysics to the sublime simplicity of the Gospel.

If there is any meaning in words, we have here a new theory about the date of the Athanasian Creed, which Earl Russell tells us is a consequence of the preference, and object, and method of the schoolmen. With some misgiving we turn to Earl Russell's great authority, Dean Milman; and we find him teaching that the remote ancestor of scholasticism was John Scotus Erigena, who lived in the time of Charles the Bald, that is, about the middle of the ninth century. Dean Milman further informs us that the rudimentary scholasticism of Erigena was by no means a system of rigid formula, but rather a full, discursive, speculative science; so that if we put the statements of Earl Russell aside by side with those of the really distinguished scholar whom he is proud of having promoted, we are obliged to infer that the Athanasian Creed is the consequence of a system which was quite in its infancy, if indeed it can be said to have been born, when a grandson of Charlemagne was king. If we can accept this conclusion, we can afford to be quite indifferent to theories which connect the creed with Charlemagne; and Mr. Foulkes and Mr. Duffus Hardy pass together into the background while disputing about the date of a Psalter. It is really too absurd; and Earl Russell, as he wrote on, seems to have become conscious of the absurdity; for some pages later we find him saying:—

It would not be correct to attribute what is called the Athanasian Creed to the authorship prevalence (*sic*) of the great schoolmen of the thirteenth century. Still, failing any authority which would enable me to give the date of the introduction of that Creed, or to name any person who did not shrink from avowing its authorship, I will insert here what I have to say upon that head.

And then he proceeds to make a rather indefinite use of Dean Stanley, Gibbon, and Tillotson. He is so courageous a man himself as to make us wonder that he has indirectly accused the anonymous author of the Athanasian Creed of moral cowardice, which is one of the last accusations to which, so far as we can judge from the Creed, that writer is really open. But Earl Russell suffers an evident deterioration, both of reasoning power and temper, while dealing with this part of the subject. Speaking of medieval doctrine as exhibited in that systematic and logical form of which the Athanasian Creed is the great surviving example, he observes:—"According to this new faith, a man must subscribe to a number of propositions he could not understand, but need not be very solicitous whether the commandments, 'Thou shalt do no murder,' 'Thou shalt not steal,' and other moral laws, were neglected or observed." If the Athanasian Creed is accepted as a representative document, it scarcely supports Earl Russell in this remark; for, though its earlier portion is full of awful threatenings with regard to the consequences of doctrinal error, we find towards its close the exceedingly strong moral statement:—"They that have done good shall go into life everlasting, and they that have done evil into everlasting fire."

But the Church of England, though retaining for the present the Athanasian Creed, is, according to Earl Russell, in as flourishing a state as she has ever reached. She is largely indebted to the action in recent years of the Judicial Committee of Privy Council, and, to go further back, she has carefully avoided in her Articles two sources of error—the superstitions of the Church of Rome and the fanaticism of the Church of Calvin. Here Earl Russell touches on a subject which may serve as a final test of his skill and discretion in the treatment of theology. If we look at the whole of her formularies, the Church of England is certainly not Calvinistic; but if we confine our attention to the Articles, the case is not so clear. Here is an opportunity for our distinguished amateur theologian to prove himself master of at least a portion of the great field embraced in his essays. No profound learning is necessary for going nearly to the bottom of the matter; no apprehension of the spirit of remote centuries; no disinterring of difficult volumes from the dust of venerable libraries. The Thirty-nine Articles are perfectly accessible, and proximately correct accounts of the views of Calvin

scarce, nor hard. The dissection of certain Articles and the comparison of their statements with a definite doctrinal system is just the sort of work in which a clever thoughtful man, with a critical turn of mind, and a sense, such as he might gain by three hours' conversation with an expert, of the salient points to be examined, might find deep learning rather an encumbrance than an assistance. How then does Earl Russell prove, or attempt to prove, that the Articles of the Church of England are not Calvinistic? He simply quotes the latter half of the Seventeenth Article. We have thus only left us the choice between thinking him very profound or very superficial, and the weight of evidence inclines to the less favourable alternative. He leaps to his conclusions elsewhere, and probably employs the same method in this case, for there is not the slightest symptom of his being aware of the points on which the English reformers sided with the Lutherans rather than with the Calvinists. He speaks in one place of "the Protestant divines who opposed at Lambeth the theory of Calvin," in seeming forgetfulness that from Lambeth issued those supplementary Articles which, if they had been adopted by the Church of England, would have done all that words could do in the way of making her Calvinistic. Indeed Earl Russell would be disinclined to consider at length any differences between Lutheranism and Calvinism by his disposition to censure the two reformers together. The following is the last quotation from his book with which we shall trouble our readers. Having repeated his censure of the Nicene Council, he proceeds:—

The anonymous author of a third and anonymous creed was not satisfied with Christ's humility, and undertook to affirm that He was equal to the Father. With a similar ambition and equal presumption, Luther and Calvin undertook to point out the way to heaven, and throwing aside the words of Christ and the teaching of St. John, St. James, and St. Paul, declared that by faith alone man could be saved. They disclaimed the words of Christ in reference to the Pagan centurion and the Jewish scribe; they looked aside when they were reminded that God is Love; they refused to accept the words of St. Paul, "Faith, hope, and love, these three; but the greatest of these is love."

So Earl Russell passes along the centuries, using his acuteness like the spear of Ithuriel, and detecting the latent fiend. When they come under his hand, theologians in general fare badly; the Nicene Fathers, the author of the Athanasian Creed, the schoolmen, Luther, and Calvin, however unlike each other, are involved in similar condemnation. So far as theology is concerned, age has not mellowed the acerbity of Earl Russell's judgment; he inclines almost habitually to the darker view of the characters and opinions he introduces, and is all but wholly destitute of that literary charity which is a humane virtue, if not a theological grace.

The professed range of Earl Russell's essays is from the reign of Tiberius to the end of the Council of Trent; and we may therefore be excused from following him beyond that range down to the present day. On the important subjects which lie on the edge of religion and politics, and which are assuming new forms with astonishing rapidity, his opinions are in all essentials what they have been for many years. We can scarcely imagine that a single person of ordinary intelligence will have his views of the Papal Syllabus, the Vatican Council, or the O'Keefe case, modified by anything that Earl Russell has written respecting the Nicene Council or the general result of the Reformation. Indeed Earl Russell himself may be assumed to be as safe from the influence of his own theological essays as any of his readers. He has carried all his peculiarities with him back to the fourth century, and returns from Fathers and Councils to modern politics as little changed as the typical Englishman usually is by a month's run on the Continent.

AMERICANISMS.*

WE English are far too apt to think our own way wisdom, and to look with scorn upon the doings of our neighbours, and more especially upon the doings of our kinsfolk in America. All ways of speaking and acting which strike us as being specially vulgar or disagreeable we at once denounce as Americanisms, thereby showing the very low estimation in which we hold our transmarine cousins. This estimate, be it false or be it true, is in most cases the result of personal observation of the swarms of Yankee tourists who, year after year, by their very presence, take the bloom off our summer holiday. They crowd in upon us in railway carriages, they empty our favourite dishes at *tables d'hôte*, pouring into our ears the while bitter complaints of the worthlessness of all they get when compared with the comforts which they have at home, where we devoutly wish they had stayed to enjoy them. Of course it may be said that in this way we see only unfavourable specimens of the race, and that, to judge of any nation with anything like justice, we must go to their country and study them there. Now that steam has practically shortened the distance between Liverpool and New York into something not much longer than a journey from London to Edinburgh used to be in our grandfathers' days, a tour through the United States has become very little more difficult than a tour on the Continent. Still very few of us take advantage of this great facility of intercourse. We shrink from plunging in among a whole nation of people who speak our own language through their noses, and who

call us men and women and our servants gentlemen and ladies. We dread having no nourishment set before us but meat-pies and chicken-fixings, and perhaps seeing even these unwholesome meats gobbled up before we can secure our modest share. The current British opinion of the manners and customs of the dwellers in the States might almost be summed up in the words of the skipper who went to investigate the social economy of certain savages, and sent home, as the result of his voyage, the brief report—"No manners, customs beastly."

Then, for those who really seek for information about America and American ways, there are the travellers' tales, a fresh crop of which spring up yearly, though those who read them and put their faith in them would do well to bear in mind the French proverb, "A beau mentir qui vient de loin." These travellers too, who are for the most part young men, seem to make their observations chiefly on young ladies as being to them the most interesting section of society. They report that, besides women doctors, women lawyers, clergywomen, and all the rest of the wild sisterhood who range at will across the American continent, there are American girls who, with all the grace and elegance of Frenchwomen, and the easy simplicity of Englishwomen, have in addition a certain fragile beauty and vivacity of thought peculiarly their own, and wonderfully winning. They tell also of social intercourse on so free and easy a footing that young people may enjoy one another's society without their pleasure inflicting a proportional amount of penance on their elders. This state of things these travellers find so pleasant that they even venture to advocate its introduction into the old country, though at the mere proposal of any such revolution they have the whole army of chaperons up in arms against them, prepared to resist such innovations to the death. These good ladies feel that, should Mrs. Grundy countenance the scandal of young ladies going unchaperoned into society, their reign would be at an end; they would have to think out some higher way of keeping that influence over their come-out daughters which their present privilege of acting as constables to them confers. No wonder then that they try to put off the evil day of the introduction of so-called American manners.

With American manners, however, the book before us has nothing to do. Mr. de Vere treats only of Americanisms so far as language is concerned. Of these he says with great truth:—

The largest part of so-called Americanisms are nothing more than good old English words, which for one reason or another have become obsolete or provincial in England, while they have retained their full power and citizenship in the United States. Thus all the provincialisms of the Northern and Western counties of England have been naturalized in the New England States.

Besides these "old friends with new faces," as Mr. de Vere calls them, which form one of the longest chapters of his book, and among which we find many a good English word now unhappily fallen out of use at home, the language spoken in the States has been enriched by a motley host of recruits from other nations. We find there Indian words, and Negro words, besides a mixture of French, Spanish, and High and Low Dutch. With so many sources to draw from, we might with some show of reason expect to find the vocabulary of our American cousins rich in words suited to express the nicest shades of meaning. But they seem to have an unlucky gift for making new and bad words, and choosing to use the words thus made rather than the better ones which are already within their reach. Hence it comes that slang words are so rife among them that a stranger must of necessity consult a dictionary if he would get at the meaning of the queer expressions which he hears in daily talk or reads in the daily papers. This constant stream of slang, which is the force at work in the destruction of all modern languages, seems to come pretty equally from both ends of society. The ignorance of the lowest rank, which lets them have at command but a very small part of the stock of words in any language, leads them to invent new ones to express their meaning. On the other hand, the idea of exclusiveness, which is the very life of their society, leads to the use in the highest rank of certain words and phrases not current in any other. Ignorance of these words and phrases at once betrays the intruder into their charmed circle; but still they are just as much slang as the slang of pickpockets or watermen. Thus every rank of society, every trade, every profession, every family even, has its own particular jargon. But it is clear that the slang which originates among the better educated classes must be the most dangerous to any language, as it is the most likely to force its way into the literature of that language. Mr. de Vere agrees with other writers on the subject in looking on the clergy as the chief offenders in this respect. As by the "clergy," however, we find that he means ministers of all denominations, it does not surprise us much to find such verbs as "to fellowship," "to happily," "to donate" "to funeralize," and strangest of all "to doxologize," laid to their charge. This doxology does duty in many different ways. Under the still odder form, "sockdolager," it has become an every day word, and stands for the end of anything and everything, "from a word that closes a debate to a blow that finishes a fight." "Sorkdolager" means also a double hook, the two parts of which close with a spring as soon as the fish bites, as if in grim expression of the unavoidable result.

In the geographical names can still be traced the history of the different districts over which the Indians, the Dutch, and the French by turns held sway. The memory of the Red Man lingers in the musical names still borne by the lakes and rivers

* *The English of the New World.* By M. Schels de Vere, LL.D. New York: Charles Scribner & Co.

whose waters were skimmed by his canoe long before the white man dreamed of his existence. Still, too, the white conqueror is universally known by the name *Yengge*, now *Yankee*, which was the Indian's attempt at saying "English," and by which he distinguished the New Englanders from the dreaded "long knives" of Virginia. French names have suffered more than Indian ones at the hands of the English settlers, who in dealing with them have yielded largely to the temptation we all feel to turn a name which we don't understand into something that shall have a meaning, no matter how absurd that meaning may be. Thus "*Bois Brûlé*" has become "*Bob Raly*"; "*Chemin Couvert*" "*Smack Cover*"; and, strangest of all, "*Rivière du Purgatoire*" is now known as "*Picket-wire River*." Another instance of this tendency of the popular mind is found in the name of the flower *Lobelia*, now invariably written "*Lowbelia*"; while another plant of the same family, but of larger size, is known only as "*Highbelia*."

Some of the most picturesque words still to be heard in the States were left there by the Spaniards; such are "*Savanna*," originally a linen sheet, "*corral*," "*stampede*," "*Jomacke*," and so on. From the Spaniards, too, come the words used to indicate the different degrees of colour, from the full-blooded Negro down to the *Mustee* and *Mustafina*. With "*Quadrone*" and "*Mulatto*" we are all familiar, but it is something new to learn that "*pickaninny*" is a corruption of "*pequeno nino*," little child; and that *Sambo*, which now stands for a black, pretty much as "*Paddy*" does for an Irishman, is neither more nor less than the Spanish "*Zambo*," handy-legged.

In treating of the High and Low Dutch infusion, Mr. de Vere makes an elaborate apology for the carelessness of his countrymen in calling both alike Dutchmen:—

It is a misfortune peculiar to patronymics in American hands that they suffer a sad perversion of meaning. As few journalists even care to distinguish the Scot from the Englishman, and are apt to call both alike Englishmen, so people throughout the Union are in the habit of confounding the Dutchman and the German, and call them all Dutchmen.

"It is evident," he adds, that this arose not from a tendency to underrate, as when Frenchmen were dubbed *Froggies*, and the like, but from a courteous effort to call the Germans by their own name "*Deutsch*," which, being somewhat difficult to pronounce, readily changed into "*Dutch*." It is strange that, having got so near the truth, still Mr. de Vere does not see that *Deutsch* and *Dutch* are merely the same word with a slight change in spelling. That he does not see it is clear, for he goes on to plead as an excuse for this use of the word "that the German immigrants themselves but too readily acquiesced in the designation, and adopted it themselves." Surely he did not expect the people who show their devotion to their Fatherland in every way but by ~~striving~~ in it, to deny their nationality by refusing to bear its name? Nor does it seem to strike him that the name *German* would, to a newcomer fresh from *Deutsch-land*, be perfectly unmeaning. The Dutch words, High and Low, seem to cluster chiefly round the frying-pan and the market-stall. The *Knickerbocker* days are recalled whenever "*cookers*," "*noodlejees*," "*speck and applejees*," "*apple-snits*," or any of the other dishes sacred to the memory of the notable *Vrowjees*, appear on the table. They linger, too, more picturesquely in the "*stoop*" of the house porch, the "*bush*" of the uncleared country, and the "*Paas-Blummachee*" and "*Pinxter-Blummachee*," names still borne by the flowers which bloom most freely at Easter and Whitsuntide.

One of the greatest peculiarities of the Yankees' English is the odd use which they make of good English words. They talk of a fine "*suit of hair*," meaning thereby not a penitential garment but abundant tresses. In the same way stones are "*rocks*," pieces of linen "*rags*," earth "*dirt*," and so on. Other words, again, which have fallen to the lowest depths of disgrace in this country have with them kept their ancient dignity. First and foremost of these is "*bug*." That harmless monosyllable, for which English affectation has contrived countless euphemisms, is in America freely applied to every sort of beetle. There are "*tree-bugs*" and "*rose-bugs*," "*gold-bugs*" and "*squash-bugs*"; in fact, every variety of bug. We have even heard of a Yankee who went all over the wonders of the British Museum with the utmost indifference till he came to the Colossal Beetle, when he stood still in delighted admiration, exclaiming "*My eyes, what an almighty big bug!*"

Another class of words which are, in the truest sense, Americanisms, are those suggested by the physical features and the natural history of the country. Mr. de Vere would have us believe that the use of exaggerated expressions, especially among Western men, is due to the influence of the prominent features of the landscape of the West. It is thus that he seeks to excuse the constant misuse of the adjectives "*tall*," "*steep*," and a host of others. We cannot quite agree with this theory. Would Mr. de Vere convince himself, or any one else, that the mind of the man who speaks of a "*pretty loud smell of varnish*" is unconsciously influenced by the roar of Niagara, or by the roll of the thunder among the great mountains of the West? The habits of the racoon and the opossum have likewise given the Yankee many highly suggestive words. From their well-known trick of taking refuge in a gum-tree when hotly pursued, a "*gum-game*" is now the favourite word for any sly attempt to get out of a difficulty. Among plants, the hickory-tree has furnished a convenient adjective, which at once explains its own meaning to all who know the durable yet pliant nature of the wood. General Jackson was known as "*Old Hickory*," and a "*hickory shirt*" or a "*hickory coat*" are garments that will stand any amount of wear and tear. A hickory Catholic, too, is one free from bigotry and asceticism.

Perhaps it is owing to the hickory nature which the Roman Catholic Church puts on in the States that it gets on so well with all the other strange sects which flourish luxuriantly there, and whose sundry peculiarities give a colouring to the social life and to the language. To which of them all Mr. de Vere himself belongs we cannot quite make up our mind, for he seems to have some views about festivals which are quite new to us. We know that the question of the observance or non-observance of Christmas Day was one of the provoking causes of a long and cruel civil war, but we did not know before that there could be two opinions as to the reason why the day is kept at all. Yet Mr. de Vere begs his readers not to forget

the one *Dutchman* whom all American children hold dear and in great veneration. This is Santa Klaus, as the name is commonly though erroneously written, in reality *Klaas*, the abbreviation of *Nicholas*, a Dutch saint of undoubted nationality, whose name is heard everywhere when his own day, Christmas, is drawing near.

Perhaps Mr. de Vere has studied hagiology at the same source as the lady who bought Foxe's *Book of Martyrs* in order to read up the story of St. Ursula with her attendant virgins, and such other legends, before going for a tour on the Continent. If so, it is not surprising that he knows so little about the patron of thieves and children. Still even an almanack would tell him that the day dedicated to the Saint is the 6th of December, and not the 25th; and, considering that he makes it a matter of conscience to limit the term *Dutch* to Hollanders only, we are somewhat surprised to find him calling Saint Nicholas, who, if we mistake not, was born somewhere in Lykia, a *Dutchman*. So complete a vocabulary as that which Mr. de Vere has here put together of all the queer words and phrases in use among his fellow citizens ought certainly to be of great service to travellers who meditate a visit to the States. If they study it well they will avoid being called to order for such mistakes as calling a possum a "*creature*" instead of a "*varmint*," and will be above showing any signs of surprise when they are told that a lady is "*rubbing her gums upon the mat*."

LEWIS'S JUVENAL.*

IT is a satisfaction to find fruits of scholarship and liberal studies in our younger public men, and a dash of Juvenal is not a bad element in a modern training for politics. Mr. Lewis has already distinguished himself as a speaker in the House of Commons, and we may hope that his translation of Juvenal will be profitable to others as well as to himself. He has not only given us a careful and skilful translation, but his annotations are very serviceable in assisting us to an adequate appreciation of the satirist:—

Juvenal [he says in his introduction], in depicting character, in drawing scenes, even in turns of expression, is of all ancient authors the most distinctly modern. . . . If we believed in the metempsychosis doctrine, we might almost believe that the soul of Juvenal reappeared in Hogarth. . . . There are many ancient writers with regard to whom it is necessary for us to make a considerable mental effort in order to throw ourselves back into the times in which they wrote, and to conceive the tone of thought which prevailed in their day. Juvenal, when the difficulties of another kind which mark his writings have been surmounted, requires no such effort. In his way of looking at things, and especially at the grotesque side of things, in his word-painting, in his illustrations, he is essentially a man of the present day. He has been accordingly often imitated—by Bohn and Johnson, for instance—while such writers as Aristophanes and Plautus are incapable of being modernized with any degree of success.—P. 217.

While the truth of these remarks is incontrovertible, it may be doubted whether the talent for writing original satire, or of reproducing it in numbers, still exists amongst us. And if, as is undoubted, satire is at all times a wholesome corrective of abuses in political and social life, the next best thing to having a band of satiric poets is to imbue speakers and writers with a spice of the Juvenalian tone, and to arm them with the weapons which Juvenal wields so powerfully. Mr. Lewis makes out a good case against modern translators. Madan's literalness is marred by obscurity of expression. The prose version of Evans, in Bohn's series, though spirited and scholarly, is in many passages untrustworthy on account of doubtful renderings. If a reader manfully sets himself to pick out the meaning of Juvenal without the aid of a translation, he must either resort to the incomplete and long-delayed edition of Mayor (the instalments of which promise much gain, as we showed a little time since, to the student of Latin and to professed scholars, but suggest to those who have less time to spare, as they do to Mr. Lewis, "*a thin stream of commentary on Juvenal, running under the surface of a vast sea of citations and excursions*"); or he may struggle with the enigmatic notes of Mr. Simcox, in the Juvenal of the *Cætana Classicorum*, against which—unless the new edition has removed a patent fault—Mr. Lewis has hit a blow not a whit harder than was deserved, in a citation of six consecutive notes on the first nine lines of the Fourteenth Satire as a perfect specimen of what "*notes for boys ought not to be*." We might add—nor for men either; for this annotator ignores the process of conveying his meaning in full, and expects students to divine from a single sentence, condensed over-much, the drift of what it was the duty of an interpreter to make perfectly clear.

* *D. Junii Juvenalis Satiræ. With a Literal English Prose Translation and Notes. By John Delaware Lewis, M.A., Trin. Coll., Camb. London: Trübner & Co. 1873.*

There is more help, it must be allowed, in Prior and Escott; but something fuller and more helpful still has been a desideratum; and this Mr. Lewis, to our thinking, has gone far towards furnishing. Beneath the Latin text in each page he gives a well-considered translation, not too literal to spoil the zest of striking passages and descriptions, and he appends in the latter half of his volume a body of notes which exhibits such research, skill of illustration, tact in selection, and discrimination in weighing conflicting interpretations, as mark him out, if not as a scholar of the dry-as-dust old-world type, yet certainly as a most agreeable and trustworthy interpreter of a classical poet. Into all his criticism he imports a refreshing common sense. He is not enamoured of a clue to interpretation in proportion to its reconditeness and its far-fetchedness; yet it is evident that he has so read and pondered his author as at times to have discovered a clearer connexion in Juvenal's train of thought and process of arrangement than editors of greater pretension have so much as dreamed of. As an instance of this we may notice his handling of a passage in the Third Satire (vv. 139-43), where he not inaptly traces a connexion between *servat* in the lines—

Quantum quisque suâ nummorum servat in arca
Tantum habet et fidei—

and *servavit* in the verse almost immediately preceding them—

Vel qui
Servavit trepidam flagranti ex æde Minervam.

Working out the sentiment of these lines, and glancing at such proverbial expressions of it as the "*assen habous, assen valens; habes, habebis*" of Petronius, he sees an allusion to *servavit* in *servat*—e.g. "You will get more credit by saving money than by saving a goddess." In the same spirit, discussing the lines—

Agmine facto
Debucent olim tenues migrasse Quirites! (162)—

"The poor among the Romans ought long ago to have emigrated in a body"—Mr. Lewis explodes the far-fetched allusion to the secession to Mons Sacer, but he is alive to the figure of *rapid προδουλιαν*, which the satirist uses. He notes the comic martial tone of the beginning of Juvenal's sentence, and its unexpected and designedly impotent conclusion:—"The poor Romans ought long ago to have formed themselves into array, and—*migrated*." Such nice discoveries of point and connexion must always be judged of by their likelihood, but we confess that these two recommend themselves to our judgment as both probable and ingenious. Nor is Mr. Lewis, though evidently quick to detect niceties, so enamoured of what is far beneath the surface as to overlook what is suggested by a plain view of the cases in point. In Sat. I. 105, "*Sed quicunque tabernæ Quadringenta parant*," he adopts Heinrich's view that the five banking-houses in the Forum mentioned by Livy (xxvi. 27) are meant, and not five shops let out to rent. Thus the sense will be, "My transactions on Change bring me in an income of four hundred thousand sesterces," and the difficulty of a very high rent for a Roman shop is avoided. Again, at Sat. IV. 112, the allusion to "*Fuscus marmoreâ meditatus proelia villâ*" is diversely taken by commentators to mean (1) that Fuscus studied the art of war in his villa; and (2) that the degrading life of a Roman senator in his day did not suit him, and so he pined for active service. Mr. Lewis espouses the first view as most consistent with the satirical tenor of the preceding words, and he is here borne out by Mr. Simcox in one of his redeeming notes, to this effect:—"Fuscus, whose heart was on war, though he had no better school for fighting than his villa, might as well have died of braving Domitian as of blundering in Dacia." Upon the words "*Rupto poscentam sulfura vitro*," "*calling for sulphur matches in exchange for broken glass*" (v. 48), Mr. Lewis throws the true light by quoting Martial, i. 41, 4, 5—"Qui pallentia sulfurata fractis Permutant vitreis"—and showing that, whereas there is no evidence of the use of sulphur in mending glass being known to Juvenal and his contemporaries, the exchange of broken glass for sulphur-matches was common and notorious.

Another proof of this new translator's care, as well as acumen, is the decision with which he sets Evans and other translators and annotators to rights with cause shown wherever he differs from them. Thus at ii. 153—"Sed tu vera puta?"—he corrects the obviously unsound translation, "Nevertheless do thou believe them true?" and renders the words "But suppose them true;" explaining their drift to be a query of the satirist—"How, if for argument's sake we allow the popular Inferno to be true, with Charon and his skiff, and all the rest, these wretched fellows would be received, when they got there?" At ii. 170 he renders "*Sic pretextatos roserunt Artaxata mores*," "Thus it is they carry back to Artaxata the manners of young Rome," rightly deeming this version more in keeping with the context, which speaks of the contamination of Armenian hostages by a prolonged stay at demoralized Rome, than the interpretation which makes Artaxata the nominative, and "*roserunt*" equivalent to "recalls" or "imitates"—i.e. "So Artaxata imitates young Rome's manners." Again he ventures to correct Dryden's clever version of iii. 72, where he brilliantly mis-translates

Viscera magnarum domuum, dominique futuri.
Work themselves inwards, and their patrons out.

"Glorious John" evidently jumped at the conclusion that slaves, foreigners, and adventurers, such as the satirist was speaking of, insinuated themselves into great houses more summarily and speedily than the text warrants. The rendering is antithetic, but

forced and strained beyond what the Latin justifies. Mr. Lewis limits the sense to "Who are destined to gain complete control over these great houses," and parallels Juvenal by a reference to Lucian. The expression "*diruque a ponte satelles*," applied by Juvenal in Sat. IV. 116 to Catullus Messalinus, who had been a Roman governor and a consul in the reigns of Vespasian and Titus, has been misunderstood by almost every annotator and translator, and Mr. Escott only represents his fellows when he renders it "a beggar fresh from the bridges." But Mr. Prior, who has many merits, though his little edition is not faultless, had already seen that the words only mean "a hateful originating satellite," and Mr. Lewis hits the true sense by translating it "a horrible satellite of the bridge-kind," and explaining "*satelles à ponte*" as "a satellite such as one might pick up at one of the bridges," "a beggarly flatterer." In v. 153—

Tu scabio frueris mali, quod in aggero rodit
Qui tegitur parvâ et galeâ, metuensque flagelli
Disce ab hirsutâ jaculum torquere capellâ—

Mr. Lewis translates "You enjoy a scabby apple such as on the rampart the monkey gnaws, who is dressed up with a shield and helmet, and in dread of the whip is taught to throw his dart from the back of a shaggy goat." He is quite right in taking the words to refer to a monkey and not to a recruit, and we are rejoiced to find that he not only pooh-poohs the objection of Mayor and Simcox, that "*ab equo jaculari*" is not found in Latin, but also cites evidences of the use of "*ab equo*" in such collocation from Propertius and Ovid. The passage from Propertius had already been communicated to us by Mr. Calverley, when, in reviewing Mr. Simcox's *Juvenal*, we demurred to so sweeping a statement.

In many other instances we might illustrate the thoroughness of Mr. Lewis's critical work, did we not fear to tax our readers' patience. It must suffice to say that he scarcely ever disappoints us when we want clear translation, or borrowed light upon a dark passage. Take for an example a reference to the Jews in Satire VI. 158, 9:—

Observant ubi festa mero pede sabbata rogas,
Et vetus indulget sentibus clementia porcis.

Mr. Lewis translates literally, "Where kings observe their festive sabbath with naked feet, and long-established clemency is indulgent to aged pigs," and notes that this is an instance of the confused idea which Juvenal and his countrymen had of Jewish ceremonies, though in xiv. 96-106 he gives a fair enough sketch of their creed. What is most important, he illustrates the phrase "*mero pede*" very nicely by "*calceâ meri*" in Prudentius Peristeph. 6, 91. By the way, however, he is scarcely correct in saying, upon Satire XIV. 251 (cf. X. 247), that Hesiod's statements about the crow's longevity are not found in the extant Hesiod. Fragments of four or five lines, embodied in Goettling or Didot's editions, ought to take rank as part of Hesiod, and this passage with others of the fragments has been recently translated. *Apropos* of longevity, we may just notice the nice little point of criticism which Mr. Lewis makes on Satire XI. 64, where he discusses whether Juvenal did not rather imitate Martial, Epigr. X. 48, than Martial him, as Gifford would have it supposed. The question turns on Juvenal's speaking of himself as an old man in v. 203 of the Eleventh Satire. Our newest critic on Juvenal reasonably holds that too much weight should not be attached to this, especially in the case of a satirist; and he cites the language of Thackeray about himself as an old man, when he was but forty, as well as that of Persius, who in point of fact died comparatively young, in his Prologue and his First Satire. Throughout Mr. Lewis's notes such questions as this will be found elucidated by a happy bringing together of the new and old. A quotation has already been given from Mr. Lewis's introduction, drawing attention to the singular "modernness" which invests Juvenal's images and portraiture. A host of illustrations of this trait in his Satires might be given; but it will serve the purpose to string together a few of them, with Mr. Evans's modern parallels, or our own. When in iii. 5 the satirist says, "*Ego vel Prochyta prepono Suburrâ*—a lonely island to a thoroughfare at Rome—it is, as Mr. Lewis suggests, as if he had said, "I prefer even Lundy Island to Cheapside." The mention in the same satire (115) of "*gymnasia*" and "*facinus majoris abolæ*" suggests to him an antithesis between the "undergraduate's and the doctor's gown." The allusion, in "*perituri cista Latini*"—"the chest of Latinus" in danger of his life (vi. 44)—to the hair-breadth escapes of intriguers, which would often be represented in farces such as *Latinus* played in, is excellently paralleled by Falstaff's clothes-braket; the "gold coins inscribed with '*Dacicus*' or '*Germanicus* in a rich dish" (vi. 204-5) are like "so many Victorias" (or "Napoleons") shining on a plate. Elsewhere a son-in-law is ineligible because "*puellæ sarcinulis impar*"—i.e. "unequal to furnishing a trousseau for the young lady." Fortune-hunters buy rich presents of fish from the provinces to offer to wealthy widows, who will sell them again, just as nowadays duplicates of wedding presents are conveniently swapped or resold to the jeweller. Two little parallels we may add which may interest the ladies. Messalina [save the mark!] puts on a flaxen or yellow wig, because that was the fashionable colour for the hair at Rome (vi. 120), and her own hair was black; and two lines in a later part of the same satire (454-5)—

Nam quæ docta nimis capit et facunda videri
Crure tenus medio tunicas succingere debet—

suggest a very ancient precedent for the use of "Bloomers."

Apropos of the wines served to guests at the rich Roman's table

according to their grades, Mr. Lewis quotes from Stocker a story how at the close of the last century the claret at a visitation lunch never got beyond the rectors to the curates below the line. What would the curates say to this nowadays? Before concluding our remarks we must show, by two examples of Mr. Lewis's pertinent and copious illustration, how very closely satire is connected with epigram. In Sat. VI. 229 Juvenal says of a woman who in modern times would have figured as a bigamist over and over again:—

Sic crescit numerus: sic fluit octo mariti
Quinque per autumnos, titulo res digna sepulchri.

The translator we have been reviewing quotes as a parallel Martial's Epigram, IX. 16:—

Inscripit tumulo septem celebrata virorum
Sic fecisse Chloë: quid pote simplicius?

The double-entente in "so fecisse" may be taken to mean that she had put up the tombs of, or done for, eight husbands. In Booth's *Epigrams*, p. 45, the original is rendered thus freely:—

In Stepney churchyard seven tombs in a row
For the reader's soft sympathy call;
On each—my dear husband lies buried below
And Chloë's the widow of all.

In the same satire (v. 276) the language which Juvenal addresses to a deceived husband "Tu tibi tunc *cornica* places,"—i.e. "You are delighted with yourself then, you hedge-sparrow"—is explained by one scholium to refer to the bird which hatches the cuckoo's eggs instead of its own, and Mr. Lewis accepts and endorses the fitness of this nickname for one who is rearing up as his own the children of an interloper. We are reminded of the adagial epigram:—

The hedge-sparrow fed the cuckoo so long
That she had her head snapt off by her young.

And so apparently is Mr. Lewis. The Sixth Satire is one which it is a mixed pleasure to read. It abounds in splendid bits of satire, at the same time that it is in many parts coarse and gross. We are not sure that the translator has omitted quite as much of it as he might have done; but we are quite sure that he has brought to bear upon it and its best points a degree of acuteness and judgment which are highly to his credit as a critic and scholar. Whatever his future career, he will not have found it lost labour to translate and annotate Juvenal; and we have no hesitation in recommending his work to our readers, more especially to those who are adults.

WALKS IN FLORENCE.*

WE can scarcely hear too much of Florence; after all that has been written, more remains to be said. The two sisters who conduct the traveller in these pleasant "Walks" have made themselves by residence and reading familiar with the streets, the churches, and the galleries of that city of flowers. The work may be used as a trustworthy guide-book; we have examined its pages for the purpose of detecting what might have been forgotten or left out, and throughout we find the most painstaking compilation from the best authorities. This comprehensive completeness is perhaps all that the public has a right to look for in a work which is of the nature of a handbook, and yet the general reader would have been glad if it had been compatible with the authors' plan to throw more life into the narrative and greater individuality into the criticisms. From a literary point of view the sentences are too uniform in construction, the style is timidly pruned down to almost a bald simplicity, and though praise is due for the suppression of that emotional writing which is the bane of female authors when they approach fine-art topics, we could not have blamed the intrusion of touches such as give charm to the criticisms of Mrs. Jameson. The famed Boboli Gardens, which commonly betray travellers into the use of highly coloured superlatives, are by the Misses Horner thus depicted in the faithful style of a catalogue or inventory:—

Tall trees and hedges of bay, cypress, olive, ilex, and other evergreens divide the ground into endless walks, shady pathways, and groves adorned with statues of unequal merit and varied with water containing gold fish. Above all towers the noble stone-pine, and beneath are banks of roses and grassy lawns, which refresh the eye, fatigued by the glare of the city. In the midst of a large sheet of water near the Porta Romana is a group of statuary by Giovan Bologna, placed on what is called the Isolotto, from whence the ground rises abruptly; and an avenue of tall trees and hedges, with statues at intervals, leads to a plateau, commanding, towards the south and west, splendid views of the town and surrounding country. The little meadow on the plateau is called L'Uccellaja, probably from having at one time been a bird-snare, so common around Florence. A little higher is a winding staircase, the entrance to the garden of the Cavaliere, where there is a casino or villa, with a small garden, from whence is obtained a distant view of hill and valley in the direction of Arezzo and Rome, &c.

The accounts of the picture galleries are careful and even critical, in proof of which may be quoted the well-considered verdicts passed upon works that have been for some time under controversy. Thus the genuineness of the "celebrated picture," "The Three Fates," by Michael Angelo, in the Pitti Palace, is properly called in question; in like manner doubt, at least as to the name, is thrown on the so-called portrait of the "Formarina" in the Uffizi. When we were last in Florence it had become the fashion to assign this forcible and highly coloured head and bust to one of the Venetian painters. We would have wished for less timidity

on the part of the authors in coming to some decisive opinion on a still more dubious work, "The Last Supper," in the refectory of a suppressed convent, ascribed with the easy credulity of Florantine critics to Raffaele. After careful examination of the work itself, with drawings and other evidence adduced on the spot, we have never been able to make Raffaele responsible for this inferior production. We are glad to see that Signor Cavalcaselle is among the disbelievers; Mr. Layard, too, in a monograph for the Arundel Society, asserts that the work "is certainly not" by Raffaele.

The Convent of San Marco, in the days when we knew Florence, was not accessible to ladies, but under the new régime the cells are open to women as well as to men; consequently the frescoes by Fra Angelico, who decorated the monastery in which he dwelt, are described in detail by the Misses Horner. It is scarcely to be expected that anything fresh can be said of these oft-lauded spiritual creations; but at any rate the little that is stated may be trusted as far as it goes. Thus when we refer to one of the most important of these compositions, "The Crucifixion," we find the remark, "The background was probably once blue, but in its present state is a dull red." Opposed to this common sense explanation, and in face of the fact known to all students of Italian frescoes that the blue of lapis lazuli falls as dust from the wall, exposing the ground beneath, there has been advanced the theory that the red which now fires the background to this Crucifixion was expressly chosen by the artist as symbolic of the woe in which nature shared when the sun was darkened and the veil of the Temple was rent in twain. That pictorial effects beyond the ordinary course of nature are looked for by certain writers may be judged from M. Rio's reflections, suggested by this very picture:—

Every time [writes this mystic critic] that Angelico painted Christ on the cross, tears flowed as abundantly from his eyes as if he had assisted on Calvary at this last scene of the passion; and it is to this sympathy, so real and profound, that we must attribute the pathetic expression he has imparted to the different personages who are witnesses of the crucifixion.

It is impossible to conceive of a greater contrast than that between the passage just quoted and the whole tenor of the work now under review. These "Walks" are not reveries, but realities; these criticisms are not triumphs of faith, but truths of the rationalistic intellect. Yet, while they have the merit of being clear and concise, they naturally lack the spiritual insight which often reward students who indulge in mysticism and emotions and acknowledge the sway of imagination.

The chapter devoted to the oft-described Mausoleum of San Lorenzo is distinguished by touches of thought altogether unusual in these pages. The whole family of the Medici, it is curious to observe, are here treated with a scorn which is but natural to writers whose family name is known in the annals of liberty. Turning from the Medici to the sepulchral monuments, the Misses Horner are entitled to speak of sculpture, inasmuch as the use of the chisel is not unknown to them; a careful posthumous bust of their friend Mrs. Jameson was executed by one of the sisters. Unwonted ardour animates the tribute paid to Michael Angelo, whose character as a man and whose genius as an artist equally command respect. We are made all the better to understand "Il Pensiero"—the statue to Giuliano, the youngest son of Lorenzo the Magnificent—by the quotation of a sonnet written by the Duke in defence of suicide:—"It is not cowardice, nor does it spring from cowardice, if to escape the terrible things which are in store for me I hated life and longed for its end." It will be remembered that Michael Angelo has made the head meditative and melancholy from the solemn shadow cast by the helmet. "What from beneath the helm-like bonnet scowls?" asks the poet Rogers; "is it a face, or but an eyeless skull?" "The mien is noble, most majestic." The colossal recumbent figures on the tomb of Giuliano, which rest, after "la terribil' maniera," in a kind of uneasy unrest, "represent Night and Day, typical probably of Death and Resurrection." The two companion figures on the opposite tomb personify Twilight and Dawn. The following criticism on these four allegorical statues proves how greatly these volumes would have gained in animation and power had the writers more often ventured to give free play to the pen:—

The majestic female figure of Night, or Death, is wonderfully real. She is crowned with poppies; an owl is at her feet, and beneath her pillow is a mask, symbolical of the body from whence the spirit has departed. Though not beautiful, there is such an awful grandeur as well as repose in that queenly woman, that we can well comprehend how in a period of war and cruelty, treachery and injustice, when good men were harassed by doubt and truth was shrouded in darkness, Michael Angelo must have found peace for a few hours whilst embodying the image of deep, if not dreamless, sleep. In contrast to Night, or Death, is the huge figure of Day, or Resurrection, rising from his rocky bed. . . . Michael Angelo might have intended to represent in these four allegorical statues the times in which he lived, when those very Medici had brought shame, grief, and ruin on their country. Dawn awakens to sorrow, Day rises wearily, Twilight brings repose, but Night alone is to be envied the calm of sleep; but she too must wake.

The changes which have been rife in Florence within the last ten years do not afford as much novelty of material as might have been anticipated. We are told, however, that under the government of Victor Emmanuel the Tuscan people have little cause to regret the loss of the old Grand Duke, whose drowsy mind and manners have been satirized by one of his former subjects thus:—

The Tuscan Morpheus gently moves along,
With poppies and with lettuce garlands crowned;
Eager for immortality he drains
Our pockets and the marshes.

* *Walks in Florence.* By Susan and Joanna Horner. With Illustrations. London: Strahan & Co. 1873.

Florence we remember as far back as the memorable year 1848, when the late Grand Duke thus caricatured remained still the idol of his people. We happened to be present when, on his triumphal entry into Siena, the horses were taken from his carriage. The taxes were then light, living was cheap, the Tuscans were content and given to *festas*; in the churches might be seen women who for refinement and beauty seemed to have but just stepped from a canvas of Raffaello; the galleries were free to students, copyists, and the public generally; along the streets, when the cool of evening came, might be heard young men with guitars singing Italian songs in company as they walked homewards after an excursion beyond the city walls. Florence has suffered much since those days, and she is certainly not more pleasant, at least to lovers of art and of simple modes of living. We do not account as very important the fact recounted in these pages "that the Palazzo dei Pitti is no longer inhabited by an Austrian prince." More in the way of an improvement may be the embankment of the Arno down to the Cascine. Other works, not without importance, have been put in hand or completed. For example, the unfinished façade of the Cathedral had given rise to a proverb; whenever any work would never be ended, the saying was "La non sarà; già, l'opera di Santa Maria del Fiore." The new Government undertook the completion of this façade. In like manner was opened the covered way which connected the Uffizii with the Pitti Palace. Changes have also taken place in the Piazza del Gran Duca, now the Piazza della Signoria; and revolutions have been wrought in other parts of the city. It is not clear to how recent a period these volumes come down; we observe no mention of a late announcement that Michael Angelo's "David" was about to be removed from the open square to the adjoining gallery. In Florence and other cities where every stone is an historic monument we are always fearing what change may come next.

One of the vicissitudes inevitable with the lapse of time is that the living join company with the dead; thus Campo-Santos once scantily tenanted have become populous. There are few spots that the English traveller visits with more interest than the Protestant burial-ground in Rome, where are the simple graves of Shelley and Keats. And now kindred associations cling to the Protestant Cemetery of Florence; here lie buried Elizabeth Barrett Browning, Mrs. Trollope, Mrs. Theodosia Trollope, Arthur Clough, and Theodore Parker. We regret to find that this "God's acre" is not so picturesque as formerly. Recent demolitions have spoilt the quiet seclusion of the spot, and in place of ivy-covered walls and tall old cypress trees there are now only a neat iron railing and a few spruce shrubs.

OFF THE SKELLIGS.*

TO clear up at once what to most people would present a geographical puzzle, we will begin by explaining that the Skelligs are two bold and bare peaks off the South-West coast of Kerry. The Great Skellig is described as standing nearly ten miles out to sea; and, in a storm, the "powdoring spray" of the Atlantic billows is sometimes known to wet the ledges of rock three parts up the thousand feet of sheer and towering precipice. This monster crag, as well as its companion the Lesser Skellig, peopled by and resonant with myriads of gannet, has been selected by Miss Ingelow to give a title for her story, because the whole action centres round a sudden and terrible adventure which breaks in upon a quiet yacht cruise in the immediate neighbourhood of the rocky giants. Uncle Rollin's yacht (he is uncle and guardian to the heroine, Dorothea Graham) finds herself one dark night running straight upon a burning vessel; and she by and by contrives to track out and to rescue the greater part of the passengers and crew, as they drift along on the forlorn hope of a raft. And here the thread of the narrative, in its crudest and simplest form, may be conveniently indicated. The most remarkable of all the passengers, and the man who, at tremendous risks and by superhuman efforts, has succeeded in keeping things together on the raft until the yacht brings relief, is Mr. Giles Brandon, who comes on board so battered and scarred and blackened by the fire that he is at first taken for a common sailor, but who turns out, when surgical skill and Dorothea's nursing have been brought to bear upon him, to be a gentleman of cultivation and of fortune. He is more than this, for he has been largely concerned in working out schemes and experiments in philanthropy, and is altogether a man of originality and of power. Quite early in the second volume, while the yacht is still moving quietly onwards towards a favourable port, it becomes sufficiently clear that Dorothea and Mr. Brandon are destined, unless some cruel and insufferable counterblast strikes across the course of events, to reach the final and absolute companionship of marriage. It is in her unique conception of a sequel, from this point to the end of a fourth volume, that the real power and distinctiveness of Miss Ingelow's narrative are principally to be remarked. Both Dorothea and her patient, whose qualities are brought into excellent relief by juxtaposition with Tom Graham, the admirably drawn brother of the heroine, are too sensitive, too reserved, and too much beset by those uncertain speculations about each other which never fail to arise in highly sensitive natures, to admit of their going through the ordinary experience known as "falling in love." A profound interest appears in either

case to pass into love without the consciousness of such a transition. And in the meanwhile an obstacle to a deeper and more permanent understanding does arise, in a quarter entirely unsuspected by either. For Giles Brandon has a half-brother, everybody's favourite and his own into the bargain, a spoiled young rogue over six feet and under twenty years, who thinks fit to fall in love with Dorothea himself; and, not content with that, he goes on to propose marriage, succeeding at last in not only carrying the point of a settled engagement, but in getting the day of marriage fixed, immediately after which the young pair are to emigrate to a home in New Zealand.

We are indicating, as we said before, only the crudest form of the narrative, and we may as well make that complete before commenting on the interesting and delicate workmanship of the superstructure. Valentine, who has unwittingly raised what seemed a hopeless barrier across the path of the bemused lovers, each unconsciously deluding and each deluded, is himself the cause of its removal. The day of the wedding draws near, the invitations are sent out, all the orders given, and the preparations for New Zealand in a most advanced stage, when, at the eleventh hour, the mercurial bridegroom plays truant and finds that he loves another. He is in reality far more boy than man, in spite of his inches; half of the charm which he had found in the engagement turns out to have arisen from the dignity and importance of the situation, and especially from an irresistible pleasure in "cutting out young Prentice," an idiotic and philandering schoolfellow; and he thus collapses at the first touch of reality in his career, finding a certain Lucy Nelson to be "the loveliest of her sex," and desiring henceforth to regard Dorothea as "the dearest of sisters." After this explanation the end is not far off. Giles and Dorothea, though the situation is not at first an easy one for either, soon begin to see things under clearer and truer lights; the mists of doubt and misunderstanding melt away, and they are safely married at length, though not until the very last page of the story, nor without one concluding hitch during the progress of the very ceremony itself. The history of this little accident gives so good a specimen of Miss Ingelow's minute and characteristic method in narrative that we shall make no apology for quoting it entire:—

But, as if it was quite impossible that anything concerning me could be done as other people do it, all on a sudden, while Giles held my hand, a thought seemed to flash straight out of his heart into mine, that he had forgotten the ring. I was quite sure of it. He did not even put his finger into his waistcoat pocket, as a man might have done who had bought one and left it behind. There was no ring: he had forgotten it.

A pause.

"Fanny?" said Mr. Mompesson; and Mrs. Mompesson, with all the good will in the world, and with Mr. Crayshaw to help her, tried to get her ring off her dear fat friendly hand, and tried in vain.

Giles almost groaned. He had expected me to be more than commonly nervous. Now seemed some ground for it; but real and sheer nervousness often goes off when there is anything to be nervous about, and I now felt very much at my ease, and whispered to Giles that a ring would be found somewhere. So it was. The clerk had darted out of the church at the first sight of Mrs. Mompesson's hand, and in a few minutes he returned, following a lovely, fresh-complexioned young woman in a linen sun-bonnet, and with a fat, crowing baby on her arm. She was out of breath; and, coming up to Giles quickly, she thrust out her honest hand, and allowed him to draw her ring off, and marry me with it. A healthy-looking young fellow, in a paper cap, which he presently removed, came slouching in after her, and looked on, unable, as it seemed, to repress an occasional grin of amusement; when the ceremony was over, they followed us into the vestry, and we all sat talking a little while, till some rings were brought from a shop for me, and Giles chose one and paid for it. Then I felt that I was Mrs. Brandon.

He returned the ring he had used to the young woman, but I observed that she made her husband put it on for her again; and, as he did so, he remarked to Giles, with a certain quaint complacency, that wives wanted humouring, and for his part—he might be wrong—but he considered it was their due. Then in all good faith, assuring him that he would never repeat what he had that day done, he set his paper cap on his head, and retired with his family; while we, having taken leave of our friends, stepped out into the fields, and departed together, to begin our story.

These four volumes make up a novel of a very unusual kind. There is such a plenitude of circumstantial narrative—and we cannot omit a remark, in passing, on Miss Ingelow's advanced stage of proficiency in the details of nautical description—that a superficial reader might fail to detect the carefully conceived plot, slowly but consistently developing itself. In Giles and Dorothea we have the portraiture of two highly sensitive and sympathetic natures, mystifying themselves and each other by the sheer intensity of these innate characteristics, and weaving a network of embarrassments where there was not the slightest occasion for them. Such a tangle, when once begun, may become still more cruelly and perhaps hopelessly confused by the sheer force of circumstances; and this, too, is cleverly illustrated as the narrative proceeds. Dorothea, until quite late in the course of events, believes Giles to be devoted to another woman, who turns out to be the invalid and elderly sister of a lady who, after rousing his immature enthusiasm, had died years before. Again, Giles distinctly perceives the shallow and transient nature of the boyish attachment on the strength of which the brother whom he loved was going to take from under his very eyes the woman whom he loved better, and he tries his best to awaken Dorothea's perception on this head in good time. It was an awkward task, and ended only in "confusion worse confounded." The straightforward Giles himself is taken in by the belief that the heroine is moved by a genuine and passionate attachment for her boy-lover; the fact being that she has drifted into the engagement partly from the reserve and reticence of the elder brother, partly from her mistakes about him, partly from the fact that Valentine's amusing qualities

* *Off the Skelligs.* By Jean Ingelow. 4 vols. London: Henry S. King & Co.

make him often her only resource in the country house where they are all staying after the voyage and the rescue, and chiefly because he, who seemed alone to care about her, was also for the most part a fragile creature to whom she could render real service. And so on through a number of events and influences and situations, the connexion and interworking of which is carried out with a degree of art and skill very effectively concealed under an apparently artless narrative. Valentine is the most completely original character in the book. He is the late-born son of the fine old Squire who is Giles's stepfather, and what with his youth and his too rapid growth and his weak lungs, and consequently slipshod home education, he appears on the scene at nineteen an ingenious and impudent rattle, with enough humour to make his impudence generally amusing, and enough vivacity and grace to ensure its being forgiven. When disturbed by his brother in a *l'été-à-l'été* with Dorothea (a most frequent occurrence with them, as among other duties she kept him regularly at work with his books), the scapegrace is equal to the occasion:—

"Now, Giles," said Valentine, "I'm improving my mind; Miss Graham is telling me a story. And if you want to come in, come in! and don't stand blocking out the light. Well, go on, Miss Graham. 'She was sailing right in the wind's eye,' didn't you say? 'when he most unexpectedly, closed it; and they wouldn't have been able to trim the sails if one of them hadn't been torn to ribbons, which they naturally used for the purpose.'"

"Nonsense!"

"Ah! it's very well to say nonsense; but I've heard Giles say that if it was possible to use a sea-term erroneously, you had the wit to do it. Your brother says the same. No, it wasn't exactly that, St. George, that we were talking of. She was telling me, that in a ship the yards in sailing before the wind are braced square, and the mizen sail alone is usually in a fore-and-aft position. Isn't that a nice thing to know? I'm glad they brace the yards square, it does equal honour to their heads and hearts."

"Touching confidences," said Mr. Brandon; "but, Miss Graham, come and sing to us."

And again, when forbidden—in vain, as it soon proved—to adopt a more familiar mode of addressing his new friend than the formal and usual one, he retorts:—

"No; I believe if you had as many names as the *Smilax simulata*, you would like to be called by them all. I saw a plant labelled once for the benefit of the ignorant public in Kensington Gardens—*Smilax simulata*—the Simulated Smilax, a Smilaceous plant. What do you think it was? why, a wallflower!"

As to Dorothea herself, notwithstanding her many perversities and her great facility in marring her own prospects of happiness, she is on the whole distinctly and naturally conceived, and her part is worked out consistently to the end. In her strength, as well as her weakness, in her aims and her motives, in her successes and shortcomings, she is always thoroughly feminine, an excellent point in the delineation of such a character; and her momentary collapse, both in *physique* and in resolution, after the first few days of her solitary life in London, is admirably described, and tells with good results upon the general effect which she produces.

Giles Brandon is the least happy conception among the characters which stand out in most prominent relief. Miss Ingelow has to some extent shared in an error not uncommon among female writers of far less genius and imaginative power. The temptation that beguiles some such producers of fiction is to paint their chief hero more demigod than man. Miss Ingelow has not gone to this extreme; but the perfection of various kinds with which Giles has been invested fail to produce a harmonious or attractive whole. George Eliot is apt to run into the other extreme. She is seldom so felicitous as when she is withdrawing the veil, with a somewhat ruthless hand for the most part, from some of the meaner phases of masculine weakness. No man has ever been described by her so self-reliant as the two women Dinah and Dorothea Brooke. Miss Ingelow prefers to exhibit an ideal of the nobler qualities in a man; and the worst that can be said of her ideal is that it is overdrawn here and there to the point of becoming oppressive; we lose the man in the unrelenting philanthropist, in the reformer who desires to be a sort of minor Providence to his species, and in the sublimely unselfish, but singularly ill-judging and miscalculating, lover.

Besides the three who may be called, in a sense, the protagonists of the story, there are several minor figures of varying importance in the development, and all made to move and speak with vivid interest and definiteness of characteristic. The chief of these are Uncle Kollin, the owner of the yacht which, for some while after her eventful rescue from the Ipswich boarding-school, was Dorothea's home; Tom, the quick-witted, but highly selfish and undesirable, brother; Brand and Mrs. Brand, the steward and stewardess on board the yacht; Anne, a practical *dévote*, the high-minded servant of Dorothea; and several members of the household to which Giles and Valentine belong. All of them would well deserve some special remark if our space allowed. But we must be contented to notice one more striking feature in *Off the Skellings*, and then conclude. This feature is the very remarkable and elaborate study of precocity with which the novel opens. Tom and Dorothea Graham are both described as children of most unusually developed intellect, and the whole thing is done with a precision and circumstantiality which suggest the conviction that Miss Ingelow must have had actual models or memories before her eye. The children live their busy little lives, first near the wharves of a tidal river, passing many blissful hours amidst the never-enough-explored aisles and recesses of a minster hard by; and later, on the edge of a great wide common, dotted all over with hillocks, and covered with broom and heather and hawthorn-trees. They invent a language of their own, and discuss the question of weak

and strong preterites; they repeat scenes from Shakespeare till Tom gets a brain-fever, and on his recovery indemnifies himself for the loss of his favourite copy of the plays by teaching scenes to his little sister, who lisps through them with a most moving enthusiasm; and among other adventures, they visit and feed for days an escaped convict who has sought a temporary refuge in the minster tower. This episode of "our man" in the tower is told with much the same perfection of narrative power that Victor Hugo has thrown into the opening scenes of *Les Misérables*; and the life in the nursery and on the common is described with a minuteness and vitality that remind one of the methods of Erckmann-Chatrian, and with the same charm and delicacy that have won for Miss Ingelow's poetry the position which it holds among English and American readers. Altogether we repeat that the novel is a very unusual one; of great, though unequal, merit; full of detail and interest; and relieved throughout, even in its more serious passages, by touches of humour of which we have been unable here to convey any adequate idea.

NOTICE.

We beg leave to state that we decline to return rejected Communications; and to this rule we can make no exception.

The SATURDAY REVIEW is duly registered for transmission abroad.

The publication of the SATURDAY REVIEW takes place on Saturday Mornings, in time for the early trains, and copies may be obtained in the Country, through any Newsagent, on the day of publication.

Nearly all the back Numbers of the SATURDAY REVIEW may be obtained through any Bookseller, or of the Publisher, at the Office, 38 Southampton Street, Strand, W.C., to whom all Communications relating to Advertisements should likewise be addressed.

Now ready, VOLUME XXXV., bound in cloth, price 16s. Cloth Cases for Binding all the Volumes, price 2s. each. Also, Reading Cases, price 2s. 6d. each. May be had at the Office, or through any Bookseller.

Copies of the SATURDAY REVIEW Bill of Contents will be forwarded every Friday Evening by post, prepaid, to any Newsagent in Town or Country on application to the Publisher.

THE ANARCHY IN SPAIN.

THE Spanish Ministry, after an unprecedentedly long existence of three weeks, is once more in course of reconstruction; and the Right of the Cortes, consisting of members who were lately regarded as extravagant Republicans, has placed itself in opposition to the Ministry. The struggle of Parliamentary factions for a momentary tenure of power is really of infinitesimally small importance. If Señor PI Y MARGALL proves himself a vigorous and determined ruler, he may possibly restore, by the exercise of absolute authority, some kind of order; but he can only act through military officers, on whom at the best he will be practically dependent. The progress of anarchy in the meantime is rapid and uninterrupted, and the irreconcilable party, corresponding with the supporters of the Paris Commune, lose no time in illustrating the tendency of the doctrines of the International Society and the extreme Republicans or Socialists. At Alcoy the agents of the International organized an insurrection, which was conducted with more than Spanish ferocity. The Mayor of the town, who is said to have spent his fortune in promoting the cause of the Republic, was brutally murdered; and another Republican, not violent enough to satisfy the popular taste, is reported to have been boiled in oil. These energetic measures will form an admirable topic for the English sentimentalists who have defended or excused the massacre of the Paris hostages by the Commune. It will be stated that the leaders of the Alcoy outbreak were singularly benevolent persons, who had on various occasions uttered the finest phrases, and that their unfortunate victims had not been sufficiently penetrated with the enthusiasm of humanity. The philanthropists who wish to turn the world upside down are laudably consistent in their determination to establish an entirely original code of morals as the basis of the new institutions. The Alcoy patriots seem to have committed the venial error of over-estimating their strength. General VELARDE, who lately escaped from his mutinous troops in the North, has entered the town with a Government force; but he has not been able to arrest the ringleaders. In more important places the aimless or unintelligible revolt of the ultra-Republicans against their own representatives seems to be more successful. A body of rebels under General CONTRERAS, lately a military and political leader of the Republican party at Madrid, has seized the town of Cartagena; and it is said that one of his principal associates is brother of one of PI Y MARGALL'S colleagues. In Barcelona the malcontent faction insisted on the adoption of rigorous measures against the supposed favourers of the Carlists; nor were they convinced by the cogent arguments of the Governor, who told them that the best way to check the advance of the Carlists would be to march against them. The prototypes of the Spanish Republicans in 1793 drew from the successes of the allied invaders precisely the same practical deductions which now recommend themselves to the judgment of the Internationalists. The base rabble of Paris and their instigators constantly excused their murders on the pretext that, in condemning their political enemies at home, they were combating the enemy on the frontier. The Government of Madrid will probably assert on the other hand that the Internationalists and other rebels are acting in complicity with the Carlists, to whom they undoubtedly afford a welcome diversion. It will evidently be impossible for the Ministers to despatch reinforcements to the North while one town after another rises in insurrection, not so much against the Government and the Cortes, as against any possible authority. It is for the most dangerous of their

present opponents that PI Y MARGALL and CASTELAR have for years been unconsciously working.

The Cortes and the Ministers are learning at the expense of their country the useful and costly lesson that obedience to law is the first condition of national existence. Declaimers against the abuses of royalty now vie with each other in exhortations to the Government against the exercise of unseasonable clemency. The rebels of Alcoy are to be peremptorily shot, if only they can be caught; and the troops are instructed to put down the rebellion if possible by force. In some cases the possession of office alone distinguishes the faction in power from their mutinous adversaries. Señor SENER fanatically supports the anti-religious doctrines of the International Society; and PI Y MARGALL himself began his career by introducing into Spain the valuable proposition that property is robbery. The principles avowed by the insurgents of Alcoy and of Cartagena are not now promulgated for the first time. It has long been known that the bulk of the Republican party were revolutionary Socialists, although the more decent leaders repudiated the subversive doctrines of their supporters. It was not through any blind feeling of loyalty that the respectable classes and the bulk of the community have constantly expressed their antipathy to any kind of Republic. Government by the dregs of the populace is nowhere desirable; and in Spain the rabble is more thoroughly demoralized than in any other country. If the period of anarchy should unexpectedly prove to be brief, the nation will perhaps scarcely have paid too high a price for the exposure of the delusion of a moderate and decent Republic. It is incredible that the monstrous fabric projected by the Internationalists should be tolerated in a civilized community; and it has now been ascertained that a Republic, reversing the formula of M. THIERS, is in Spain the form of government which divides parties the most. It is highly probable that personal intrigues may have co-operated with political fanaticism in producing the recent disturbances. With a body of unknown and undeserving upstarts occupying, by a random selection, the chief posts in the State, military and political adventurers are naturally encouraged to try their own chance of obtaining power and pay. CONTRERAS is not a reputable officer; but he may perhaps think himself as good as the subaltern deserter who is, or lately was, Minister of War. If he can establish himself in force at Cartagena, he may probably march on Madrid in the name of the Federal or Irreconcilable Republic, and for the purpose of making himself Minister or Dictator. The officers who for the present remain faithful to the Central Government may, in case of success, become not less formidable rivals of their present employers. Service in the Republican campaign on one side or the other is likely to be more profitable and more popular than dangerous and laborious campaigns in the North, where one general after another has forfeited any little reputation which he may have previously acquired. The Carlists have made far more rapid progress since the meeting of the Cortes than during any former part of the Civil War; and some political observers even think it possible that disgust at the crimes and follies of the Republic may at last produce a reaction in favour of Don CARLOS. An abler and more popular Pretender would by this time have placed himself on the deserted throne; and it is impossible to foresee the consequences which may result from the present anomalous circumstances. If no other alternative remained, SANTA CRUZ himself might perhaps be preferred to the savage assassins of Alcoy and to the helpless rhetoricians who struggle in vain against the caprices and bloodthirsty passions of their adherents. Nevertheless

there is at present no proof of the existence of Carlists in the centre or South of Spain.

One of the strangest peculiarities of the present state of affairs is the voluntary self-effacement of the party which includes the bulk of the nation, the whole of the middle classes, and the soldiers and politicians who till lately governed the country. SERRANO, ZOREILLA, and SAGASTA are silent or absent, while obscure adventurers exercise power which is only limited by the contemptuous disobedience of their own unruly faction. Even FIGUERAS has disappeared from the political scene; and CASTELLAR, who holds no office, is, except the Prime Minister himself, the only known member of the nominally dominant party. As PLY MARCILL truly said, retirement in Spain means conspiracy, and the mere inaction of the old parties conveys a formidable menace to the Republic. The effect of the misfortunes which were largely due to their own factional mismanagement has probably been to unite Moderates and Progressists in support of the candidature of Prince ALFONSO, son of ISABELLA. All the more or less Liberal parties have been uniformly opposed to the pretensions of Don CARLOS, who on his side has neither the fact nor the largeness of mind which would enable him to win over temperate adversaries. The reason for postponing an attack on the tottering Republic is evidently the disorganization of the army. If it had been possible to trust the troops, the great majority of officers would have willingly followed SERRANO in an attack on the present Government, which could scarcely have been resisted. It may now be prudent to wait till the miscarriage of the ill-omened Republic is absolute and complete. The restorers of order will, sooner or later, profit by the universal indignation which is produced by daily catastrophes in the Northern provinces and the towns. The friends of Monarchy will not, when their opportunity arrives, think themselves bound to pay any deference to the Assembly in which they are not even ostensibly represented. FIGUERAS and CASTELLAR dissolved the late Cortes without a shadow of legal right, and their opponents and probable successors will not be more scrupulous. It is perhaps not wholly impossible that the Republican Cortes themselves may repudiate their origin and political designation. The minority of extreme Republicans has already left the Assembly, and the residuary body is in its fright and confusion becoming more and more Conservative in its tendencies. A year ago few Spaniards cherished any strong attachment to the throne; but a short experience of the Republic and its Republican enemies will perhaps once more have made royalty popular. The faction which assassinated PERU, and which tried more than once to assassinate AMADEO, has been tried by a temporary possession of power with results which cannot be misunderstood. Some of those who are still brawling against the supposed enemies of the Republic will become ready converts as soon as it becomes evident that the Republic is out of fashion. At first, perhaps, a few sanguine dreamers shared the belief which was less excusably held by some leading English journalists, that a Revolution accomplished without effusion of blood was destined to produce an orderly and peaceable Government. The illusion is now effectually dispelled, and the conversion will be still more sudden and complete if the irreconcilable faction obtains any temporary success. That open negation of right should be the foundation of permanent authority is simply incredible.

MR. FORSTER'S BILL.

MR. FORSTER has withdrawn some valuable matter from the Education Act Amendment Bill, but he has left a good deal remaining. The most important element in the 3rd Clause is preserved, for DENISON'S Act is still to be made compulsory; but the administration of educational relief is to be left in the hands of the School Boards. As regards the latter point, the Government were met by the difficulty that, whereas the Guardians have shown a singular unanimity in opposing the proposed transfer of the duty, the School Boards have shown an equal indifference to the prospect of being relieved of it. They must know that they have no machinery adequate to the proper investigation of the cases which come before them, and consequently that there is a very great chance that the money of the ratepayers will be wasted. They must know that, if the power to pay school fees is not to be unused in their hands, it must occa-

sionally be exercised in a way which will offend a part of their constituents. Yet in spite of this they have seen the Bill violently attacked without saying a word in its behalf. If any considerable number of School Boards had sent up petitions in favour of the Bill, Mr. FORSTER would probably have been able to resist the pressure of the Guardians. He could have insisted that, on such a question as this, a School Board which declares its own unfitness for the work thrown upon it is a more trustworthy witness than a Board of Guardians which does not pretend to plead that it cannot do the work, but simply that it does not wish to do it. The want of any support from the School Boards would have forced Mr. FORSTER to rest his case upon the intrinsic merits of the proposal. He would have had to show that School Boards and Boards of Guardians are alike ignorant of the interests of the community; that the power to which the former cling is only a means of pauperizing parents under cover of educating their children; that the dislike of the latter to have the power made over to them is the dislike of men who consult their own popularity in preference to their constituents' pockets. But when the persons who are asked to surrender a certain power betray a decided desire to retain it, and the persons to whom it is proposed to hand it over declare their extreme reluctance to being invested with it, the position of a Minister becomes one of considerable difficulty. The House of Commons seldom likes to go against the opinions of experts on their own subject, and the opinions of two classes of experts were against this part of the Bill.

Further, as Mr. FAWCETT pointed out, some of the sympathy and support which might have been enlisted on behalf of the proposed transfer had been lost by the imperfect and contradictory manner in which it was to be effected. The distinction attempted to be set up between educational relief and parochial relief has no foundation either in logic or in common sense. The law ordains that every man shall supply his children with the necessities of life; and, in order to meet the plea of inability, it ordains that under certain circumstances the means of supplying these necessities shall be provided at the cost of the community. The effect of making attendance at school compulsory is to include elementary education in the list of necessities which a man must supply to his children, and which under certain circumstances the community will enable him to supply to them. There is nothing in this extension of the term "necessaries" to justify any distinction between the action of the community in the two cases. If help given to a man to enable him to supply his children with the food which the law compels him to give them is parochial relief, why is not help given to a man to enable him to supply his children with the instruction which the law compels him to give them equally parochial relief? Mr. FORSTER did not directly answer this question on Thursday, but he set up an appeal *ad misericordiam* against a more stringent application of the analogy. "Take the case," he said, "of a poor widow who had by a hard and bitter struggle kept herself from receiving outdoor relief. Because they imposed on her the duty of having her child educated and helped her to do it, to say that she had become a pauper notwithstanding all her sacrifices—and once a pauper always a pauper—would be very hard indeed." No doubt it would be hard, but unfortunately in dealing with these matters we have to choose between inflicting occasional hardship and making the condition of the pauper dangerously attractive. Mr. GLADSTONE said the other day of the Civil Service that it was difficult to pay the best men in it as they deserve, because a crowd of average men would rush in to share in their advantages; and what is true of Government servants is still more true of paupers. No really effective test can be devised to mark off the widow who by a hard and bitter struggle has contrived to do without parish relief from the widow who has always regarded outdoor relief as a means of support secured to her by Providence. It may be suspected that Mr. FORSTER himself would hardly push his illustration to its legitimate results; but if he does not, it rests with him to show why it is not equally hard to impose on his poor widow the duty of feeding and clothing her child, and to refuse her any help in discharging this duty, except on condition of becoming a pauper. As a matter of fact, it is not likely that the case of educational destitution contemplated by Mr. FORSTER would often occur. To aid those who are genuinely struggling to keep themselves above pauperism is one of the most legitimate functions of private charity; and a widow of this type would

probably not find school managers inexorable in the matter of fees. It is to be regretted, however, that this part of the 3rd Clause has been withdrawn, because, though it declared that educational relief was not to be confounded with parochial relief, it inevitably would have been confounded with it. The payments would have been made by the same official, and by an official identified in the minds of the poor with the whole system of poor relief. The widow instanced by Mr. FORSTER would have felt as much repugnance to going to the relieving officer to get money to buy her child schooling as to going to the relieving officer to get money to buy her child food. Thus the clause, so far as it was operative at all, would have operated in the direction in which Mr. FAWCETT wishes that the Government had gone.

The only speech of much importance which was made against the Bill on Thursday was that of Sir MICHAEL HICKS BEACH. He objected to what remains of the 3rd Clause, on the ground that to make DENISON'S Act compulsory would be to introduce the principle of compulsory education into parts of the country where it is at present unknown, to alter the basis of our Poor Law system, to impose on the Guardians a duty which it would in many cases be out of their power to perform, and to cast on the ratepayers a burden of unknown and indefinite magnitude. To those who regret that Mr. FORSTER'S Bill did not extend to England the educational legislation already adopted for Scotland, the first of these objections is really an argument in favour of the Bill. That it will introduce the principle of compulsory education into parts of the country where it is at present unknown is its best title to support. The alleged change in the basis of our Poor Law system is only the imposition of a new test to prevent the plea of destitution from being abused. Just as wise Guardians refuse to give a pauper relief unless he is willing to come into the workhouse, and to surrender the precarious wages which he might perhaps earn out of doors, so the law will now refuse to give him relief unless he gives up the money which his child might earn for him, but which would be earned at the risk of the child itself being brought up to pauperism. As to the alleged impossibility of making the grant of relief dependent on the children being sent to school in cases of sudden and urgent necessity, such as the sickness or infirmity of the applicant, or the burial of a pauper, it is certainly true that the enforcement of the condition may have to be suspended until after the funeral, or until the person requiring medical relief is out of immediate danger of death. But as soon as the case settles down into one of the ordinary phases of outdoor relief, there will be no difficulty in applying the law beyond the difficulty common to all Poor Law reforms—that though they save money in the long run, they are occasionally costly for the moment. But a change which educates two hundred thousand pauper children, most of whom would otherwise grow up without education, will not only help to dry up the fountain of pauperism for the future, it will also tend to divert some of the existing pauperism into better modes of subsistence. If all children under thirteen were at school, there would be a large increase in the demand for adult labour, and by this means slackness of work, which is one cause of pauperism, would be lessened. To make DENISON'S Act compulsory is to do something in this direction. Again, there are paupers who contrive to live on a joint fund composed in part of the children's earnings and in part of outdoor relief. To make DENISON'S Act compulsory is to cut off the former element, and so to force men who are doing nothing for themselves either to supplement their children's labour by their own or to submit to coming into the workhouse. On the whole, therefore, the Bill, even in its present reduced form, is a real educational advance. If it does not carry us as far forward as either we or its author wish, it may at all events form the starting point for that larger measure which will come with better times.

PARIS.

PARIS has been having a holiday and has enjoyed it; but it has enjoyed it as people enjoy a holiday whose life is full of care and anxiety, and who seek in a moment of distraction a rest from pressing troubles. No doubt the state of things at Paris is better than it was some little time ago. The traces of the German and the Civil War have in a great measure disappeared. The houses which bore marks of contest have been patched and refaced, and on the roads

where the fighting was most furious and the destruction greatest new lines of houses have sprung up. A traveller may, for instance, pass from Paris to St. Germain through a continuous series of decent houses and tidy villas, most of which are occupied and well cared for; and the easy circumstances thus indicated, and the energy with which the ravages of war have been repaired on a road where there was so much deadly fighting, show that Paris still preserves much of its old wealth and high spirit. Nevertheless it is quite true that Paris is suffering. Its commerce is languishing. Work is hard to get and very precarious, and the poor of Paris suffer more from the doubt whether their means of living may not soon fail them than from actual privation. What rise of prices there has been tells more against the poor than against the rich. A stranger finds Paris, if anything, less dear now than it was under the Empire. In spite of the new burdens of national and municipal taxation, the keepers of hotels and cafés have not raised their prices, and have even perhaps diminished them. They are so anxious to attract strangers, and are so afraid of the competition of each other, that they are content with less profits than they used to look for, and so prices are kept down. The wealthier residents find the cost of some articles of food increased, but houses are cheaper, and it is only a few tradespeople, such as fashionable milliners, who can venture to put on extra charges to cover the losses. But for the mass of Parisians rents are about the same as before the war, the competition being great enough to prevent a fall, but not great enough to permit proprietors to recoup themselves for the new taxation they have to bear. How long even this amount of competition may continue is doubtful. In every street there are notices of houses to let and apartments to let to an extent quite unknown under the Empire. But while their rents remain for the present much the same, the poor find the cost of many necessities of life increased. Meat and coffee are decidedly dearer; and the condition of Paris is to be judged, not by the very poor, but by those to whom meat is an occasional, and coffee an habitual, necessity. There is no great amount of actual distress perhaps among this class, but there is the most wearing anxiety lest actual distress may be coming on them. And there is an increase not only of pecuniary difficulty, but of demoralization in Paris. The war did enormous harm to Paris by engendering habits of idleness, drunkenness, and insubordination. Families complain that they cannot find the same sort of servants they used to have before the siege. The general character of the Parisians is that of a very industrious people, but they have been to some extent spoiled by the war; and they are being still more changed by the long, sickening period of depression through which they have passed and are still passing.

What keeps Paris up for the moment is the sanguine belief that all this is only a provisional state of things, the end of which must arrive at a definite period. September is the time Paris fondly assigns to its present state of wretched uncertainty. Things may go on as they are till the Germans have quitted the country, but then Paris must have its chance again of being a bright, flourishing capital, with assured prosperity. Paris, in company with forty-three departments, is in a state of siege, and a state of siege cannot last for ever. To the eye of a stranger the effects of the state of siege are not apparent. Paris is as safe as it ever was, as well lighted, guarded, cleaned, and managed. But to Parisians the fact that the city is in a state of siege is ever present. Arrests are continually going on, and although the persons arrested were in most cases really mixed up with the Commune, and although the ordinary Parisian detests the Communists, and thinks it a very good thing that they should be kept down by any amount of arrests that may be necessary, yet these perpetual arrests keep up the general sense of excitement and alarm. Paris, too, is shut out of the politics of France. The Assembly of Versailles is a body which, hating and humiliating Paris, receives from it in return neither respect nor esteem. There is much gratitude to M. THIERS, and a feeling that he really did great things, and has been unfairly set aside. Still, as he was to be set aside, Marshal MACMAHON is a very creditable President, and does well enough to fill the post during the short time which has to elapse before the happy change comes which must accompany the liberation of the territory. That this change is to be brought about by a new insurrection or by a revolution in which Paris is to take a leading part does not probably enter the thought of the ordinary Parisian. What he bases

his expectations on is that, as Paris is suffering from the want of a definitive form of government, and as the obstacle to the establishment of a definitive form of government offered by the German occupation will soon be removed, the longing of the capital for a state of things in which it may once more breathe freely and make money, and feel some confidence in the future, is somehow sure to exercise an irresistible pressure on public affairs. Paris may be in some measure deceived in this. The present Government will evidently do its very utmost to prolong the present provisional régime, under cover of which it is exercising one of the most singular dictatorships known to history. Paris may have to bear its burden of uncertainty, and to sink into depths of pecuniary difficulty long beyond September. But still it is impossible to believe that Paris is altogether wrong, and that the daily sufferings, mental perhaps rather than bodily, of hundreds of thousands of persons in a city like Paris can remain for many months unheeded.

If it is asked what is the future to which Paris looks forward, the answer is not very easy to give. But it is not a very hazardous assertion to say that what the ordinary Parisian would really like is the restoration of the Empire. The clerical and legitimist party is strong in Paris, as everywhere else; but it is a clique with the ideas and the ways of a clique, and it has grown wonderfully silly with the amount of success it has gained, and under the influence of a time of great excitement. It lives more than ever in an atmosphere of miracles, visions, and pilgrimages. Its bitterness is the bitterness of people who honestly believe that every one who is their enemy is the enemy of God. The Republicans form much the most active, intelligent, and serious of the parties of Paris, and they are perfecting a machinery for carrying elections, not only in Paris, but throughout the large towns, which must have considerable results, unless it is suppressed by force before it has had time to produce its inevitable results. The majority of Parisian voters are Republicans, and a Republic would have perfectly satisfied Paris if it had been such a Republic as M. THIERS contemplated— a definitive Republic, with the Legislature at Paris, with a large allowance of Presidential pomp, and a willing army to support it. But now the Parisians ask themselves whether a Republic can give them what they want, which is the revival of trade, an influx of strangers, the return of rich families, and plenty of work. The Empire gave them all this, and perhaps the Empire would give it them again. It is the incidents of their daily life, and not any political leaning to Imperialism, that make them fancy that, with the Tuileries rebuilt and NAPOLEON IV. lodged in it, Paris might be itself again. What checks this tendency more than anything else is, perhaps, the character of the Imperialist party. Nothing can surpass the insolence, the frivolity, and the recklessness of the Bonapartist press. But the family of the late EMPEROR is not unpopular, and Parisians have taken it into their heads, or, at least, in talking to Englishmen affect to believe, that the restoration of the Empire would be very welcome to England, and that Englishmen would swarm round the new throne, and set a fashion which the rest of the world would imitate, and thus make Paris delightfully rich in a moment. When M. THIERS saw his fall imminent, he warned the Duke of BROULLE that in securing a momentary triumph he was really paving the way for the Empire he detested. Perhaps the detestation of the Duke for the Empire may have diminished by this time, as there is not a single vice of the Imperial Government which he has not found time to copy; but, at any rate, if he still dreads the Empire, he has, so far as Paris goes, every reason to believe in the prophecy of M. THIERS. It is not for a moment to be supposed that the destiny of France is to be determined by the passing wishes of any number of suffering Parisians. To estimate the real chances of the Empire we should have to look, not to the state of Paris only, but to the state of the whole of France. But what Paris thinks is worth studying, for Paris has always its own importance, and its opinions give more or less of a clue to the state of opinion in France generally. And of Paris we think it may be said that, if those who are now perplexed and downcast with uncertainty could but be assured that the provisional state of things which makes them so miserable was going before long to end in the restoration of the Empire, they would for the most part be extremely well satisfied. Under a restored Empire they would naturally rush once more into opposition, but their empty pockets and heavy hearts inspire the thought how delightful it would be to have an Empire to oppose.

THE ASHANTEE WAR.

THE treaty of last year between England and the Netherlands has produced for both parties unpalatable first-fruits. In exchange for their settlements on the Gold Coast, the Dutch obtained a release from covenants by which they were restrained from extending their possessions in the Eastern Archipelago. It was probably in consequence of the provisions of the treaty that they have since prosecuted a quarrel with the Sultan of ATCHIN in Sumatra, which has resulted in a temporary check. In a more favourable season, after providing the necessary reinforcements, the Dutch will undoubtedly repair the discomfiture and reassert the superiority of their arms. In Sumatra, as in Central Asia, civilized Powers have become irresistible in their conflicts with barbarians; nor are the consequences of the unequal struggle generally subjects for regret. Captain SHERARD OSBORN indeed regards with alarm the prospect of a future war in which the English trade with China will be harassed by cruisers issuing from the ports of Atchin; nor is he reassured by the suggestion that Holland is scarcely likely to be engaged in war with England. For Holland, he says, Germany must be substituted in speculating on future events; and it is impossible to say that the greatest Power on the Continent may not prosecute ambitious designs to the detriment of England in distant seas. Happily some of the steps in the progress of Germany to maintain supremacy in the East still remain to be accomplished. Holland has first to annex Atchin, and afterwards to be annexed by Germany, before some undiscoverable cause of quarrel can bring the China trade within reach of a hostile German fleet, which has yet to be built. Even if the danger were more imminent, the occupation of Atchin by the Dutch cannot be resisted without a deliberate violation of the Treaty of 1872. It may be doubted whether, even if the West African settlements had not been ceded, the English Government would have been disposed to insist on any technical objection which might have been raised to the extension of the Dutch territories in the Eastern seas. It has become necessary to acquiesce in the possession by foreign States of many positions which might in case of war be used for hostile purposes.

The transfer of the Dutch settlements on the Gold Coast has also been followed by a war; and there is reason to fear that the town of Elmina, lately under Dutch protection, has been burnt by the English forces. The Fantees, a cluster of tribes who have long acknowledged some kind of allegiance to the English Government, have been attacked in superior force by their savage Ashantee neighbours. The defeated Fantees have taken refuge in the English settlements; and it would seem that a part of the inhabitants of Elmina sympathized with the invaders. Some English troops, probably belonging to coloured regiments, have set fire to the town, and have established themselves in the Castle. The Administrator, who is luckily a military man, was at the date of the last accounts taking measures for the defence of the settlement; and it may be hoped that the Government will lose no time in providing him with sufficient reinforcements. A handful of marines landed from the vessels on the coast, inflicted a defeat on the invading army; but the Ashantees immediately rallied so far as to threaten an attack on Cape Coast Castle; and it was thought prudent to consult the health of the marines by sending all who could be spared on board their ships. The native allies of the English Government are probably quite as troublesome as the enemy, especially as they are crowding down to the coast in the most unhealthy season. Philanthropists and peacemongers will probably seize the occasion of the West African war to denounce the policy of extending or maintaining English dominion in uncivilized countries. If Mr. CORDEN were alive, he would prove in a lucid pamphlet that the Ashantees were the most injured of mankind, and that English misgovernment was the sole cause of the unfortunate misunderstanding between two amiable negro tribes. It is highly probable that blunders may have been committed; but Imperial nations, or nations which have been Imperial, must be prepared from time to time for collisions between their dependents and their neighbours. In spite of the unambitious doctrines of the Colonial Office, it will be found indispensable to beat off the victorious Ashantees, and to convince the protected chiefs that their safety depends on the maintenance of English power. In the meantime Mr. RICHARD and his majority in the House of Commons

may profitably inquire whether the King of ASHANTEE could not be induced to refer the quarrel to arbitration. He has probably complaints to urge with reference to runaway slaves which would be admirably suited for reference to a benevolent International Tribunal.

The Colonial Office has taken the opportunity of the war to publish a correspondence which throws no light on its causes or its probabilities, though it illustrates the oddities which are necessarily produced by the contact between civilization and barbarism. It cannot be said that the scanty contributions made to the discussion by the Home Government indicate the smallest comprehension of the whimsical difficulties which perplex the local authorities. Colonial Secretaries seem always to hold that embarrassing problems are best solved by the application of cant and commonplace. Two years ago it occurred to a few half-educated young natives to construct, probably with the aid of some white adventurer, a new Constitution for a proposed Fantee Confederacy; nor can it be denied that the project displayed a certain kind of ingenuity. The kings and chiefs were to form a Confederacy under the nominal sovereignty of a King, who was also President, to be practically governed by a Ministry of men of education, or, in other words, by the authors of the Constitution. The attention of the African SOLONS to material works was shown by an article in the Constitution providing for the construction of a certain road "fifteen feet wide, with good deep gutters on each side"; and, probably on the suggestion of a Wesleyan missionary, compulsory education was to be established wherever there were Wesleyan schools. By far the most important article provided for the levying of taxes; and indeed it was afterwards suggested by an irreverent English functionary that the sole object of the entire scheme was to impose a tax on the transit of goods from the interior to the coast. The imposing document was signed with the marks of thirty or forty kings or chiefs, most of whom afterwards either disavowed their signatures, or professed their ignorance of the nature of the constitutional instrument. The acting Administrator of Cape Coast was one of the old-fashioned public servants who combine with an unhesitating determination to maintain English authority an instinctive contempt for negro legislators and for their sham Constitutions. When a deputation brought the Constitution under his notice, he summarily locked them up on a charge of high treason, and required the only respectable member of the proposed Ministry to repudiate his complicity with the transaction. The delinquents were soon after released on bail, nor had they been at any time exposed to serious danger; but some of them wrote indignant letters to a journal called the *African Times*, under various imaginary signatures. Lord KIMBERLEY intimated that the acting Administrator had displayed an excess of zeal, and Mr. POPE HENNESSEY, as his superior officer, expressed an opinion that the Confederation on the whole deserved encouragement. There is much reason to trust the judgment of an experienced public officer who declared that the kings and chiefs would retire from the combination if they found that it diminished their authority. One proposal which the Colonial Office at once rejected as imposing a charge on the Imperial revenue had a practical look. It was recommended that the kings and chiefs should become Government officers at modest salaries of 50*l.* a year for the kings and 25*l.* a year for the chiefs. The plan seems to have deserved consideration; but Ministers in the present day never propose to the House of Commons any expenditure for so irrelevant a purpose as the maintenance of English influence among barbarous tribes. The constitutional experiment has now been rudely interrupted by the Ashantee invasion, and the English Government will be compelled to assert its supremacy by proving its protective power. The Fantees are probably susceptible of some kind of military discipline, which may enable them under English officers to resist their hereditary enemies. The students who have learned to read and write imperfectly, and to mimic European phrases, will be relegated to their natural insignificance till the danger has passed over. Africa is not yet in a condition to be ruled by talk.

THE GOVERNMENT AND THE HOUSE OF COMMONS.

THE position of the Ministry does not improve as the Session approaches its close. It is probable that they will carry the Judicature Bill and the revised Education Act Amendment Bill; and if the Conservative peers are as eager to get away from town as the Liberal members of the

House of Commons seem to be, they may also carry the Rating Liability Bill. But the Parliamentary reputation of a Government is often decided by the treatment accorded to motions they oppose. It is the little foxes of the Session that do most to spoil the Ministerial grapes—the divisions in which Ministers find themselves day after day, as during the past week, with miserable majorities varying from fourteen to four, or see the House of Commons pledging itself to some absurdity without having the power to prevent it. Independent members are having a good time just now. They may not always succeed in bringing on their motions, but if they can bring them on, there is no saying how the voting will go. The Opposition may be away dining, the Liberal members may have their own reasons for not opposing a crocheted which is supported by some of their most influential constituents, and with a Government deserted in this way by friends and foes, nothing is too wild to gain the honours of an unexpected victory, or at the least of a narrow defeat. A custom of leaving the Government to take care of itself is very easily established, and there are so many ways of spending a July evening more pleasantly than hanging about the House of Commons, ready to rush in at the sound of the division bell, that it is no wonder that, when it is established, it should be honoured with a very constant observance. Lord HARTINGTON lays the main blame of this state of things on the Opposition. Formerly, he said in his speech at Nottingham, the Opposition has been content to have two or three field-days on great political questions in the course of the Session, but it has not sought to embarrass the Government on every night of the week. It is very natural that a member of a Government which is never allowed to sleep at its post should think this harassing warfare unfair as well as inconvenient. Cooler observers will say that it is for an Opposition to decide what modes of attack will best suit its purpose, and that it will only be made more content with its selection by the discovery that the Government dislikes it. A field-day on some great political question is just what an Opposition wants when its object is to turn out a Ministry, or to ascertain how near it can come to turning it out. But there are often periods when it has no desire and no power to turn a Ministry out; while, at the same time, it is not at all disposed to let the shining hours go by unimproved. If the Conservative leaders chose to speak frankly, their answer to Lord HARTINGTON would probably be something to this effect:—We don't want to beat you upon any question important enough to give you an excuse for resigning or dissolving. The languid and discredited life you are leading is exactly the life we wish you to lead. Every small reverse or narrow victory lowers your character in the country and improves our chances in the elections. It is possible, of course, that you may retrieve your character in some degree if the day of dissolution is postponed; but the chances are against it, and on the whole, it is our best policy to wait. To weaken an enemy by a series of small surprises is as legitimate a part of strategy as to worst him in a pitched battle.

No doubt from a Liberal point of view all this is very unsatisfactory. It is exceedingly unlikely that any further legislation of much value will be got out of the present House of Commons, and there is no immediate prospect of its being replaced by a new one. Some advisers of the Government make this state of things a ground for recommending a dissolution in the autumn. They say with great truth that Governments rarely grow stronger when Parliament is not sitting, and that the coming recess will be employed by the Opposition in the manufacture of all kinds of charges, which the Government will have no opportunity of answering without a sacrifice of dignity. The charge that Ministers are afraid to face the country, that their own members are not in all cases sure of their seats, and that even if they themselves get safe back to Westminster they know that their majority will be left shipwrecked in more constituencies than they dare to calculate, is far too telling not to be well worked between this and February. There is no use, it is said, in putting off an evil day when it will only become more evil by postponement. The boast that the feeling of the country has so changed that a general election will give the Conservatives a majority has been so often made that to delay putting it to the test looks like, or will certainly be said to look like, an admission that it is probably true. Whether it is true or false, it is time that the experiment should be made. If the Conservatives have a majority in the country they cannot too soon have a majority in the House of Commons, and be saddled with

all the difficulties and responsibilities which the possession of a majority carries with it. If they have not a majority in the country, the baselessness of the claim they have set up cannot be too soon demonstrated. Under these circumstances, for a Liberal Ministry to put off a dissolution is to show that it fears its fate too much, or is conscious that its deserts are small.

There is great force in this reasoning, and if the Government were really putting off a dissolution, it would be altogether conclusive. The assertion that the Conservatives will have a majority in the next Parliament may or may not be a gross exaggeration, but it has been so constantly made and so generally accepted that, until the elections are over and the gross results counted up, it is of little use to contradict it. If there is one thing more than another which is calculated to make it turn out true, it is any indication on the part of the Ministry that they are afraid of finding it true. The Conservatives are perfectly aware of this, and the favourite subject of their newspapers just now is the miserable position of a Government which longs for a dissolution, but dare not provoke it for fear of that which comes after dissolution. But those friends of the Government who advise a general election in the autumn seem to leave one thing out of sight. There must be some cause assigned for a dissolution, and the consideration which a Minister owes to his followers demands that this cause should be a sufficient one. A general election means a great deal of loss and inconvenience to many Liberal members, and unless the Government has been deserted upon some matter important enough to be fairly made a Cabinet question, the victims would have a right to ask their leader why they were sent about their business at least a year earlier than need be. Since you took office again, they might say, we have supported you whenever our support was really needed; we have helped you to carry the Judicature Bill, we have helped you to carry the Rating Liability Bill, and if we have not helped you to carry other Bills, it was because you deprived us of the opportunity of doing so by declining to proceed with them. Granting that some of us were careless about attending what seemed like unimportant divisions, you will not pretend that you have dissolved because you were beaten on the claims of the Irish Civil Servants, or on Mr. RICHARD's dream about international arbitration. At any rate, if you meant to give an artificial importance to these triumphey notions, you ought to have told us so beforehand. We acknowledge that we have not always been as assiduous in our attendance as we might have been, but to dissolve on such a trifling ground as this would be like expelling a boy from school because he has once or twice been caught out of bounds. The Liberals who counsel an immediate dissolution are bound to give some answer to this appeal, and as regards a dissolution in the autumn, it seems to admit of none. An appeal to the country implies a previous defeat upon some question by which the Government is prepared to stand or fall. If the Irish huly had accepted the University Bill, that would have been a question of sufficient dignity to go to the country on, but its rejection by the people whom it was designed to benefit made it impossible for the Government to persevere with it any longer. Since that time no similar issue has been raised, and a Government strangely and unexpectedly defeated on the principal measure of the Session can hardly be at once prepared with a second equally provocative in its character. But the argument against a dissolution which is good now will not be good after the recess. It is the duty of the Ministry to ascertain whether they are strong by acting as though they were strong. They may be tempted, in constructing their programme for next Session, to think only of what is likely to pass easily. If they yield to this temptation, they will fairly lay themselves open to the charge of wishing to put off a dissolution to the latest possible moment. The proper course for them to pursue will be to bring forward precisely the measures which they would have brought forward if they had never known defeat, and to pass them on with all the energy of former years. If the House of Commons is still ready to support their policy, it will be clear that the disorganization of the Liberal party was only a passing ailment. If the House of Commons is not ready to support their policy, they will have the ground for dissolution which is now wanting. Either way, the early weeks of next Session will end the demoralizing uncertainty in which the Government is now placed.

THE PERSIAN CONCESSION.

THE SHAH came here, or was supposed to come, for business as well as pleasure, and now that the hour of pleasure is over, and has been so successful, it is natural to inquire how the business part of his visit has been getting on. He has, so to speak, conceded himself to Baron REUTER, and the question is whether his visit has improved the chances of his concession becoming a useful, profitable, and practicable arrangement. Accordingly, Lord CAERNARVON asked Lord GRANVILLE on Monday night what had been the line adopted by the Government with regard to the Persian concession, and intimated that, if the policy of the Foreign Office was as spirited as it ought to be, the chance of doing something bold and striking as against Russia would not have been lost. Lord GRANVILLE replied that he had done all he could properly do, and that he had done no more. He had allowed the SHAH and Baron REUTER and every one concerned to know that the British Government would rejoice at learning that Persia possessed railroads, canals, a flourishing revenue, and a thriving population; but the commercial speculation of Baron REUTER was one which must stand or fall on its own merits. What more could Lord GRANVILLE have done without exciting false hopes and placing England in a false position? Lord CAERNARVON urged that, if England did not take up the Persian concession, Russia would, and that Russia would really work the concession with money found in London. This could only happen if the Russian Government borrowed the money; for, idiotic as English investors often are, they would scarcely be likely to entrust their capital to private Russian Companies, looking for dividends solely to profits made in Persia. The true way for England to prevent the Russian Government working the concession is obviously to find or guarantee the cash required for the vast enterprises of Baron REUTER. We might no doubt have treated Baron REUTER as a broker, and bought Persia of him. But whatever the Russian Government may do, we certainly shall do nothing of the sort. Lord CAERNARVON did not suggest it, and no English statesman would dream of England spending a farthing, or guaranteeing a farthing, of money in aid of enterprise in Persia. But between doing everything and doing nothing there might be, it was imagined by Lord CAERNARVON, some way found. England might countenance and give its moral support to the Persian concession. Lord GRANVILLE very properly said that a Government could not remain for ever in the region of vague language. It must do something positive, or engage that in certain events something positive should be done, otherwise it would be subjecting itself to uncertain and hazardous liabilities. Now Baron REUTER had asked for something positive. He wanted a support which would have been a most effective support. What he asked the Government to give him was not cash or a guarantee, but an engagement that they would see that the SHAH and his successors carried out the undertakings of the Persian Monarchy under the concession. This would have been a charming arrangement for Baron REUTER. If he did not get in his revenues regularly; if he did not get hold of his forests and his mines on as grand a scale as he desired; if his railways were interrupted; if the Persian guaranteed interest was in arrear, England was to interfere, and make the wrong her own. The SHAH would be reminded of the ironclads he had admired so much at Portsmouth, and the recollection would be enough probably to persuade him that Baron REUTER's felling and digging must be allowed to go on comfortably and without any hindrance.

Lord GRANVILLE justly ridiculed the notion of England coming under any such engagement, and he pointed out that, among other objections, there was the insuperable one that, in fairness to the SHAH, if we insist on his fulfilling his part of the undertaking, we ought to insist that the concessionaire fulfilled his, and promise that every work should be honestly and properly executed. There is no need of arguing against the proposal that England should accept such a responsibility, for no English statesman would think of asking Parliament to sanction its acceptance. Nor is it only England that is to be thought of. The special object to be attained by this strange interference in Persian affairs is said to be the defence of India, and England has always gone on the principle that India must bear the cost of its own defence; and it is on the natives of India that the cost of perpetually looking up Baron REUTER and the SHAH, and keeping each party to his bargain, would properly fall. India can just, and only just, pay its way as things are at present, and the whole finance system of India

would be paralysed if any such vague and enormous liability were incurred. Lord GRANVILLE had really no choice in the matter, and could say nothing more than that Baron REUTER'S concession was a purely commercial affair, which must be treated exactly as any similar affair would be treated, whatever might be the part of the globe where the scene of operations was to be. Nor was it possible for Lord GRANVILLE to fail to observe that this particular commercial affair is of a peculiar kind, and its peculiarities are such as to inspire the Foreign Office with an extra amount of caution. In the first place, Baron REUTER appeals to English capitalists for an enormous sum. Capitalists must judge for themselves, and if they like to put money in Persian railways they are free to do so. But the Foreign Office, without persuading or dissuading any one, may naturally find in what it knows of Persia considerable reason for taking care that, if capitalists make a loss, at any rate they shall not be able to say that the Government misled them by seeming to speak of the enterprise as a hopeful one. Lord STANLEY of Alderley, who followed Lord CAMERON, said that, in his opinion, it would be wrong to neglect this opportunity of promoting railways in Persia; for though railways would pay better in China, because it was more populous, Persia had just been devastated by famine. This certainly puts the enterprise in an interesting light. Persia is to have railways, not because it has a population to support them, but because it has not. The contribution of capital becomes an act of meritorious charity, and we had better have a Persian Concession Sunday at once. In the next place, the Foreign Office has Persia itself to think of, and Lord GRANVILLE had forced on his notice the extraordinary position which the reigning Persian Monarch would occupy if this concession were carried out. As Lord CAMERON himself said, the whole thing was more like a passage in the *Arabian Nights* than anything in real life. But the Foreign Office has to look at real life, and if the SHAH chooses to believe as if he were a Prince in a fairy tale, sensible men may apprehend that he will place himself or some of his successors in a position of extreme embarrassment, from which the only mode of escape will be to have recourse to some act abrogating the concession as wild and despotic as that by which it has been constituted.

If the SHAH has been deceived by the reception he met with in England, and thinks that we were in point of fact humbugging him with our reviews and banquets if we did not mean to take up his concession, we are sorry for the mistake. The English people, we believe, had no thought whatever except that of entertaining themselves, and following a fashion almost accidentally set. But if he was much under the influence of persons whose minds move in the cloudy region of moral support, he may have been led to form expectations which cannot be realized, and may feel some mortification at finding that England is not going to do anything definite to help him. Lord GRANVILLE says that, to the best of his belief, nothing of the sort has happened, and that the SHAH is perfectly satisfied with his English visit. We will hope that this is so; but at any rate it fortunately happens that two events have lately taken place which may calm his mind as to the peculiar significance of his reception here. The first of these is his reception at Paris. The French avowedly have no interest whatever in Persia, and yet he has been at Paris admiring crowds. He has witnessed the magnificence of the capital displayed to receive him, he has been stared at, he has had banquets and fêtes without end held in his honour, and he has enjoyed the unparalleled luck of hitting on a day for his visit to the French Assembly when there was what the papers call a calm sitting. Surely this is enough to convince him that Western cities, without any secret political or commercial purposes, are capable of working themselves into a state of effervescence merely for the sake of having a bit of fun, and that the arrival of an Oriental in diamonds is enough to start amusement among people determined to be amused. In the next place, he will have learnt since he left England the announcement or rumour of the Duke of EDINBURGH'S marriage with a Russian Princess. The alliance of our Royal Family with that of Russia may not have much political significance, but it has as much as the reception of the SHAH here can have. His visit to England will not be without results. A kindly feeling towards him and an interest in Persia have sprung up here, and he will have learnt something of the power and resources of the mistress of India. If a very grave crisis arose, and he had to choose between Russia and

England, he would be guided, not by a comparative estimate of the grandeur and cordiality of his reception at St. Petersburg and at London, but by considerations as to which nation could most befriend or hurt him. If no such crisis arrives, he will naturally have more favourable sentiments towards England than if he had not been here; and, if he had any great wrong to endure at the hands of Russia, we should be more inclined to resent it than if we had never seen him. In the same way the connexion of the Royal Families will naturally lead to an exchange of friendly acts and courtesies between Russia and England, and will make both countries less likely to magnify small dangers or small affronts. In a grave crisis, if we thought India in danger, or if the old Turkish question threatened to assume a form hostile to our real and permanent interests, we should equally go to war with Russia whether the Duke of EDINBURGH was married to a Russian Princess or not. Still the marriage would do something to prevent such a war; and so perhaps hereafter will the visit of the CÉSAREWITZ, when Englishmen have had time to forget the SHAH a little and to call to mind the kind feeling towards this country which the heir of Russia has taken every opportunity to express, and the calmness with which he has seen himself eclipsed by the Sovereign of a tiny Asiatic kingdom, and the advent of this Sovereign used as an occasion of manifesting an extreme dread and distrust of Russian policy in the East.

THE FRENCH COMMERCIAL TREATY.

THE English Government will shortly be asked to renew for a limited time the French Commercial Treaty of 1860; and there will probably be little hesitation in acceding to the request, with or without conditions. The Government of Marshal MACMAHON is happily relieved from the necessity of humouring the strange economic prejudices of M. THIERS. The country and the majority of the Assembly had already been inclined to a more liberal policy; and almost all parties will welcome the opportunity of escaping from a complication of recent embarrassments. When the English Government, after long hesitation, agreed to form a new Commercial Treaty, M. THIERS applied to the Powers which have unexpired treaties with France to concur in anticipating the term for which they still remain in force. The request was in every case met by a courteous refusal, so that it became impossible for the French Government to impose the taxes which had furnished a motive for commencing the return to a protective system. The tax on raw materials produced an utterly insignificant contribution to the revenue, and the only result of a laborious negotiation was to place a wanton impediment in the way of commercial intercourse with England. It may now be considered fortunate that Lord GRANVILLE and his colleagues carried conciliation almost to an extreme. It was understood that there had been some difference of opinion in the English Cabinet, and it was only after a delay which indicated a wholesome indifference to the Commercial Treaty that the question of modification was finally entertained. A stern refusal of concession, though it might have been consistent with the orthodox economic doctrine, would have furnished M. THIERS with an excuse for the failure of his policy, and it would certainly have caused irritation in France. The effect of the agreement to form a new treaty was to make the French Government exclusively responsible for all the difficulties which have since occurred. M. CHEVALIER and other ardent advocates of Free-trade complained that the English Government was losing the opportunity of giving the French a useful lesson in economic science, but the instruction which is derived from practical experience is generally the most impressive and the most lasting. No national jealousy has disturbed the gradual conversion to sound doctrines of the large part of the French community which has hitherto wavered between the opposite systems.

It is now generally admitted that commercial treaties are only defensible as provisional arrangements while one or both of the parties are passing through an experimental process of education. The Treaty of 1860 was a contrivance by which NAPOLEON III. supplied one of the few defects in the Imperial prerogative. At that time, notwithstanding the general docility of the Legislative Body, even the power of the Government would have been insufficient to pass a liberal tariff; and the EMPEROR could therefore only accomplish his enlightened purpose by

embodying his innovations in a treaty. A fictitious contract was accordingly made, by which England, in return for a reduction of French Customs duties, affected to make corresponding sacrifices, which were, in fact, additional benefits to herself. The consumer was, according to the old fashion, treated as a public enemy, or, at the best, as a mere dependent on the producer. It was agreed that cloth should become cheaper in England, as a set-off against the increased cheapness of cotton yarns in France. Mr. CORDEN was perhaps liable to the charge of not having driven, for the advantage of both countries, a sufficiently hard bargain; but he felt unbounded confidence in the proselytizing qualities of Free-trade as soon as it was tested in practice. His judgment, although it was too sanguine, has been to a certain extent justified by the result. Before the fall of the Empire, indeed, the Opposition, under the guidance of M. THIERS, had obtained from the Government a kind of promise that the Treaty should be denounced and remodelled at the expiration of the appointed time. On the accession of M. THIERS to power, the Protectionist party seemed to have become dominant; but after all the French nation is now contented with the partial liberality of the Treaty of 1860. The duties on almost all English products are unreasonably high, but there is no longer, even on the part of M. THIERS, any demand for prohibition. It may be assumed that the supporters of the treaty confine their attention to the French tariff, for it is well understood in France, as well as in England, that there is no question of increasing Customs duties in England. Traders are probably beginning to understand that the encouragement of imports tends to increase the demand for exported commodities.

The chief oversight committed by Mr. CORDEN has been corrected in the treaty lately concluded; and it will be proper in any impending negotiation to secure the continuance of a concession which was considered equitable by M. THIERS himself. The most-favoured-nation clause was only one of the articles of the Treaty of 1860, and consequently it lapsed with the instrument in which it was contained. But for the omission to insist on perpetual equality of treatment with other countries, it would have been impossible for the French Government to impose a distinctive duty on English vessels; and the benefit of the treaties with Continental States would have been secured to England. By the treaty now in force the right to profit by concessions made to other nations is made independent of the continuance of the special arrangement; and a partial exception which was allowed by the English negotiators to remain in the treaty is in itself a recognition of the principle of equality. It is probable that hereafter most-favoured-nation clauses will be inoperative or unnecessary. The barbarous practice of higgling for special immunities is becoming obsolete, and the equality which has been hitherto secured by covenants may become a part of the common law of nations. Commercial treaties also will disappear as soon as the simple truth that buying is correlative with selling has been universally accepted. In the meantime, the provisions of commercial treaties ought to be just and reasonable; and if the English Government is willing to accommodate a friendly neighbour by concluding an unnecessary bargain, the perpetuity of a right to the treatment accorded to the most favoured nation may well be a condition of the treaty. The delusion that English manufacturers or merchants attach great importance to the Treaty of 1860 has happily been dispelled. The French Government, though it abandons the attitude assumed by M. THIERS, is still asking rather than granting a favour; and comparative indifference to the success of a negotiation affords a legitimate advantage to a diplomatist. It may be presumed that, even in default of a treaty, the French Government would recommend to the Assembly the tariff of 1860.

The proposed renewal of the treaty fortunately applies only to a limited period. The latest of the Continental treaties with France will expire in 1876, and the French Government naturally desires that the whole question of commercial policy shall be considered at a time when legislation will be unfettered by obligation to foreign States. No objection will be raised on the part of England to a continuance for three years of restrictions which have been endured with patience since the first conclusion of the treaty; but it would be undesirable to perpetuate engagements which, in theory at least, hamper the independent action of Parliament. Although the best economists are opposed to the plan of levying an export duty on coal, much dissatisfaction might arise, in a time of scarcity and dearth,

if a popular measure were rejected on the ground that foreign States had a right to insist on receiving an untaxed supply. The antipathy of the Australian colonies to freedom of trade has been aggravated by the former claim of the Home Government to a veto upon mischievous legislation; and although the foresight of the Emperor NAPOLEON has, on the whole, been justified, the earlier attacks on the Commercial Treaty were regarded in France as laudable protests against absolute government. When the simple principles of exchange shall have been at some future period universally admitted, it will require some effort of thought to understand why commercial treaties should ever have been deemed necessary or useful. During the negotiations of the last two years the French Government were often reminded that no treaty was needed to facilitate the adoption of any tariff which might be thought most expedient; but M. THIERS, perhaps in the hope of providing himself with arguments in his negotiations with other States, always attached great importance to the object of obtaining the consent of England to increased burdens on trade. It is possible that in 1876 the French Government of the day may appreciate the advantage of reserving to itself absolute liberty, and that it may also be disposed rather to reduce than to increase the present tariff. In England the lapse of a few years will perhaps give additional weight to the reasons which have lately been urged against the whole system of commercial treaties. There is a certain absurdity in the assumption that the diminution of taxes paid in England is a concession in favour of France or of any other exporting country; but in this, as in other cases, fictions are sometimes found convenient.

THE CALLAN SCHOOLS.

MR. O'KEEFFE has gained what may by courtesy be called a victory, and the Irish Board of Education has been furnished with a new rule of action. Hitherto the Board has been accustomed to remove an ecclesiastical manager on receiving from his ecclesiastical superior a certificate of his suspension. Lord HARTINGTON's letter admits that the ordinary practice of the Commissioners "would have been broken by the continuance of Mr. O'KEEFFE as the recognized manager of the Callan School," but implies that the inconveniences arising from this practice in Mr. O'KEEFFE's case have been great enough to necessitate some change. Lord HARTINGTON attributes these inconveniences to the "unfortunate division of opinion among the Commissioners," and he thinks that this difference of opinion would have been avoided "if some definite course of proceeding had been prescribed by the rules." On neither point does Lord HARTINGTON quite get to the bottom of the matter. It is true that the division of opinion among the Commissioners supplied Mr. O'KEEFFE's friends in Parliament with an additional argument, but there is nothing to show that they would not equally have brought the question forward if the Commissioners had been unanimous. If the removal of Mr. O'KEEFFE from the managership of the Callan schools was an act of injustice, its character would not have been altered by the circumstance that it was an injustice committed by all the Commissioners. The wrong, if wrong it was, lay in the fact of his deprivation, not in the fact that it was inflicted by a Board divided against itself. Nor is it easy to see how the new rule suggested by the Government, and accepted by the Commissioners, would have served to prevent the division of opinion which Lord HARTINGTON laments. It invests the Commissioners with the power of withdrawing the recognition of a patron or local manager, "if it shall appear to them that the educational interests of the district require it. But such recognition will not be withdrawn without an investigation into the above matters, held after due notice to the patron or local manager, and to all parties concerned." If this rule had been in operation at the time of Mr. O'KEEFFE's suspension, the course of the proceedings would have been this. The Roman Catholic Bishop of Ossory would have informed the Commissioners of the fact of Mr. O'KEEFFE's suspension, and would have pleaded that the educational interests of Callan required his removal from the managership of the parish schools. The Commissioners would thereupon have given due notice to Mr. O'KEEFFE, to the Bishop, and to Mr. O'KEEFFE's parishioners that they intended to hold an investigation with the view of ascertaining whether the educational interests of the district did or did not require his removal.

Accordingly Mr. O'KEEFE would have appeared and argued that his suspension was unjust, the Bishop would have appeared and argued that the justice or injustice of the Commissioners was no affair of the National Board, and the parishioners would have appeared and taken the side of Mr. O'KEEFE or of the Bishop, as their feelings in the matter prompted them. What is there in this "definite course of proceeding" that could have had the effect of avoiding the "unfortunate division of opinion which" has occurred among the Commissioners? A majority would probably have held that the educational interests of the district required that the manager of the parish schools, being a priest, should be recognized as such by his bishop. A minority would probably have held that Mr. O'KEEFE had been improperly suspended, and would have denied that the educational interests of the district could be served by exhibiting the Board as an accomplice in an act of tyranny. In the end the division of opinion among the Commissioners would probably have been pretty much what it has been, and Mr. O'KEEFE would have been removed from the managership by the majority in the teeth of a protesting minority.

As Mr. GLADSTONE has in effect promised that the rule shall have a retrospective effect in Mr. O'KEEFE's case, and as it is very unlikely that Mr. O'KEEFE will let an occasion slip of defending his cause before anybody who can be compelled to hear him, this imaginary process will soon become an actual fact. The Commissioners had no choice but to accept the rule tendered them by the Government, but they are to be sincerely commiserated on the prospect which lies before them. The principle underlying their former practice was definite and intelligible. As soon as a clerical manager got into trouble with his ecclesiastical superior the Commissioners washed their hands of him. In future they will be allowed to wash their hands of him only when the educational interests of the district require it. It is clear that, if the National Board assumes that the educational interests of the district require in all cases that a suspended priest shall be removed from the managership, the real object of the new rule—if indeed it can be said to have any object beyond making things pleasant with Mr. BOUVIERE—will not be attained. For all practical purposes the fact of Mr. O'KEEFE's suspension had been as completely ascertained by the Commissioners as though they had been investigating the affair for a twelvemonth. Consequently a rule prescribing investigation in the educational interests of the district must mean an investigation of some sort into the merits of the case, and on what principles such an investigation is to be conducted is one which may well puzzle the best intentioned Board.

Mr. O'KEEFE's letter in the *Times* of Wednesday discloses some, though only some, of the questions which the Commissioners will have to decide under the new rule. Mr. O'KEEFE will ask the Board to declare the sentence of suspension canonically invalid, on the ground that Cardinal CULLEN was his accuser as well as his judge, and also on the ground that it was pronounced without trial. In the event of their rejecting both these pleas, the Commissioners will further have to consider whether the Papal Rescript under which Cardinal CULLEN acted was legal in Ireland. If the Board, rejecting the authority of the CHIEF JUSTICE, accepts the Rescript as constituting a sufficient authority to the Cardinal to try the case, the next step will be to inquire whether the trial was fairly conducted, and especially whether any proceeding which is confessedly *ex informi conscientia* can be regarded as a fair trial. This is a very pretty bundle of issues to set before a Court no member of which is necessarily an expert either in canon, or civil, or English law. But, supposing that all these difficulties have been surmounted, and that the Board have pronounced Mr. O'KEEFE's suspension invalid, there remains the question as to what is required for the educational interests of the district. If Mr. O'KEEFE is retained as manager because Cardinal CULLEN has passed an unjust sentence on him, and the schools are thereupon deserted, can the Commissioners be said to be consulting the educational interests of Callan? Perhaps the retention of Mr. O'KEEFE will not have this effect, as he is said to be popular with his parishioners; but it must not be assumed that the parishioners will always take the side of a suspended priest against his bishop, and what is to be done if they do not? It may be argued perhaps that the educational interests of the district will be better promoted by the spectacle of justice being done between a powerful

Cardinal and a lowly priest than by any less heroic measure which would merely have kept the schools full. We are not at this moment prepared to deny the truth of this position; but it is nevertheless to be remembered that the National Board has been established to see that children are taught to read, write, and cipher, rather than to infuse principles of morality into their parents, and that empty schools do not conduce to the former end, however they may serve the latter.

The difficulties of the subject will not be quite over even when the Commissioners have made their choice between the several claims of rudimentary knowledge and the higher morality. It is quite conceivable that the educational interests of the district may point in one direction and the educational interests of the country in another. In this very case the restoration of Mr. O'KEEFE to the managership may fill the Callan schools, and empty the schools in other places. Supposing that, in consequence of this step, the Roman Catholic bishops withdraw their recognition from the National Schools, and that a large number, perhaps a majority, of Roman Catholic parents thereupon remove their children, and either let them go without instruction or send them to some inferior school set up in a hurry to meet an unforeseen demand, will this be a result favourable to the educational interests of Ireland? Some persons will say that it is better for children to receive no education at all than to receive it in schools in which Papal rescripts are recognized and acted on. This argument altogether ignores the theory which Protestants are usually fond of maintaining, that secular knowledge is the one thing needful for the enlightenment of Roman Catholics, while it also ignores the fact that the choice in a great many cases will lie not between schools which recognize Papal rescripts and no school at all, but between schools which recognize Papal rescripts so far as they operate to disqualify a particular manager and schools which make the Papal authority the foundation of their whole system of education. If the new rule is to favour the latter class of schools at the expense of the former, it may be doubted whether Ireland will really profit by Mr. BOUVIERE'S advocacy of Mr. O'KEEFE.

IRASCIBLE JOLLITY.

ONE of the most curious departments of the study of the human mind relates to the mode in which the various emotions attract or repel one another. It has long been a familiar fact that many feelings tend after a certain duration to pass into other emotional forms. Now, for example, the fluctuations in musical strain beget now tenderness, now rage, as finely described in Dryden's famous ode. Possibly the new direction which the study of the origin of man is giving to psychology may lead up the inquirer to this problem of the affinities of the passions, and this conjecture is borne out by one or two bold hypotheses in Mr. Darwin's latest work. Meanwhile we may recall attention to the phenomena, and seek to bring them nearer to that focus of light where the discoverer's theorizing vision is most likely to note them.

A very common illustration of these laws of affinity may be found in the study of the states of mind rather questionably called high spirits. At first sight nothing seems more clearly enviable than an abundance of this emotional energy. People frequently suppose that they are awarding the highest praise by characterizing a person as "awfully jolly." No doubt this somewhat indefinite epithet is intended at times to convey the idea of habitual cheerfulness, and with this attribute nobody is very likely to quarrel in a world which is rather too favourable to the development of a morbid irritability. But when the jollity is of a more fitful and ecstatic character, we are not at all sure that the value currently assigned to it is a correct one. A jovial young man will generally be found to be a little troublesome to some of his friends as well as to himself; and, indeed, the Olympic personage whom he is supposed to resemble must, we fancy, have been rather a consternation to the orderly matrons of his day. Such draughts of delicious hilarity are rarely free from baneful concomitants. We seem to have been created for rather a sober and even humdrum kind of existence, and any attempt to realize the mad delights of the gods is pretty sure to be punished by those jealous sovereignties. The soul exalted for an instant in a delirium of bliss is soon plunged back into some most degrading form of human experience. The paroxysm of exciting joy can be endured but for a moment by the torrene mind. Its first production required an extraordinary stimulus, and its maintenance makes demands which no circumstances in human life can well satisfy. The sense of superhuman blessedness soon begins to fail, and reaction—an intense vexation, with a host of alarming symptoms—sets in.

It is not only in this violent relapse to the vulgar modes of feeling that we discern the dangers of excessive jollity. The soul of man appears to be but slightly susceptible of an abundant innocent joyousness. Whenever a very powerful excitement seizes it we

may observe its tendency to pass into an unlovely fury. The pure delight of mere excitement, the sense of a full and free existence, however intense for brief instants, is incapable of sustaining itself over long periods. The fund of nervous energy requires some new vent, involving an intenser form of emotional life than this innocuous hilarity. Hence the familiar spectacle of harmless mirth passing into anger, cruel taunting, or some other mischievous impulse. This phenomenon is conspicuously seen in cases of alcoholic stimulation. Excess of good temper and extreme irritability are here notoriously so closely related that each passes readily into the other, and the same amount of stimulation will produce now one effect, now the other, according to the particular temperament or previous mood. It is very curious, for example, to see German students, after perhaps the twentieth *Seidel* has been drained, emerging from a maudlin amiability to an excessive quarrelsomeness, and winding up their frequent embraces by a challenge to the sword. Many other forms of excitement resemble alcoholic stimulation in this respect; and in some persons it is observable that any unusual degree of high spirits brings on the contentious mood.

One of the most pitiable exhibitions of this incontinence may be found in a mass of people excited by the electric influence of numbers. One frequently hears of the amazing good-temper of the British crowd, but our own experience rather supports the opinion that during the ferment of excitement which close packing commonly generates there is a vast amount of nascent ebullition ready to vent itself on the appearance of any shadowy provocation. Single cases of protracted good-temper undoubtedly occur; but these are rendered remarkable just because of the general tendency to drift into rude rebelliousness and angry irritability. Nor is the phenomenon, strictly speaking, characteristic of any one social grade. Culture may be reasonably expected to soften down the unamiable sides of human nature; but the so-called cultivated classes are far from irreplicable in this matter. The proverbial destructiveness of youthful gaiety receives frequent illustrations at some of the resorts of our adolescent aristocracy. The elixir of juvenile sanguinity is found occasionally overflowing into actions which in ordinary persons would be characterized by wanton cruelty or mischievous brigandage. The conventional notion respecting Oxford or Cambridge undergraduates seems to be that they are supremely happy beings, exhaling a superabundance of delicious consciousness in grateful melody or sparkling jest. But an occasional reference to the newspapers is likely to dissipate this comfortable delusion. When the energy of the blissful fit happens to run over into so awkward a channel as the destruction of valuable works of art, one is violently put in mind of the limitations which even aristocratic felicity must recognize. Some persons may see in the spectacle of assembled collegiates, under the excitement of their yearly saturnalia, concentrating for half-an-hour a somewhat unfriendly attention on a particular hat or necktie, only a case of harmless youthful frolic; yet a more cynical observer would say that so meagre a subject could scarcely furnish such a continuance of simple amusement, and that an important point in the gratification was the element of annoyance and retaliation for an alleged insult. However this be, we can scarcely doubt that even high-born hilarity sometimes approaches too closely to the boundaries of intolerable offensiveness.

If the phenomenon thus seems to be only in a very limited degree conditional on the stage of social culture, it may be interesting to inquire how far it is modified by peculiarities of race and temperament. That some people's jocularity passes with special facility into rude violence must be so familiar a fact as to need no illustration. A certain kind of temper which we are frequently obliged to notice seems always predisposed to the hostile attitude; and in proportion as it is excited above its ordinary pitch, the danger of open fury increases. On the other hand, one is sometimes so fortunate as to meet with a person in whom no degree of mental intoxication breeds this anti-social fury. With respect to race, we are inclined to think, however unnatural a sentiment it may at first appear, that the members of the Teutonic family manifest this aptitude for quarrelsomeness under excitement in a very high degree. The very gravity and sincerity of which the Northern peoples are so justly proud appear to necessitate this unamiable mental feature. Anybody who has had frequent opportunities of observing Southern races will have remarked a capability of prolonged light-heartedness which seems childish to the sterner notions of Anglo-Saxons. We should find it hard to conceive George Eliot's *Fedalma* transported by a joyous delirium at the spectacle of a village revelry, as an English maiden. How many broken heads, one imagines, would result from the introduction of an Italian Carnival with its pretty pleasantries into our serious society! A curious verification of this conclusion may be found by contrasting the students of Paris with, say, those of Berlin or Göttingen. Whereas the Teuton striplings show, under the influence of *boierisch Bier*, a considerable degree of irascibility, the frequenters of the cafés of the Quartier Latin are far more disposed to an inane levity than to so earnest a business as wrangling. No doubt disputes have arisen among the latter over their wine or Strasburg beer; but the motive force is less an animal instinct than an artificial sentiment of honour and vanity. Altogether the Northern temperament appears to be conspicuously prone to these aggressive modes of mental agitation. Englishmen are frequently spoken of as a nation of grumblers. And the querulous and quarrelsome moods are only two forms of

activity into which the same deep-seated spirit of defiance is apt to run. The Epicurean type of mind that takes life as a matter of course, and abandons itself unquestioningly to every fit of pleasure that visits it, is not often found among our sturdier British natures. These are stolid and but slowly stimulated in their customary drowsy condition; but when once excited, the very same elements reappear as a gloomy resentfulness and a sulky hostility. The inspiration of their raptures comes not from blithe-hearted Bacchus, but rather from fierce and blustering Thor.

This alliance between jovial excitement and irascibility is somewhat suggestive from a philosophic point of view. One can imagine, for instance, some learned Hegelian recognising here an illustration of a favourite dictum. Every affirmation, says the metaphysician, is at the same time a denial. But hilarity is only the emotional form of the assertive *ego*. Exuberant joy is the fruit of an intense self-consciousness. Consequently, there must be some form of denial attending this affirmation; and such a form is presented in the hostile and destructive impulse of which we have been speaking. In other words, combativeness is only the negative side of the great instinct of self-preservation. How far this idea might be elaborated, and what degree of scientific value it would be entitled to receive, we must leave our readers to reason out for themselves.

From a less metaphysical point of view we might, on the evolution hypothesis, trace out the inquiry how far the connexion between excessive joy and quarrelsomeness is due to ages of experience both in our own and in inferior species, in which, through the physical necessity of the struggle for existence, the anti-social and destructive passions have had full play, and have ministered some of the intensest forms of instinctive gratification. It may be a very humiliating truth that many people still find their deepest emotional satisfaction in some form of vindictiveness and infliction of pain. Yet if it be a truth, it might, we think, in the hands of Mr. Darwin or Mr. Spencer, be made to suggest some such organized product of primitive and anti-social forces.

But, leaving the regions of metaphysics and somewhat impalpable hypotheses, we may perhaps effect more by a suggestion of the practical lesson derivable from our subject. Whatever may be the real explanation of the conjunction, we must all recognise at least a frequent tendency in boisterous hilarity to pass into some mischievous impulse. How few men can be long witty without growing coarse and shocking to the finer feelings, must be known to every frequenter of the conventional dinner-party. Of course, if Hobbes was right in saying that all mirth arises in the first instance from a sense of glory in ourselves as triumphing over our rivals, the relation between merriment and the hostile passions is sufficiently made out. But even apart from this assumption, the two modes of excitement must be conceded to be closely allied. Indeed it would seem as though all varieties of intense emotion were more or less fitted to excite each other. If this be so, Plato might have urged against violence of passion, not only that it is a usurpation of the proper province of the regulative *voic*, but that the most innocent of the desires, when raised above a certain pitch of intensity, produce a general agitation of the psychical currents, so that some form of destructive impulse is pretty certain to manifest itself. However much future ages of culture may tend to uproot these anti-pathetic passions, it may be safely maintained for a long while to come that to most men any very boisterous mode of indulging high spirits is attended with considerable moral risk. Even were there no subsequent depression for the subject of these exalted states of mind, the fact that they are always contiguous with the regions of anger, malignity, and wanton power should be sufficient to banish them from a refined and humane society. In this case, then, conventional propriety appears to have a solid basis of reason. Bacchanalian orgies, and the utter self-abandonment of mirthful revelry, are unsightly in the England of to-day, not because any degree of merriment is inherently sinful, but simply because all rioting is perilous to that well-ordering of the impulses on which a refined social life is so nicely balanced.

JOHNSON'S RAMBLER.

EVERYBODY has a tolerably distinct idea of Dr. Johnson's style, but this does not prove that the world has an equally distinct acquaintance with the writings on which that idea is founded. The *Rambler* is talked of, laughed at, treated as part of the common stock of literature which we know as Englishmen. But is it read? As we much doubt whether it is, we are glad to see a new edition (Tegg) which may find its way into libraries, and give the rising generation an opportunity of acquainting itself at first hand with the thoughts and periods of the last century's sage—not at all like the moralist of our day, but a preacher notwithstanding, who had a way of embodying moralities in very impressive and lasting language. No style suits Johnson's vein of thought but his own. In his own words, his reflections on life, without starting any new theories, make their way to our heart and understanding, not merely as abstractions, but weighted with the force and vividness of a very extraordinary nature. No writing can possibly be more characteristic of the writer than these essays of the *Rambler*. As far as he could show himself in monologue they show him. His sonorous periods take sound and life as we read, and some echoes reach us of the "strong emphatic voice" which was Boswell's dearest music. That precision and pomp of diction which distinguished his talk from all others is here immortalized

in print. As we read these balanced sentences and listen to their rhythm we perceive that he thought in periods. The vocabulary of our language lay open to him—not simply as a figure of speech, for he was engaged upon his Dictionary during the whole time the *Rambler* was coming out—the longest words pressing forward for selection as most consonant with voice and manner, and with that vast bulk of body and mind which dominates over the reader as a presence. It would have cost Johnson a most intolerable amount of labour to simplify his style. It is called laboured, but, as we know that he composed at full speed, that these essays were “struck off at a heat with rapid exertion,” and that he rarely corrected his first manuscript, it only means that the style natural to him is laborious to imitators, and ill adapted for a model. He was such an admirer of Addison's style that Boswell could not help observing that it had not been his own model. “Sir,” was the reply, “Addison had his style and I have mine.” For our own part, we do not wish one sentence or one word shorter. He was a giant in his way, and we like to trace the characteristics and peculiarities of the species.

In saying that the *Rambler* is the man, we mean of course the man thinking in his closet. Conversation was necessary to bring out Johnson's rarest qualities. These essays would be forgotten if they did not illustrate his talk. Only in company was he cheerful or could enjoy life. We are not surprised, therefore, that the *Rambler* was slow in making its way, that it needed his social fame to set it going through the career of editions which it passed through before his death; for, however weighty the thought and sonorous the language, if the picture of life is uniformly a sad one, people will study it with reluctance, and with a preference for the sayer of smoother things. Of this he was fully aware. “As it has been my principal design to inculcate wisdom and piety, I have allotted,” he says, “few papers to the idle sports of imagination”; and, “Scarcely any man is so steadily serious as not to complain that the severity of dictatorial instruction has been seldom relieved, and that he is driven by the sternness of the Rambler's philosophy to more cheerful and airy companions.” But just as things that happened long ago, however tragic, lose something of their terror through distance of time, so it is with gloomy moralizing. The man who viewed life in this aspect has taken some of the gloom away with him; the world is brighter by the deduction of his own share in it. We are struck rather with his pathos than with his melancholy, which was no doubt oppressive to his contemporaries. Thus it is pathetic to observe his sense of dependence and need of individual sympathy. “The necessities of our condition require a thousand offices of tenderness. Every man has frequent grievances which only the solicitude of friendship will discover and remedy, and which would remain for ever unheeded under the great heap of human calamity, were it only surveyed by the eye of general benevolence equally attentive to every misery.” And who has more pathetically set forth the pains of authorship—“majestic pains” under his handling—and the hindrances mind has to cope with from the body it is tied to?

He that condemns himself to compose on a stated day will often bring to his task attention dissipated, a memory embarrassed, an imagination overwhelmed, a mind distracted with anxieties, a body languishing with disease; he will labour on a barren topic till it is too late to change it; or, in the ardour of invention, diffuse his thoughts into wild exuberance, which the pressing hour of publication cannot suffer judgment to examine or reduce.

Too proud to propitiate, he yet realizes all the hazards of this calling. “There is nothing more dreadful to an author than neglect, compared with which reproach, hatred, opposition, are names of happiness; yet this worst, this meanest fate, every one who dares to write has reason to fear.” Nor need this fate be due to the feebleness of his powers, for “though it should happen that an author is capable of excelling, yet his merit may pass without notice, huddled in the variety of things, and thrown into the general miscellany of life.” It is no peculiarity to Johnson's disadvantage, though every point in his character is so marked and salient that it may seem so, that his sympathy needs some personal experience to set it flowing. For a vast number of human troubles and annoyances he has very little pity, because it seemed to him easy to ignore or override them—“we may,” he says, “think the blow violent only because we have made ourselves delicate and tender.” But the troubles of which he owned the mastery loom out upon us sometimes with a terrible force, at others with a distinctness which adds to our knowledge of human nature. His health was infirm, and he conveys to his reader some of his own misgivings “that we shall find the vesture of terrestrial existence more heavy and cumbrous the longer it is worn.” All his life he suffered from the fear of death, and he impresses us with some share of his own perceptions of awe and terror where his compassion for his fellow-men hurried to a violent death takes the urgent form of an appeal to the universal conscience. “Who knows,” he quotes from an old author, “whether this man, dragged to execution, is not less culpable than I? On the day when the prisons of this city are emptied into the grave let every spectator of the dreadful procession put the same to his own heart. Few among those that crowd in thousands to the legal massacre, and look with carelessness, perhaps with triumph, on the utmost exacerbations of human misery, would then be able to return without horror and dejection.” His conscience is great matters indeed never slumbers: we recognize its workings in the paper on the lapses in practice of the wise and learned. While owning it natural to be indignant with men who fall so far short of their own precepts, yet he pleads, “Since no man has power of

acting equal to that of thinking, I know not whether the speculative may not sometimes incur censures too severe; and by those who form ideas of his life from knowledge of his books be considered no worse than others, only because he was expected to be better.”

Poverty is another subject in which experience gives him a very practical character. Literature and asceticism he considers alike at fault in their definition. “The votary when he leaves his monastery and wanders abroad is seldom seen but with reverence or heard but with submission”; “in epic language the man is poor who cannot command the wealth of nations.” He quotes Cowley as fixing the income of the only poverty on which he condescends to speculate at five hundred a year; Johnson himself—first stating that no one ought to call himself poor unless the majority of mankind are richer than himself—pronounces poverty, in words not to be gainsaid, to be “a state in which every virtue is obscured, and in which no conduct can avoid reproach; a state in which cheerfulness is insensibility and dejection sullenness; of which the hardships are without honour and the labours without reward.” A man speaks thus because he has felt it and knows. In his view of every state of life and thought in which he can have shared, we are impressed by a width of range, an order, harmony, and fullness of observation; a power of embracing all conditions; a touching sense of the vanity of human endeavours—all which are tokens of a powerful and surely a noble mind. Take, for example, the obstacles to any man becoming famous, collected into the following fine sentence:—

If, therefore, he that imagines the world filled with his actions and praises shall subduct from the number of his encomiasts all those who are placed below the tight of fame, and who hear in the valleys of life no voice but that of necessity; all those who imagine themselves too important to regard him, and consider the mention of his name a usurpation of their time; all who are too much or too little pleased with themselves to attend to anything external; all who are attracted by pleasure or held down by pain to unvaried idlers; all who are withheld from attending his triumph by different pursuits; and all who slumber in universal negligence, he will find his renown straitened by nearer bounds than the rocks of Caucasus, and perceive that no man can be venerable or formidable but to a small part of his fellow-creatures.

It is when Johnson follows a lead and falls into a fashion that we become alive to his weak points. He is severe on pastorals, but he scarcely keeps out of a kindred absurdity in his allegories and genealogies of the virtues and vices. What a weariness comes over the modern reader set to thread his way through the parentage of Religion, Labour, Frugality, Truth, Falsehood, and Patronage! What a dull, fruitless puzzle does it all sound to modern ears!

He was evidently sensible that his style was incapable of disguise, and he himself furnishes Macaulay with the shaft of ridicule where he quotes Sir Hugh as not liking a woman with a “pearl.” Yet here and there his sentences, affecting to come from a female pen, have a particular grace. Thus Cornelia, describing Lady Bussle's (the country housewife's) employments—“It is indeed the great business of her life to watch the skillets on the fire, to see it simmer with the due degree of heat, and to snatch it off at the moment of projection”; and we note the pretty balance of the closing illustration, where she owns that the same economist has by incessant application to fruits and flowers contracted her cares into a narrow space, yet does not perceive that she is more free from disquiets than those who take a wider range:—“Her marigolds, when they are almost cured, are often scattered by the wind; the rain sometimes falls upon the fruit when it ought to be gathered dry.” The young lady's delight at the year of confusion introduced by the New Style has some real touches of the girl in it. As for the charge of long words, Johnson boldly acknowledges that they please his ear. “Where common words were less pleasing to the ear, or less distinct in their signification, I have familiarized the terms of philosophy by applying them to popular ideas.” Thus, “no man can at pleasure obtund his senses.” Hence the “flatulence of pride,” “the petulance of insult,” “the spirit of youth sublimed by health and volatized by passion,” “the Londoner in the country growing of a sudden oracularous and infallible.” On the same principle the comfort of a fire in winter is thus explained:—“Ease after torment is pleasure for a time, and we are very agreeably recreated when the body chilled by the weather is gradually recovering its natural tepidity.” But Johnson's long words are with so many people the most they know about his writings that we need not extend our list. On the other hand, he can condense observation into few words. Thus, “all error is meanness”; therefore it is incumbent on every man who consults his own dignity to retract it as soon as he discovers it. To the suggestion that men should regulate their conduct by the counsels of a wise friend, he answers that “this appears a remedy by no means adapted for general use; for, in order to secure the virtue of one, it presupposes more virtue in two than will generally be found.” “Frugality,” he argues, “is necessary even to complete the pleasure of expense.” “Curiosity is the thirst of the soul.” “Good humour is a state between gaiety and unconcern,” the act or emanation of a mind at leisure to regard the gratification of another. Tetrica's ill-humour has grown into a “principle of disapprobation.” Sorrow is “a kind of rust of the soul which every new idea contributes in its passage to scour away.” Unpunctuality even in small things “darkens those moments with expectation, suspense, and resentment which are set aside for pleasure.” “The necessity of doing something, and the fear of undertaking much, sink the historian to a genealogist, the philosopher to a journalist of the weather, and the mathematician to a constructor of dials.” Dr. Johnson was undoubtedly a good Christian, and could

forgive a real injury, yet it was part of him to have it out with anybody who offended his feelings or his pride; nobody wounded either with impunity. We are not surprised that Garrick never entirely forgave the pointed satio which avenges his airs of superiority under the character of Prospero. Johnson seems to have called upon Garrick at his new house; and the mode of his reception, the provisions against his clumsiness and awkwardness, the nuts on the staircase to secure it from the pollution of his feet, the carpet covered with a cloth of which the servant was bid turn up a corner "that he might contemplate the brightness of the colours and the elegance of the texture," the insolence of condescension with which his friend conducted him to a back room where he breakfasted when he had no great company, the quality of the tea, which—upon his forcing himself to commend it—was explained to be inferior to that reserved for those he thought himself obliged to treat with particular respect, are detailed by Asper, who thus takes credit for forbearance:—

My patience was not wholly subdued. I was willing to promote his satisfaction, and therefore observed that the figures in the china were eminently pretty. Prospero had now an opportunity of calling for his Dresden china, which, says he, "I always associate with my claved tea-kettle." The cups were brought; I once resolved not to have looked upon them, but curiosity prevailed. When I had examined them a little, Prospero desired me to set them down, for they who were accustomed only to common dishes seldom handled china with much care. You will, I hope, commend my philosophy when I tell you that I did not dash his baubles to the ground.

Superciliousness provokes return in kind, and our moralist was not above the pleasure of tit for tat. When shortly afterwards Johnson asked Garrick what people said of his Dictionary, and he answered it was objected that he cited authorities which were beneath the dignity of such a work, and mentioned Richardson, "Nay," said Johnson, "I have done worse than that; I have cited *thee*, David." But in showing that the *Rambler* has its light reading and attractions for all the world, we are leaving an impression which ought not to be the permanent one. The asperities and irritations of a temper tried by melancholy and disease may well excuse some pettiness of resentment beneath the temper of a philosopher: but it is an essential part of Johnson's greatness that it maintains its ground in spite of our intimate knowledge of his weaknesses and imperfections. What but sheer force of intellect and character could have kept for him, beyond all his contemporaries, a living name to this day?

THE NEW SCHEME OF SWISS FEDERAL REFORM.

IT could hardly be expected that the movement for a reform of the Swiss Federal Constitution would be altogether stopped by the rejection in May 1872 of the proposals which had been voted by the Federal Assembly in the March of the same year. The majority of the popular vote by which the scheme was thrown out was a very narrow one—for five thousand is but a shave when half a million of men are voting; the defeat was of that kind which does not so much dishearten as it stirs up to fresh efforts. The rejection of the measure at all was a great and unexpected success for the anti-revisionist party, but it was the kind of success which was sure not to remain long undisputed. This would doubtless have been the case, even if the revisionist and the anti-revisionist party had been two parties which thoroughly agreed among themselves. But it was well known that the scheme of Revision was thrown out by a union of parties, who could honestly join in a negative vote when they were called on to say Yea or Nay to a scheme which took in almost every subject of political debate, but who could not join together for any positive object, and who would doubtless have voted differently on the subject of Revision itself, if the several proposals had been put to the vote separately instead of all in a lump. The strongest illustration of this state of things was that, though the anti-revisionist party could throw out the scheme of revision, yet when the general election came soon after, a large majority of the new *Nationalrath* proved to be in favour of Revision. The enemies of Revision had not changed their minds; but, while they could agree in the negative act of throwing out the scheme, they could not agree in the positive act of choosing a representative body.

Thus came about the apparent anomaly that the defeat of the Revisionist party at the voting on the Constitution was followed within a few months by the election of an Assembly in which the Revisionist party has an unmistakable majority. The election of that Assembly was naturally followed by the election of an Executive body, a *Bundesrath*, also favourable to Revision. Of this election we spoke some months back soon after it took place. The retirement of Dr. Dubs during the term of office of the last *Bundesrath*, and the failure of M. Challet-Venel to obtain a place in the new one, gave the Executive of the Confederation a wholly different character from that of the body which was in power when the question came on for discussion in 1871. The scheme which was drawn up in the Session which began in the November of that year, and which was rejected by the popular vote in May 1872, was not at all the work of the then *Bundesrath*, but of the Assembly itself. The *Bundesrath* had indeed made its own proposals of reform, but they were few and moderate, and very unlike the scheme which the Assembly voted but which the Cantons and the people threw out. But when the Assembly which was elected last autumn requested the *Bundesrath* which they had just elected to draw up a scheme of revision for their discussion, the new Federal Councilors could hardly be expected to keep within the same narrow

bounds as their predecessors. As a distinctively Revisionist *Bundesrath*, elected by a distinctively Revisionist Assembly, their natural course was certainly that which they have actually taken. As men favourable to a certain scheme, a scheme which had been thrown out by a very narrow majority of the people, we can see nothing to object to in their taking that scheme as the groundwork of their deliberations, and in proposing it afresh with such changes as the experience of the last year had shown to be prudent. The objections which some of the Anti-Revisionist organs have made to the course taken by the *Bundesrath* on this head do not seem to us to be well founded. It is said that it is insulting to the Cantons and to the people again to propose to them a scheme which they have already rejected. The answer to this is that the present scheme is not the scheme which was rejected, but a scheme which indeed is founded on the rejected scheme, but in which many of its proposals are seriously modified. When a Government has had its proposals thrown out by a narrow majority, it can hardly be blamed for bringing them forward again, with such changes as it may fairly think are likely to meet the objections of those by whom the proposals were thrown out in their first form. And, though the existing *Bundesrath* cannot be said to have any personal identity with the Assembly by which the scheme of last year was drawn up, yet, at all events to an Englishman's notion of party government, it might seem to have so much in common with it that it might fairly take in hand the scheme on which the majority of that Assembly had agreed. Our own objections would be of another kind. We are sorry to see that the *Bundesrath* still recommends that the voice of the Cantons and of the people shall be again taken by a simple vote of Yea or Nay. They are not indeed so positive about it as the Assembly was last year. They do suggest, as an alternative course, that the vote may be taken separately on several groups of proposals. But the way of voting *in globo* is still that which they recommend. Now it is pretty clear that it was this necessity of voting for everything or against everything which caused the negative vote of May 1872. Had the distinct subjects contained in that proposal been put to the popular vote in distinct portions, there can be no doubt that many at least of the proposals would have been carried. By lumping all the proposals together in one vote, men who could not agree in any positive course are again invited to agree in a negative vote. All those who disapprove of anything in the scheme, utterly different among themselves as their grounds of disapproval may be, are again invited to throw out a scheme in which each would doubtless find many things to vote for, if he was allowed to vote for those things only. It is the *Bundesrath* itself which invites Ultramontanes, Welsh, and Old Liberals, to use the phrase of the promoters of Revision last year, to join in a second coalition against its own work.

Whether this will really happen depends upon the course taken by the Assembly, to which, and not to the *Bundesrath*, it belongs to put the proposal into the shape in which it is to be finally submitted to the votes of the Cantons and of the people. The *Bundesrath* simply put a proposal before them with which they can deal as they please. It is open to them to put the scheme of Revision into what shape they choose, and to cause the voting to be either *in globo* or *artikelweise*. But we have now to discuss the scheme in the shape in which it comes to them from the *Bundesrath*. The changes which are made in the scheme of last year are undoubtedly considerable, but the change which of all others we should have been best pleased to see made in it has not been made. The proposals about the *Initiative* and the *Referendum* remain exactly as they were last year. We need not again go through our arguments on that head; we will only say that, if we were Swiss citizens, we should deem it quite reason enough to say Nay to the scheme, if we were obliged to say Yea or Nay to the whole scheme, but that we should much rather be allowed to say Nay to some parts, and Yea to some other parts. And in discussing the other proposals we must, as before, keep clear of questions which have no interest out of the country, and which cannot be properly understood out of the country. How far the vote of any party or of any man may have been influenced, or may be likely to be influenced, by questions about railways and such like is a matter which is no affair of ours. To us the whole thing is a study in constitutional politics, and it is from that point of view that we shall say what little we have to say about the particular provisions of the present scheme.

Of the changes made in the scheme of last year, and of the wholly new proposals which are now added to that scheme, those which are of the greatest interest in themselves, and those to which the *Bundesrath* in its Message of July 4 clearly attaches the greatest importance, are those which relate to educational and ecclesiastical matters. With regard to the military proposals, which, as they stood in the scheme of last year, gave great offence to cantonal feeling in several parts of the country, it is certain that several changes have been made with a view of making the proposal less offensive to a spirit which, even if mistaken, is always respectable. But strong advocates of cantonal right maintain that the concessions are altogether illusory. With regard to the question of those whom it saves trouble to call *père*, there is nothing new in the present scheme, except that it is absolutely forbidden to charge anything for what is called a "permis d'établissement ou de séjour." This of course is a step in the direction of making the process of *Niederlassung* easier, and is so far a gain. In the matter of an unification of the law, a point on which the Romance-speaking Cantons were so frightened last year, the proposed changes are not so great as they then were.

It seems to be chiefly matters of commercial law which are to be transferred to the dominion of the Confederation.

On the question of education it is plain that a real and important concession has been made to cantonal right. By the constitution of 1848, the Confederation had the power of founding a Federal University, which it has not exercised, and of founding a Polytechnic School, which it has exercised. To this the scheme of 1872 added three other provisions. Besides the University and the Polytechnic School, the Confederation was authorized to found other establishments for the higher instruction. The Cantons were bound to provide for elementary education, which was to be compulsory and gratuitous. But though the immediate care of primary education was left to the Cantons, the Confederation might, by a Federal law, fix a general minimum for elementary education. In the new scheme the other provisions of last year are kept, but this last is left out. So it would seem that the details of primary education will be left to each Canton to settle, and that there cannot be anything in the shape of a Federal School Inspector. This is a very important concession indeed on a point on which both local and religious susceptibilities had been strongly stirred up.

After all that has lately been going on about ecclesiastical matters, both in Switzerland and elsewhere, it could hardly be expected that the present scheme should fail to contain some proposals bearing on the relations of Church and State. The proposals which are now made go very far beyond anything in the scheme of 1872; and they are elaborately explained, and the principles on which they are based defended, in the Message of the *Bundesrath*. The Constitution, as it now stands, guarantees the free exercise of the worship of all recognized Christian confessions throughout the extent of the Confederation. It is somewhat strange that the restriction to Christian confessions, which was struck out in 1866 from other parts of the Constitution, should have still been left here. To this was added a clause empowering the Cantons of the Confederation to take measures to preserve order and peace between the different confessions. These simple provisions were greatly enlarged in the scheme of 1872, and in the present scheme they are greatly extended again. No one can regret the abolition of a restriction which might be construed as allowing any Canton to hinder the free exercise of any form of worship other than those of the two Churches which at present divide between them the great mass of the Swiss people. But we tremble a little when the *Bundesrath* says, in a somewhat lordly tone, that the Confederation places itself above all Churches and confessions, and cannot recognize any of them:—

La Confédération se place au-dessus des communautés et des dénominations religieuses. Elle n'en reconnaît aucune. Elle ne les connaît que pour protéger leur liberté et pour faire régner la paix entre elles. Elle ne défend ni une confession ni une église. Elle défend l'individu, en lui assurant le respect de sa croyance et la liberté de sa conscience.

The enactments which are to follow from these principles stand as follows:—

Article 48. La liberté de conscience et de croyance, est inviolable.

Nul ne peut être contraint de faire partie d'une association religieuse, de suivre un enseignement religieux, ou d'accomplir un acte religieux.

On ne peut faire dépendre les droits civils et politiques de proscriptions et de conditions de nature ecclésiastique ou religieuse.

Nul ne peut, pour cause d'opinion religieuse, s'affranchir de l'accomplissement d'un devoir civique.

Nul n'est tenu de payer des impôts dont le produit est spécialement affecté aux frais proprement dits du culte d'une communauté religieuse à laquelle il n'appartient pas.

Article 49. Dans les limites compatibles avec l'ordre public et les bonnes mœurs, chacun professe sa religion avec la même liberté et obtient pour son culte la même protection.

Les Cantons et la Confédération, peuvent prendre les mesures nécessaires pour le maintien de l'ordre public et de la paix entre les membres des diverses communautés religieuses ainsi que contre les empiètements réciproques du domaine civil et du domaine religieux.

On peut recourir auprès de la Confédération des décisions des Cantons sur les contestations de droit public ou de droit privé auxquelles donne lieu la création de communautés religieuses nouvelles ou une scission de communautés religieuses existantes.

Il ne peut être érigé d'évêchés sur le territoire suisse sans l'approbation de la Confédération.

This last provision is, from an historical and legal point of view, fully justified by the existing relations between the Confederation and the Holy See. The existing law is as the proposed constitutional amendment would make it. If this proposal stood by itself, the only question which could be raised would be, whether it would be worth while to make a constitutional matter of it. But we really do not see how the prohibition is justified on the principles from which the *Bundesrath* sets out. By legislating about a matter which touches one denomination only, the *Bundesrath* surely belies its own principle of not recognizing any denomination. If the Confederation is to know nothing of Bishops and of any acts that they may do as Bishops, if it is carefully provided that no ecclesiastical act shall have any civil consequences, it cannot matter to the Confederation whether there are many Bishops or few within its territory, or what may be the territorial limits of a jurisdiction which it does not acknowledge. Again, in Article 60, where the scheme of 1872 only proposed that "en matière matrimoniale nul ne peut être contraint de se soumettre à une juridiction ecclésiastique," we get in 1873 two clauses:—

La juridiction ecclésiastique est abolie.

L'état civil et tout ce qui s'y rattache est du ressort des autorités civiles.

This, according to the Message, enforces civil marriage, of course not interfering with the liberty of adding any religious ceremony; and it requires that the registration of births, deaths, and marriages should be an exclusively civil business. With this in itself we should not be disposed to quarrel, but the everlasting question crops up whether it is a piece of legislation which ought to be forced on any Canton against its will. Without the help of the Message, we should hardly have understood what was meant by the abolition of the ecclesiastical jurisdiction; but the Message tells us:—

Elle est la conséquence de la distinction entre le domaine civil et le domaine religieux, mais elle ne porte point atteinte aux droits de chaque communauté religieuse et de chaque congrégation de régler comme elle l'entend les questions de dogme, de discipline ecclésiastique, etc.

Lastly, we have a new Article 64:—

Quiconque, sans l'assentiment de la Confédération, exerce sur le territoire suisse des fonctions officielles au nom d'un état étranger ou d'une autorité étrangère, peut être expulsé de la Suisse par le Conseil fédéral.

This sounds rather like a Bill of Indemnity for the action of the Federal Council in the Mermillod business, and it is another sign how hard it is for either nations or individuals to take in the force of the great saying of William the Third:—"Mr. Collier has set his heart on being a martyr, and I have set my heart on disappointing him." To our insular notions there seems something very strange in giving the Executive power authority, as it would seem, of its own mere motion, to expel anybody.

The changes, on the whole, seem as if they were designed to make considerable concessions to cantonal feeling at the cost of still more deeply offending Ultramontane, or indeed any form of Catholic feeling. It is perhaps thought that, if Vaud can be won, it does not matter about Uri. From our own point of view we should be as strongly disposed to vote against the ecclesiastical proposals as to vote against those which again bring forward the *Initiative* and the *Referendum*. But, at any rate, it does not seem fair to mix up together in a single vote these ecclesiastical and purely constitutional questions, which, to say the least, are open to so much discussion, and again to mix them up with proposals about other matters, the military changes especially, which those who best understand them seem agreed to look upon as improvements.

HEROES AT HOME.

WE may say what we like about the worthlessness of the world and the solid charms of home, but the plain fact, stripped of oratorical disguise, is that we mostly give society the best we have and keep the worst of ourselves for our own. The hero at home is not half so fine a fellow as the hero in public, and cares far less for his audience. Indeed, when looked at under the domestic microscope, he is frequently found to be eminently unheroic, something of the nature of a botch rather than nobility in address and an ideal brought down to the line of sight; which would be the case if he and all things else were what they seem, and if heroism, like fine gold, was good all through. This is not saying that the hero in public is a cheat. He has only turned the best of his cloak outside and hidden the seams and frays next his skin. We know that every man's cloak must have its seams and frays; and the vital question for each man's life is, who ought to see most of them, strangers or friends? We fear it must be owned that, whoever ought, it is our friends who do get the worst of our wardrobe—the people we love, and for whom we would willingly die if necessary; while strangers for whom we have no kind of affection are treated to the freshest of the velvet and the brightest of the embroidery. The man, say, who is pre-eminently "good company" abroad, who keeps a dinner-table alive with his quick wit and keen repartee, and who has always on hand a store of unhackneyed anecdotes, the latest *on dit*, and the newest information not known to Reuters, but who hangs up his fiddle at his own fireside, and in the bosom of his family is as silent as the vocal Memnon at midnight, is not necessarily a cheat. He is an actor without a part to play or a stage whereon to play it, a hero without a flag, a bit of brute matter without an energizing force. The excitement of applause, the good wine and the pleasant dishes, the bright eyes of pretty women, the half-concealed jealousy of clever men, the sensation of shining—all these things, which are spurs to him abroad, are wanting at home; and he has not the originating faculty which enables him to dispense with these incentives. He is a first-class hero on his own ground; but it would be a tremendous downfall to his reputation were his admirers to see him as he is off parade, without the pomps and vanities to show him to advantage. He has just been the social hero of a dinner, "so bright, so lively, so delightful," says the hostess enthusiastically, with a side blow to her own proprietor, who perhaps is pleasant enough by the domestic hearth, but only a dumb dog in public. The party has been "made" by him, rescued from universal dullness by his efforts alone; and every one admires him as he leaves in a polite blaze of glory, and only wishes he could be secured for their own little affair next week. So he takes his departure, a hero to the last, with a happy thought for every one and a bright word all round. The hall door closes on him, and the hero sinks into the husband. He is as much transformed as soon as he steps inside his brougham as was ever Cinderella after twelve, with her state coach and footmen gone to pumpkin and green lizards. He likes his wife well enough, as wives and liking go; but she does not stir him up

intellectually, and her applause is no whetstone for his wit. Put the veriest dolt of a girl as bodkin between them and he will waken into life again, and become once more the conversational hero, because he is no longer wholly at home. His wife probably does not like it, and she laughs, as wives do, when she hears his praises from those who know him only at his best, letting off his fireworks for the applause of the crowd. But then wives are proverbially unflattering in their estimates of their husbands' heroics; and the Truth that used to live at the bottom of a well has changed her name and abode in these later times, and has come to mean the partner of your joys, who gives you her candid opinion at home. Still, our good company abroad who sits like a dumb dog at home is not pleasant, though not necessarily a sham. Certainly he is no hero all through, but he may be nothing worse than one of those unfortunates whose intellect lives on dramas and does not take kindly to domestic pudding.

His wife does not approve of this hanging up of the fiddle by his own fireside; yet she does the same thing on her side, and is as little a heroine by the domestic hearth as he is a hero. What his talk is to him her beauty is to her; and for whom, let us ask, does she make herself loveliest? For her husband, or for a handful of fops and snobs each one of whom individually is more indifferent to her than the other? See her in society, a very Venus dressed by Worth and Band Street, if not by the Graces. Follow her home, and see her as her maid sees her. The abundant *chevelure* which is the admiration of the men and the envy of the women who believe in it, taken off and hung up like her great grandfather's wig, leaving her small round head covered by a wisp of ragged ends broken and burnt by dyes and restorers; her *couche* of glycerine and powder washed from her face, showing the faded skin and betraying lines beneath; the antimony rubbed off her eyelids, and the effects of the belladonna gone out of her contracting pupils; her perfectly moulded forms laid aside with her dress; and the fair queen of the salon, the heroine of gaslight loveliness, stands as a lay figure with bare traces of possibilities whereon the artist may work, but which nature has forgotten, or where she has worn herself out. How many a heart-ache would be healed if only the heroine, like the hero, could be tracked to the sanctuary of the dressing-room, and if each adored could appear to the adorer as they respectively do to the maid and the valet!

The tender, sympathetic, moist-eyed woman who condoles so sweetly with your little troubles, and whose affectionate compassion soothes you like the trickling of sweet waters or the cooling breath of a pleasant air, but who at home leaves her sick in-hand to get through the weary hours as he best may, who bullies her servants and scolds her children—she, too, is a heroine of a class that does not look well close to the line of sight. The pretty young mother, making play with her pretty young children in the Park, a smiling gracious picture of love and loveliness, when followed home, turns to a fretful, self-indulgent fine lady, slung wearily into an easy chair, sending the children up to the nursery the instant they come in, and probably seeing them no more until Park hour to-morrow, when their beautiful little *têtes d'ange* will enhance her own loveliness in the eyes of men, and make her more beautiful because making the picture more complete. Mrs. Jellaby given up to universal philanthropy, refusing a crust to the beggar at her own gate, but full of fearful pity for the misery she has undertaken to mitigate at Boriboolagha; Croesus scattering showers of gold abroad, and applauded to the echo when his name, with the donation following, is read out at a public dinner, but looking after the chess-parings at home; the eloquent upholder of human equality in public, snubbing in private all who are one degree below him in the social scale, and treating his servants like dogs; and the no less eloquent descender on the motto *Noblesse oblige*, running honestly so fine that it is almost undistinguishable from roguery when the house door is shut between him and the world—all these heroes abroad show but shabbily at home, and make their heroism within the four walls a literally vanishing quantity.

People who live on the outside of the charmed circle of letters, but who believe that the men and women that compose it are of a different mould from the rest of mankind, and who long to be permitted to penetrate the "rose hedge" and learn the facts of the Arctida's garden for themselves, sometimes learn them too clearly for their dreams to be ever possible again. They have a favourite author—a poet, say, or a novelist. If a poet, he is probably one whose songs are full of that delicious melancholy which makes them so divinely sad; an æsthetic poet, a blighted being, a creature walking in the moonlight among the graves and watering their flowers with his tears; if a novelist, he is one whose sprightly fancy makes the dull world gay. A friend takes the worshipper to the shrine where the idol is to be found; in other words, they go to call on him at his own house. The melancholy poet, "hidden in the light of thought" is a rubicund, rosy-gilled gentleman, brisk, middle-aged, comfortable, respectable, particular as to his wines, a connoisseur as to the merits of the *chef*, a *bon vivant* of the Horatian order, and for talk prone to personal gossip and feeble humour. The lively novelist, on the other hand, is a taciturn, morose kind of person, afflicted with a perennial catarrh, ever ready with an unpleasant argument, given to start disagreeable topics of a grave, not to say depressing, nature, perhaps a rabid politician, taking gloomy views of the currency and despondent about our carrying trade. As for the women, they never do look the thing they are reputed to be, save in fashion, and sometimes in beauty. A woman who goes to

public meetings and makes speeches on all kinds of subjects, tough as well as doubtful, presents herself in society with the look of an old maid and the address of a shy schoolgirl. A sour kind of essayist, who finds everything wrong and nothing in its place, has a face like the full moon, and looks as if she fed on cream and butter. A novelist who sails very near the wind, and on whom the critics are severe by principle, is as quiet as a Quakeress in her conversation, and as demure as a nun in her bearing; while a writer of religious tracts has gowns from Paris and gives small suppers out of the proceeds. The public character and the private being of almost every person in the world differ widely from each other, and the hero of history who is also the hero to his valet has yet to be found. Some people call this difference inconsistency, and some many-sidedness; to some it argues shallowness, veneer, unreality, and is therefore unworthy of esteem; to others it is but the necessary consequence of a complex human nature, and a sign that the mind needs the rest of alternation just as much as the body. We cannot be always in the same groove, never changing our attitude or object. Is it inconsistency or supplement, contradiction or compensation? The sterner moralists, and those whose minds dwell on tares, say the former; those who look for wheat even on the stony ground and among thorns assert the latter. Anyhow, it is certain that those who desire ideals and who like to worship heroes would do well to content themselves with adoration at a long range. Distance lends enchantment, and ignorance is bliss in more cases than one. Heroism at home is something like humanity in Brobdingnag; and the address of the domestic hearth is more favourable to personal comfort than to public glory. To keep our ideals intact we ought to keep them unknown. Our goddesses should not be seen eating beefsteaks and drinking stout; our poets are best in print, and social small talk does not come like truths divine mended from their tongue; our sages and philanthropists gain nothing, and may lose much, by being rashly followed to their firesides. Yet, after all, a man's good work and brave word are, in any case, a part of his real self, though they may be very far from being the whole; and even if he is not true metal all through, his gold, so far as it goes, counts for more than its alloy, and his public heroism overtops his private puerility.

FRENCH POLITICAL ROWS.

THE past week has been fertile in those Parliamentary rows for which we look as regularly in France as for sunshine, epigrams, and new bonnets. M. Gambetta has been treating M. Buffet with what we should call outrageous disrespect, and what the French call vivacity, and M. Buffet has been forced to put on his hat in order to close the sitting. M. Gambetta's sonorous voice has been heard proclaiming that the Royalists are trying to kill universal suffrage, and that they are a priest-ridden gang. M. Ernoul, the Minister of Justice, has retorted that at least the present Government was freely chosen by the Assembly, and was not created by the Parisian mob, like the Ministry which sprang into existence on the 4th of September, 1870. For two days the theatre at Versailles was, in fact, more like a horse fair at a late hour of the evening than a gathering of legislators deputed to save France from the anarchy of revolution. No Englishman who has not been present at one of these uproarious sittings can form even a shadowy idea of the noise, the inarticulate roars of assent and dissent, the laughter, applause, and running to and fro which accompany a fiery attack on the Right by M. Gambetta, or a cynical reply from General Changarnier. A journey from the House of Commons to the National Assembly on the afternoon of a debate on some such question as whether the Duke of Broglie's speeches should be posted on all the official walls throughout France at the public expense without the Republican replies, might seem to take us from one race of beings to another.

Taken individually, it is true, Frenchmen may appear to be so sensible that, in moments of generosity, we might sometimes almost say that they are like Englishmen. For they all hate revolution and praise moderation. They all predict that a millennium would come to France if they were only to get their own way, and if those wretches of Republicans, or Bonapartists, or Royalists, as the case may be, could be prevented from throwing France into a convulsion by their mad passion for intrigue and *coup d'état*. In fact, nobody could be more sensible than a Frenchman when you catch him alone in a railway-carriage, or at his own fireside, and do not contradict him. But all his propriety of tone, and his sighs over the past outbursts of his countrymen, seem to be totally forgotten the instant he steps into the Assembly. Perhaps he himself would be glad to pass a quiet afternoon in the lobbies, chatting with his friends about the impossible Elysian future, or glaucing over the rough French of the provincial newspaper which speaks in the name of his constituency, or listening even to the interminable oratory of M. Laboulaye, if the enemies of his party would only let it alone. But such a condition is impossible. M. de Belcastel is prompted to declare that France can be saved from an interminable series of Atheistic revolutions and Communes only by cursing Robespierre, and by believing in the divine power of winking virgins and pilgrimages to Lourdes. Or M. Ordinaire springs up to assert that the members of the Commission of Pardons are assassins. Or the Orleansism of General Changarnier finds vent in the chilling contempt with which he tells the Reds that they merit an "amnesty of disdain." It is scarcely ever the chiefs who thus

flourish a lighted match in the powder-magazine. The work is usually done by minor fanatics whose minds are so filled with their own creed as to leave no room for the consideration of practical consequences. But it matters not who trails the coat through the mud. The instant that a bitter word is said against the Clerical party or the Reds, the moderation of comment which was remarkable on the way to the Assembly gives place to a frenzy of passion. Then up goes a roar which is not indeed equal in volume to the ear-splitting tempest on the Bourse, but which is made sharper and wilder by sudden gusts and lulls. Paper-knives are rapped and brandished, journals are flourished, and insults are showered against the Revolution or the Church. An angry, surging mob is massed round the tribune, trying perhaps to take it by storm, and the besiegers are jostling each other, pushing each other off the steps, and shaking their fists in one another's faces. Meanwhile the orator in the tribune is usually so accustomed to such interruptions that he does not permit himself to be discouraged, but, watching for those momentary lulls which come now and then, he jerks forth words of defiance or of insult, and thus the storm takes what the French mildly call a new "point of departure." The poor President of the Assembly is all the while sitting aloft like a stricken Jove, tugging at the handle of his bell with the energy of a sexton, sending sharp peals of sound through the roaring of the storm, beating the table with a ruler, exchanging high words with the besiegers who are scaling the tribune, but without reaching one obedient ear or moderating the tempest by one appreciable note. He is not exactly defied; he is simply forgotten. The combatants have no time to attend to such trivialities as his bell or his ruler. But, such is the effect of symbols, if he should only put on his hat, and thus declare the sitting to be closed, the roaring, struggling, and gesticulation would instantly cease, as if magic lay in the sight of his headgear. Men who were furious a moment before put their hands in their pockets and talk at their ease; the scaling party round the tribune go to their seats or to the buffet; and the orator who has done all the mischief comes down with a smile to receive the congratulations of his friends. There is peace in the land once more, and it rests until another Red or White rhetorician condenses insults into epigrams, and flings them at his opponents.

To an English eye there is scarcely a more amazing scene than this to be seen abroad. If the House of Commons were thus to forget the sanctities of decorum; if Mr. Bouverie, Mr. Harcourt, Mr. Fawcett, or any other master of vigorous speech were to call the leaders of Her Majesty's Opposition a set of thieves, who were eager to get office in order that they might loot the Treasury; if Mr. Disraeli and Mr. Hardy were to fling back the taunt that the great Liberal party was a gang of Atheists, Communists, and professors of Free Love; and if the House were to spring to its feet, and shriek, and gesticulate, as if preparing for a grand free fight, the funds might be expected to go down next morning, and we should be rather afraid that it was all up with our glorious Constitution. But nothing serious happens in France after the rows of the Assembly. They are only the "vivacities" of our neighbours; they only denote differences of opinion. Englishmen are constitutionally unable to do justice to such exhibitions. We hardly make due allowance for the liveliness of our neighbours, their quick play of fancy, and the delicately sensitive apparatus of passion which each Frenchman carries about with him. Frenchmen think us dull and stolid. We do not shrug our shoulders with a grace and expressiveness which make the gesture a language in itself, and we leave unused all those resources of expression which lie in varying gesticulation. The feeling of contempt with which we regard a gesticulating and shrieking crowd of educated Frenchmen is as great perhaps as that with which impassive Easterns like the eunuchs of the Shah must look on the gambols of the ball room. We should have to become Frenchmen ourselves in order to do Frenchmen justice. And there is a more prosaic but less obvious reason why we are apt to speak with undue severity of their political rows. We forget that the sittings of the Assembly are not the occasions on which the real business of legislation is done, but are rather occasions of rhetorical display. The present Assembly has done as much work of one kind or other as would surprise those who fancy that it is a mere debating club; but it is in the privacy of the Commissions, and not in the public sittings, that the labour is really performed. The Commissions are like our own Select Committees in so far as they are made up of delegates from the Chamber, but they differ in this respect, that every Bill and every proposal for legislative action must fall under their scrutiny before it can be debated in full Session as a mature plan. In this respect the Bills of the Government and the Bills of private members are alike. Thus each Commission is a sieve for catching absurdities, and a proposal on which a deputy has set his heart may only draw forth the report that it is impracticable, or it may be so changed by the time of its return to the Assembly that its features would scarcely be recognized by its own author. Hence a great amount of such work as our own members of Parliament do in Committee of the whole House is done by the deputies of France in private rooms out of the way of reporters. And as a rule the work is done silently, quickly, and well. It is difficult even for a Frenchman to generate wildly in a small room, to an audience of a dozen, when nobody is looking on. So his wrath is bottled up for the moment, and it does not escape until he goes back to the publicity of the main session. There is everywhere something of this in the atmosphere of the Chamber, and the Frenchman catches fire with peculiar quickness from contact with the glow of passion

which is to be found in throngs. But it would be a great mistake to suppose that French deputies sitting apart in a quiet Committee-room cannot be practical and business-like. The promptings of political or religious passion are then brought under the sovereignty of prosaic common sense.

Apart from rant and excuse, however, the rows in the National Assembly are serious because they show how thin is the crust of firm earth on which apparently any French Government must rest, and how overwhelming are the volcanic forces which are at work beneath. They are menacing, not so much because they defy decorum, as because they bring into view the implacable hatreds of the rival factions. Our parties can work with each other on a middle ground of compromise, because such disputes as they bring into the field of legislation do not, after all, touch the fundamental ground of religious belief or of constitutional organization, but arise, for the most part, from the application of principles which most Englishmen hold in common to sets of facts that bring up mere difficulties of detail. The French have of course their small controversies about points of detail, which may take rank with the intricacies of our Supreme Court of Judicature Bill, and they manage those matters calmly enough. But most of the measures with which they must deal either do touch, or may touch, institutions and laws and habits which, if hateful to one set of Frenchmen, are to another the very Ark of the Covenant. The contrast between the two nations is vividly illustrated by the manner in which they have taken up their respective schemes of elementary education. The 25th Clause of Mr. Forster's Act has no doubt stirred up the wrath of the Dissenters because they fancy that it adds to the political and ecclesiastical power of the Church; but the name of the Church calls up so little active opposition in England that Mr. Miall and his friends have failed to constitute a formidable party of foes. All Frenchmen believe, on the other hand, that the elementary education of their country is charged with such political consequences as to make the prize at stake the whole immediate future of France. It is apprehended that, if the teaching be made essentially religious, the priests will gain such an accession of power as they have not received since the Revolution, and the domination of the priests means the incessant insinuation of the doctrine that Republicanism is hateful to God, and that France and the Church alike demand a king. Secular teaching will as inevitably proclaim that the doctrines of the priests are fictions, that they themselves are the worst foes of France, and that she will never reach a state of permanent peace until they and their doctrine shall be put down for ever. So full of peril is the question that, although a measure on the subject of elementary education has been before the country for two years, neither M. Thiers nor the Duke of Broglie has had the courage to challenge a decisive verdict. To one set of Frenchmen a France governed by priests, and to another set a France cut loose from the Church, is not worth having. There can be no compromise when parties thus import the passions of religion into the strife of politics, and without compromise there can be no peace.

THE IRISH MEMBERS AND THE REPORTERS.

THE list of Irish grievances has received a new and formidable addition. Mr. Mitchell Henry complains that the speeches of himself and other Irish members in the House of Commons are imperfectly reported, and he in effect demands that the *Times* and other newspapers should increase their already unwieldy size. It appears to us that the remedy is easy. Let another journal be established for the special purpose of reporting Irish debates, and let those persons buy and read it who care to do so. It is, however, possible that Mr. Mitchell Henry may consider that speeches upon Irish questions should be not only reported but read, and, if so, his complaint assumes a truly alarming character. It used to be said that one man can take a horse to water, but two men cannot make him drink; no doubt if the pure stream of Irish eloquence is offered to his lips, he ought to drink, but how is he to be made to do so? The only effectual remedy for Mr. Mitchell Henry's complaint would be a system of official reports which would be about as readable as the statute-book. There is already Hansard's publication, and it might be brought out weekly, or even daily, if only readers could be found for it; and it seems there is already a difficulty in this respect. But the idea of interfering with the discretion of newspapers, unless they are manifestly partial or corrupt, is idle. They choose those topics and that treatment of them which they think is popular, and they study to produce a commodity which will sell. The "systematic ill-treatment" of which Irish members complain must be imputed, not to the press, but to the people for whose information it reports debates. The Irish mind is fertile in invention, and the Irish tongue is prolific in exposition, and if all that Irish members could say on Irish questions were reported there would be no end to it.

Mr. Mitchell Henry caused reporters to be excluded as the best means of enforcing accuracy in reports. The *Times* has been informed that during the absence of reporters he told the House that he never spoke in it "without feeling as if he were undergoing a painful operation." The House, if it spoke truly, would perhaps say that the feeling is mutual. It finds the class of members whom Mr. Mitchell Henry represents bores, and the House has not yet been so far reformed as to endure bores without resistance. The bores cannot of course compel anybody to listen to them, but the mischief is that they displace better men. As it is, the time of

the House, even with the best economy, is inadequate to the demands upon it, and much of that time is wasted. Among many talents with which nature has endowed Irishmen, the talent for brevity of speech is not the most conspicuous. We do not believe that Irish questions receive less than their fair share of attention in the House, but it is quite possible that there may exist an ignorant impatience of Irish eloquence. The reporters reflect only too faithfully the judgment of the House and of society. Mr. Mitchell Henry is sensible that "the views of Irish members are out of harmony with the mind of the House." But the House probably objects not so much to the views as to the way in which they are expressed. The great majority of the House would, like the nation which it represents, desire fair play for all sides, and full expression for all views, consistently with remembering that the term of human life is limited. There are other complaints besides those of Ireland which sometimes obtain less attention than is expected and perhaps deserved. Mr. Charley has this week brought under review the ecclesiastical policy of Government in the Windward Islands, and he was twice threatened with a count out. Yet his clients doubtless consider that they have a substantial grievance, and they would be very angry if it were suggested that there are probably members of Parliament who do not know where the Windward Islands are. Irishmen are so successful as advocates in private causes that it is very unlikely that Irish interests are not adequately supported in Parliament. The general impression of English members probably is that they hear much on Irish affairs that is worth hearing, and much also that is not. But it seems to us that, if Ireland desires fuller reports of the speeches of Irish members, Ireland can obtain them. It would be quite possible for the staff of reporters to be recruited so as to supply whatever demand may exist for fuller reports of Irish speeches. But perhaps it would be desirable to make quite sure that the demand does exist before arrangements are made for the supply.

Mr. Mitchell Henry expresses the wish that reports of his speeches should be read in Ireland, and we think that this wish is reasonable. Indeed this form of the sentiment "Ireland for the Irish" commands our sympathy. We do not know what is the practice of the Irish newspapers as to reporting debates in Parliament, but we conceive that it is open to them to print as much of any speeches as they can sell. The English newspapers must be allowed to manage their reports on the same commercial principle, and we are sure that Mr. Mitchell Henry does not intend to ask for a reciprocity which would be all on one side. Indeed, when we come to examine his statement more closely, it appears that his complaint against the reporters was, not that his speech was not reported, but that it was not made. He rose, "amid noise and interruptions, which were not unusual," to state the views of some portion of the Irish people on the Judicature Bill, and he was so displeased at his reception that next day, shortly after the sitting of the House, he caused strangers to withdraw. Thus he punished the reporters for what was apparently the fault of the House. We have thus far taken Mr. Mitchell Henry's own account of his speech and the report of it. But, on referring to the *Times*, we find a brief report of some remarks by him on the Judicature Bill which to us appear reasonable. We are tempted to ask what all this hubbub is about? It may be that reporters sometimes infer from the fact of a speech being interrupted that it is not worth reporting, and, as a general rule, this inference would be correct. At any rate they cannot be responsible for the unfortunate coincidence that a number of members should be in a hurry for their dinners at the precise moment that another member rises to address the House. Mr. Whalley, who followed Mr. Mitchell Henry, seems to desire that not only the speeches made, but the business done, in the House should be more fully and accurately reported. Of course, if the *Times* thought it worth while, it could print daily all the "Votes and Proceedings" of the House, but the *Times* does not. Its conductors know what the public can and will read, and endeavour to supply that. The reporters in Parliament are not the only class to which partiality is imputed. Suitors and counsel often complain that cases in courts of law are reported either very imperfectly or not at all. It must be owned that, if a case comes on in the afternoon, the reporters have a tendency towards discovering that the details of it are deficient in public interest. At no period of the day do reporters like the trouble of unravelling complicated facts and explaining technical arguments, and they have a well-founded belief that the trouble, if they incurred it, might not be very profitably bestowed. In truth, the whole business of journalism is conducted on the same principle, that it is useless to place before the public that which the public cannot be induced to read. The systematic manner in which reports are given by the English newspapers is one of their chief merits. In such a paper as the *New York Herald* everything is sacrificed to effect; and, unless a speech in Court or Congress is susceptible of capital letters, it is not reported. The *Times*—we cannot say so much for the other journals, for their reports are too long for summaries, and too short for any other purpose—does its best to present a fair readable report of a night's proceedings in Parliament, and the work, considering how rapidly it is done, is wonderfully good. It behoves members to treat the Press with consideration, for otherwise they might be liable to see their speeches reported as they actually were delivered, and that is a test which few orators could bear.

The existing arrangement for reporting debates has, like many other things in England, been created gradually and accidentally,

and it probably works better than any system which might be theoretically more perfect would work. It is necessary to consider how small the reading power of the public is, and how many demands there are upon it. Many readers of the *Times* content themselves with its admirable summary of the debates, and are only tempted to read a few of the principal speeches in some great debate. Many more readers derive their ideas of politics almost entirely from leading articles, and the most valuable proposal that was ever made for legislation would with such readers have no chance until it could get into large type. It is curious that the reports of debates should be challenged as unfair to Ireland when Irishmen are numerous in the Reporters' Gallery. Mr. Whalley appears to discover in this circumstance another indication of that conspiracy of Roman Catholics against Protestantism which he is always watching and denouncing. We say appears, because Mr. Whalley was interrupted by the Speaker at the moment when he began to explain his view of the religious influences which operate in the Reporters' Gallery. He, however, quoted from a publication called the *Weekly Register*, which lately boasted that the metropolitan press is almost wholly under the control of Roman Catholics. The existence of the editor of this newspaper accounts for the existence of Mr. Whalley. We should fear that this influence, so far as it prevails, is ineradicable. Even if the House of Commons took the business of reporting into its own hands, as Mr. Mitchell Henry suggests as possible, the staff of reporters might, and probably would, still contain a large proportion of Irish Roman Catholics. A silly newspaper on one side might still pretend that the reports were influenced, and a weak gentleman on the other side might still believe it. The Irish as well as the English newspapers can now obtain summarized reports of debates by telegraph, and it is probable that as telegraphy improves these reports may become more full. But the first report which reaches Ireland of a debate will always necessarily be an abridgment, which must destroy the interest of the full report which arrives afterwards. However, if there are people in Ireland, who desire to read complete reports of the speeches of Mr. Mitchell Henry, we think that means might be found to gratify them. Only we object, as readers of English newspapers, to be overwhelmed with matter which we cannot pretend to regard as more than moderately interesting.

If ever the proposal to establish an official system of reporting in Parliament is seriously made, there are several obvious and overwhelming reasons against it. In the first place, it would be a great waste of money. It is quite clear that the public does not want such reports, and all members who are worth listening to are already reported at sufficient length. Mr. Gladstone's superfluous adjectives would in themselves be a considerable item in the account; and Irish eloquence, if what Mr. Mitchell Henry considers justice to Ireland were done to it, would add enormously to the current expenses of Parliament. Then the presence of official reporters bound to report everything would be a great temptation to vain and silly members to waste time more than they do at present; and half the Session would be spent, as in the French Assembly, in squabbling about the accuracy of the reports. But the crowning objection is that what members want is, not merely to be reported, but to have their speeches read; and no human being could be found to wade through such an overwhelming mass of dreary and useless stuff as would be presented in a verbatim report of Parliamentary talk. The truth is that the importance of Parliament consists now mainly in what it does, rather than in what it says. Nobody there ever says anything that has not been said years before, and much better said, in the press. The opinion of Parliament, instead of being an initiatory stage, is only the final result of public opinion.

CHURCH AND STATE IN HUNGARY.

WE are not aware that anything of great importance has taken place in direct connexion with the Old Catholic movement in Germany since the election of Dr. Reinkens as Bishop. It had been asserted indeed in the Ultramontane journals that Bishop Heykamp of Deventer, who is expected to succeed to the archbishopric of Utrecht, had reconsidered his offer to consecrate Reinkens, and declined to act in the matter. But the report, improbable enough in itself, has, like so many others from the same quarter, been authoritatively contradicted, and the consecration is to take place before the end of this month at Deventer. Nor would such a refusal, though it might naturally have made the Old Catholics the more anxious to secure a bishop of their own, have thrown any permanent difficulty in the way of his consecration. The great majority of the so-called Uniate Armenians have broken with Rome in consequence of the Vatican decrees, without, as far as we know, having entered into communion with their brethren of the Oriental rite. And it can hardly be doubted that their bishops, who have thus in fact assumed precisely the position of the Old Catholics, as professed members of the Western Catholic Church rejecting the present claims of the Papacy, would be quite ready to do any good offices for them for which occasion might arise. It was resolved the other day at a meeting held at Bern to provide a second Old Catholic bishop for Switzerland, where the strife of parties in the Roman Catholic Church runs high, and the diocesan prelates find themselves at issue as well with the Government as with a considerable part of their flocks. The details of the Bishop's appointment will perhaps

be reserved for consideration at the third Old Catholic Congress, which is to assemble at Constance on the 12th of September. Meanwhile the address of a large and influential body of Silesian Catholics to the Emperor of Germany has an important bearing on the movement, although—or rather, in one sense, because—the signatories are not among its professed adherents. They express a general concurrence in Prince Bismarck's policy, and are decidedly opposed as well to Ultramontanism as—unlike the Hungarian Liberals, of whom we shall have to speak presently—to the separation of Church and State. On the contrary, they desire that the due relations between the two may be preserved and strengthened. The bitter irritation which their address has provoked among the infallibilists may be gathered from the circumstance of the Duke of Ratibor, who was the first to sign it, having been in consequence expelled from his post of President of the Silesian Committee of Knights of Malta, which he had held for the last eight years, his fifteen co-signatories on the Committee being at the same time displaced with him. Meanwhile six of the Prussian bishops have already formally refused to admit the Government inspection of their seminaries, which have therefore been deprived of the Government grant and the students declared ineligible for benefices in Prussia. Two new churches have just been opened, with overflowing congregations, by the Old Catholics, at Essen and Breslau.

Meanwhile, if we turn our eyes from Germany to Hungary, the ecclesiastical controversy is seen cropping up in a somewhat new form. Our readers may recollect that the great majority, if not the whole, of the Austrian and Hungarian episcopate sided at Rome with the Opposition, the primates of Austria and Hungary and the Cardinal-Archbishop of Prague being among its most prominent spokesmen. In the original debate in the Council on the *Schisma de Primatu*, Simor, Archbishop of Gran and Primate, whose support had been counted upon by the Curia, and who was known to be one of the best Latin speakers in the assembly, electrified his hearers by delivering an eloquent and emphatic denunciation of the proposed decree. And when, two months later, the bishops of the minority met, on the eve of the decisive 13th of July, to determine their line of action on the morrow, the insidious suggestion of Ketteler and Archbishop Melchers, that all should vote *placet juxta modum*, was by none more energetically resisted than by Cardinals Rauscher and Schwarzenberg and the Archbishop of Gran. To say that these have proved faithless to the pledges they then gave is only to say that they have followed the ignominious example of every one of their colleagues, with the single exception of Strossmayer. But there are degrees even in subservieney, and, although all the minority bishops have outwardly acquiesced in doctrines which they have given the world the best reasons for suspecting that they do not really believe, they have not all condescended to do the work of the Vatican by persecuting their former followers, nor have they all gone so far as to promulgate the obnoxious decrees officially in their dioceses. There has not, if we are correctly informed, been, as a general rule, any formal promulgation or any attempt at enforcing the new dogmas in the dioceses of Austria and Hungary. Professor Schulte, for instance, the President of both the Old Catholic Congresses, continued a regular communicant and an intimate personal friend of the Cardinal-Archbishop of Prague up to the period of his recent removal from that city to Bonn. Of course on Ultramontane principles the promulgation or non-promulgation of these decrees in particular dioceses is a matter of very little consequence. The mere fact of their promulgation at Rome clothes them with all requisite authority, and in these days of railroads and telegraphs that fact may be known to all whom it concerns within a few hours, or at most a few days, of its occurrence. This, we say, is the modern Ultramontane theory, though it is not apparently the old theory of the canon law, as was shown incidentally the other day in the O'Keefe trial. To this day the decrees of Trent have never been promulgated in France. And when Archbishop Murray and other Irish prelates were examined before a Parliamentary Committee at the time of Catholic Emancipation, they distinctly insisted that no Papal decree could have force in Ireland till it was promulgated by the local bishops, and that it was their right and duty, before promulgating it, to remonstrate with the Pope, if they saw any sufficient reason for doing so, though they might ultimately be compelled to submit. But even this lingering shadow of episcopal independence has become intolerable to the Jesuit Camarilla who now rule the Court of Rome, and accordingly Papal decrees are alleged to be equally binding whether they have been proclaimed by the bishop of the diocese or not. Nevertheless, the bishops, whose sole business appears to be to make themselves the faithful echo of the Vatican, are required to promulgate them, and it seems that at last one Hungarian bishop, after an interval of nearly three years, has been reduced to compliance. Hence arose the debate which took place the other day in the Hungarian House of Deputies, to which we purpose calling attention. The issues involved are of much wider interest and significance than the particular question which gave rise to the discussion.

The Minister of Worship was interrogated by a member of the Left as to the recent publication of the infallibilist dogma by a Bishop of Upper Hungary. He replied that he had intimated his disapproval to the Bishop, and had informed him that, in case of any illegal consequences of his act, the law would be strictly put in force. But this answer did not satisfy the Left or the Protestant members, who insisted that the publication was itself an illegal act, and the Minister defended himself by alleging the absence of

any specific law under which the offending Bishop could be dealt with. Deak, who came forward to support him, adduced this view, and the Opposition could only refer vaguely to old laws against disloyalty and felony, which they presumed to be applicable to the case. On this Deak took occasion to sketch out his own ideas of ecclesiastical reform, which may be summed up in Cavour's famous and, as many contend, fanciful and unpractical formula, "a free Church in a free State." He advocated the enactment of laws to guarantee the free exercise and civil equality of all religions, obligatory civil marriage, the autonomy of Catholics, and the readjustment of the *jus placiti* in accordance with the modern system of free speech and a free press; he finally suggested the appointment of a Commission to regulate the relations of Church and State. And he would have them regulated rather on Cavour's principle than on Bismarck's. Like Cavour, he referred complacently to the precedent of America, and urged that liberty and Catholicism might be reconciled on the basis of a complete separation of Church and State, each being absolute and independent in its own sphere. The practical difficulty of effecting this entire separation between two powers whose claims and line of action so constantly cross one another does not seem to have occurred to him, and the majority of the assembly evidently shared his view of the subject. Discontented with the religious policy of the Cabinet, and distrustful of its independence from clerical influence, the Left Centre declared that they would only consent to the appointment of the Commission desired by the Minister of Worship—in which they suspected a mere pretext for delay—on condition of its being directed to conduct its proceedings on the principles enunciated by Deak; and all the Liberal members of the Right, with Deak at their head, voted in the same sense, against the Catholic party. And the vote seems to have been taken as equivalent to one of want of confidence in the Ministry.

It may at once be admitted that in countries like Austria and Hungary, where the Catholic Church retains far more of its mediæval status and wealth than anywhere else in Europe, a scheme of disestablishment, especially if accompanied by partial or entire disendowment, would involve very important changes, and it is not wonderful that the Catholic party should strenuously oppose it. But it by no means follows that the adoption of the programme somewhat crudely extemporized by Cavour, so far as it is capable of being carried out, will have the effect anticipated by what may be termed the Italian school of Liberals. So far as the experiment has actually been tried in Italy—and it has been worked no doubt by far feebler hands than his—the results as yet can hardly be considered encouraging. The utmost that can be said from the Liberal point of view is that the snake has been scotched but not killed. Nor does the experience of other countries really support a more favourable conclusion. In Belgium and Switzerland, Catholicism, though enjoying no political privileges, has shown itself a formidable political power, and in Belgium it is always aspiring to a virtual civil supremacy. As to North America, the chosen paradise of Free Churches, it must be remembered that there Catholicism is, as it is not in Europe, but one of a multitude of contending sects, and that it is as yet too numerically weak to make itself a dominant power in the country. Yet even there, in particular States or cities, as in New York, the Catholic vote exerts a tyrannical force. Moreover, it must always be borne in mind that arguments derived from a social condition of things to which, from the nature of the case, the Old World presents no parallel, are very apt to be misleading. The principle of a free Church in a free State, like the principle of universal suffrage, has a very liberal sound, but neither the one nor the other affords any sure guarantee against a crushing despotism. No suspicions of the kind, however, seem to trouble the complacent optimism of Deak and the Hungarian Liberals. Their notion is to pass a series of laws in vindication of religious liberty, such as Cavour originated twenty years ago in Piedmont, to introduce universal civil marriage, exclude spiritual peers from the Upper House, separate educational and ecclesiastical endowments, enact a law of mortmain, and then trust that the lion and the lamb will henceforth lie down peacefully side by side—the Church having hitherto played the lion's part—and that common sense and the bond of common interest will guide and unite them both. What is forgotten in such speculations is that, where Church and State are not absolutely identified—whether on the theocratic or the Erastian model—their interests can never be altogether the same nor can their powers be co-ordinate. An Established Church is a sort of compromise between the two principles, where the State gives certain privileges in exchange for the authority it claims. But it is, at least in its ordinary forms at this day, a compromise, and therefore it fails to satisfy the ideal of either of the great schools of Continental Liberalism. Bismarck has undertaken to solve the problem in one way in Prussia, by subjecting the Established Church to the supremacy of the State. Deak proposes to solve it in another way in Hungary, by casting off the Establishment altogether, and the *Neue Freie Presse* of Vienna rejoices that the Government has accepted his scheme, in the hope that it may be extended to Austria. It remains, however, to be seen whether either experiment will answer its intended end. There is a sort of doctrinaire completeness about foreign systems of Liberalism which looks faultless on paper, but is apt to break down under the rude impact of stubborn and unideal fact.

THE GREAT AMERICAN LECTURER.

A PERSON who describes himself as "the great American lecturer" deserves a visit, if only that we may get an idea of a sort of entertainment which is much more popular in the United States than among ourselves. Mr. Hardy (Gillard) is certainly great in some of the qualities of a lecturer, and it is difficult not to admire the faculty of feeling or assuming enthusiasm at the completion of the Pacific Railway, and the consequent opening-up, as the phrase is, of direct trade with China. Two Companies were working one from the east and the other from the west towards a certain point in the line. Mr. Gillard's excitement slightly interferes with his elocution, but, if we rightly understand him, each Company was to have a concession of the land on either side of the line which it made. And, therefore, if the Western or Californian Company could carry its line east of the middle point, it would gain so much land, and if the Eastern or New York Company could carry its line west of the middle point, it would gain so much land. We do not know whether the land was worth the struggle, and we regard that consideration as irrelevant. The two Companies ran a most exciting race, which is described by Mr. Gillard with all the vehemence of gesticulation proper to the subject. It differed from most other races in this respect, that the competitors started from opposite quarters and ran towards the same point. The result was, we believe, a dead heat, but Mr. Gillard's energy at this point of his narrative slightly impaired his clearness. He stated that both Companies employed three relays of men, one of which worked by torchlight. The sleepers were laid, the rails placed upon them, and the pins driven; and these three operations were performed by each Company at the rate of six miles per day. This is a plain prosaic description of this great contest, but there ought to arise and reveal himself a poet equal to the magnificent opportunity. We had once a poet among ourselves who sang of the undertaking of the Balaklava railway and the beneficent power of the contractor who completed it:—

The soldiers' friend and sailors' too,
He saved their weary feet, oh!
On railroad car, they blessed from far
Sir Samuel Morton Peto.

In such style ought the completion of the Pacific Railway to be celebrated. But in the absence of a poet we must content ourselves with Mr. Gillard screaming until he becomes almost inaudible, and making terrible cuts and slashes with a long wand, as if he were performing sword exercise against a giant. The Californian Company sent a golden nail, which was driven with great solemnity into the last sleeper on their side by a high functionary appointed for that purpose—*clavum figendi causi* would be the correct classical expression. We do not know whether another high functionary was appointed to watch the nail after it was driven, but that precaution would not seem to be altogether superfluous in a country liable to be roused over by predatory Indians. An iron nail would keep the rail quite as well in place, and a gold nail would go a long way in drink. However, the nail was driven, and the triumphant result was telegraphed to San Francisco, where Mr. Gillard happened to be, ready to arouse himself to an enthusiasm suitable to the contemplation of the tremendous fact that tea could now be drunk in New York thirty days after it was growing on the plant. The same result has long since been attained in England, but it scarcely excites enthusiasm in the consumer.

The interest of Mr. Gillard's lecture culminates when he—to use a phrase of his country—becomes explanatory of the sleeping arrangements for ladies and gentlemen in the cars of the Pacific Railway. An inexorable, but to our mind unpleasant, necessity has decreed that a lady and a gentleman should sleep, not exactly in the same bed, but in the closest juxtaposition that could well be arranged short of it. Even if the sexes were not intermixed to an extent that to our old-world prejudices would be disturbing, we should say that the arrangements must be more snug than comfortable. "As snug as a bug in a rug" would be a very fair description of the condition of an occupant of one of these berths when the car happens to be full. The snuggery is enhanced by the consideration that a couple of dozen people of either sex are lying as close as herrings in a barrel on what was a dining-table, and has, by some wonderful hocus-pocus, been changed into a nest of berths. As you sit at breakfast or dinner in what is by daytime a saloon, your attention is called to the stupendous fact that your bed-clothes and the bed-clothes of several ladies and gentlemen your fellow-travellers are at that moment packed away above your head. The cleverness of this contrivance is perhaps more obvious than its sanitary value. Such an arrangement would be inconvenient in England, and this railway traverses a country as to which there is a legend that a native, having had after death some experience of a place which is commonly reputed warm, came back to fetch his blanket. The custom is that the gentlemen go forward to the smoking-car between nine and ten in the evening, while the ladies put themselves and their children to bed among what were the dining-room tables and sofas. We had quite forgotten the children, who must add much, as they always do, to the beauty and harmony of the scene. Then the gentlemen return, and having prepared themselves for bed, they draw aside a curtain, behind which are sleeping, on the ground tier of berths, several ladies, and placing one foot on this ground tier, the gentlemen vault nimbly (or otherwise) up to the tier above. According to programme they go to sleep; but supposing they don't? The subject of ventilation was not mentioned by the lecturer, and a black waiter, who is in the dining-room by day, was left unaccounted

for; but he perhaps sleeps in the funnel of the steam-engine, which by comparison with one of these berths must be, one would think, a cool place.

It strikes us as wonderful, not only that the lecturer should tell us this, but that he should not tell us something else. The route is dreary and the description of it more dreary. Even an American railway with its adjuncts cannot destroy the beauty of the Rocky Mountains, but perhaps the most melancholy of all spectacles is a rudimentary town upon the prairie. It is depressing to reflect that the monotony of nature is being displaced by the monotony of civilization. Mr. Gillard expresses the ordinary American view of his country and its destiny, when he treats bigness as synonymous with grandeur. Chicago was a wonderful place, and it will be a more wonderful place still when it is rebuilt. Forty years ago there were only seven people dwelling there, and now, in the eloquent language of Mr. Gillard, it surpasses Birmingham, and it rivals Liverpool, Manchester, and Glasgow. You ought to hear Mr. Gillard, and to see him perform sword-exercise with his wand in order to get this fact properly into your mind. He might have mentioned that at a particular time of the year there is probably more bacon at Chicago than at any other place in the world. But if Mr. Gillard forgot bacon, he aroused all the power of his oratory to do justice to the more sublime subject of oil. Millionaires, and we might add very disagreeable ones, have been made in a few years from oil. Since the world began there has been no simpler method of getting rich than "striking oil," if only you can strike it. Perhaps a more hideous picture was never painted than this of "oil wells in Canada" which forms part of Mr. Gillard's panorama. The oil is pumped from the well into a tank, and drawn thence into vessels which run upon wheels and form part of a railway train which carries the oil to a refinery at Detroit or New York. Fortunes are made out of these Canadian oil-wells, but the richer springs which gush up into millions are found in Pennsylvania. Then there is another great trade in lumber which excites the lecturer's admiration. The forests which darken the horizon on the North as the train crosses Iowa and Nebraska supply timber which floats down the tributaries of the Mississippi, and down the mighty river itself, and so reaches New Orleans. Although rail-splitting may have helped to make a statesman, yet the contemplation of rail-splitting is hardly likely to make a poet or an orator. The railway crosses some of the tributaries of the Mississippi, and, when the timber is once placed upon the line, it can be carried to these prairie towns, which have been built or sketched at the distance of several hundred miles from growing wood. The lecturer describes, with copious details, the Mormon settlements, which he judges—and perhaps rightly—will be interesting to his hearers. He started from New York, which is a wonderfully big place, and he arrives at San Francisco, which is also, considering the circumstances, a wonderfully big place. He shows us the Golden Gate, and the hotel where the rich citizens of San Francisco walk upon the sea-sand and look at the big seals, while the big seals stand on end and admire the results of modern civilization.

Such a lecture is interesting not only for its style, but also, as we ought fairly to own, for its subject. The views of the route are painted from sketches or photographs, and they represent faithfully a process which, whether beautiful or useful, or what else, is actual and irresistible. This ugly locomotive with its train of cars is to our age what the chivalry of Spain and the naval skill and enterprise of England were to ages which preceded. The functionary who drove the golden nail into the last sleeper of the Pacific Railway was the conqueror of a continent and an ocean; and Mr. Gillard is his panegyrist. To the romantic daring of Magellan and Drake has succeeded the commercial spirit of Mr. Cook, who invites us to travel with him round the world in ninety days. All who love to travel with Mr. Cook will like to hear Mr. Gillard lecture. He tells them nothing of the past, and perhaps, as it was not exclusively American, he thinks that it would not be interesting. Mr. Gillard regards the Pacific much as Mr. Spurgeon regarded Rome when he made his memorable visit to it. The Pacific is capable of being traversed by a steamer in eighteen days, and the highway of commerce between China and Europe is likely to pass by New York and San Francisco. Thus streams of wealth will ever flow to the eastward and westward through the Golden Gate. The prairie accomplishes its destiny by presenting a level surface upon which a railway may be laid at the rate of six miles a day. Towns uniformly hideous will be built upon the line, and in every town there will be published, at least one newspaper. This is the course of civilization which Mr. Gillard's panorama faithfully represents. It would be almost worth while to fetch back the Shah of Persia to show him this impressive spectacle of life and human progress in the "new and happy land."

THE LORDS' REPORT ON HORSES.

THE Report of the Committee of the House of Lords on Horses was likely to be chiefly valuable for the information which it would collect, and for this we must wait for the appendix which is not yet published. The recommendations of the Committee may be summed up in this—that they are in favour of letting things alone. If horses are dear, everything else is also dear; and if the farmers have neglected horse-breeding in recent years, they have probably given increased attention to breeding sheep and oxen. "It seems admitted that the mounted portions of the army were never better horsed than at present, and that any future difficulty in mounting them would be a question of price." This question of price is very serious, and it cannot be

evaded. The Government must either breed horses themselves or buy in the market, and experience teaches that the latter is the preferable course. It at least enables us to know what we spend, which might not be possible by the former course. The difficulty of all previous discussions of this subject has been the want of accurate statistics, and these will be supplied in the appendix to the Report. "The Committee have considered with great care the primary question before them—namely, the alleged scarcity of horses in this country—and they are of opinion that the scarcity complained of by many witnesses is not caused so much by a deficiency of number as by the supply not having kept pace with the increased demand." We should have expected this conclusion, but we shall nevertheless be glad to see the evidence from which it is derived. There does not appear to be a scarcity of every class of horse. "There is no scarcity of thoroughbred horses." This statement is undeniable, and the Committee avoid the vexed question of the quality of our thoroughbred stock as not within the scope of their inquiry. Hunters of high character have increased in price, but for those who can afford to pay the article can generally be found. This statement agrees with ordinary observation. In some districts horse-breeding has declined, but in Devon and Cornwall, where formerly few horses were bred, great improvement has taken place. On the other hand, some breeds, such as the Cleveland bay, and the old-fashioned roadster, appear to have become extremely rare. It is remarkable that the greatest scarcity exists among agricultural horses, on which point, the Committee say, "the evidence is practically unanimous." One of the causes of this scarcity is the exportation of mares to foreign countries, for which there is manifestly no direct remedy. We must await such a rise in price as will make it worth while to keep the mares at home. Another cause is the increased profit on sheep and cattle. This profit is both more certain and more rapid than the profit on horses. The great aim of the breeder of sheep and cattle has been to bring them early to maturity, and wonderful success has been attained. But an animal which is bred for work cannot be thus forced. The nearest approach to a system of early profit has been made by two-year-old racing. But many eminent authorities believe that this system has injured our thoroughbred stock, and it is inapplicable to any other class of horse. The attraction of sheep and cattle breeding would appear to be so superior that a considerable rise in the price of horses may be needed to overcome it. And if in future years we get more horses but fewer sheep and oxen, there must be a further rise in the already exalted prices of animal food.

It is difficult to discuss this question of the scarcity of horses without remembering the sight which the Park presented during the Shah's visit. It would be interesting to compare the number of carriage and saddle horses kept in London now and thirty years ago. As regards carriage-horses, it may probably be said, as the Report says of hunters, that those who can afford to pay for them can get them. The teams of the Four-in-Hand and Coaching Clubs, and of the coaches which run out of London in the summer, form a considerable item in the superior class of horses. This fashion is almost certain to extend, and as national wealth increases there will be more carriages in the Park. Thus there must be adequate inducement to breed these classes of horses, and the only apparent limit to breeding is the want of suitable soil and climate. An interesting part of the appendix will be that which refers to Ireland. A large decrease in the number of horses existing in Ireland is shown by trustworthy figures. It is clear that every available animal has been bought up and carried away. But why have not more animals been bred? We should have thought that all parties and sects could agree in encouraging the breed of horses. The education of the horse can hardly be made a religious question. Even those economists who have thought that there could be too many Irishmen would scarcely suggest that there could be too many Irish horses. In large tracts of country the soil is eminently suitable, and a district which produces horses is comparatively barren of those "improvements" which have been the frequent cause of strife. If the Irish could breed more horses and think less about Home Rule, it would be better both for themselves and for us. But perhaps the country has produced nearly up to the limit of its power. There has been "a very extensive exportation to foreign countries." Recent returns show a certain increase in the number of horses now bred in Ireland, and it may be believed that the inducement is sufficient to develop the productive power of the country to the utmost. Indeed, we should almost be tempted to think that Irishmen could breed horses without requiring a grant of public money to assist them. Both in Ireland and England demand exceeds supply. The foreigner is ruining our breeders by offering prices which they cannot resist, and perhaps other classes of traders would like to have their ruin effected in the same way. There have been both from Ireland and England exceptional exportations during the Franco-German war, and it is probable that in the next few years the scarcity now acknowledged will stimulate supply. Companies may perhaps be formed for breeding various classes of horses, as has been already done to some extent for thoroughbred stock. But the area of available land is limited, and it may well be that for horses, as well as for sheep and oxen, we must henceforward depend for a portion of our supply upon our neighbours.

It will be obvious from what has been said that the Committee have almost nothing to suggest by way of remedy for a state of things which is not altogether satisfactory. The enterprising foreigner might have carried off his share himself if he had been the highest bidder at a recent sale. Admit all that has

been lately urged as to the defects in our thoroughbred stock, it is evident that, if these defects could be cured, the demand for our horses for exportation would be thereby increased. The proposal that Government should keep stallions of its own in various parts of the country was certain to be disapproved by the Committee, and whatever may be the case in other countries, it appears unsuitable to England. We must trust in this matter either to Government or to private enterprise, but cannot combine the two. As regards any check on the unsoundness of travelling stallions, the Committee think that it is greatly to be desired, but they doubt whether compulsory examination would be endured. They would not suggest prohibition, but merely a tax upon unsoundness. Another and gentler method of attaining the same result would be to offer prizes to sound stallions which have covered a number of mares at a low price in particular districts. It is manifest, however, that this is merely a proposal to assist the farmer in breeding horses by paying one of the necessary expenses. It would be difficult to justify such a proposal in the House of Commons, unless the farmer gives in some way a *quid pro quo*; and with this object it has been suggested that the horses thus bred should be under liability to be taken for military service at a fixed rate. As this suggestion is favoured by certain military authorities, it has doubtless been brought under consideration of the Committee. It appears probable that the offering of prizes to stallions will remain with the Agricultural Societies, to whose attention we earnestly recommend it. The next, and perhaps we may say the only, practical suggestion of the Committee is that any tax which operates to discourage a farmer in keeping horses should be either abolished or modified. The Committee express disapproval of the system of warranty, but they reasonably add that breeders have this matter pretty much in their own hands.

We attached value to this Committee principally as a means of collecting accurate information. There is much to be said against nearly all proposals which have been put forward for interference by Government in horse-breeding, and it might have been expected that this Committee would incline, as it has done, to the negative side. Useful action may be taken by Agricultural Societies and by noblemen and gentlemen who are able to make a sound and useful class of stallion accessible to their neighbours. It must always be remembered that a good and numerous supply of horses is essential to national defence. If Government interference could promote this supply, the pecuniary means for interference would doubtless be forthcoming, but it seems best to leave Government in the position of a large regular customer for horse-breeders. It is certainly wonderful to find this Committee testifying at once to the large increase in number and value of thoroughbred horses, and to the considerable decrease in the number of horses used for agricultural purposes. It seems surprising that, instead of the considerable increase which the great prosperity of the country and the consequent demand would lead us to expect, there should be this reduction in numbers in the two years following 1870. If the business of the country could be done as well with a less number of horses than were used formerly, it would be idle to complain of the reduction. But it is difficult to believe that this can be so. If in one department of business horse labour can be saved, some other department is established which requires it. This is notably the case with railways, which have displaced horses in carrying goods over long distances, but employ horses in collecting and distributing these goods. It would be interesting to know whether there are any causes at work which tend to reduce the number of horses employed in agriculture. The machines which one now sees in every farm are designed to save the labour rather of men than of horses. It cannot be that farming business has fallen off, because that business is, and is likely to continue, co-extensive with the productive land of England. The decrease in the two years is small; but the wonder is that there was not an increase. The decrease appears in the total number of brood mares, unbroken horses, and horses actually used for agricultural purposes; and it may be that this decrease is chiefly to be ascribed to the insatiable foreigner, who, regardless of expense, has been buying up and carrying away our brood mares. It is to be hoped that the statistics of their exportation have been and will continue to be accurately collected. It is difficult to believe that this exportation can be an unhealthy feature of English horse-breeding. When we read that, by the providential interposition of a millionaire, some celebrated stallion has been preserved to his country, we are inclined to wish that that country may never be exposed to any worse danger than this from which an expenditure of some few thousands of pounds has rescued her.

REVIEWS.

LORD CLIFFORD OF CHUDLEIGH.*

THE Lord Treasurer Clifford's Ministerial pre-eminence was of very short duration. His rise in Parliament to the great post of Lord Treasurer had been amazingly rapid. He was appointed Lord Treasurer on April 20, 1672; he ceased to hold the

* *Collections Illustrating the History of the Catholic Religion in the Counties of Cornwall, Devon, &c.* By the Very Rev. George Oliver, D.D., Canon of the Diocese of Plymouth. The Clifton, London. 1857.

Lives of the Prime Ministers of England, from the Restoration to the Present Time. By J. Houston Browne. Thomas Lord Clifford and the Clifton, London. 1822.

office on June 19, 1673. The loss of power and the disappointment of ambition preyed on his spirits, and in four months after the loss of his greatness he died, and died, there is much reason for believing, by his own hand. He was only in his forty-fifth year when he died.

Clifford's name is fixed in the general mind as that of a chief and daring member of the so-called Cabal Ministry. But his has been a neglected biography. It is not included in the *Biographia Britannica*, or in Chalmers's *Biographical Dictionary*. Bishop Burnet and Samuel Pepys both erroneously describe him as a clergyman's son. Such errors could not now be committed by writers of the position of Burnet and Pepys about a contemporary prominent politician. Clifford's father had been colonel of a regiment for Charles I., and he died in 1639 from illness which overtook him in military service. His eldest son Thomas, the future Lord Treasurer, was then nine years old. He appears to have inherited but a small country gentleman's estate, Ugbrooke, near Chudleigh, in Devonshire, which he enlarged by wealth acquired through office, and which is still the family seat. He had an ancient and brilliant lineage. Clifford went through the usual career of college (Exeter College, Oxford), an Inn of Court (the Middle Temple), and foreign travel, and was elected member for Totnes in the Convention Parliament which restored Charles II., and again in the Parliament of 1661. Clarendon is said by Burnet to have slighted him on information that he had, while abroad, embraced the Roman Catholic religion. He attached himself in the House of Commons to Bennet, soon afterwards Secretary of State and Lord Arlington, who was not sympathetic with Clarendon, and, showing much Parliamentary ability, he rose rapidly through Arlington's friendship. He was knighted. His first appointment was to be one of three Commissioners for the care of the sick and wounded, appointed at the beginning of the Dutch war of 1665. In this war he served as a volunteer, and was also employed as a Civil Commissioner in the naval campaigns of 1665 and 1666, and he earned a character for valour and qualities of business.

In the autumn of 1665, after the ill-starred engagement with the Dutch merchant fleet in the port of Bergen, at which Clifford was present, he was appointed Minister to the Kings of Sweden and Denmark. There is in the Record Office a letter of Sir William Coventry, a very able and active member of the Ministry, addressed to Arlington, when resigning this appointment, saying that he thinks Clifford the fittest person, but that he shall regret the absence of so considerable a man from Parliament, where indeed he doubts if he can be spared, for that he considers him the most useful member of the House (Mrs. Green's *Calendar of Domestic State Papers*, September 2, 1665). In November 1666 he was appointed Comptroller of the Household. Pepys describes him a little before as "much set by at Court for his activity in going to sea, and stoutness everywhere, and stirring up and down"; the same gentleman, having heard Clifford speak, had already pronounced that he "do speak very well and neatly." Evelyn, a particular friend, mentioning his appointment to the Comptrollership of the Household, which carried an appointment to the Privy Council, says that Clifford was "a bold young gentleman, of a small fortune in Devon, but advanced by Lord Arlington to the great astonishment of all the Court." In May 1667, after the death of the Earl of Southampton, Lord Treasurer, this office was put into Commission, and Clifford was appointed one of the Commissioners of the Treasury. With this post he retained the Comptrollership of the Household, and in 1668, the superior office of Treasurer of the Household becoming vacant by the death of Lord Fitzhardinge, he was promoted to it, again by Arlington's interest. His small fortune made him eager for advancement, and he was also immoderately ambitious. A member of Parliament told Pepys, June 24, 1667, that "there is not so great confidence between any two men of power in the nation at this day, that he knows of, as between my Lord Arlington and Sir Thomas Clifford; and that it arises by accident only, there being no relation nor acquaintance between them, but only Sir Thomas Clifford's coming to him and applying himself to him for favours when he came up first to town to be a Parliament man." But there came soon a time when his patron Arlington resented his ingratitude, and then Arlington showed Evelyn the letters which he had received from Clifford begging for the Treasurership of the Household "as the very height of his ambition," and the letters were written, says Evelyn, "with such submissions and professions of his patronage as I had never seen any man acknowledging."

He was now Treasurer of the Household and a Commissioner of the Treasury; the latter a place of business, the former giving him great access to the King. There was a memorable small private meeting convened by Charles on the 25th of January, 1669, in the house of the Duke of York; besides the King and the Duke there were present Arlington, Clifford, and Lord Arundel of Wardour, a known Roman Catholic. The object of this meeting was to concert measures for an alliance with France on the basis of the re-establishment of the Roman Catholic religion in England. Burnet has positively stated that Clifford had been reconciled to the Church of Rome while he was travelling abroad, before he became a member of Parliament. The Rev. Dr. Oliver, a Roman Catholic clergyman of our own day, and a friend of the house, but having apparently no special private information, says that he was not converted before 1672, and that as late as July 17, 1671, he caused a domestic chapel at Ugbrooke to be consecrated by the Protestant Bishop of Exeter. The truth probably is, that he became at heart a Roman Catholic while abroad, and

kept his secret, and maintained conformity to the Church of England from prudence. It was probably the same with Arlington. It was undoubtedly the same with Charles II. Even to the last, to the very eve of his retirement from the Lord Treasurership, because he would not take the Protestant tests, watchful observers and even intimate friends doubted if he was a Roman Catholic. His most intimate friend, Evelyn, writes of him during the two previous years only as "warping to Rome," and wavering, and doubts if he had "any prejudice to the Protestant religion" (Evelyn's *Diary*, May 17, 1671, March 12, 1672, June 19, 1673). A clerk in the Secretary of State's office, supplying news to Sir Joseph Williamson abroad, wrote as late as June 6, 1673, only three weeks before Clifford refused the tests and retired, "His Lordship continues his daily prayers in his chapel after the form of the Church of England." But there were those who held another opinion, and on May 23 the same correspondent had written to Williamson:—"They mark now in the town that my Lord Clifford has always observed Popish holidays, and would never do business on any of them, and that his chapel was only for fashion and for his servants, his Lordship or Lady never frequenting it" (Letters of H. Ball to Sir Joseph Williamson, in *Record Office*).

Clifford was the most eager, bold, and thorough of all the advisers of Charles II. in prosecution of the unhappy scheme of French alliance, Dutch war, and Popery in England. His nature was ardent and impetuous. He became all-important to the Duke of York and the King. On the conclusion of the Triple Alliance with Holland, negotiated by Sir William Temple, under Arlington's directions, in January 1668, Clifford had been heard to say in the House of Commons, "This is all very well, but we shall soon have a Dutch war nevertheless." This Dutch war he worked for perseveringly, till on March 17, 1672, it was proclaimed; and the proclamation was preceded by an attack without notice on a convoyed rich Dutch merchant fleet in the Channel—an unhappy project of Clifford's, which failed. The war was called Clifford's War. In preparation for it, being the most active and leading Commissioner of the Treasury, and having completely the ear of the King, he had counselled and executed the famous Stop of the Exchequer. The monies of the goldsmiths, or bankers, and their clients, deposited in the Exchequer on security of the revenues, were laid hold of for the King's use, payment of the principal refused, and the King's creditors put off with a promise of six per cent. interest. This was Clifford's measure, not, as has been often said, Shaftesbury's. Shaftesbury strongly opposed it in the Cabinet. By the Stop of the Exchequer, January 2, 1672, Clifford obtained thirteen hundred thousand pounds. He hoped to repay this sum by the capture of the Dutch Smyrna fleet in the Channel, reported to have a freight worth a million and a half sterling. The attack miscarried; he lost the plunder; and England was irretrievably involved in the long projected war. The proofs that Clifford was the Minister primarily and chiefly responsible for the Stop of the Exchequer and the attack, without previous declaration of war, on the Dutch Smyrna fleet are abundant and irresistible. Sir William Temple says:—

The counsel of stopping the Exchequer was carried so secret, that I do not hear of any man at Court that had warning enough to call in his money out of the bankers' hands till Sir Thomas Clifford proposed the thing in Council, without other circumstances than saying that it was necessary; the King must have money for the war with Holland; that he knew no other way but this; and desired that none would speak against it without proposing some better and easier way. Upon this nothing more was said, and the thing passed.—Temple's *Memoirs*, Works, II. 184.

"Lord Clifford's violence," Temple also says, "in beginning the war, gave it an ill air in general." The testimony of Evelyn, Clifford's attached and intimate friend, is even more important:—

The Treasurer of the Household, Sir Thomas Clifford, hinted to me as a confidant, that his Ministry would shut up the Exchequer (and accordingly His Majesty made use of infinite treasure there, to prepare for an intended rupture); but, says he, it will soon be open again, and everybody satisfied; for this bold man, who had been the sole adviser of the King to invade that sacred stock (though some pretend it was Lord Ashley's counsel, then Chancellor of the Exchequer), was so over-confident of the success of the unworthy design against the Smyrna merchants, as to put His Majesty on an action which not only lost the hearts of his subjects, and ruined many widows and orphans, whose stocks were lent him, but the reputation of his Exchequer for ever, it being before in such credit, that he might have commanded half the wealth of the nation.—*Diary*, March 12, 1672.

The action of the Cabinet, or, as it was then commonly called, Cabal, and the relations of Ministers to the King and to each other, were in those days very different from what they are now. Each Minister separately held his office in immediate dependence on the King. There was no common solidarity, as there is now, of those Ministers whom the King was in the habit of calling together for Cabinet advice. He called whom he chose, and, after hearing, acted as he chose. He did not give his whole confidence equally to all. In the great questions of French alliance, Dutch war, and Popery, his chief object of establishing Popery in England was known to the Duke of York, Arlington, and Clifford, and sedulously concealed from Buckingham, Lauderdale, and Shaftesbury. Another cardinal measure preparatory to war with Holland, the Declaration of Indulgence to Protestant Nonconformists and Roman Catholics, was eagerly promoted by Clifford for furthering the design of establishing the Roman Catholic religion, and by Shaftesbury, who knew nothing of that design, on wise principles of religious toleration.

Soon after the declaration of war Clifford was made a peer, Lord Clifford of Chudleigh, and Lord Arlington was made an earl.

These favours were grateful acknowledgments of co-operation in the great design of establishing Popery. The Earl of Lauderdale was also made a duke, and Lord Ashley made Earl of Shaftesbury. By these favours the King endeavoured to stimulate the support of these two important Ministers, whom he was duping as to his Roman Catholic design.

On April 20, 1672, the Commission for the Treasury, which had existed since the death of the Earl of Southampton, in 1667, and of which both Cliford and Shaftesbury were members, was superseded, and Lord Cliford was made Lord Treasurer. This high office was previously offered to Shaftesbury, who refused it. Seven months after—November 17, 1672—Shaftesbury was made Lord Chancellor. The making Cliford Lord Treasurer was a heavy blow to Arlington, who had been Secretary of State for ten years, who had been Cliford's first and constant patron, and who believed that Cliford was now using his influence with the King to procure for him this great appointment. Arlington told Evelyn, the friend of both, that Cliford had pretended to make interest for him, and had cut the grass under his feet, assuring the King that Arlington did not desire the office. "This," says Evelyn, "was the only great ingratitude Lord Cliford showed, keeping my Lord Arlington in ignorance, continually assuring him he was pursuing his interest. . . . For the rest my Lord Cliford was a valiant, incorrupt gentleman; ambitious, not covetous; generous, passionate, a most constant sincere friend." But it may not have been quite as Arlington believed. It may have been that the King did not wish to appoint Arlington, and was determined to appoint Cliford, his great favourite. If it were so, Cliford could not tell Arlington this, and he could not make the King appoint Arlington. This is very much the story told by the Duke of York, who pressed Cliford on the King, and whom the King told that Arlington desired the office, but "that he had too much kindness for him to let him have it, for he knew he was not fit for that office, and that, should he give it him, it would be his ruin, and expose him to the malice of his enemies."

Want of money for carrying on the war compelled the calling together of Parliament in February 1673, after an interval of two years without Parliament. The national mind was now roused and engrossed by fears of Popery, and to this subject the House of Commons, when it met, gave almost undivided attention. Neither the Stop of the Exchequer nor the attack on the Dutch fleet, nor even the Dutch war, excited opposition. A large supply was readily granted for carrying on the war; but the Commons were determined that the growth of Popery should be suppressed, that the Declaration of Indulgence should be cancelled, and that rigid tests should exclude all Roman Catholics from public employments. The King was forced to annul the Declaration of Indulgence, after having said in the speech with which he opened Parliament, "I shall take it very ill to receive contradiction in what I have done, and I will deal plainly with you: I am resolved to stick to my declaration." It was not annulled till after the King of France had made a strong representation to Charles of the necessity of not sticking to it. Then, the Declaration having been withdrawn, Parliament passed an Act for removing all holders of office who should not by a day named take the oaths of supremacy and allegiance, receive the sacrament according to the rites of the Church of England, and disavow the doctrine of Transubstantiation. Cliford, in the House of Lords, opposed this Bill with fury. Shaftesbury and Arlington saw the necessity of supporting it. Cliford's fury accelerated the passing of the measure. Bishop Burnet has given a graphic account of Cliford's violent speech, making however the extraordinary mistake of representing the speech as made, not against the Test Bill, but in support of the Declaration of Indulgence which had been a fortnight before cancelled. Colbert, the French Ambassador, reported to the King of France his own and Arlington's opinion that Cliford's "mad zeal" had raised a storm which might bring shipwreck on the alliance. The Test Act passed; on the 29th of March Parliament was adjourned; and on June 29, before the day fixed by the Act for compliance with the tests, which was the 1st of August, Cliford retired from the office of Lord Treasurer and his place in the Privy Council.

The very interesting correspondence with Sir Joseph Williamson in 1673, preserved in the Record Office, gives a vivid picture of the excitement and uncertainty about the course which Cliford would take after the passing of the Test Act. There was much diversity of opinion as to whether or not he would conform to the tests. At last, on the Saturday preceding Whitsun Day, on May 17, an unfortunate accident ridiculously discovered him in close company with a well-known Roman Catholic priest on his way from Somerset House:—

The whole town is now no longer in doubt of my Lord Treasurer's being a Roman Catholic, since the passage that unluckily fell out on Saturday last, which day his Lordship having given out he set apart from all business to prepare for the Sacrament, the people expected he would take it in St. Martin's Church; but such was the misfortune that this afternoon, coming out of Somerset House in a private coach the back way, with only Father Patrick with him, the coach was unfortunately overthrown, and his Lordship and the Father exposed to the view of the street, one bringing his hat, another his periwig, with compliments that they were very sorry for the mischance, so that his Lordship took boat and came privately home by water. They say now of him that he has been but lately seduced, and that by Father Patrick (Henry Bell to Williamson, May 23, 1673).

The letter proceeds to say that the Privy Council had met only three days before to consider what should be done with Father Patrick, who had not quitted England according to orders.

And the third in rank of the great officers of the Crown, the Lord Treasurer, is found close-packed in a hackney-coach with this contumacious Father! Still for a month longer there was doubt and wonderment. Cliford made no sign. At last, on the 15th of June, the Duke of York resigned his office of Lord High Admiral, and on the 19th Cliford followed his example. Sir Robert Southwell, one of the clerks of the Council, wrote to Williamson that until the eve of the day on which Cliford resigned, throngs of people of all qualities crowded the Council Chamber from excited curiosity, but that the next day all was silent as in a convent (June 20, 1673).

Cliford quickly left town for Tunbridge Wells, where his friend Evelyn visited him. Evelyn described him as broken-hearted, and seeking to divert his mind rather than doctor his body. He may have had hopes of a political change which would soon overbear the tests and restore him to power; but, if so, they were vain delusions. He moved from Tunbridge to his Devonshire home, and there he died on October 17, three days before the meeting of Parliament, which, there was great reason to believe, would call him severely to account. There were circumstantial stories of severe suffering and death from stone. But Evelyn believed that he committed suicide. Andrew Marvell in one of his satires says that he hanged himself. Evelyn's story of the suicide is told with much circumstance. He heard it from Cliford's servant, who lived afterwards with Sir Robert Clayton, a City alderman. Cliford sent this servant out of his room in the morning in an unusual manner; he then locked himself in and strangled himself with his cravat on the bed-tester; the servant, looking through the keyhole, saw him hanging, broke in before he was quite dead, took him down vomiting blood, and heard him say, as he died, "Well, let men say what they will, there is a God, a just God above." "This," says Evelyn, "if true, is dismal. Really he was the chief occasion of the Dutch war, and of all that blood which was lost at Bergen in attacking the Smyrna fleet, and that whole quarrel." From others, who were likely to be well informed, Evelyn also heard that Cliford had "made himself away after an extraordinary melancholy." He mentioned the subject to one of Lord Cliford's trustees, a Mr. Prideaux, who was unwilling to talk about it. Cliford had had a presentiment or intention of death when he parted from Evelyn in London. "He wrung me by the hand, and looking earnestly on me, bid me 'God-b'ye,' adding, 'Mr. Evelyn, I shall never see thee more.' 'No!' said I, 'my lord, what is the meaning of this? I hope I shall see you often, and as great a person again.' 'No, Mr. Evelyn, do not expect it, I will never see this place, this city, or this Court again.'" Cliford was an astrologer, and he had told both Lord Shaftesbury and Sir Edward Walker, Garter King-at-Arms, that his horoscope predicted for him one of the highest offices of the State, a very short tenure of it, and a bloody death.

By general testimony Cliford was an upright and honourable man. His fault was ambition—a virtue when regulated and subdued, but in excess criminal. His ambition was political power; wealth he probably cared for only as a means of power. His nature was vehement and his vision limited. No literature or genius adorned or relieved his misguided statesmanship. He was conscientiously the eager and impassioned tool of the reckless, unscrupulous Charles and his fanatical, arbitrary brother James. His devotion to the Duke of York's religion and his desperate ambition worked his ruin. He is one of many illustrations—and there are few so striking—of the vanity of human wishes among the weak and short-sighted men whose happiness is at the mercy of outward accident and not based on a solid rock of self-dependence:—

Unnumbered supplicants crowd Preferment's gate,
A thirst for wealth and burning to be great;
Delusive Fortune hears the incessant call,
They mount, they shine, evaporate, and fall.

RALSTON ON RUSSIAN FOLKLORE.*

THOSE of our readers who saw this heading little more than a year ago will not be sorry to meet it again, and to learn that Mr. Ralston has continued his researches among Russian popular literature—if the term be not too glaring a misnomer—to such good effect as to be able to present us with a second instalment of the very considerable work which he has undertaken. He explained in the *Songs of the Russian People* that he restricted himself there to an account of the popular lyric poems, and reserved for a future volume the prose stories (*skazkas*) and epic pieces or metrical romances. These last are again put off, and the present volume is well filled with the stories alone. Mr. Ralston is therefore in the happy position of a writer who finds his subject grow under his hands, so that what was to have been contained in one volume is perforce expanded into three. He is brimful of his subject, and encounters no difficulty but that of keeping within reasonable bounds. No padding will therefore be found in his volumes; they are full of good matter, and Mr. Ralston knows very well when to leave off storytelling and when to close his own valuable comments upon the stories.

The Russian tales which Mr. Ralston has translated are selected from the great collections made by Afanasief, Khudyakof, Erlenwein, and Chudinsky, who, like Jacob Grimm in Germany, took them down from the mouths of the peasantry. Afanasief's collection, we are told, extends to nearly three thousand pages and contains

* *Russian Folk-Tales*. By W. R. S. Ralston, M.A., of the British Museum. London: Smith, Elder, & Co. 1873

332 distinct stories. Such a vast store of stories remembered from generation to generation without the aid of writing, and apparently capable of considerable increase from investigations in outlying provinces, is at least a very remarkable phenomenon. It shows that the peasantry of Russia are not duller than those of Germany, Scandinavia, the Scotch Highlands, and other countries which have been found to contain as valuable a treasury of legend for those who knew how to unlock it by winning the confidence of the peasants and overcoming their unwillingness to tell stories which might appear to be childish and silly to educated strangers. The real value of such stories is indeed not at all generally understood, and it is desirable to point out the misconceptions to which they are liable. It is sometimes supposed that stories current among, and apparently emanating from, the indigenous peasantry, with the least possible infusion of extraneous ideas, must be the most faithful mirror of the life and thoughts of the people, and must reflect the national character without the dressing of education. Where stories can be found which do unquestionably emanate from the peasantry, this expectation may probably be realized; but in the folk-stories generally this is not the case, and we find that the peasant constantly allows his imagination to run riot among kings and princesses, palaces of gold or of gingerbread, seven-headed serpents and demons—things as remote as possible from his daily experiences. Again, it is thought that in some obscure way history is preserved in these stories; that popular legends of a Deluge being found in various parts of the world may be treated as cumulative historic testimony to the reality of such an event, and that heroes of whom written history knows nothing, such as Sigurd, Grettir, Arthur, Ruston, have their lives preserved by the unwritten books of popular tradition, and may on the faith of this be treated as well-accredited historical personages. Now the most that can be said in support of the historical character of popular stories is that they may happen to attach themselves to the person of a real man, the idol or the terror of the people, and thus perpetuate his memory, which may chance to be lost to written history. But the popular story in no way establishes the reality of the hero, else it would establish the reality of devils and imps, of those two arrogant elder brothers and that supposed silly but really clever youngest brother who comes off victorious when the others fail, and many other characters who furnish the stock-in-trade of the popular tale. That the recurrence of the same idea—such as that of the Deluge—should among many and far separated peoples furnish any presumption in favour of the reality of the event is perhaps the greatest mistake of all; for it tells rather the other way. In most cases of this kind, either the idea in its original form was a simple conception of some natural phenomenon which mankind must have observed everywhere, or the story is told by now separated members of the same race, and is an heirloom brought from the ancestral home, repeated in new seats, and even communicated to tribes of alien race. Only where the story can be proved not to owe its diffusion to either of these causes can it put in a claim to be treated as a record of a real historic event on the ground of being recounted by several distinct witnesses.

If, then, the folk-story has little or no value either as a picture of national character or as an obscure element of history, has it really any interest at all except as a mere curiosity—a spontaneous growth of wonderful luxuriance? Because, if so, it will be less and less studied. It would be easy to write so depreciatingly of the whole body of folk-lore as to dissuade persons not already committed to the study from ever approaching it. The Russian *skazkas* already collected are more than five hundred; yet how many are independent of one another? Are not the 'Three Brothers' story, Cinderella, Jack and the Beanstalk, and many others, repeated with hardly any difference, *ad nauseam*? And is not this true in a much higher degree of the frightful stories of corpses rising from their graves, of vampires, witches, and all the most horrid features of the fictitious "black art"? Is it not worse than wasted time—is it not enervating to us, like the perusal of the foolish romances of chivalry to Don Quixote—to brood over idle and often ugly stories like these?

The answer to questions such as these, which naturally arise when grave professors are found collecting nursery-tales, is that the very points which were supposed to constitute the defects of the stories give them a value unsuspected by the uneducated. The same story is told in many different forms by one nation; one very similar is told by a second; others more or less similar, but manifestly of the same origin, are found in other nations. Comparison often enables us to ascertain which is the most original. If some circumstance which in one version stands unexplained and isolated appears in another to be brought out by the natural sequence of events, the latter may generally be presumed to be the original. If lions and tigers are mentioned in a story common to England and India, we may safely set down the Indian as the original. Thus the comparison of various forms of one story often throws a light on its real nature which no single one could have furnished. Again, the mention in one version of some feature absent from others may be sufficient to connect a whole cycle of stories with some idea belonging to an extinct mythology, and thus to prove their antiquity, their parentage, and their real meaning. How often may the thunderbolt of Jupiter, the club of Hercules, or the hammer of Thor, be recognised—e.g. in the cudgel in Grimm's story of "Tischchen, deck' dich," *Dasel und Knippel aus dem Sack*, in Mr. Ralston's stories of Ivan Popyalof and Emilian the Fool, and in our Jack the Giant-Killer! But it is obvious that in the comparison of a considerable number of analogous stories lies the proof of their original

mythological meaning, antiquity, and source. A cudgel as the ordinary weapon of common life need not of itself, occurring casually, be suspected of any esoteric meaning; and a system of interpretation formerly much in vogue, especially in Biblical criticism, which assigned a mystic or emblematic importance to every accidental feature of a story, is happily abandoned by all sensible writers. Hence the great importance of collecting materials from every land; the larger the store, the better shall we be able to trace the wanderings of nations in times unknown to history, to discover their ideas on the subjects on which mythology rests, the government of the world, the nature and destiny of the soul, and the like. But as the materials must be abundant if the argument founded on them is to be conclusive, we must be content to collect materials long before we are prepared to launch any mythological theory. At the same time so much has been already accomplished in collecting stories, that it is hardly too early to cast our eyes forward, and to begin to generalize. Mr. Ralston has steered a very wise middle course here. He has generally referred to analogous stories in other lands, notably India, Tartary, Germany, Scandinavia, Wallachia, Italy, and Scotland, hiding in a few lines, rather than displaying, extensive reading and a sound judgment; and in cases of more than ordinary clearness he has given us the mythological key as well. All this makes the reader feel that he is not being merely amused by fairy or ghost stories, but instructed in a very curious but very widely spread phase of human imagination, which turns out to be far from the wild caprices which it seems at first sight to be. Mr. Ralston has wisely abstained from working out an entire system of mythology deduced from folk-tales; for such an essay would of necessity have become the principal feature of the book, to which the tales themselves must have served only as illustrations—a perverse arrangement in a book intended for Englishmen who as yet know nothing of the stories. Now that he has given them excellent and copious specimens of the tales, we hope to see him in a future work grappling with the arduous task of the interpretation of the whole system of folk-tales.

We have said that the stories are not primarily valuable as pictures of Russian peasant life or character. Yet of these we do get some notion, though hardly so vivid or so pleasant as from the lyric songs. The very general belief in sorcery, witchcraft, and fiends which naturally takes up a large space in this book, and especially the brutalizing vampirism, seem to cast a lurid hue over the picture, and may tempt us to ask, are these superstitious creatures so near to, if not politely treated as belonging to, European civilization? forgetting how recently similar devilry—we will hope not quite so gross—was common in Scotland and Ireland. The large room which these ideas fill in the Slavonic mind, rather than the fact of their existence, is notable. And the kindness of the Russian heart exerts its influence even here in making the devils less repulsive, and allowing them sometimes to give men real help, not followed by punishment. Another notorious bad propensity of the Russian peasantry, that towards drunkenness, also appears here undignified, and apparently regarded with no severity, except in songs of a religious character. But in general the Russian peasant appears to be fond of his home, obedient to all requirements of the Church, though destitute of that reverence for his "popo" which the Roman Catholic everywhere displays towards his priest, and, in short, a model subject, with quiet habits. He joins the army when called on, but on the completion of his service is eager to return to his native village, and is not likely to give trouble, either by his temper or his aspirations.

We will now notice one of the most curious mythological ideas which appear frequently in these tales. It is the belief that the strength, especially of a supernatural being, resides in some definite locality or object; destroy the latter, and the strength or even the life of the being passes away. One of the most extraordinary beings of the malicious order is the many-headed snake Koshchei, who flies through the air, carries off princes, princesses, and other mortals, and holds them captive in his magic abode. This localised strength is sometimes termed *death* and sometimes *life*. Koshchei is called the Deathless, as being not subject to the ordinary death of mortals; but his death is procurable notwithstanding. A Prince Ivan goes in search of his mother, who has been carried off by Koshchei; arriving at the house where she is held prisoner, he is hidden when the monster returns home, and the mother

drew nigh to Koshchei, addressed him in terms of affection, asked him about one thing and another, and at last said:—

"Whereabouts is your death, O Koshchei?"

"My death," he replied, "is in such and such a place. There stands an oak, and under the oak is a casket, and in the casket is a hare, and in the hare is a duck, and in the duck is an egg, and in the egg is my death."

Ultimately the prince returns to his mother with the egg. Koshchei flies in and complains of feeling rather unwell:—

Then Prince Ivan began squeezing the egg, and thereupon Koshchei the Deathless bent double. At last Prince Ivan came out from his hiding-place, held up the egg and said, "There is your death, O Koshchei the Deathless."

Then Koshchei fell on his knees before him, saying, "Don't kill me, Prince Ivan! Let's be friends! All the world will lie at our feet."

But these words had no weight with Prince Ivan. He smashed the egg, and Koshchei the Deathless died.

Similar ideas are found in the stories of many other races; only instead of the abstract term *strength* the more concrete *heart* is used. We quote one or two, to show the ramifications of the subject, and Mr. Ralston's ingenuity and extensive reading:—

In a Norse story a giant's heart lies in an egg, inside a duck, which swims in a well, in a church, on an island. . . . In a Transylvanian Saxon story, a witch's "life" is a light which burns in an egg, inside a duck, which

swims on a pond, inside a mountain, and she dies when it is put out.

In the Gaelic story of "The Sea Maiden," the "great beast with three heads" which haunts the loch cannot be killed until an egg is broken, which is in the mouth of a trout, which springs out of a crow, which flies out of a bird, which lives on an island in the middle of the loch.

The legend to which I am now about to refer will serve as a proof of the venerable antiquity of the myth from which the folk-tales which have just been quoted appear to have sprung. A papyrus, which is supposed to be "of the age of the nineteenth dynasty, about A.C. 1300," has preserved an Egyptian tale about two brothers. The younger of these, Satou, leaves the elder, Anepou (Anubis), and retires to the Valley of the Acacia. But, before setting off, Satou states that he shall take his heart and place it "in the flowers of an acacia-tree," so that, if the tree is cut down, his heart will fall to the ground and he will die. Having given Anepou instructions what to do in such a case, he seeks the valley. There he hunts wild animals by day, and at night he sleeps under the acacia-tree on which his heart rests. But at length Noum, the Creator, forms a wife for him, and all the other gods endow her with gifts. To this Egyptian Pandora Satou confides the secret of his heart. One day a tress of her perfumed hair floats down the river, and is taken to the King of Egypt. He determines to make its owner his queen, and she, like Rhodope or Cinderella, is sought far and wide. When she has been found, and is brought to the King, she recommends him to have the acacia cut down, so as to get rid of her lawful husband. Accordingly the tree is cut down, the heart falls, and Satou dies.

The brother Anepou returns to find Satou dead, but succeeds by a mystic fluid in re-animating not only the heart, but the corpse too, and Satou lives again. Another variety of the same myth, and one also of great antiquity, we may add here. Samson had external "strength" residing in his hair. Like Koschev, he was betrayed into telling the secret, and his deprivation of strength immediately followed.

Most of the stories in this book are as innocent and pleasing and as suitable for children as Grimm's popular German collection. There are indeed none unsuitable for children, unless it be those that deal in sorcery and devils, which might sometimes raise images of terror, and be answerable for bad dreams. We give as a specimen of these the "Witch Girl":—

Late one evening a Cossack rode into a village, pulled up at its last cottage and cried:—

"Heigh, master! will you let me spend the night here?"

"Come in, if you don't fear death!"

"What sort of a reply is that?" thought the Cossack, as he put his horse up in the stable. After he had given it its food, he went into the cottage. There he saw its inmates, men and women and little children, all sobbing and crying and praying to God, and when they had done praying, they began putting on clean shirts.

"What are you crying about?" asked the Cossack.

"Why, you see," replied the master of the house, "in our village Death goes about at night. Into whatever cottage she looks, there, next morning, one has to put all the people who lived in it into coffins, and carry them off to the graveyard. To-night it's our turn."

"Never fear, master! without God's will no pig gets its fill!"

The people of the house lay down to sleep; but the Cossack was on the look-out and never closed an eye. Exactly at midnight the window opened. At the window appeared a witch all in white. She took a sprinkler, passed her arm into the cottage, and was just on the point of sprinkling—when the Cossack suddenly gave his sabre a sweep, and cut her arm off close to the shoulder. The witch howled, squealed like a dog, and fled away. But the Cossack picked up the severed arm, hid it under his cloak, washed away the stains of blood, and lay down to sleep.

Next morning the master and mistress awoke, and saw that every one without exception was alive and well, and they were delighted beyond expression.

"If you like," says the Cossack, "I'll show you Death! . . . Let's go through the village and look for her!"

At last they come to the Ponomar's [sacristan's] cottage.

"Is all your family present?" asks the Cossack.

"No, my own! one of my daughters is ill. She is lying on the stove there."

The Cossack looked towards the stove—one of the girl's arms had evidently been cut off. Thereupon he told the whole story of what had taken place, and he brought out and showed the arm which had been cut off. The Commune rewarded the Cossack with a sum of money, and ordered that witch to be drowned.

THE STATUTES OF THE CHURCH OF LINCOLN.

BEFORE the present Bishop of Lincoln began the Visitation of his cathedral church which now stands prorogued till August 1, he put forth a little book of great importance both to those who are immediately concerned and to all who take any interest in such matters. This was no other than the existing Statutes of the church of Lincoln, now printed for the first time. The book is not, strictly speaking, published, but it is in so many hands that it cannot be called private, and we happen to know that, in taking notice of it in this way, we are breaking no confidence towards those who are immediately interested in the matter. The truth is that all documents of this kind, besides their direct practical importance to the members of the bodies whose duties they prescribe, are in the strictest sense, historical monuments. They are part of the materials for the history of the country, and, as such, the more of them the Master of the Rolls—whenever there is a Master of the Rolls—the Delegates of the Clarendon Press, or any one else, will get put into type, the better for historical study.

As regards the foundations concerned in these documents, we believe that we are not wrong in saying that these statutes are still in force so far as they can be in force—so far, that is, as they contain nothing contrary to the law of the land. Where, for instance, they prescribe forms of worship for which the law has since substituted other forms of worship, they are not aside by the law. But where they ordain anything which is incompatible with the existing law, where they define the relations of the Bishop to his Chapter and

of the several members of the Chapter to one another, they are as much in force as ever. And, in the case of these Old Foundations, we believe that nothing has ever taken away the ancient power of the Bishop and his Chapter acting together to legislate, within the same limit of the law of the land, for their own particular body. In this of course they differ from the New Foundations, whose statutes were given by the King who founded them, and which may, we conceive, be altered, within the same limit, by his successors, but clearly not by the Bishop and Chapter themselves. The Statutes of an Old-Foundation church are therefore a living thing, capable of putting on a new form on any points on which a new form is wanted. Their consideration therefore at any particular moment is a perfectly practical matter. But besides this, the forms which they put on at any particular time are part of history, local and general. The Visitation of Bishop Alnwick is part of the history of the fifteenth century; the Visitation of Bishop Wordsworth ought to be part of the history of the nineteenth.

The book begins with a Latin letter addressed by the present Bishop to his Chapter in a style somewhat more suited to the ears of classical purists than the more ancient documents to which it serves as preface. These are the "Novum Registrum" and the "Laudum" of Bishop William Alnwick, who was translated from Norwich to Lincoln in 1436 and who died in 1449. The "Registrum" is a set of Statutes setting forth the duties of the various officers of the church; the "Laudum" is in fact a judgment given by Bishop Alnwick on certain points in dispute between the Dean and the rest of the Canons. Between the two come the Statutes of the Vicars. And some older documents are embedded, as some ordinances of Bishop John Gynwell, who sat from 1347 to 1362, bearing date in 1355. The whole set however seem hardly to make up a perfect piece of legislation for all aspects of the capitular body. They deal more with the duties and powers of its several members than with the constitution and powers of the corporation as a whole. But we can see that these documents set before us one stage of the gradual change from the Cathedral system as it was set on foot by the reforming Bishops of the eleventh and twelfth centuries, to the state into which it must have fallen when Henry the Eighth devised the constitutions of the New Foundations. On the one hand we see the authority of the Bishop fully recognized, the special duties and powers and the strict residence of the several dignitaries are all strongly enforced; there is no fixed number of Residentiaries, but it is open to any Canon to make himself a Residentiary on certain conditions, and those Canons who do not reside are to be represented by their Vicars. On the other hand, there is a strong tendency to shut out those who do not reside from any share in the common action of the Corporation, and to deal with the resident body as alone forming the Chapter. But it must be remembered that, as long as it was in the power of every Canon to be a Residentiary if he chose, this exclusion would bear a different character from what it does now. Those who did not reside might still be looked on as men who were forsaking their duties, and who were therefore fairly shut out from their privileges. To this it might have been answered that, though every Canon might make himself a Residentiary on certain conditions, yet as those conditions were somewhat burdensome in the way of entertainments and the like, it was quite possible that a man might often be shut out against his will. But one thing is quite certain, that at Lincoln in the fifteenth century it would have been impossible for any dignitary or other Canon, actually keeping his residence and doing his duty, to be shut out from the deliberations of the Chapter and from a share in their common revenues. The residentiary character of the dignitaries, as at Lincoln, has never died out; such dignitaries as remain—for the treasurerhip was suppressed in the sixteenth century—are Residentiaries still, only for a long time past the residentiary body has consisted of dignitaries only. At the time of the late changes it had sunk to a body of four—the Dean, Precentor, Chancellor, and Sub-Dean. Now it has risen to the usual number of four besides the Dean, among whom are the Precentor, the Chancellor, and, we believe, the Sub-Dean also. At the time of Bishop Alnwick's "Laudum," we get a list of the residentiary body who had the dispute with the then Dean John Macworth. They consisted of the Precentor, the Chancellor, the Treasurer, three Archdeacons, the Sub-Dean, and three other Canons, and they describe themselves as forming the Chapter:—"Canonici residentiarii Ecclesie vestre Lincolnienis Capitulum ejusdem facientes." These words however do not absolutely exclude the non-residentiary members from being members of the Chapter; for, besides that they might become Residentiaries by going through the required conditions, the Residentiaries, or any other quorum of the Chapter, would of course be the Chapter. And be entitled to act as such for any particular purpose. And of course such a residentiary body as is described in the "Laudum" is something very different from the four or five—in case of sickness or vacancy three or four—who have formed the body of late years. Still, in the places in which the residentiary body speak of themselves more than once in the "Laudum" as "facientes Capitulum," we can discern a tendency to the shutting out of the other Canons, and it comes out in some passages in the Statutes. The Dean is to summon the Residentiary Canons to all meetings of the Chapter, the non-residentiary only when the Chapter shall think good:—

Debeat Decanus Canonicos Ecclesie residentiarios, pro negotiis Ecclesie communiter tractandis quibus hoc requirit Ecclesie utilitas aut honestas, convocare; et alios non residentiarios quando et quoties Capitulum, ad hoc opportunum.

It is easy to see how, by virtue of the burthens laid on Residentiaries, the residentiary body might be cut down to a very small number, and how by virtue of this last statute the non-residentiaries might be shut out altogether. The mode of summoning absent members is something between the high civilization of a notice sent by the post and the mockery of setting it up on the church door where the absent will not see it. Two classes only are to be exposed to this last kind of treatment:—

Litteræ dirigendæ fratribus convocandis tradantur in choro suis Vicariis, ut eas Dominis suis transmittant, quod si Vicarios non habuerint propter ipsorum præbendam exilitatem; vel Archidiaconi fuerint, qui Vicarios eorum loco in Ecclesia exhibere non consueverunt; ponantur publice in choro in ipsorum stallis, et alio modo non tenentur præsentem fratres vocare absentes; quod observari volumus et ordinamus in Episcopi electione, et in quocunque negotio per fratres communiter pertractando.

With regard to this last point, the right of summons is everything. At York, for instance, the right of the non-residentiaries to be summoned to every meeting never died out, but it became a mere form. By simply insisting that the form should become a reality, the reign of oligarchy has come to an end, and the church of York has got back its ancient constitution.

Bishop Alcock's "Novum Registrum" starts from the time when the See was removed from Dorchester to Lincoln by Remigius, and when the capitular body received its full organization at his hands. The document then goes on to set forth the duties and powers of the several officers of the church, beginning with the Bishop. It is clear that in Alcock's time the disputes which had been raised by the refractory Canons in the days of Robert Grosseteste had quite blown over, and that the true position of the Bishop with regard to his Cathedral church was fully acknowledged; not only is his right to visit strongly set forth, but it is imposed upon him as a duty; if he cannot visit in person, he is to visit by deputy, the deputy however being always a Canon of the church of Lincoln:—

Videtur etiam Episcopus pro tempore existens, visitareque poterit Ecclesiam suam Cathedrali Lincolnienstem, Decanum (viz.) et Capitulum ejusdem, et personas quascunque habentes dignitates, canonicatus, præbendas, personatus, cantariasque, et officia in eadem, quoties et quando voluerit, secundum exigentiam juris communis, et personarum, nisi legitime impediatur: quo casu, per Commissarium unum de residentiariis, vel non residentiariis, admissum prius in Canonico per Decanum et Capitulum, et juratum in forma admittendorum Canonicorum consueta, in visitatione procedet.

But the Bishop is not merely to be an external visitor. He is to be the chief member of the Church, alike in the choir and in the Chapter-house, and the odd claims which have sometimes been set up by Deans and others to precedence over the Bishop in his own church are altogether shut out. The section about the Bishop begins:—

Dignitas Episcopi (cujusvis ordo potius dici debet dignitatis culmen quam dignitas) est in Choro, Capitulo et in omnibus locis supra Decanum, omnes Canonicos et Ecclesie ministros etiam dignitates obtinentes in eadem, in exhibitione honoris habere præminientiam.

Some way further on (p. 20) the legislator waxes eloquent, and even sarcastic, on this head:—

Ridiculum enim foret, et plusquam monstruosum, quod Episcopus in sua Ecclesia (cujus dignoscitur esse caput) paratus ad divinum officium exequendum vel audiendum (prelatis et subjectionis ordine sic turbat, quin verius subverso) Decani præsentiam expectaret; ut dum Decanum reverentiam Episcopo, juxta sanctorum patrum præscriptas sanctiones, exhiberet, ipsam sibi ab eodem expectare videretur.

At the same time expressions of this kind have a controversial sound. They show that some Deans had been setting up their horns higher than the Bishops at all liked, and we know that earlier Bishops of Lincoln had had difficulties with contumacious dignitaries of this class. The Dean however was not then, as he is now, a person sent down from outside by the Crown. While all the other dignitaries and Canons were appointed by the Bishop, the Canons, as in all the other Old Foundations, elected their own Dean, but they do not seem to have been bound, as they were in some churches, to elect one of their own body. This freedom of choice as against the Bishop is carefully guarded; the Canons are to announce a vacancy in the Deanery to the Bishop, but it is expressly provided that they are to go on to the election without waiting for any licence from him. The Bishop therefore could not keep the Deanery vacant in the same way that the King could keep the Bishopric vacant. The Dean-elect had to be presented to the Bishop and confirmed by him, but the Bishop had no power of veto; he was bound to confirm, as he was bound to institute the presentee of the patron of a living, unless there were some canonical objection to the person chosen. And it must not be forgotten that all this went down to the present reign, the Chapter always electing—though not bound by any law to do so—a candidate recommended by the Crown. The powers of the Dean are fully described, and he and the other dignitaries are bound to a residence of thirty-four weeks and five days yearly. Then we come to the other great officers, the Præcentor, Chancellor, and Treasurer, and the Præcentor and Chancellor are distinctly marked as diocesan and not merely cathedral officers. Both these dignitaries have duties imposed on them which, if they were carried out, might cause further complications with the National Society and the School Boards. But at all events, if there are to be such people as Diocesan Inspectors, the Chancellor might be made to discharge such a duty without greatly departing from his original functions. And it is still clearer that we have in him the Principal of the Theological College ready made. We read of the Præcentor, besides his duties in the Cathedral itself as the immediate director of the choir and all that pertains to it:—

Magistrum itaque cantus in civitate et comitatu Lincolnensi ordinet et

præficiat; locis præbendalibus, ac scholis quas in suis propriis parochiis curati aliqui de suis propriis parochiis tenent, aut parochiales clerici eorundem (quos per Præcentorem ad informandum et instruendum suæ parochie puerulos in cantu volumus impediri) duntaxat exceptis.

Of the Chancellor we are told:—

Cancellarii est officium, ac esse debere ordinamus et decernimus, scholas theologie regere. Item in eisdem auctoritate legere: quod nullus alius debeat facere, nisi de ipsius Cancellarii licentia.

And it is further said, but with the same restrictions which are made in the case of the Præcentor:—

Idem etiam Cancellarius scholas omnes grammaticas in civitate et comitatu Lincolnensi pro suo libero conferat arbitrio.

With regard to the Canons who are not dignitaries, but who, in the phrase of the Statutes, "protested residence," they were bound for the first three years to the "major residentia," which was one day less than that of the dignitaries. After the third year they were allowed the advantages of Residentiaries on keeping the "minor residentia" of seventeen weeks. Even this last is something different from the modern notion of one Canon at a time for three months each, and we would again call attention to the point which we raised in a former article on the Bishop's Visitation. Surely the clause in the Act of Parliament which enforces a three months' residence simply enforces it in those churches where a vicious practice had brought in a yet shorter time. It surely is not meant to absolve those who by local statute are bound to a longer time.

A SLIP IN THE FENS.*

WE have more than once ere now declared our intention of saying a good word for any novel which should be written in good English, be free from all villains and all extravagant adventures, have a low rate of mortality, and be contained in one volume. We have long been weary of slang, of the sort of English that has the largest circulation in the world, of scoundrels, of sensationalism, of consumptive heroines and of penitent heroes, but still more weary have we been of the endless succession of three volumes. We have had enough and more than enough of the first volume which gets the hero into a scrape, of the second which keeps him in it, and of the third which gets him out of it. We have become as indifferent to the fate of the most dashing hero or the most lovely heroine as ever was the Ordinary of Newgate to the last of a batch of some fifteen or twenty convicts whom he had to prepare for the gallows on a Monday morning. "Custom hath made it" in us as well as "in him a property of easiness," and we could fully sympathize with him in his desire to get the business speedily over, and to return to the breakfast and the company which were awaiting him. At last, however, we have found the author whom the critic delighteth to honour. We have come across a book where no one commits any crimes, no one has any wonderful adventures, no one dies at great length, no one, not even the author, is unintelligible. It is a story of very common life, and it is written in one volume. The worst part of the book is its binding, which, in its red colour with gaudy gilt lines running across it, would much more suit one of Miss Braddon's novels than such a quiet book as *A Slip in the Fens*. We cannot, by the way, approve of the new fashion of binding books. If publishers wish to have their books bound so as to compare with the bindings which not only cover, but also adorn, the poems of Mr. Rossetti or of Mr. Morris, they must—that is to say, if they can—secure designers who have the same admirable taste as these writers. Till they can come across such men, they had much better stick to the old styles of binding, which were at all events simple and unpretending. But we must return from the outside of the book to the inside, with which we are more especially concerned. Though this story is distinguished in a high degree by the absence of faults, it is not equally remarkable for the presence of great merits. It is a book which can be read with pleasure, but yet which does not leave any strong impression on the mind. It reminds us most of all of a carefully painted Dutch picture, of some scene of quiet life in a flat country, where there is nothing to represent that much excites the imagination. The story is as simple as a story could be. The most striking adventure is the slip of the hero into a ditch, and his rescue by the heroine. The heroine neither marries, nor, we trust, dies of a broken heart. The hero is a weak fool, who is obedient to his father, and consequently faithless to the heroine, marries, and, for all we are told, lives a most respectable life. The story, we believe, appeared in numbers in one of the magazines. We should very much doubt whether the author's plan was not changed in the course of publication, for one or two characters have an importance assigned to them in the beginning of the story which its subsequent course by no means justifies. It may be the case, however, that the magazine had had as much of such very quiet writing as its readers cared for, and that two or three chapters at the end were cut out. Or, finally, it is possible that the author thought the story would seem more true to nature if the heroine, simple country girl that she was, not only fell in love with a man who was unworthy of her, but also fell in love though there was present all the time a man whom she might rightly have admired, and who might rightly have admired her. We suspect, however, from the long and careful description given of Dobree, one of the four Cambridge undergraduates with whom the story opens, that he was intended to play a much more important part in the plot than he actually does. Perhaps we shall see a continuation published

* *A Slip in the Fens*. London: Macmillan & Co. 1873

—under the title, maybe, of "A Slip out of the Fens"—in which Dobree will marry Elsie, the heroine, who will, from a study of his strong character, have learnt to see how utterly unworthy Lillingstone, her first lover, was of her.

The scene is laid in the fen country, some few miles from Cambridge, and the story opens on a hot summer's day in the Long Vacation, with a walk which Dobree takes in search of some curious ferns. To us the description of the country and of the people is fresh and interesting. At the same time it is a description which, with all its cleverness and its apparent accuracy, will not make many readers uneasy to go and see the country for themselves. Every one who is fond of books of travel and of travelling must know the restless desire for wandering which so often comes over a man as he reads of some land altogether unknown to him. *A Slip in the Fens*, however, may be safely read by a man in June without making him count up the long days that have to be gone through before August comes. On a hot day a man who reads the following passage may feel thankful to live in a street or a square that has a shady side:—

The sleepy river crawled through the sleepy fen. No breeze waked a ripple on its surface or stirred the rushes that grew near its flat edge; they rose silent and straight from their reflections, and these reflections were turbid. The sparse willows were too faint to give any shade, and the sleepy cattle stood motionless and apart, each bearing its burden of heat alone. Beyond this fen were more fens, with more sleepy cattle and more willows; but there the cattle looked indistinct, and the willows were blended into straggling rows. After these again were other fens, and fens, till they faded into the distance, where the cattle seemed shapeless dots, the willows were merged in a pale watery haze, and the horizon gave no relief, but suggested an indefinite stretch of the same fen land beyond, with the same haze and the same heat. The sun stared down on the naked waste, not sparing its ugliness, and the waste was nothing abashed, as it stared back blankly.

Dobree is not successful the first day in finding his ferns, but he falls in with three Cambridge men who, like him, were out for the day. They are all three cleverly enough described, though one of them, Laurd, like Dobree, has not a part assigned to him in the story that at all comes up to the length of the description. Lillingstone, whom we must call the hero, as he falls in love with the heroine and the heroine with him, though he is in himself most unheroic, is a man "whose attractiveness lay rather in a general grace, and in refinement of colouring, than in excellence of proportion; and whose every movement expressed a delicate organization, lulled by that lassitude of self-indulgence which some people attribute to sensitiveness." His first remark, we presume, is meant to be the key to his whole character, and to show that we have to do with a self-indulgent man. Bordale, the fourth man of the party, had said, "Before we go on, I propose that we have some beer." Beer was Lillingstone's cue, and he enters upon the scene with the exclamation, "Beer, yes, decidedly beer." What good can be looked for from a hero who begins with beer, instead of with rescuing the heroine from a villain or from death? The three men, leaving Dobree, go out to shoot pigeons on some grounds where they had no right to go. The farmer pursues them, and Lillingstone, who, thinking to take a short cut, had left the other two, finds his way stopped by a lode or a ditch for draining the fens. As the farmer was close upon him, he takes a jump, and, making that slip in the fens which gives its name to the book, lights in the soft mud. The farmer will not help him, and he finds himself slowly sinking, when Elsie, who was on her way home from gleanings, runs up to his aid, throws him her bundle of wheat, and so affords him some kind of footing. He gets out of the ditch only to get over head and ears into love, and goes to her cottage to have his clothes washed and dried. We had more than half suspected that the author of the story is a woman; but it has been pointed out to us that no woman could have made the mistake of having clothes washed and dried in the course of an hour or two. Elsie's home is much like the home so beautifully described by Burns in his "Cotter's Saturday Night," though in the present case it is the grandsire, and not the sire, who

turns o'er, wi' patriarchal grace,
The big Ha-Bible, ance his father's pride.

Elsie's character, considering her good home training, is natural enough, and, though she is refined, the coarseness of labour attaches to many of her brothers and sisters. One of them indeed is rendered offensive by the fact that she is suffering from a form of idiocy which, according to our author, is very frequent in the fen country, and is due to the exhalations from the half-drained ground. One of her brothers had been left a widower with four little children, who look, and not in vain, to Elsie, for everything. The dislike of Elsie's mother to daughters-in-law is thus pleasantly described:—

Mrs. Reads was so placed that while she commanded the circle of young, rosy faces she could also look past Jonathan down the garden path, and see her two other sons, who were leaning over the pig-stye staring into the fens. To her this was a spectacle of unclouded satisfaction; the secret of it lay in her instinctive prejudice against daughters-in-law. She said it was no good to grub up the ground after the seed was well in; so, when one such evil had been forced upon her, she had made the best of it. But a moderate success in one instance did not blind her to the risk of future ventures, nor to the symptoms which foretold them. Therefore, her motherly heart rejoiced, as week after week she saw her sons contented with the quiet disipation of a pipe over the pig-stye, on the evening consecrated above all others to rustic love making.

Lillingstone contrives to see Elsie frequently, and, taking advantage of her innocent trusting nature, persuades her to keep their meetings secret. He presently arranges to take lodgings at a neigh-

bouring farmhouse, where Elsie at the same time goes to help the mistress in her household duties. They would have been no doubt married before long, for he was not a villain, though a weak fool, had not his father with a large party come to stay a few days with him at the farm. The old gentleman is a country squire of the good old school, and is a cleverly drawn character:—

"Good Heavens! that any man with the blood of a butcher," exclaimed Mr. Lillingstone, bringing his hand down on the table with a suddenness that made them all start, "To think that any man with the blood of a butcher in him should have any sense of property!"

He surprises the young lovers in one of their stolen meetings, and without making any fuss sends off his son to Scotland, and takes his name off the books of his college. Poor Elsie thinks that he will surely come back to her, but it is not till a year later that Dobree, who had again been fern-hunting, gains sufficient courage to grieve her by the news that Lillingstone had lately married. The story thence ends, leaving poor Elsie

looking out, attracted—fascinated, it would seem, by the golden pianacles of the stacks that rose clear from the vague shadow of the trees, and nursed the flattering rays of the daylight after the day had gone.

Our hope is that Dobree grew fonder of ferns, and of Elsie too, and that she grew fond of him. But this is left entirely to our own imagination without any help whatever from the author.

Such is the story, as simple indeed as a story could be, but not the less true to nature for its simplicity. As regards nature, there is one description, by the way, which we venture to say is not correct. At the back of the cottage where Elsie lived there were some hives, and on the day when Lillingstone had his slip, the bees are represented as in their laziness flying through the cottage on their way to their hives, "for the back-door was open." The author has a close eye for nature in general, and for the poor man's home too, but we maintain that bees do not take short cuts, and least of all through houses. It is not likely that an insect which hardly ever comes into houses, and is utterly bewildered if its hive is moved a foot or so, should prefer a dark road, however short, to the road in the light of heaven with which it is familiar. The fact that we notice such an error as this shows that we find the book, generally speaking, accurate enough. We must not be understood to speak of this story as if it had any striking merit. It is very unlike most of the stories that come before us, and is pleasing as being a change, and, as we think, a change for the better. Though it is not a work of genius, it will be read with pleasure, and with a pleasure that is altogether innocent.

MADAME RÉCAMIER'S CORRESPONDENCE.*

ONE of the most curious problems offered by French society in the earlier part of this century is the influence of celebrated women and the causes of their celebrity. In the case of Madame Récamier we have long suspected that the influence must have been chiefly due to qualities which literature cannot preserve—to *charm* rather than genius, to the charm of beauty and kindness rather than to any eminent intellectual superiority. This volume of her correspondence confirms our previous impression. It consists chiefly of letters written to Madame Récamier by some of the cleverest men of the time, and what strikes us most in these letters is that none of them are written as if their authors were addressing a highly intellectual correspondent. They all seem to be writing to a charming woman, whom they love and respect very much, but not to an intellectual equal. Amongst themselves their correspondence abounds in interesting details about their studies, researches, and opinions; but in writing to Madame Récamier they seem to lay all this aside and to adopt a quite peculiar tone, based upon admiration and affection, but not upon intellectual reciprocity.

The truth seems to be that Madame Récamier exercised a great power of the most strictly feminine kind. There is nothing of the blue-stocking in her, nothing to make any one forget her sex, even for an instant. She appears to have been eminently beautiful, and yet her beauty could never of itself provide a sufficient explanation for an influence so peculiar as hers, and so enduring. She was a natural queen, reigning permanently over the hearts and minds of a little court which was composed of some of the very ablest men of her age, and beyond her immediate *entourage* she had a great fame and prestige generally accounted for by the supposition of an intellectual eminence which did not really exist. The true explanation seems to be that men were first attracted to her by admiration for her surpassing loveliness, and then kept permanently in subjection by an extraordinary power of sympathy and an extraordinary kindness. The relation between Madame Récamier and her admirers is one of the most peculiar that have ever been established between the sexes. On their part, at least on the part of some of them, there existed no doubt a strong element of passion, but it seems to have been kept in the condition of chivalrous homage and devotion by a sort of maternal influence on her part. It is impossible to avoid the question, even in the case of a lady of such perfect delicacy as Madame Récamier, whether so many intimate friendships with the other sex could be compatible with a virtuous life, and it has certainly been very generally believed that she was at least the mistress of one celebrated personage, Chateaubriand. But the more we learn about her, and about the peculiar condition of the intimate society that surrounded her, the more we feel inclined to regard her way of living from

* *Madame Récamier, ses amis, sa jeunesse, et sa correspondance intime. Par l'auteur des Souvenirs de Madame Récamier. Paris: Lévy.*

the most charitable point of view. There are many circumstances revealed quite by accident in this volume and elsewhere which tell uniformly in her favour, and lead to the inference that she was happiest in the exercise of a beneficent sovereignty, and was very far removed from the condition of mind which is the most usual accompaniment of immorality. That she enjoyed her influence there can be little doubt, but it is equally certain that she had plenty of self-respect, and was always strictly to be relied upon in those relations of warm friendship which she maintained with her numerous subjects. Even so pious a lady as Madame Swetchine became her friend in Italy, when Madame Récamier was travelling there with her friend M. Ballanche, and with M. Charles Lenormant, who afterwards married her niece. Madame Swetchine appears to have had suspicions before she became personally acquainted with the celebrated Frenchwoman, but they were immediately dissipated when she knew her personally. M. de Falloux tells us in his *Life of Madame Swetchine* that she soon changed her first opinion, "et ceda aussitôt à l'attrait des sérieuses et rares qualités de Madame Récamier." The two ladies corresponded afterwards, and Madame Swetchine said in a letter:—

Je me suis sentie liée avant de songer à m'en défendre; j'ai cédé à ce charme pénétrant, indéfinissable, qui vous assujettit même ceux dont vous ne vous souciez pas. Vous me manquez, comme si nous avions passé beaucoup de temps ensemble, comme si nous avions beaucoup de souvenirs communs; comment s'appauvrirait-on à ce point de ce qu'on ne possède pas hier? Ce serait inexplicable s'il n'y avait pas un peu d'éternité dans certains moments; on dirait que les âmes en se touchant se dérobent à toutes les conditions de notre pauvre existence, et que plus libres et plus heureuses, elles obéissent déjà aux lois d'un monde meilleur.

It is not very easy for people of our generation, whatever their nationality, to enter at once into the peculiarities of a society like that which surrounded Madame Récamier. One or two indications may help us. In the first place, we may notice that this group of friends always called each other by their Christian names, even when there did not exist any relationship. Thus Madame Récamier is always *Juliette*, Camille Jordan is always simply *Camille*, and so it is for Benjamin Constant, Prosper de Barante, and every other member of the friendly circle. The same rule was observed by Madame de Staël and her friends at Coppet. She always spoke of and to M. de Montmorency as *Mathieu*, Madame de Boigne calls Adrien de Montmorency *Adrien*, and he calls her *Adèle*. So it is with all of them; consequently the use of the Christian name means no more than initiation or reception into a society whose forms were generally affectionate, and implies no personal tie. At the same time these friends preserved the strictest deference and respect. A highly curious example of the etiquette which reigned amongst them is Madame Récamier's way of offering a cup of tea to Chateaubriand. Every evening this little dialogue recurred, precisely in the same words:—

"Vous offrirez-vous du thé, monsieur?"
 "S'il vous plaît, madame."
 "Du sucre?"
 "Un soupçon."
 "Du lait?"
 "Un nuage."

Here is a note from Madame Récamier to Camille Jordan which is an example of the familiar tone:—

"Cher Camille, je suis désolée de ne pas vous voir aujourd'hui. Je suis obligée d'accompagner maman chez Cambacérès, et je pars de là pour la campagne."

"Si je ne vous vois pas ces jours-ci, j'irai vous chercher à Meudon. Mille tendres souvenirs et amitiés à vous et à vos amis."

It seems to have been a habit of theirs to use expressions of tenderness. Camille Jordan writes to Madame Récamier from the house of some common friend called Degérando, but instead of saying, as we should, "they send their kind regards," he says, "Degérando et Annette vous disent *les choses les plus tendres*." When Camille Jordan marries, he announces the event to Madame Récamier in a letter beginning "Chère Juliette," and in the same letter he says, speaking of his betrothed, "j'ai le plus vif désir de vous la faire connaître et aimer. Pour elle, je suis bien sûr qu'elle vous aimera, que nos cœurs, si d'accord, s'entendront sur Juliette, chériront ensemble cette bonté et cette grâce ineffables." Mathieu de Montmorency writes to Madame Récamier, and begins by calling her "l'aimable Juliette," recommending young Albert de Staël as an escort, and saying that he would be "également fier de vous ramener ici et désespéré de perdre quelque chose de votre séjour." Madame de Staël recommends her son also, adding that he is "tout amoureux de vous, comme le reste de sa famille." M. Lemontey begins a letter to Madame Récamier in these words:—

"Une vaine suffit donc pas, aimable héroïne, d'embellir les lieux où vous êtes, il faut encore que vous attiriez ceux où vous n'êtes pas."

One cannot help wondering how M. Récamier looked upon all this amiability. He seems to have taken it very quietly, and as a matter of course, just as we accept the common social forms of our own day. After M. Récamier's banking misfortunes, Camille Jordan wrote a most affectionate letter of condolence to his wife, in which he says, "Parlez de moi à votre excellent mari, dites-lui bien à quel point je suis pénétré de sa douleur." The letter ends thus:—"Adieu, je ne cesse de penser à vous et de vous entourer de tous les vœux de l'amitié la plus tendre." She answers that she has read the letter to her husband, who is much touched by it; and she thanks God that amidst her trials she has friends who help her to bear them. Notwithstanding the gallantry of manner which these friends adopted, the absence of jealousy amongst them seems to indicate the moderation of their passion, which

asked no more than the happiness of worshipping the goddess in common with other worshippers. A constant urbanity and much grace of feeling and of manner appear to have reigned in Madame Récamier's little world. It had the charms of the best intellectual society and of high life, curiously but pleasantly intermingled with a strongly fraternal sentiment which we have the greatest difficulty in appreciating, or even imagining, for we have nothing like it in our own day. The real interest of this publication is not in anything the letters tell us in the way of positive information, but in the evidence they contain of a manner of living which belongs as much to the past as the Court of Queen Elizabeth. The author says very truly in the preface:—

La publication que nous faisons aujourd'hui aura, nous l'espérons, pour résultat, de faire mieux comprendre et de plus en plus apprécier ce monde disparu; milieu charmant dont rien dans la société actuelle ne saurait donner l'idée, et où l'élévation des sentiments, la délicatesse du goût, l'indépendance des caractères revêtaient un langage plein d'élégance et d'urbanité.

There can be no doubt that the habits of the First Empire, in authorising these intimacies between men and women, gave the latter opportunities for the cultivation of their intelligence which they must have lacked under a more rigid code of manners; a clever woman who could see and correspond with such men as Ballanche and J.-J. Ampère whenever she wanted to ask a question had the readiest means of rectifying her opinions and enlarging her information. Such friends are far more profitable than books, especially for ladies, who always like to have the pith of a matter presented to them by somebody who has been at the trouble of extracting and preparing it for their use. It is a convincing proof of Madame Récamier's defect of intellectual power that with all her opportunities she reached no intellectual greatness. Her place in the world—and she filled it remarkably well for a long series of years—appears to have been that of a sympathetic feminine friend to hard-working men of genius and learning. They found in her a valuable support, an unfailing consolation for the sentimental side of their natures, and, having once discovered the utility of this peculiar kind of assistance, they constantly sought for it, just as others have continually, or at frequent intervals, refreshed their minds by the contemplation of beautiful natural scenery. There have been few examples equally remarkable of a strictly feminine influence. Her power over J.-J. Ampère was steadily exercised for his encouragement in the work that lay before him, and when they were separated her art was to make the most prudent counsels charming and irresistible by the affectionate interest she bore him. The relation between these two celebrated persons is well worth studying as an example of Madame Récamier's moral and intellectual habits. When J.-J. Ampère first knew her she had already retired, after the shattering of her fortune, to the convent of L'Abbaye-au-bois, where she lived in a little garret outside of the strictly conventual buildings, and yet belonging to them. We are accustomed to be told that when fortune deserts one of its favourites, friends take their departure also; but this instance was an exception to the rule. Madame Récamier's garret was as much frequented by the best society in Paris as if it had been a splendid salon. M. Ballanche brought young Ampère to L'Abbaye-au-bois on the 1st of January, 1820, when he was not quite yet nineteen years old. Young as he was, he soon underwent the same fascination which had already subjugated so many of his seniors, and after a few weeks had passed he was a daily guest. J.-J. Ampère was very highly educated, but utterly unaccustomed to the world, so that the impression of Madame Récamier's great social qualities was felt by him with all the freshness of inexperience. The effect was intensified by a visit to the country in the summer or autumn of the same year, when Madame Récamier stayed at La Vallée-aux-Loups, and young Ampère stayed within a little distance during several weeks at a country house belonging to his friend De Jussieu. He saw Madame Récamier and her niece very frequently during this time, and on their return to Paris renewed his visits to the Abbaye. On the first of these occasions the lady spoke of their pleasant walks and excursions in the country, and delicately hinted that there might possibly have been some more tender emotion. This was an allusion to the young lady her niece, but J.-J. Ampère could not contain himself, and, falling on his knees, declared that it was not the younger of the two ladies who had fascinated him. After this outburst Madame Récamier seems to have managed him in a maternal way, and for thirty years he belonged to her family. His own mother had died during his infancy, and he found at L'Abbaye-au-bois a home for the affectionate side of his nature. Ten years after their meeting he wrote to her these lines:—

J'espère, madame, que cette lettre vous arrivera tout juste le premier jour de l'an, où je vous vais revoir. Je ne suis pas, vous le savez, grand formaliste, mais le jour de l'an est pour moi une époque que je ne vois pas revenir sans attendrissement. C'est le jour de l'an que je vous ai vue pour la première fois. Ce moment, où je vous vis paraître tout à coup, est pour moi blanc comme la neige, car rien jusque-là ne m'avait donné l'idée, ne m'avait jamais fait souvenir. Voilà tout juste dix ans de cela, toute ma jeunesse s'est passée entre ce moment et celui où je vous écris, et dans cet intervalle je vous retrouve à toutes les époques de la vie et de peine, avec ce charme et cette douceur, et de plus tout ce que l'habitude de tous les jours m'a découvert de raisons de vous aimer, de vous adorer. J'y pense avec attendrissement en vous écrivant de ma petite cellule. Je me dis qu'en lisant cette lettre vous serez peut-être un peu attendrie en pensant à dix ans d'une affection si douce, si pure, que rien ne peut altérer, et sur laquelle nous pouvons nous reposer pour tout l'avenir.

The editor of this correspondence, who, though anonymous, is believed to be Madame Récamier's niece, says of this letter of Ampère:—"Cette lettre, qui exprime avec tant de

grâce et de simplicité une de ces affections inaltérables parce qu'elles sont pures," &c.—an expression which she would hardly have ventured to employ if the relations between her aunt and J.-J. Ampère had been immoral. But what a wonderfully close and constant attachment it must have been! He followed his idol everywhere, to the Vallée-aux-Loups, to Saint-Germain, and even to Rome. When she set off for Rome in 1823, J.-J. Ampère persuaded his father that a journey to Italy was necessary to his studies, and so went with her and Ballanche. They took a month to get from Paris to the Eternal City, stopping at every place where there was anything to see, and exploring together churches, galleries, ruins, and libraries. Whenever the three made a halt, they talked over their impressions together, and Madame Récamier exercised her feminine taste in giving an air of elegance and comfort to their little sitting-rooms in the bad Italian inns. At Rome young Ampère, thanks to his brilliant companions, had access to the most distinguished cosmopolitan society. The French Ambassador belonged to the family of Montmorency, in which Madame Récamier had very intimate friends, and through him the travellers could know everybody they cared to know. A curious detail is that Napoleon's mother was in Rome then, and Queen Hortense with her two sons passed part of a winter there. Madame Récamier knew them, and saw them frequently. One of these young men was the future Napoleon III. The ladies took walks together, and during these walks Ballanche and Ampère had long conversations with the elder of the two princes, but the younger rarely joined them.

Madame Récamier's plan was to stay a second winter in Italy, but J.-J. Ampère received letters from his father, which became more and more melancholy as the elder Ampère began to find so long an absence hard to bear. So it was decided that J.-J. ought to return to Paris, and he separated himself with the greatest difficulty from the studies and society which had become necessary to him—especially that of the lady whom he worshipped. This separation resulted of course in a perpetual correspondence, part of which is given in this volume. Madame Récamier's manner with her young admirer is kind and flattering:—

Je me promène tous les jours dans l'avenue de Sainte-Croix de Jérusalem, où nous avons été ensemble. Vous rappelez-vous ce beau soleil, ces ruines, cette terre toute couverte de fleurs? ces entretiens si confiants et si doux?

M. Ballanche et tout ce que vous connaissez à Rome se rappellent à votre souvenir. J'ai eu de vos nouvelles par le duc Mathieu, qui a été charmé de vous voir. J'ai reçu de M. de Chateaubriand une lettre bien triste, bien désolée! On vous a donc parlé de ma nouvelle passion pour Madame Swetchine? elle prend l'appartement dont je dispose à l'abbaye-au-Bois; c'est une personne très-spirituellement aimable; elle vous plaira beaucoup et vous aime déjà.

When J.-J. Ampère thought it desirable for his culture that he should study a year in some German University, Madame Récamier encouraged the project, though it would cost a separation. This second separation produced another correspondence. The two following letters are good examples of Madame Récamier's share in it, and of her style:—

2 septembre 1826.

Je voulais vous écrire et je ne sais pourquoi je ne l'ai pas fait encore. Je ne puis désapprouver vos plans, mais je vous regrette. J'ai vu plusieurs fois monsieur votre père, je l'aime à cause de vous et à cause de lui; c'est un excellent homme. Il n'a dans ce moment qu'une idée, mais comme il m'est facile de m'y associer, nous nous entendons très-bien et nous ne parlons que de vous.

Adieu, écrivez-moi et comptez à jamais sur ma plus tendre amitié.

8 octobre 1826.

Je suis si touchée du plaisir que vous me dites que vous a causé ma lettre, que je ne perds pas un moment pour que vous puissiez encore recevoir ce mot de souvenir à Berne. Je vous répète encore que je vous regrette et que j'approuve vos projets. Je verrai souvent monsieur votre père. J'ai été charmée de la dernière conversation que j'ai eue avec lui. Il est résigné à votre absence, il espère beaucoup de l'avenir; il va, comme vous savez, passer quelques jours à Vautrill. Je le verrai souvent cet hiver; je vais lui demander les vers que vous lui avez envoyés; je suis un peu jalouse de cette préférence, il m'a semblé que j'ai les premiers droits à vos confidences poétiques. Adieu. Cette longue absence est pourtant bien triste, je regrette nos douces habitudes. Amélie est souffrante, on craint encore une fausse couche. Le duc de Laval part dans peu de jours; ma vie s'écoule dans les inquiétudes et dans les regrets. Écrivez-moi, donnez-moi beaucoup de détails sur vos occupations et soyez bien assuré que vous nous retrouverez comme vous nous avez laissés.

Je crois pouvoir, comme votre sœur, vous demander de vous adresser à moi si vous aviez quelque embarras momentané dans vos finances. J'ai des présentations à tous les genres de confidences. Adieu encore, travaillez et pensez à vos amis. J'ai le pressentiment que vous accomplirez votre destinée selon vos vœux.

There seems to have been wonderfully little jealousy in this close friendship. J.-J. Ampère introduced his young friends to Madame Récamier, and she remained faithful to her old ones. It is curious to find her writing from Dioppe:—"Je fais quelques visites le matin et je passe la soirée avec M. Ballanche. Il s'arrange à merveille de cette solitude." When Ballanche writes to Ampère, it is in the most affectionate way, beginning, "Mon bien cher ami," "Mon très-cher ami," and ending, "Je vous embrasse tendrement." Later, when Ballanche dies, and poor Madame Récamier is nearly blind from cataract, the faithful Ampère behaves like a devoted son to her; and, finally, when she loses Chateaubriand, it is Ampère who follows him to the grave, and, in the name of the Academy, pronounces the last words of adieu. She did not long survive her famous friend. His death proved too much for a constitution already weakened, and her life would probably not have been much prolonged even if she had not been carried off by an attack of cholera (a disease she especially dreaded) on the 15th of May, 1849. Ampère, who had lost his father and his sister, lost in Madame Récamier a friend who had supplied the place of relations; so he

threw up the appointments which kept him in his native country, and travelled in Europe and America. A week before his death, in 1864, he wrote his last will, of which these are the concluding words concerning his friends:—

Je finis en les bénissant tendrement pour leur amitié, qui a été la source et la consolation de ma vie. J'espère fermement que leurs noms s'éleveront auprès de celle que nous avons tous aimée et qui nous a donné le jour et nous a soutenus.

HELMSLEY'S HANDBOOK OF HARDY TREES.*

THE professed purpose of the adapter of the *Manuel de l'amateur des jardins* for English use is simply to satisfy the needs of gardeners and amateurs of limited scientific knowledge, chiefly as regards the technical terms and details of garden botany, and, in a less prominent degree, as regards practical gardening. To this end the arrangement of the original work has been considerably altered, yet in such a way as to retain all its information, and, what to some will seem a high recommendation, its woodcuts. Opinions may differ as to the advantage of the natural system, which is adopted here in pretty close adherence to the Kew practice, over the alphabetical or other kinds of grouping; but even those who have a distaste for botanical terms and distinctions and classifications can hardly fail to appreciate the benefit of copious and well-drawn illustrations, with a glossary to unravel such terms as "loculicidal dehiscence" and "parietal placentation." The knowledge which may thus be acquired will place the reader on the same level as Continental gardeners and botanists who are accustomed to a similar nomenclature of Latin origin. We may doubt whether the mass of gardeners are ripe for handling even such a book as that before us systematically, and whether for amateurs it is not enough to get hints and ideas of gardening from such volumes as those of Mr. William Robinson, and of tree and shrub planting from Mr. Mongredien, in which case they will not be encumbered with botanical terms and classifications. Still it is certain that those who master the technical arrangements set forth in the book before us will obtain a store of systematic knowledge, helpful and useful in the main; and that to those who turn to it as a book of reference it will be serviceable in difficulties about the correct naming of a plant which can be solved only by the union of practical knowledge with the study of botanical works. When the writer is obliged to admit that

The most accomplished botanists often fail, after careful study, to identify a plant with its description, even when that description is as perfect as it is possible to make it from half-a-dozen or more specimens; and it is usually considered necessary to compare the new specimen with the original in the case of little known species—

readers without extraordinary powers of memory and divination will be thankful to acquiesce in the handy and ready oracle which rests on their bookshelf; and such an oracle for the English general reader has been provided with equal tact and judgment by Mr. Helmsley. Enough is done by him to throw light on the physiology and structural affinities of plants, to make clear by classification the differences and identities of the members of a genus, and to furnish from recognized authorities a definite botanical and horticultural nomenclature. Both in his introduction and in his chapter on Climate, the author supplies valuable and compendious information as regards the geographical habitats and the congenial acclimation-fields of hardy trees, shrubs, and herbaceous plants; and even those who shrink from the discipline of the descriptions of hardy plants, systematically arranged in the 550 pages of Part I., may easily find drier and duller reading than the hints on climate, soil, culture, and ornamental gardening which compose the second and more general portion of the work. At the same time it is a pity that the necessary bulk of the earlier and technical division of the volume has allowed only the barest space for matters of far greater interest to the majority of readers. It is hard to see where the genera and species of the diverse orders could have been retrenched so as to afford more room for a less fragmentary and slender sequel on "practical gardening," but it might be worth the compiler's while to expand his second part into a separate volume.

As it is, our course must be to take the volume as we find it. And a perusal of the First Part of it enables us to affirm that, while on many genera—e.g. "Rosa" in "Rosaceæ," and "Rhododendron" in "Ericaceæ" (Order 63)—great pains and space have been expended, there are others which are unaccountably hurried over. Considering the fashion which has set in for the ornamental gourds, more space might have been given to Order L., Cucurbitaceæ, than a bare page, and the briefest notice of mere names; especially as the order is given to vagaries of shape, varieties of colour, and feats of climbing power in its very numerous species, which distinguish it from more normal orders. In the case of some genera again, such as the dahlia, the China-aster, and the chrysanthemum, under the head of Compositæ, we find copious and interesting details to relieve dry technicalities of description. The first-named has a curious history, having been neglected and lost after its first introduction to England in the last century; taken up for its tubers, which proved a disappointment in an economical point of view, by the French; and eventually reintroduced to England, to be cultivated to a perfection, and in varieties, which no other country has attained to. Asters, on the contrary, espe-

* *Handbook of Hardy Trees, Shrubs, and Herbaceous Plants, &c.* Based on the French Work of Messrs. Decaisne and Naudin. By W. B. Helmsley, formerly Assistant at the Herbarium of the Royal Gardens, Kew. London: Longmans & Co. 1873.

cially the China-aster (*Callistephus hortensis*), have a more French connexion. Introduced to the Jardin des Plantes in seeds sent by a Jesuit Father from China, the different races have been brought to high perfection by such French horticulturists as Truffaut, Fontaine, and Vilmorin, whose names will be old acquaintances even to the casual reader of illustrated catalogues. The introduction of the *Chrysanthemum Sinense*, now so well known in our gardens, in its large-flowered and small-flowered or Pompon variety, is referred to a French source, though the perfection to which this flower has arrived is, as the author does not omit to state, due to English gardeners:—

The history [he writes] of the garden varieties is rather obscure, and the wild form is unknown to botanists, but the later progress in the production of improved varieties is more familiar. In some books we find the year 1764 given as the date of the original introduction of some Chinese varieties. But 1790 is the earliest authentic date we have, at which period it was introduced into France by a merchant named Blanchard; and in 1826 an amateur of Toulouse, named Bernet, conceived the idea of raising plants from seed, which resulted in the acquisition of some new varieties. This method was soon adopted by other growers, at first in France and subsequently in England, where chrysanthemums now receive more attention than in any other country. The variety or race called *Indicum* was imported from China about the year 1835; and this was subjected to the same procedure, and crossed with varieties of the older strain.

Akin to the chrysanthemum, and a sort of tiny miniature of it, is the *C. Parthenium*, or *Pyrethrum*, a variety of which, *Pyrethrum aureum*, is a favourite yellow foliage bedding plant, which goes by the name of Golden Feather.

If we examine the treatment in this handbook of widespread orders—e.g. the Ranunculaceæ, including tribes like the clematis, anemone, ranunculus, hellebore, with their beautiful genera and species; the Papaveraceæ; the Cruciferae, which embrace 200 genera and 1,200 species, and comprise not only all kinds of stock, wallflower, cress, and candidum, but also the Brassicæ, of every shade of colour, and of every feather, quill, curl, and cut in point of shape; the Caryophyllæ, amongst whose many representatives the dianthus is the father of our delightful carnations, picotees, and cloves—no just ground will be discovered for complaint of slight or injustice or favouritism. The most notable and desirable varieties of all and each are enumerated; the descriptions are sufficient, if technical; and, wherever it is needed, information is given which explains any variation from the account of French botanists and gardeners, together with hints as to the proper culture and climate, though these latter are of the briefest. Under the head of carnations will be found the distinctions between bizarres, flakes, and picotees, according to the white ground, (1) rayed or striped with bands of three colours or shades from centre to circumference, (2) striped or streaked with a single colour, and (3) bordered or fringed with a different colour, and the limb sometimes spotted with the same. Here, too, we may ascertain the English representatives of the French Grenadins, Flamands, and Fancies. This volume departs from its French original in giving the *Dianthus hispanicus*, or Spanish pink, a charming variety of "Sweet William," as a distinct species; but Mr. Helmsley regards it as a totally different plant, belonging to another section of the genus.

An interesting order of herbs and shrubs is that which goes under the name of "Malvaceæ." It is a denizen of all parts of the world, save the coldest. It includes the Malopes, soft and woolly, as their name imports; the Altheas, whether in the common form of the marsh-mallow, or the "Althea rosea," i.e. the hollyhock, which came first from the Levant, and has been in cultivation for three centuries. To this order, too, belongs the Lavatera, very near to the mallow, and named after the brothers Lavater. One of its species, *L. arborea*, the tree-mallow, is a tall biennial of shrub-like dimensions. It is occasionally met with on the sea-coasts of England and Wales, in Pembrokeshire, for instance; but it generally has the credit of being an introduced plant (p. 81). The *Malva* (from *μαλίκη*, known to the readers of *Moschus*) are another type of this order, amongst which the annual from Syria called *Malva crispa* is memorable, for its rounded and crisp foliage rather than for its very insignificant white flower. A class of real shrubs, and beautiful shrubs too, of this order is the Hibiscus, under which come the *H. Syriacus*, or *Althea frutex*, a deciduous shrub of from six to eight feet in height, with showy flowers of white, yellow, rose, purple, violet, and stripe, and a darker coloured spot at the base of each petal. Its recommendation is its gaiety of blossom and flower at the end of summer and the coming of autumn. *Hibiscus roseus*, a tall and showy perennial of purple or pink hue, with deeper coloured centre, is herbaceous, and comes really from North America, though it has almost acquired the rank of a native at Bordeaux.

Another order of herbs and shrubs, not yet made enough of in English gardens and shrubberies, is the Umbelliferae (Order 54). Its representatives are mostly showy, and many of them valuable as esculents, spices, or drugs. What can possibly be handsomer than the *Fetula communis*, or Giant Fennel, in nature, or in the woodcut at p. 211 of this book? or than the *Heracleum flavescens*, a species of the familiar cow-paranip introduced from Austria, and noteworthy for the very deeply cut foliage it bears, as well as for enormous umbels containing myriads of flowers? Akin in structure to the "Umbelliferae" are the "Araliaceæ" (Order 55), one tribe of which is the "hedera," or ivy, which, however, rarely flower in their creeping form, or until they have reached the top of the support they cling to. Then their habit of growth gets more close and bushy, and they produce flowers.

Taking a survey of the trees and shrubs, we shall find these sometimes cropping up, almost alone, amidst orders largely

composed of herbaceous plants, and at other times usurping the whole area of the order. Not seldom there is a more equal division between plants and shrubs or trees, as in the case of the Rosaceæ, which, as every one knows, is an order rich in manifold kinds of fruit trees. Besides such evergreens as the common laurel, *Prunus lauro-cerasus*, the Caucasian laurel, and the Portugal laurel, it includes among the Prunæ, the sloe or blackthorn, with its offspring, the plum and bullace of our gardens, as well as the cherry, peach, nectarine, and apricot. In the tribe Pomæ, too, comes the extensive family of the *Pyrus*, including the Chinese Crab, the most handsome in flower in the section, the Siberian crab (*Pyrus prunifolia*), the Wild Service (*Pyrus torminalis*), with small corymbose white flower and pear-shaped fruit, the true "Service Tree," with fruit larger, and also pear-shaped, the *P. aucuparia*, or Mountain Ash, and the *P. Japonica*, or Cydonia, common enough as an early flowering shrub, with brilliant scarlet flower, but very rare, as far as our quest has gone, in its white-flowered variety. This order includes also the thorn (*Cratægus*), the cotoneaster, and the medlar (*Amelanchier*). The extensive order of Leguminosæ has a good many trees and shrubs belonging to it—e.g. the *Wistarias*, which so gracefully cover our house-walls or trellises in the last days of April and the first of May; the Robineæ and Sophoræ, and the interesting and curious laburnums, *Laburnum vulgare*, or *Cytisus laburnum*, and the purple laburnum, *L. Adami*, which is a cross between this and *Cytisus purpureus*. Mr. Helmsley notes the often quoted peculiarity of the *Laburnum Adami* (of which the flower is of a dull purple, in long pendulous racemes like the common one, and the leaves shorter as to petioles), that some parts of the same tree revert completely to one or other of the parents. "Thus the three forms may be seen growing on one stem, having the appearance of being grafted on it" (p. 118). Our own observation is that this is more perceptible in some years, or in some ages of the tree's growth, than in others. The locust-tree, the Kentucky coffee-tree, and the Judas-tree, strangers from North America, and from Asia, belong to a sub-order of the Leguminosæ.

In the moderate-sized order of Magnoliaceæ, and its second and eponymous tribe, occurs one species more curious than the *M. grandiflora*, which one is accustomed to look for against a south or west wall of a house, though not so effective. It often provokes remark in the early spring, because it is a standard tree, and its abundant white flowers come before the leaves. Of this species Mongredien says that it will repay any little protection it may require by its snowy pyramids of flowers. An order of vastly more numerous genera and species is that of the Sapindaceæ, to which, amongst other noble and beautiful trees, the diversified tribe of maples (*Aceraceæ*) contributes. The species of *Acer* enumerated in this book are necessarily limited, and for a full description of most of the fifty the reader may be referred to the pages of the *Garden Here*, however, the plane-like Norway maple, the Bird's-eye Maple, the *Acer rubrum*, and the *Acer eriocarpum* are noticed and described, though it might have been said of the former that it is of very doubtful hardihood in this country north of London, and of the latter that it grows best and most rapidly in moist situations. Of the *Acer pseudoplatanus*, or False Sycamore, Mr. Helmsley remarks that it is good for planting in bleak spots near the sea. And this statement leads us, *per saltum*, into the midst of the Coniferae, an order of exceeding interest, but one to which we can at present only barely refer. Amongst the first group of the Abietineæ, i.e. those species of *Pinus* which have their leaves usually two in a sheath, Mr. Helmsley cites, but without any great enthusiasm, the *Pinus pinaster*, or Cluster Pine. No doubt it is, as he says, variable in habit and irregular in growth; but it is odd that neither in p. 422, where it is noticed in due order, nor in the list of trees suitable for the sea-coast, is anything said of the *Pinaster*'s eligibility for such a situation. If we mistake not, it is so used in France, where it is prized for its timber and hardiness; and in Norfolk it is the principal species in a 500-acre plantation near the sea. Mr. Helmsley's arrangement of the Coniferae generally is creditably compendious; and, in truth, the preciseness of his limits is an excuse for omissions which might else be found fault with. When he notes the capacity of the *Abies Smithiana*, or *Morinda n. Kurov*, for improving out of a miserable weakling into a beautiful specimen (pp. 427-8), he ought perhaps to have added the fact that it is very "impatient of transplantation."

Of the suggestive hints of the Second Part of this book, many of which—such as those on absorption and respiration, and the dangers to which newly-transplanted trees and shrubs are liable from the inability of their roots to maintain the necessary supply of water—are extremely valuable, we have no space to take notice. Otherwise we should make a note on not planting too deep, on not transplanting out of season, and on laying turf, not thick, but thin, as well as on other useful points. The volume will commend itself to the amateur and the gardener as being what it professes to be—a handy-book for reference, well and copiously illustrated, and of solid value.

THOMSON'S PHOTOGRAPHS OF CHINA.*

AT the moment when Lord Elgin was putting his signature to the last treaty concluded with China, a photographer,

* *Illustrations of China and its People. A Series of Two Hundred Photographs, with Letterpress descriptive of the Places and People represented. By J. Thomson, F.R.G.S. 4 vols. Vol. I. London: Sampson Low, Marston, Low, & Searle. 1873.*

who had previously been introduced into the Hall, gave great annoyance to the Prince Kung by taking a general view of the "high contracting parties." So great has been the advance made since those days even by the Chinese in the knowledge of foreign arts that the same Prince who thirteen years ago attempted to conceal his face from the camera of Signor Beato appears now as the subject of the frontispiece to the work before us, seated quite at his ease, and in the attitude of a man as thoroughly inured to the process as any one of our own princes could possibly be. The idea of placing his likeness in the front of the book was a happy one, as he may truly be said to embody the comparatively enlightened policy which has made photography possible in China. Under his rule facilities in the way of travelling in the interior have been largely extended; and whereas ten years ago it was almost as much as a foreigner's life was worth to venture into any of the central or southern provinces, Mr. Thomson now lays before us the most positive proof that he has not only traversed some of the districts which were wont to be reckoned most dangerous, but that he has also been allowed to take "sun pictures" of such objects as appeared to him to be worthy of illustration.

As yet only one volume, containing photographs of men and things taken in the region of Hongkong, Canton, Macao, and Formosa has appeared, and of this instalment of the work it is impossible to speak too highly. The subjects chosen are precisely those which will be most highly valued as souvenirs by travellers in China, while at the same time they are well calculated to give to stay-at-home people a very complete and vivid idea of the appearance and customs of the Celestials and of the scenes which surround them in their native land.

To those accustomed to pursue the peaceful art of photography in Western countries, the idea of collecting a series of pictures such as that before us would present few difficulties. But in China, as Mr. Thomson tells us in his introduction, it is far otherwise. The Chinese are eminently superstitious, and entertain a firm belief that all photographers are in close league with the Prince of Darkness, and that the "sun portraits" which they produce are obtained only at the expense of so large a portion of the principle of life on the part of the sitter that his death must infallibly ensue within a very short period. Acting on this belief, and in apparent oblivion of the laws of filial piety, they everywhere raised strong objections to Mr. Thomson's proposals to photograph children, but readily brought their aged parents to be placed before the foreigner's silent and mysterious instrument of destruction. As may be supposed, however, the results of this and kindred superstitions were not always only of a negative nature. In many places Mr. Thomson met with much opposition, and on more than one occasion he was attacked by "lowly fellows of the baser sort," who at the instigation of the Literati stoned and otherwise ill-treated him. In fairness to the nation, it must also be mentioned that he speaks of having received much kindness and hospitality in many country districts, and at the hands of officials who by association with Europeans have learned to appreciate the substantial benefits which foreign intercourse can confer.

In the volume before us, as we have already said, are represented only scenes and people from the neighbourhood of Canton and Hongkong, where foreigners and their ways are perfectly understood, and it is plain that Mr. Thomson has largely profited by this extended knowledge. Not only is he able to show us what Canton schoolgirls and boys are like, but he is able to take us into the verandah of a private gentleman's house, to introduce us to the entire family enjoying their post-prandial pipes, and to open the door of a lady's dressing-room that we may witness the operation by which she removes superfluous hairs from her cheeks and trims her eyebrows. A close inspection shows us that the instruments she employs are "two fine silken cords arranged upon the fingers so as to yield to the form of the face, and at the same time act as pincers." On the table before her stands a dressing-case which contains white powder and carmine for the face, comb, hair-brush, tooth-brush, tongue-scraper, gum for stiffening the hair into the required shape, hair-pins, &c. In no country in the world is painting the face more largely practised than in China, and in no country are its evil effects more plainly visible. A very few months' application of the brush is enough to ruin the complexion. The skin speedily becomes coarse, yellow, and shrivelled, and a lady who has once habituated herself to the use of paint can no more do without it than can an arsenic-eating Turkish lady forego the fattening drug, or an English dram-drinker his morning glass. It is as refreshing to turn from the contemplation of the artificially pink and white cheeks of Chinese ladies to the healthy, fresh complexions of the Canton boat-girls in the photographs as it must be in real life. These strong, active young women are the pictures of health, and need no carmine to add roses to their round chubby faces. They are despised and rejected by their sisters on land, who look down on them as belonging to an inferior race. Their *paotais* is turned into ridicule, and their unframed feet are made the subjects of witticisms. But if health counts for anything, and if strength and beauty of limb are to be desired, the Hakka boat-girl need scarcely envy the poor bedizened, be-crippled creature who points the finger of scorn at her through the blinds of her sedan-chair.

In other photographs we find represented victims of two great evils which at present afflict China—competitive examinations and the opium pipe. When the illustrious founder of the periodical examinations through which alone honour and rank are to be obtained in China enunciated his system, he omitted to limit the age of candidates, and unfortunately confined the subjects for study to the nine

canonical books. The results are such as might have been expected. Year after year unsuccessful competitors appear before the examiners in the vain hope of at last winning a button. Youth and middle age pass away, but still they persevere; while at the same time they eke out a miserable pittance by leading others in the same hopeless paths which they themselves have trod, or, as is more frequently the case, subsist on the charity of their friends. The conclusion of every examination increases the number of these drones of society, who, while they add nothing to the producing power of the country, are a steady drain on its resources, and whose minds are contracted by the exclusive study of the narrow principles laid down by the native philosophers of the Confucian era. Unless the influence of the foreign trade and enterprise which are now slowly but surely making their way throughout the Empire be sufficiently powerful to induce the Literati to direct the energies which they now waste on pseudo-literary efforts into new and useful channels, we shall for many years find in the brethron of the unfortunate student represented by Mr. Thomson our worst and most bigoted enemies.

But more destructive to the mental and physical fibre of the nation is the opium pipe. The photographs of opium-smokers at home and in the tavern which Mr. Thomson has given us reveal in some measure the extent of the evil. We see the wealthy man enjoying his pipe on his well-furnished bed, and surrounded by all the comforts of his own home, while his poorer neighbour is stretched on the bare mat of an uncurtained tavern couch, inhaling the fumes of the same ensnaring drug. It is no exaggeration to say that opium-smoking is now universal in China. Princes and peasants, mandarins and civilians are all votaries to the pipe. Theoretically it is prohibited by law, and heavy punishments are declared to await both those who smoke and those who deal in the drug, but practically the law on the subject is a dead letter. No one is without sin, and there is, therefore, no one to throw the first stone, and, notwithstanding the strongly worded edicts which appear periodically, strictly forbidding the growth of the poppy, large districts in the Northern and Western provinces are annually devoted to its cultivation. In every large town the well-known sign of the opium shop meets the traveller at every turn, and there is scarcely a house in the land which in some shape or another does not bear witness to the very wide extent of the evil. It has frequently been contended that opium-smoking is not more pernicious in its effects than alcoholic intemperance, and that when practised in moderation it is, if not beneficial, at least harmless. Of course there may be people who by the constant exercise of self-control may succeed in resisting the desire for more which invariably accompanies even the smallest indulgence in opium; but the large majority of smokers recognize no limit but that drawn by the length of their purses. No one can have mixed much with Chinamen who has not seen abundant evidence of its baneful effects in the haggard looks, the sunken eyes, and the trembling limbs of its votaries. Mr. Thomson mentions the case—and thousands of a similar kind might be recorded—of a clever young miniature-painter at Hongkong who brought speedy ruin on himself and his family by the use of opium:—

Five years ago [he says] I recollect him a handsome, fashionably-dressed youth; his tail a model of perfect plaiting, and his head shaven as smooth as a billiard-ball. No silks were more beautiful or richer than his. . . . This good looking dandy was at that time in full work as a portrait-painter. Some years afterwards I fell in with him again—a shrunken, hollow-eyed, sallow-faced old man. He was still working at his craft, but only on two days a week, the rest of his time being uninterruptedly devoted to the demands of his opium pipe.

That this vice is not so universal among the Tartars as among the Chinese may perhaps be gathered from a glance at the group of fine, stalwart Manchu artillerymen which Mr. Thomson's art has portrayed. It is perhaps fortunate for the European Powers which have crossed swords with China that those recruits from the conquering race bear but a very small proportion to the rest of the Imperial army. It may be doubted whether the march of the Allied armies to Peking would have been such an easy "walk over" as it was had the road thither been defended by such formidable looking gunners as those which now garrison Canton. Their appearance forcibly brings to mind the fact of their direct descent from the Tartar tribes who in the thirteenth century swept over the whole of Asia, and carried terror and confusion up to the walls of Moscow, and suggests the question whether another such inroad might not be within the bounds of possibility were another Jenghis Khan to arise.

We can confidently recommend this first volume of Mr. Thomson's series to the perusal of our readers, and from the nature of the work we anticipate that the interest it excites will at least be fully maintained in the succeeding parts, since the districts through which he intends taking us are less known to Europeans than those which form the subjects of the photographs before us. After showing us the principal places of interest on the coast as far as Shanghai, he tells us in his introduction that he

will proceed to Ningpo and the Snowy Valley, the favourite spring resort of Shanghai residents, and justly celebrated for the beauty of its *azalæ*, its mountain scenery, its cascades and waterfalls; thence to the Yang-tse-Kiang, visiting *en route* the Treaty Ports and the ancient capital Nankin, passing through the weird scenery of the gorges of the Upper Yang-tse, and penetrating as far as Kwei-chow-fu. The concluding journey will embrace Chefoo, the Peiho, Tientsin and Peking. The remarkable antiquities, the Palace, Temples, and the Observatory, the different races in the great metropolis, the ruins of the Summer Palace, and the Ming Tombs shall be presented to the reader; after which I will guide him through the Nankow Pass, and take my leave of him at the Great Wall.

PENRUDDOCKE.*

WHEN we see the name of Mr. Aidé appended to a work of fiction, we feel sure that the book will contain more cleverness than is as a rule to be found among the ephemeral literature of the season. There is much cleverness in *Penruddocke*, but it has also graver faults than we have observed in any of the author's previous novels. Mindful perhaps of the success of *Rita*, Mr. Aidé has put his latest, as he did his first, production into an autobiographical form. To this we have no objection to make, but we cannot help entering a protest against the childish trick of appending foot-notes by an imaginary editor to a narrative the title-page of which announces it to be, not the memoirs of Osmund Penruddocke edited by some one else, but simply a new novel by Mr. Hamilton Aidé. This device, trivial as it is, gives a shock to our artistic perceptions which we resent. It is false heraldry, pretence on pretence, and spoils the illusion which it is meant to assist. It may be thought ungracious to cavil at the frame when we may find points to admire in the picture; yet we cannot but think that so intelligent and generally careful a writer as the author whose book is before us might have paid more attention to such a detail. However, it is time to leave discussion of what is mere matter of introduction, and come to what is introduced.

The plot of *Penruddocke* is better constructed, or we should rather say better founded, than is generally the case with Mr. Aidé's books; he has got hold of a good idea for the centre piece, on which the whole works and depends: but, on the other hand, the very strength of that idea exposes the weakness of its surrounding supports, which indeed are far from equal to the strain put upon them. The notion of an aristocratic lady of good birth and high principles, whose son flies from her and all that belongs to her in horror because he has seen her commit a theft to save the family estates, is, if extravagant, more or less original, and might in the hands of a great artist be worked up to a high pitch of intensity and excitement; it would give him opportunities of both dramatic and psychological treatment (for we do not agree with a present writer that the two are identical), and he might make a fine work of it. But Mr. Aidé is not this great artist; he is overmastered by the demon he has raised; and the scene in which Osmund, after moments of agonizing doubt, sees in the face of the thief by night the features of the mother whom he has so long respected, the scene which should be the climax of this portion of the book is lamentably weak. The author indeed, having got his hero into this terrible situation, is fain to get him out of it by rolling him off a wall in a dead faint—much as we have seen an indifferent actor try to express the storm of conflicting emotions which rushes upon the jester at the conclusion of *Rigoletto* by the mechanical trick of a stage fall.

The crime which is the subject of this scene is committed by Lady Rachel Penruddocke in order to get rid of the just title set up to the estates to which her eldest son is supposed to be heir by John Penruddocke, a claimant who turns up unexpectedly from America under the wing of Lady Rachel's cousin Humphry, an old bachelor, who interferes merely in the cause of right. We should mention, by the way, that the legal convolutions of this title are worked up with a care and correctness too seldom found. The upshot of it all is that Osmund, the second son and the hero of the book, is unable to endure the ignominy of resting beneath a roof which he knows to belong by every law of right to another; he is equally unable to expose his mother's crime, and so cuts the knot by running away and enlisting, leaving a little cousin with whom he is in love in despair. It is possible that this is the best thing he could do under the circumstances; but we cannot see why a third course which he suggested to his brother was not equally open to himself. Nothing surely was easier for him than to say—to quote his own words—"that it had come to his knowledge that some ignorant and foolish person, thinking to befriend them, had made away with the tablet," and then, as he ingeniously added, to have the lark dragged. There was no more chance of such a statement compromising his mother or being disregarded if made by him, than if made by his brother. But some mysterious and unexplained reason or influence prevents this occurring to him, either at the time or during the lapse of years afterwards; and so, as we have said, he shakes the dust of dishonour from his feet, and enlists in one of Her Majesty's regiments. And here Mr. Aidé is once more in his element; his light touch and quick perception of the less sombre moods of character are well fitted to deal with the varying scenes and personages of barrack life. From this phase of existence Osmund is delivered by the advent of his uncle, who proves to him that, without touching a shilling of the Penruddocke property, he will have enough wherewith to purchase a commission in the Guards, and to live as younger sons may live. Before he receives his commission he takes a tour abroad, which serves to introduce some characters who are of great importance in the book—one a Madame d'Arnheim, a lady just divorced from a very bad husband, who is supposed to be one of those mysterious women who exercise a magnetic influence on those around them, if we are to judge from the unrestrained manner in which Osmund pours out to her on their first meeting all his confidences, save the one which he can tell to no one, and the quiet way in which she receives them. In Madame d'Arnheim's character there is much that is beautiful; but we cannot help feeling that had we met her we should have been inclined to agree with the people who excite Pen-

ruddocke's contempt by setting her down as a sentimental German and female incoherence. There is, indeed, something sweet and touching in the long friendship which exists between these two, and which is told of with great delicacy of treatment, until the effect of the whole is spoiled, our bright vision of an ideal friendship between man and woman dissipated, and an excuse given to ill-natured remarks, by its very nearly resulting in a marriage which could hardly under any circumstances have been happy, or even suitable. It is provoking that Mr. Aidé should have spoilt in this way what might have been really a touching episode.

However, all this is long after Penruddocke's introduction to the lady on his foreign tour, during which he also encounters and renews acquaintance with John Penruddocke, the unsuccessful claimant, and with his daughter Elizabeth, who is by far the best drawn and most interesting character in the book. It may have been intentionally and in a spirit of irony, though we scarcely think so, that the author has made her so infinitely superior to her cousin and Osmund's, Evelyn Hamleigh, whom Osmund loves throughout the book, and for whom he rejects all idea of a marriage with Elizabeth. To our mind she is as much more attractive than Evelyn as she is more original: her wild, frank, noble nature, the gradual smoothing down and rounding off of which by the processes of education are indicated with much skill by the writer, has a charm of its own which we cannot imagine the pretty simplicity of the other to have possessed. Their first acquaintanceship ends with the retirement of Elizabeth to school, and the return of Osmund to London to join his regiment and to plunge into society. The society scenes are certainly in some ways the cleverest and at the same time the least agreeable parts of the novel. The characters, whether pleasant or not, are all hit off with ease and dash, and the dialogues are smart and pointed; but the writer too often sacrifices good taste in his struggle after effect. Take, for an instance, the idle chatter on the stairs at Lady Castle's ball:—

"And now, Mr. Penruddocke, tell me, you've been here at least a quarter of an hour, whom have you fallen in with? I give you your choice, but you're bound to fall in love with some one."

"It is *Penruddocke du choix*," I returned, rather shyly, not feeling quite up to the sort of repartee that seemed to be expected of me.

"Oh! a base subterfuge. What do you say to Lady Ancaster—beautiful, isn't she? Such a head and such shoulders!"

I assented mildly; when Sir Walter said, with a sardonic smile,

"Lady Ancaster, with that crescent, looks like Diana gone astray—in the woods, of course, I mean."

"And almost ready for the bath," laughed another man, in a lower voice.

We venture to hope that Osmund Penruddocke was somewhat unfortunate in his society. Nor is it only in the scenes of society, where he may be supposed to have the excuse of a satirical purpose, that the writer sacrifices good taste in this way. In the brilliant, and we might almost say abandoned, society to which we are introduced, we find a Lady Castle who might be a countess out of one of Feydeau's novels; an Italian Count who is a gambler and a ruffian of a diabolical, if handsome, appearance, and yet an honoured guest in all the best houses; and a crowd of fashionable people whose morals, we are led to conclude, are as loose as their talk, and that is loose enough. The only two persons in a large party assembled at Kendal Castle who, with the exception of the Duke and Duchess their entertainers, have any pretensions to good principles or good breeding, are our old friend Madame d'Arnheim, and Tufton, formerly Penruddocke's commanding officer in barracks, and now his close friend, and certainly a very pleasant specimen of a cultivated and agreeable soldier. These people are supposed to be the pick of English society; but all sorts of intrigues are going on amongst them; and Penruddocke, in consequence of some rash acts of chivalry, gets the credit of being mixed up in at least two of these. This episode is skilfully managed; and the scene in which his intended confidante to his best friend are repressed by the friend reading him a lecture upon the folly of devotion to married women is admirably touched. We cannot but give our sympathy to Penruddocke, and feel how hardly he has been used; and yet we see plainly that it was impossible for Tufton to have taken any other view of the circumstances presented to him, and that, from his point of view, he was perfectly right in what he said and did. Altogether we are very glad to get away from the atmosphere of Kendal Castle, although we are taken from it to the deathbed of John Penruddocke. Misfortune following on misfortune, the death of John Penruddocke is quickly succeeded by that of Osmund's eldest brother Raymond; thus he is left heir to the estates, which he immediately insists on giving up to Elizabeth at the sacrifice of his own marriage with Evelyn. Then comes his return to London, and a sensational adventure with Count Benevento, brought about by the dangerous Lady Castle, who here more than ever supports her likeness to one of Feydeau's countesses, inasmuch as the very incident to which we refer is to be found in the *Comtesse de Chalis*. The end of it all is that Penruddocke has to go abroad to recover his shattered health, and during his stay at Nice the conclusion of the book is worked up to by a series of events which we will leave our readers to inform themselves upon. With all its faults, *Penruddocke* is a clever and interesting book, and if it is not quite up to the mark of excellence which we have a right to expect from Mr. Aidé, it is at least far better than the ordinary run of novels. One more criticism we have to make, and that is upon the strange number of slight errors in the printing; and sometimes in the writing of the book. Thus we have Penruddocke's mother appearing at one time as Lady Rachel, at another as Lady Rachel; we hear of a casket being buried in a family "fault"; we find Count Benevento's valet established for some unexplained reason at

* *Penruddocke*. By Hamilton Aidé, Author of "*Rita*," "*The Marston*," &c. 2 vols. London: Hurst & Blackett. 1873.

Kendal Castle without his master; we have Feydeau spelt Faideau; and we have Browning's ride to Ghent quoted thus:—

I sprang to the stirrup, and Joris, and he;
I galloped, Dick galloped, we galloped all three.

Perhaps there will be a second edition of the book, and we hope that then such blunders as these may be corrected.

GERMAN LITERATURE.

IT would be beyond our present province to inquire to what extent Arminius Vambéry* may be justified in assuming the character of the Cassandra of British power in India, in connexion with the designs of Russia on Central Asia. We can but indicate the circumstance, and, admitting once for all the weight due to the opinion of one so intimately acquainted with the regions in question, we will briefly summarize the purport of his recent contributions on the subject. These consist of ten essays written at various periods during the last six years, and now brought together within the compass of a moderate-sized volume. The first essay discusses the progress of Russia and the general question of her rivalry with England between 1864 and 1867; a subject continued in the second, which describes the conquest of Bokhara in the following year. This paper contains much interesting information respecting the population of Turkestan. The third article treats of the misunderstandings between Persia and Turkey, the adroitness with which these are stimulated by Russia, the folly of the French mission at Teheran in playing into Russia's hands, and the still greater folly of Persia in not perceiving that Russia is the only Power with interests hostile to her own, and that all Russia's interests are hostile. The fourth discusses the question of Herat, and recommends its occupation by England in conjunction with the Afghans. The fifth treats of the social circumstances of Central Asia, and compares Russian with English methods of civilization, to the disadvantage of the former. In the sixth a connexion is pointed out between the Russian advance in Central Asia and that "revision" of the Black Sea Treaty which she enforced upon us. The seventh essay brings the history of Turcoman affairs down to 1871; the eighth details the adventurous career of the present ruler of Yarkand; and the ninth treats of the condition of Khiva at the period of the recent expedition being undertaken. The general purpose of Herr Vambéry's volume is to inculcate the extreme danger of allowing Russian progress to continue unchecked. On this point all are in agreement; but whether it would be more effectually met by concentration on our present lines, or by so decided an onward move as the advance to Herat recommended by him, is a question on which we cannot enter here. Writing from such a point of view, it is but natural that he should exalt the power of Russia to the utmost, and ignore the numerous elements of weakness in her position. The decided preference for England as a civilizing Power expressed by one who has seen so much of both countries in their relations with Orientals, is highly flattering to us as a nation; and we may hope that the author represents the general opinion of Austria, and also of Germany, when he says that the possession of India by any Power but England would be a signal retrogression as concerns the common interests of mankind.

The latest instalment of L. Schneider's valuable history of the Paraguay campaign† details the siege of Humaitá, the Paraguayan Vicksburg. Like the siege of that great improvised fortress, this tedious operation illustrates the almost insuperable difficulties attendant upon an offensive campaign in which the line of advance is up a river whose navigation has been thoroughly obstructed by the enemy. As at Vicksburg, the allies finally gained their point by turning and isolating a position which they were unable to carry by a direct attack. General Grant would probably have made much shorter work of it; yet, with every deduction for the incapacity of the allied commanders, the Paraguayans were anything but contemptible enemies. We know nothing more touching than their invincible devotion to the misunderstood cause of their country, represented in their eyes by the ruffian whose ambition and folly had brought all their misfortunes upon them. Had this been an intelligent instead of a merely mechanical devotion, the result of the paralyzing discipline of the Jesuits and Francia, history would have exhibited few finer episodes. The military direction of the allies seems to have been very incompetent, but the troops displayed real fortitude in bearing up against discouraging circumstances, and their behaviour in victory was marked by humanity and consideration. Characteristically Spanish was the demeanour of the leader of the Uruguay contingent, who, when his forces were reduced to twenty men, continued to comport himself as though he were at the head of twenty thousand, and whose claims had to be allowed, too, as his withdrawal would have been fatal to the magnificent phrase of "The Triple Alliance."

The second volume of Herr E. Arnd's Annals from 1867 to 1871‡ relates to the history of the non-European States, and is serviceable as a compendious account of transactions information respecting which is not in general readily accessible. The most dramatic episodes within the author's department are the Paraguay war and the catastrophe of Maximilian; interesting particulars,

however, will be found respecting other occurrences which the lapse of time or the vicissitudes of circumstances have almost assigned to oblivion. Considering, for example, the present relations of the Sultan and the Khedive, it is almost startling to peruse the record of the latter's deportment a few years since, when he was seeking to attain the object of his policy by a different road.

The definitive union of the duchies of Schleswig and Holstein to Denmark was the result of a treaty concluded exactly a century since, the merit of which is usually attributed to the great Danish Minister, Count Bernstorff, although he was not in office at the period of its ratification. Herr G. Jansen*, however, has now revived the memory of a previous treaty on the point of being concluded by Count Lynar, a Saxon statesman in the Danish service, when he was recalled from St. Petersburg through a Court intrigue at Copenhagen. The interest of Herr Jansen's volume, which is considerable, depends less on these antiquated passages of diplomacy than on the piquant notices of Lynar's successors, such as Bernstorff and Struensee, preserved in his correspondence after his final retirement from the Danish service. After his recall from the St. Petersburg Embassy, he was appointed Administrator of Oldenburg, which important post, after nine years' tenure, he lost from causes which his biographer is unable satisfactorily to explain. After he retired to his ancestral estate in Saxony, he continued to watch the transactions of the Danish Court, and to pronounce upon them in a very *Suave mari magno* style, save for some traces of rancour against the personal favourites of his former master, the late King of Denmark. He died in 1781.

Herr Knebel's† historical essays on the development of the French system of military conscription and the Prussian system of universal military service are interesting sketches of these subjects. A third essay deals with a recent proposition to subject persons incapacitated from personal military service to a tax, which he repudiates, regarding it as inconsistent with the fundamental principle that the military service of civilians should not be considered as a burden, but as an essential part of their duty towards the State.

The design of Dr. von Kremer-Auenrode's collection of "Official Documents relating to the Connexion of Church and State‡ in the Nineteenth Century" is to publish the most important Papal Bulls and briefs, episcopal pastorals, &c., on the one hand, along with the text of the legislation which has called them forth upon the other. The work will consist of two sections, the first embracing such documents as appeared anterior to the Vatican Council, the second those published subsequently. The first part is principally occupied with the ecclesiastical legislation of German States, both Catholic and Protestant, but contains one very interesting Papal document, the letter (March 24, 1813) of Pope Pius VII. then a captive at Fontainebleau, to Napoleon, revoking the Concordat which had been extorted from him. The document is remarkable for its intrepidity in every sense of the word, and more particularly for the distinctness with which it enunciates the invalidity of any obligation which a Pope may contract if he subsequently chooses to consider it at variance with his duties as head of the Church.

Dr. Emil Friedberg's account of the late J. B. Baltzer§ is less a biography of the man than a history of the various persecutions he underwent from the Court of Rome, which made him in some degree a representative of those Catholics who, while resisting the decrees of the Vatican Council, have refrained from joining the Old Catholic secession. Baltzer, a professor and canon at Breslau, rendered himself obnoxious at Rome by his support of Professor Günther, whose philosophical works were condemned as heretical. The civil power, however, always prevented him from being utterly crushed by his ecclesiastical superiors; and when at length his case seemed desperate, he was saved by the direct interference of Prince Bismarck. He owed no thanks to the Ministry of Worship, which, while Herr von Mühler was in office at any rate, seems to have acted in constant connivance with the spiritual power. The case, which presents considerable analogy to that of Mr. O'Keefe, is highly instructive, as showing how easily Governments might attach the liberal and independent portion of the Catholic clergy to the national interests by according them a reasonable measure of protection against the tyranny of their ecclesiastical superiors. Had this course been consistently pursued, the late stringent legislation might never have been required. One of the most interesting parts of the volume is Baltzer's account of his mission to Rome on behalf of Günther. The Professor, he thinks, would not have been condemned but for the inability of the Italian Cardinals to read his works in the original, and their consequent reliance upon a German colleague who was devoted to the Jesuits.

The story of a more celebrated object of ecclesiastical suspicion and intolerance—like Baltzer, however, ultimately liberated from their grasp—is told in Professor Reusch's narrative of the imprisonment of Luis de Leon.|| The author, a Professor of

|| *Luis de Leon und die spanische Inquisition*. Von Dr. F. H. Reusch. Bonn: Weber. London: Williams & Norgate.

Catholic Theology in the University of Bonn, is naturally indisposed to bear hardly on the Inquisition; nevertheless his sober and dispassionate account of the proceedings against Leon sufficiently establishes the gross iniquity of a tribunal which, so far from confronting the prisoner with his accusers, denied him the knowledge of their very names, which sequestered him from all aid or advocacy, compelled him to furnish pretexts for new charges by furnishing long explanations of the incriminated points in writing, protracted the proceedings wholly at its own caprice, and reserved the right of examination by torture. No prisoner whose destruction had been resolved upon could have escaped under such circumstances; but it seems probable that private malice had more to do with Leon's prosecution than any serious suspicion of heresy, and that the real object was to keep him away from the University of Salamanca. However this may be, it is apparent that anything like freedom of thought was utterly out of the question under so arbitrary and irresponsible a despotism, and the only wonder is that the present intellectual sterility of Spain should not be even more complete. In addition to the narrative of Luis de Leon's prosecution, Dr. Reusch's work contains a brief, but thorough, investigation of almost every point relating to his personal and literary history.

Dr. Braune's abridged biographies of Luther, Calvin, and Zwingli* present no novel feature, but may be commended as clear and spirited narratives, with as much impartiality as the writer's strong evangelical leanings permit.

Karl Strack's notes on the condition of the female sex in Germany during the antique and mediæval periods† add little to our knowledge of the subject, but are agreeable reading. A considerable portion of the volume consists of biographical sketches of remarkable women, such as St. Elizabeth of Hungary.

Herr F. Kreyssig‡ is an able writer, but he has little to tell us of the great outburst of French intellect and genius about 1830 that is not already generally known. The most interesting feature of his little work is the German point of view from which his subject is regarded. Each of the parties now contending for the mastery in France represents an idea obnoxious in Germany, the diffusion of which is evidently regarded with greater uneasiness than any demonstration of a more material kind. For the moment, Ultramontanism is an object of greater apprehension than Socialism, and Herr Kreyssig's tone is one among many indications of the unrelenting hostility of educated public opinion in his country to the Church of Rome.

Without being precisely a bad book, Ludwig Spach's sketch of the present condition of literature and science in Alsace§ might have been much better. The execution is altogether too slight for the subject, and a considerable portion of the work appears to be mere book-making. The writer, however, deserves the praise of good feeling, and of having made no attempt to disguise the essentially French character of Alsatian culture. The German element, so far as the employment of the language is concerned, seems to be exceedingly feeble in comparison with its rival. On the other hand, it is impossible to overlook the influence of Teutonic blood, coupled with the grave and dignified traditions of Protestantism, in raising the moral standard of Alsatian literature, and imparting to it that earnestness of tone and exaltation of purpose in which French literature is in general so lamentably deficient. M. Eckmann (for Herr Spach declares M. Chatrian to be merely the business partner in the firm) is a familiar instance of this, and is undoubtedly by far the most conspicuous Alsatian man of letters. M. Charles Dollfus takes good rank as a philosopher and theologian. M. Ratisbonne has executed a good translation of Dante, and the University of Strasburg can exhibit many names of the highest eminence. The condition of the University, the Catholic and Protestant Churches, and the principal learned Societies and literary periodicals, is treated at considerable length by Herr Spach, whose disquisitions, however, generally leave the impression of his having failed to get to the bottom of his subject.

Dr. Heinrich Suter|| disclaims, on the one hand, the attempt to produce a really critical history of mathematical science, but, on the other hand, declares himself to have aimed at something more than a mere series of biographies of mathematicians. Assuming his object to have been the production of a popular history of the progress of mathematical research from the days of the Egyptians, including its application to astronomy and other exact sciences, this must be held to have been fairly attained by the composition of a work written in so easy and perspicuous a style as to be fully intelligible to non-mathematical readers, excepting only as concerns the technical illustrations of the progress effected by successive writers in the solution of algebraic and geometric problems. It is in the judicious selection of these that the scientific value of his work mainly consists, his materials being principally derived from Montucla, Charles, and, when treating of the Indian mathematicians, from English writers on that subject. For the Greek mathematicians he might have advantageously consulted the articles in Dr. Smith's Classical Dictionary by the late

Professor De Morgan, one of the rare instances of English erudition owing little or nothing to Germany. One particularly meritorious feature of the book is the space allotted to Cardan and his almost forgotten Italian contemporaries. The first volume comes down to the end of the sixteenth century, pausing on the verge of the great scientific revolution effected by Bacon.

Three stout volumes have brought the late Dr. August Koberstein's history of German literature down only to 1773.* The remainder is in existence, and, if we apprehend the editor aright, is equal in length to all the rest. This fact is pretty conclusive as to the character of the work, a careful and massive compilation, evincing more knowledge than skill, and better adapted for reference than for perusal. The merit of the first volume, which comprises the early history of German literature, and is the only portion previously published, seems to be attested by its having gone through four editions. It by no means follows, however, that the same favour will be extended to the sequel of so voluminous a work.

The first volume of a collection of Oriental fiction translated into German by H. Oesterley†, contains the popular "Stories of a Demon," known to the English readers in Captain Burton's lively paraphrase *Vikram and the Vampire*. Herr Oesterley's is the first complete translation of the Sanscrit original, some portions of which, however, appear to be additions subsequent to most of those translations into the various Indian languages by which the work has hitherto been principally known. The variations of these respective versions are described in the translator's concise but highly interesting notes.

The late Frederick Halm‡, so well known as a dramatist, left behind him three novelettes, which, with two fragments of others, and an essay on the Italian novelist Brevio's "Tales of the Misery of Human Life," have been published by his friends F. Pachter and E. Kuh. The plots of Halm's stories are usually taken from real life, and in one instance at least the subject is offensively scandalous. The indelicacy consists in the matter, not the manner, of the fiction; the incident was evidently selected on account of its adaptation for investigation as a psychological problem. The execution displays the usual talent of German novelists for narrative, when their subject is not conceived upon too large a scale. The novelettes of Bishop Brevio were recommended to Halm by their coincidence with his own pessimist view of human life. On ourselves they produce rather a grotesque impression. The good Bishop is so determined to exhibit the misery of existence under adequate gloom, that he leaves no light to view it by; he kills off all his *dramatis personæ*, and leaves us to guess how he himself became acquainted with the causes of the catastrophe.

THE PAYMENT OF THE FRENCH INDEMNITY.

IN a recent number of the *Revue des Deux Mondes*, M. BONNET has given an interesting sketch of the mode in which France has paid the indemnity extorted from her by Germany. He points out that, while every one knew that France was rich, no one could have believed that the indemnity would have been paid so rapidly and with so little immediate inconvenience to the country. France in a couple of months will have paid two hundred millions, together with considerable sums for interest, and yet this vast operation will have been performed without anything like a corresponding amount of pecuniary embarrassment. French commerce has not felt the want of capital, and has been carried on with ease and regularity, the exports and imports of 1872 showing a sensible increase over those of 1868. The total stock of the precious metals in France has not, according to M. BONNET, diminished, and in 1872 France received from abroad nearly three millions sterling more in bullion than she sent out. The paper currency has been enormously increased, and yet it has maintained its par value. How all this happened is what M. BONNET undertakes to explain, but before we consider his explanation there are one or two preliminary points which it may be worth while to notice. In the first place, if France has paid the indemnity so easily and with so little financial derangement, the demands of Prince BISMARCK cannot be considered so exorbitant as they appeared when the world first heard of them. The amount of the indemnity imposed by Germany on France was as nearly as possible seven times as great as that of the indemnity imposed by the Allies after Waterloo, and it seemed a very severe exercise of the rights of conquest to multiply so very largely the pecuniary penalty of defeat. But M. BONNET at least must allow that Prince BISMARCK knew perfectly well what France could afford to pay. The annual savings of France are said to be three milliards, and what Germany exacted was therefore only an amount equal to the savings which France accumulates in less than two years. The penalty imposed was, then, that for about two years the wealth of France should remain stationary; and if it is said that, although this does not sound very much, yet the real burden lay in the confusion and financial disorganization which the payment of the indemnity must cause, M. BONNET supplies the answer, for he tells us that practically it has caused no difficulty whatever. In the next place, M. BONNET gratifies his patriotic feelings by remarking that it is Germany, which has received the indemnity, and not France, which paid it, that has lately been agitated by a financial crisis. There has been a financial crisis in Germany, and Frenchmen, if they can find any satisfaction in thinking of it, are free to do so. And in one sense the indemnity had something to do with this crisis, for it was the excitement and buoyancy of spirits created by a successful war which tempted Germans to forget their habitual caution, and to launch out into a variety of foolish enterprises. But the intention of the German Government was not to use the indemnity in finding capital for German commerce. The use to which it destined the money was that of providing for two or three great heads of non-productive expenditure, without Germany having its resources diminished. Almost the whole of the indemnity will go in paying for the last war, in improving the military position of Germany against another war, and in introducing a gold coinage. And a Frenchman who wishes to know what Germany has gained by the war has only to ask himself what, apart from the indemnity, France lost by the war, what it will cost to make the Eastern frontier decently

safe against Metz and Strasburg, and what will be the efforts necessary to secure the resumption of specie payments.

M. BONNET reckons that altogether, what with the interest of the indemnity and the sums levied on Paris and other cities, the Germans got six milliards out of France, and they will have got all this in cash, except the price of the ceded railways and the ransom of Paris, which was paid in notes of the Bank of France. Subsequently, however, he takes at five milliards the actual amount of cash paid, and his proposition is that France has paid two hundred millions in cash without parting with any cash at all. The value of coined precious metals in France was two hundred millions sterling before the war, and it is the same now. Where then has the money come from? He answers this question by saying that the profits of France on its external commerce reach one milliard a year, and he gets at this figure by saying that the exports and imports show transactions to the extent of eight milliards. But traders require and get twelve per cent. profit, and one-eighth of the pecuniary total of these transactions must have been clear profit. This gives a milliard a year of profit, and taking the last half of '71, the whole of '72, and the first half of '73, or a period of two years, France has made two milliards of clear profit, which it has received in cash from abroad, and paid away to the Germans. This calculation appears to us very fallacious. Every step in it contains an error, and M. BONNET might at least have paused to ask himself how an importer who makes twelve per cent. by selling goods to his own countrymen at a higher rate than is represented by the purchase-money and freight, can possibly get cash out of the foreigner to the amount of his profit. In the next place, M. BONNET says that Frenchmen have sold securities abroad for cash, have invested the proceeds in their own Rentes, and given the bullion to the Government. This is intelligible, and has, no doubt, been going on upon a large scale, although, when we find that M. BONNET puts down the sum at exactly a milliard, we are tempted to wonder how it happens that every item of his calculation fits in so nicely. However, he has got as he says, two milliards from profits, and one milliard from the sale of securities, and then he has only one milliard left for the investment of foreigners in the new loan of two milliards and he gets his five milliards quite. But we do not know where M. BONNET has got his facts, and there is no apparent reason for believing that he knows anything more than what every one knew, namely, that the cash for the indemnity has been to a large extent procured by the sale of securities by Frenchmen, and by the investment of foreigners in French Rentes. It is very convenient to say that profits have given two milliards, and sales and investments three milliards, and to have nothing more to do than to point out triumphantly that two and three make five. But a sum does not represent everything in real life simply because it is an easy one, and M. BONNET permits us to see how he satisfied himself as to the correctness of his figures as to the amount of foreign investments. If foreigners, he says, had not invested two milliards, there would have been a financial crisis in France; but there was no financial crisis, and therefore foreigners must have invested two milliards. This argument makes him quite happy and comfortable, and enables him to dispose of the subject in half a page.

One of the most curious features of recent French finance is undoubtedly the enormous issue of paper money without depreciation of its value. The Bank of France has now an issue of about two milliards, or eighty millions sterling, more than before the war, and it has only about thirty

millions of gold in hand. Ordinary experience would induce us to expect that paper money issued to such an extent would fall below its nominal value, whereas the exchanges are at present less unfavourable to France than they were. M. BONNET very justly observes that the value of paper money is greatly affected by the causes on account of which it is issued, and that the recent issue of paper money in France is shown to have been made on proper grounds, by the mere fact that it has not fallen in value. If, for example, the Bank of France had issued an excess of paper money merely to facilitate overtrading, and this money had had a forced currency, it must have been rapidly depreciated. But what was the good ground on which the recent issue of paper money has been made in France? M. BONNET's answer is simple in the extreme. He says that eighty millions of paper have been issued to supply the place of eighty millions sterling of bullion that have been hoarded. There is exactly as much coin in France as before the war, but coin to the amount of eighty millions has been withdrawn from circulation because its possessors are afraid to show it. If it is true that no bullion has left the country, this explanation may be the true one; and the returns furnished by the Custom-houses are said to show that the imports of bullion into France in 1872, since the war, slightly exceed the exports. The real difficulty is to know whether these returns can be trusted. It is a very extraordinary thing that the French should be hoarding eighty millions of bullion now beyond what they used to hoard three years ago; for the whole of M. BONNET's article goes to show that there is no want of confidence in France as to the pecuniary future of the country, that commerce has not been restricted, and that every one has perfect faith in the solvency and honesty of the Government and the Bank. The French are accustomed to conduct their affairs on a much bigger basis of coin than we think necessary; and although the total amount of their transactions is very much smaller than that of ours, they have perhaps twice as much coin in the country as we have. M. BONNET thinks this a very good thing, as it prevents the commercial crises to which England is subject. To examine how far this is true would lead us into the interminable labyrinth of the English currency question; but there is no doubt that in France there is an amount of bullion which we should consider unnecessarily large. Habit has made the French much more willing to keep bullion in store than we should be; but it must be confessed that eighty millions sterling is a very large sum for a nation to lock up suddenly from mere force of habit. We may allow that paper money would not drive gold out of the country so quickly in France as it would in England, and yet hesitate to believe that the eighty millions of bullion which has been, according to M. BONNET, replaced by paper, is still all in the pockets of the French. We cannot accept M. BONNET's theory that two out of the five milliards have been paid in cash by means of French profits, and if a more probable explanation is sought, it would naturally be found in the supposition that the gold which the paper money has replaced has to a great extent gone out of the country. The only thing against this supposition is that, according to the returns of the French Custom-houses, coin has not gone out of the country. We are thus reduced to pure conjecture, but when we get to the end of M. BONNET's article, we do not find any of the conjectures he has offered us so plausible as the conjecture we may make for ourselves that these returns are erroneous.

THE BISHOP OF WINCHESTER AND LORD WESTBURY.

THE numerous biographical notices of the Bishop of Winchester and of Lord WESTBURY which have been published during the present week are generally accurate and just, and the speeches in the House of Lords and in Convocation were appropriate and graceful. Although, in consequence of personal and political collisions, they regarded one another with extreme asperity, their characters had much in common. Lord WESTBURY was as witty and as sarcastic as the Bishop of Winchester, and he possessed the same habitual confidence in himself; but he had neither the pleasant temper nor the grace of manner which might have ensured forgiveness to his superiority. If Dr. WILBERFORCE had adopted the pro-

fession of the law, he might have attained the success of ERSKINE and of SCARLETT; but in scientific precision of reasoning he could never have competed with Lord WESTBURY. Lord WENSLEYDALE was in the habit of saying that during his long experience Sir RICHARD BETHELL was the greatest advocate whom he had known; but the logical application of legal principles to facts which satisfied the understanding of a judge might perhaps not have been equally effective with a popular tribunal. It is universally admitted that no greater lawyer has been known in the memory of the present generation. By sheer force of intellect Mr. BETHELL at an early age forced his way to the front rank of the Bar; and when he attained the woolsack, he might boast that during his whole career he had owed nothing to favour or to friendship. Like many other lawyers who have found it expedient to enter public life, he was almost indifferent to political doctrines. When he failed as a Conservative candidate he became for the rest of his life a Liberal, probably without having either experienced any change of opinion, or having been guilty in his adherence to either party of conscious insincerity. In the House of Commons his legal ability and reputation commanded deference; and the qualities which had raised him to the head of his profession were conspicuously displayed in the conduct of discussions which involved a legal element. In 1853 he gave powerful assistance to Mr. GLADSTONE in the debates on the Succession Duty; and at a later period, in a long conflict of subtlety and pertinacity, he defeated his former ally and principal by passing the Divorce Bill. On the Bench he maintained and increased the fame which he had acquired at the Bar. Asserting with unusual boldness his independence of precedents, he interpreted the principles of law with a vigorous sagacity which commanded general assent; but the same cynical and contemptuous demeanour which had alienated the regard of his former competitors still continued to cause just offence to his colleagues and to the practitioners in his Court. Lord CAIRNS agreed with the Lord CHANCELLOR in the opinion that Lord WESTBURY was really kind-hearted and good-natured; but a certain moral obtuseness, which afterwards contributed to his fall, repelled the affection and respect which ought to attend brilliant and merited success. When he had ceased to be an object of envy, the same defects of character tended in some degree to disarm resentment and censure. It was felt that, if Lord WESTBURY had not been faultless, he had also made no Pharisaic pretensions to extraordinary virtue. Even his celebrated announcement that he owed his success in life to his practice of Christian doctrines was justly regarded as an outbreak of unconscious humour. The numerous anecdotes, authentic and apocryphal, of which he was in his later years the hero, indicated a certain Epicurean laxity which was relieved or adorned by unflinching intellectual acuteness and promptitude. In a world of commonplace, inexhaustible vigour and ready wit command sympathy, and even admiration.

The Bishop of WINCHESTER occupied a larger place in political and social life than his occasional and formidable adversary. Not less witty than Lord WESTBURY, he was also a genial humourist, and his wit was almost as often playful as satirical. His musical voice and his kindly manner exercised an irresistible attraction, while they added to the pungent effect of his frequent sarcasms. He was one of many instances of the transmission of eminence from father to son. Like the first PITT, the first FOX, the first GRENVILLE, the first GREY, and the first CANNING, the celebrated WILBERFORCE left a son who maintained for a second generation the distinction of his name. In the House of Lords, as elsewhere, his eulogists have apparently been surprised at the difficulty which they found in defining the exact nature of his claims to admiration. He was not a great scholar, nor was he the leader of any sect or party; and even his oratory would have been more impressive if it had been less ready and fluent; yet it was universally felt that he was the most conspicuous member of his order, and that his great abilities and his untiring activity were characterized by something of the temperament of genius. The peers who took part in the conversation on Tuesday last spoke more fully of the merits of Lord WESTBURY than of the qualities of the far more popular Bishop. One reason of the preference was the comparative ease with which a tribute could be paid to the pre-eminence of a great jurist and judge. The Bishop of WINCHESTER was not to be measured by any particular work with which his name will be identified. The inflexions of his earnest and pathetic voice some-

times raised an unfounded doubt of his sincerity. Naturally impulsive, and inevitably eloquent, he inquired after the health of an acquaintance in almost the tone of plaintive anxiety which might have befitted a question of life or of fortune. The same apparent excess or waste of feeling impaired, more than any other drawback, the effect of his public oratory. He was so much accustomed to employ all his persuasive powers for the immediate purpose, that he sometimes proposed a vote of thanks to a Royal chairman with almost the same seeming fervour which had previously moved the audience to sympathy with his advocacy of some great religious or philanthropic cause. No man was really less prone to confuse comparative degrees of importance, or to squander enthusiasm on trifles. His indifference expressed itself less in coldness of voice and manner than in an irony which derived much of its force from a certain solemnity of manner. His personal epigrams were pointed and severe; and, like all men of wit, he was sometimes tempted into momentary injustice by the opportunity of inventing and applying a happy phrase. The best proof of the absence of malignity was the openness with which he proclaimed his passing antipathies. The anger which habitually assumes a humorous form is never profound or venomous. Of all passions, hatred is the most incompatible with the play of comic imagination. It might be thought scarcely worth while to discuss in detail the social peculiarities of an eminent man, if they furnished no illustration of his public career. The ability and assiduity which the Bishop displayed in ecclesiastical administration would alone have formed a sufficient proof that he was no intellectual trifler. If the welfare of the Church of England had not been the chief object of his thoughts, he might perhaps have been a more determined and zealous politician. It is scarcely possible that an English prelate should be a revolutionist, but the Conservative tendencies of the Bishop of WINCHESTER were always tempered by an intelligent tendency to Liberalism. His first speech in the House of Lords was directed against the Corn Laws; and he cultivated through life the hostility to negro slavery which he had inherited from his father. As the companion of statesmen, with some pretension to be himself a statesman, he was secure against the narrow fanaticism of the clerical recluse. Religion cannot "lift her mitred head in Courts and Parliaments" without sharing the tolerance and the largeness of thought which prevail in secular assemblies. On the other hand, the Bishop's worldly associates and social equals were compelled in his presence to treat religion with external respect; and some of them were probably attracted to his side by finding that zeal and orthodoxy were not incompatible with external graces and intellectual accomplishments. The attacks to which the Bishop was often subject proceeded either from strangers or from professed antagonists, and not from the members of the various social and political circles in which he was familiarly known. It is not to his discredit that he entertained a professional ambition which was but imperfectly crowned with success. If he had deliberately employed his great powers and remarkable opportunities for his own personal aggrandizement, he would long since have been Archbishop of Canterbury. Liberal or Conservative Ministers would have been equally glad to reward the devoted partisanship of so powerful an adherent; nor would it have been difficult to consult the supposed predilections of the Court. The opinions which he most earnestly professed wore, as he well knew, often unpopular in high places; nor could he be ignorant that, if he would have consented from time to time to efface himself, he would have removed a principal obstacle to his promotion. None of his friends would have included in a catalogue of his qualifications the virtue of habitual moderation and prudence in little matters. He often disappointed his adversaries by shrinking from extremes which they may have thought to be the logical consequence of his avowed opinions; but he was not solicitous to abstain from collision with minor prejudices. Unfriendly critics might discover in his character foibles which were exaggerated by gossip and rumour; but it is an ungracious task to dilate on the ordinary imperfections of humanity. The race of courtly and genial ecclesiastics, who were nevertheless zealous in their calling, is fast dying out.

THE COUNTY FRANCHISE.

MR. TREVELYAN, towards the close of the debate on his Bill for establishing household suffrage in counties, said that he had derived much comfort from the course the discussion had taken. He might well say so. If he thinks that it is a great and glorious thing to secure a vote for every householder in the United Kingdom, he may now rest assured that his object will be obtained. It is, after the debate of last Wednesday, a mere question of time. We shall have the usual manœuvring and jockeying as to which party is to have the credit of the change; but the change will be made. It is evident that when both political parties agree to accept a new order of things, and only reserve to themselves the right of saying how and when it shall be carried out, the only question left is as to which party will be first forced or induced to commit itself to a definite proposal. In the first place, Mr. TREVELYAN had the satisfaction of hearing that the leaders of the Liberal party welcomed his proposal. The Government as a Government did not come forward on his behalf, but Mr. FORSTER and Mr. BRUCE declared that they were personally in favour of establishing household suffrage in counties, and Mr. FORSTER was entrusted with what a subsequent speaker characterized as a Presidential Message from Mr. GLADSTONE, who was absent, but who wished it to be known that he was ready to support Mr. TREVELYAN's motion. This will be quite enough for ordinary members of the Liberal party, and they will understand that at the next election they will be wise in making household suffrage in counties a part of their programme. It was said in the House that Mr. GLADSTONE's message was expressly intended to suggest an electioneering cry to a party sadly in want of one, and, if this is a reproach, it is a reproach that few will believe not to be justified. Mr. GLADSTONE only a few days ago treated in a very different manner a motion which was coming on as to the redistribution of seats. This is always an invidious and unpopular side of the Reform question, and is full of pitfalls for the Liberal party, which has much more to lose than to gain by an alteration of the present distribution of power. Mr. GLADSTONE therefore did his utmost to prevent the motion coming on, and threatened that, if it did come on, the Government would use all its strength to defeat it. The striking contrast presented by his reception of Mr. TREVELYAN's motion and his taking the trouble to send his Presidential Message in favour of it, shows as clearly as possible what is the direction in which he judges it advisable for his followers to move. Mr. GLADSTONE's influence in the House has decreased, and there is some dissatisfaction with his Ministerial policy in the country. But the ordinary Liberal candidate addressing the ordinary Liberal constituency cannot get clear of Mr. GLADSTONE. Those whom he addressed would not think him the right sort of man unless he brought in Mr. GLADSTONE's name, paid his humble tribute of admiration to the leader of the party, and promised at least a discriminating and independent support. Unfortunately for candidates there has hitherto been nothing to do but to refer to Mr. GLADSTONE's past history. It was known what Mr. GLADSTONE had done, but there was nothing known of what Mr. GLADSTONE wished to do. Now this blank has been filled up so far as one considerable measure goes, and GLADSTONE and household franchise in counties is an easy and safe cry. It was evident from what Mr. BRUCE said that several members of the Cabinet are opposed to the change; but the adverse opinions of minor members of the Cabinet who keep their sentiments to themselves are of no avail. If he retains the opinions he expressed some years ago, Mr. CARDWELL would regard the extension of the county franchise to all householders with regret, but there is no probability that Mr. CARDWELL will do more than not advocate it now. He will wait to see how the cry tells at the elections, and if it is strong and successful he will bow to the judgment of his party. Mr. BRUCE referred to the debate on the woman-suffrage question, and said that on that occasion Mr. GLADSTONE allowed it to be known that he was in favour of the measure, and yet no one had observed that this made the measure a Government one. Modesty, perhaps, prevented Mr. BRUCE from remembering that he made a decisive speech against the measure, and it was of course understood that when Mr. BRUCE exerted himself to the utmost to oppose what Mr. GLADSTONE supported, the topic of debate was to be regarded as one of merely speculative interest. Had two or three members of the Cabinet followed Mr. BRUCE and Mr. FORSTER, and ex-

pressed very decided opinions against the proposed extension of the county franchise, the Liberal party would have been puzzled. It would have shirked a question that might have broken up the union of its leaders; but now there is nothing to make Liberal candidates and speakers hesitate. They have received the watchword from Mr. GLADSTONE, and there is no one to hint that they should not pass it on.

All this must have sounded very pleasant to Mr. TREVELYAN, but it must have been still sweeter to him to listen to the speeches made by his Conservative opponents. Scarcely a speaker offered any opposition to the motion on principle. Some, like Mr. NEWDEGATE, thought the proposed change a bad one, but held that it was inevitable, and after the experience of 1867 no Conservatives can have the slightest confidence that any proposal with regard to the franchise will be effectually resisted. The duty of "dishing the Whigs" is one of eternal obligation, and bitter experience has taught the Conservatives that, if they do not want to have to eat their words on Reform, the wise thing is to refrain from saying anything. Sir J. KENNAWAY had been fired with something of Conservative enthusiasm, and had placed on the notice paper a motion for discharging the order for the second reading of Mr. TREVELYAN'S Bill. But he had suffered his ardour to cool before the debate came on, and not only was content to second a mild motion for the previous question, but announced that he had no wish permanently to exclude the labourers, and that when the time came for enfranchising them, he thought they must be admitted heartily. All Lord JOHN MANNERS had to say was that he thought such a Bill ought to come from a Government, not from a private member, and that he could not say but what, when a Government proposed to establish household suffrage in counties, they might show very good reason for it. This is not the way in which effectual opposition is offered to proposals for altering the franchise, and it is clear that the Conservatives will only offer an accidental and temporary opposition, if they offer any, to the proposed extension of the suffrage in the counties. They have been educated till they have got to consider all proposals as to the suffrage as mere weapons of party warfare. When they learn that the oracle has spoken at last, and that the Liberal leader has decided on the electioneering cry of his party, they will immediately consider whether the Liberals are to have the monopoly of this cry, and whether Conservatives had not better make it their cry too. In this instance they may perhaps think that the interests of their party will be served if the cry succeeds. A large addition to county voters will, in the first place, necessitate an increase of county members; and will, in the next place, make county contests even more expensive and exhausting than they are now. Conservatives may possibly reckon that this would be to their advantage, and may therefore look kindly on a proposal which they think will benefit them. But if there is anything that could deprive them of the advantage they look for, it would be that they had resisted the change, and resisted it ineffectually. If the labourers are to vote, and will, when no opposing influences intervene, vote in harmony with the views of the owners of the soil, what, from the Conservative point of view, can be the good of letting them suppose that the Liberals are their only friends, and that the Conservatives have tried to depress and humble them? In all probability the Conservative candidates at the next election will find it expedient to notice a topic which their Liberal rivals will have made a prominent one, and it is tolerably safe to guess that they will be nearly unanimous in saying that they recognize the claim of county householders to vote, but that they do not think the time has yet come to begin again an agitation of the question of Reform. This will be perfectly intelligible to every one, and will obviously mean that gratitude to the authors of the Reform Bill of 1867 ought to prompt county householders to wait till the real inventors of household suffrage are once more in office.

One argument was used freely in the debate in favour of household suffrage in the counties, and was used not only on one side of the House, which speaks volumes as to the mode in which questions of electoral reform have come to be regarded in England. Agricultural labourers are, it was conceded, in many instances unfit to vote; but it was considered a triumphant answer to reply that so are many of the dwellers in towns admitted to the suffrage under the Act of 1867. Because there are some bad electors, there may just as well be more. The fact is undeniable. There

are in some boroughs electors quite as incapable of exercising the right of suffrage properly as any agricultural labourer can be. What is remarkable is this—that, instead of being looked on as a matter of deep regret, and as an evil that ought to be kept within the narrowest limits, it is turned into a precedent for giving the suffrage to another and a larger set of incapable voters. The suffrage is looked on, not as a means of getting together a good House of Commons, but as a right of each man, which some strong ground must be shown for withholding from him. That he is unfit to exercise his right properly might seem a good ground, but this ground is to be cut away by the objection that this is to raise an arbitrary and invidious distinction between him and other equally unfit persons who already possess the right of voting. What may be termed the educational argument also runs in the same groove. This is a very favourite argument with Reformers, and Mr. TREVELYAN naturally made the most of it. The franchise, it is said, is a powerful instrument of education. The agricultural labourer may be unfit to vote now, but give him a vote, and he will forthwith become fit to exercise it. His new privileges will exalt and instruct him. He will become interested in questions to which he has hitherto been a stranger. It is even imagined that he will learn to read in order to prepare himself to vote once in every five or six years for a member of Parliament. There are many reasons to doubt whether this educational influence of the suffrage is not at variance with both probability and experience; but even if it were shown that some scintilla of increased intelligence was not unlikely to be struck out of the agricultural mind by this process, we are still as far off as ever from knowing whether this tiny good would not be largely outweighed by a deterioration of the Parliament elected. Lastly, we may observe that agricultural labourers are now treated with a respect in Parliament which was formerly denied them, simply because they have made themselves to a certain degree formidable. The fact of their uniting together, said Mr. FORSTER, though they have no votes, is a reason why we should seriously consider how long they ought to go on without votes. It is the old story of the Fenians and the Irish Church and Land Bills over again. The way for men to get all they want is to make themselves sufficiently disagreeable. The labourer is to have a vote, not only because he is no more unfit than some people in towns, and because his intellect may be quickened by a new source of power, but as a reward for the pluck with which he has combined against the farmer. His unhappy deficiencies in elementary education will probably prevent his knowing much of what passed on Wednesday; but if he could but get one of his children to spell out to him a report of the debate, he could not help feeling that he had been treated by the House of Commons in an uncommonly handsome and liberal manner.

THE SULTAN AND THE KHEDIVÉ.

THE large concessions which have been obtained by the Khedive of Egypt during his visit to Constantinople indicate on the part of the Turkish Government a statesmanlike superiority to prejudice. The KHEDIVÉ has satisfied the Porte that he will be a faithful ally on condition of being relieved from irksome obligations of dependence. The use of the Ottoman flag and coinage will still serve as an acknowledgment of such an allegiance as great feudatories in the middle ages bore to their nominal Sovereigns; but for all practical purposes Egypt will in time of peace be an independent kingdom, with the power of raising taxes, of contracting loans, of negotiating with foreign Powers, and of maintaining a naval and military force. An odd exception is made as to ironclad vessels, which are not to be constructed without the consent of the Porte. It was probably thought expedient to reserve for some future occasion a concession which may perhaps command a suitable price. In return for the liberal grants of the Porte, the KHEDIVÉ is to aid the SULTAN against external enemies with all the forces at his disposal; and, for the present at least, he is probably satisfied that, in defending the Turkish Empire, he will consult his interest as well as his duty. While his vassalage was ostensibly more complete, the ruler of Egypt could not have been compelled to furnish the contingent which might have been lawfully demanded by the Imperial Government. During the disturbances in Crete, the KHEDIVÉ gave effective aid to the Porte, but it was always possible

that an enemy of Turkey might have received, for adequate consideration, the neutrality or the assistance of Egypt. The bribe which would have been almost certainly offered would have been the recognition of an independence which has now been attained by amicable negotiation. It is still possible that an Egyptian Khedive might be tempted to betray his allegiance by an offer of facilities for extending his dominions; but it seems that the former designs of Egypt on Syria and Arabia have been abandoned, and the reigning KHEDIVE is inclined rather to push his conquests at the expense of the uncivilized negro races in the South. Either through policy or from a sentiment of loyalty, the Viceroys of Egypt have now for many years cultivated friendly relations with the Porte, and it is remarkable that the Albanian dynasty of MEHMET ALI has attained its present elevation without any violent rupture with the sovereign Power, or rather, after the termination of a temporary struggle, which has been followed by a long period of harmony and deference. At one time the affairs of the East seemed likely to take a different course.

Forty years have passed since IBRAHIM defeated the Turkish army at Konieh, and advanced within a few marches of Constantinople. He had previously taken Acre, which was recaptured by the English troops seven years later, and he was practically master of Syria. The threatened overthrow of the Sultan's power furnished the Russians with an excuse for entering Constantinople and for extorting from the Porte the notorious Treaty of Unkiar-Skelessi. In the interval between 1833 and 1840, the French Government, instigated by vanity and by jealousy of England, gave an active support to MEHMET ALI's claims of independence and of the possession of Syria; but the resolute policy of Lord PALMERSTON eventually prevailed over the exertions of M. GUIZOT and M. THIERS, and the Viceroy was finally confined to his Egyptian dominions. At the same time the English Government, supported by Austria, Russia, and Prussia, induced the Sultan to acknowledge the right of MEHMET to transmit his power to his descendants. It is a remarkable fact that, since the forcible interruption of their ambitious projects, the Viceroys of Egypt have betrayed no disposition to rebel against the Porte. MEHMET and IBRAHIM probably misunderstood their own interest when they attempted to deprive the Sultan of a large portion, or of the whole, of his dominions. It was scarcely possible that a usurping dynasty should maintain the independence of the Turkish Empire; and if they had established themselves at Constantinople, or even in Syria, they would have loosened their hold on Egypt, which forms the firmest basis of their power. In that province alone a Mahometan ruler is relieved from the inconvenience of governing a Christian population. The subjects of the KHEDIVE are better affected to the Government than the Rayahs of Bulgaria and Roumelia, and they are more docile and more laborious than the Turks. The Viceroys have for more than one generation shown good sense in availing themselves of the services of European officers and engineers. The administration of the country is not altogether satisfactory; but great material improvements have been effected, and Egypt is now by far the richest part of the Ottoman Empire. In the absence of dissent there is neither persecution nor religious fanaticism, and the imitative civilization which has been introduced will probably, in the course of years, become less artificial. At one time the Viceroy went so far as to establish a Parliament, but the institution failed because no threat or promise sufficed to embolden any member to belong to the Opposition.

A main concession which has been made to the KHEDIVE is important both in itself and because it is intended to have a reflected operation. The hereditary succession of the Egyptian dynasty is henceforth to follow the European rule of primogeniture; and it is well known that the SULTAN has long been anxious to establish the same order of descent in his own family. In many ages and countries collateral heirs of mature age have been preferred to the infant sons of deceased rulers, on the obvious ground of their greater fitness to discharge at once the duties of their office. In Turkey and in Egypt the system has been so far extended as to give the brother priority over the son; and the consequent jealousy, which often led to fratricide, has almost passed into a proverb. ARISTOTLE is compared by BACON to an Ottoman Sultan who thinks his throne insecure till he has killed all his brothers; and POPE applied the same illustration to the jealous temper of ADAMSON. Even in the East the wholesale murder of relatives would now be reprobated by

public opinion; but the effects of collateral succession, when it is not interrupted by violence, are incompatible with national welfare. No law or custom will induce any man to care for brothers or cousins as for his own descendants; and the ruler who knows that he will not be succeeded by his son feels himself in the position of a life tenant with a stranger in remainder. Accordingly, like more than one Egyptian Viceroy, he occupies himself in the accumulation of wealth for his family, in entire disregard of the future prosperity of his country. The greatest advantage of hereditary monarchy is the identity of interest which it produces between the sovereign and the subject. As BURKE said of Indian administrators whom he denounced for cupidity, birds of passage are sometimes birds of prey. It is in every way desirable that the actual owner should have sufficient motives for improving the estate. The only objection to the change is the possible danger of transition in creating pretenders with plausible claims. Some of the Turkish Ministers who have lately followed one another in rapid succession have recommended themselves to the favour of the SULTAN by professed devotion to the object which he is known to contemplate. His grant of direct succession to the KHEDIVE will be regarded at Constantinople as an avowal of his intention to leave his throne to his son in preference to collateral claimants. There is no reason why any friendly Power should hesitate to recognize a change which is evidently advantageous to the country.

The entire or approximate independence of Egypt is not inconsistent with English interests. It is not stated whether the control of the Suez Canal is at present reserved by the Imperial Government; but the Canal may, for all ordinary purposes, be considered as a part of Egyptian territory. The KHEDIVE himself is the largest shareholder, and he is in other ways deeply interested in the prosperity of the undertaking. If any physical or financial impediments are offered to the effective conduct of traffic, it will be easier to attract attention to the subject in Cairo than in Constantinople. Even if the Canal were, in accordance with the anticipations of alarmists, silted up, Egypt would still remain a part of the highway between England and India. Friendly relations have long existed between England and Turkey, but it is always possible that the Porte may yield to an adverse influence. Since the cessation of the former rivalry between England and France, there is no reason to anticipate any conflict of European policy which could directly affect Egypt. There would be many opportunities of applying pressure in the improbable contingency of hostile feeling on the part of the Egyptian Government. It may also be conjectured that the grant of larger privileges diminishes to some extent the probability of war in the East. The concessions of the Porte have not been extorted by force, and they will leave no feeling of resentment on either side. In the event of a disruption of the Turkish Empire, Egypt would retain its separate existence; and it would not be tempted to transfer its allegiance to a foreign conqueror of the parent State. It is not known whether foreign diplomatists have taken any part in the negotiations between the KHEDIVE and the Porte. It seems most probable that the question has been treated independently by the two parties to the discussion; and they have in any case arrived at a sound conclusion. It remains to be seen whether the Egyptian arrangement is a part of a general policy with respect to the dependencies of the Porte. It is at least possible that the link which unites the provinces with the sovereign Power may become more tenacious as they are relaxed. The modern colonial system of England furnishes a precedent for the combination of allegiance to the empire with the concession of almost unbounded liberty to outlying communities. Egypt is now as independent as Canada or New South Wales.

THE GOVERNMENT AND THE OPPOSITION IN FRANCE.

IT is essential in watching the course of French politics to be careful not to make too much of unfavourable symptoms. Nature will often bring a patient through a disease against all the prognostications of the doctors, and, amidst much that is discouraging, France has shown an amount of vitality since the war which makes her condition more hopeful than it ought to be if judged by any ordinary rules. Yet it is difficult not to feel disheartened at the present aspect of affairs at Versailles. We say at Versailles, because it is only of what happens at Versailles that

foreigners can be said to know anything. Those mysterious peasants about whose thoughts and wishes there used to be so much speculation under the Empire have become as mysterious as ever. They are believed to have trusted M. THIERS; and if a general election had taken place while he was still President, they would probably have sent up a strong majority of deputies pledged to support his policy. But it is not known how much of this confidence was given to M. THIERS personally, how much to the Republic with which he was associated, how much to the holder of the supreme Executive power. In this latter character Marshal MACMAHON has, no doubt, completely replaced M. THIERS, since, being a soldier, he is to a Frenchman a better embodiment of visible and conscious authority than any civilian. But it is doubtful whether the peasantry did not see in M. THIERS something more than the holder of the chief Executive power. Unquestioning reverence for established authorities must have been terribly shaken by the fall of the Empire. NAPOLEON III. had been as a God upon earth; but capitulation and imprisonment are rude tests to apply even to the least intelligent worship. The prostration of France at the close of the war made her recovery under M. THIERS's rule more visibly striking perhaps than even the habitual prosperity associated with the best years of the Empire, and this recovery would be likely to impress the peasantry all the more because it was effected under a form of government from which they had learned to look for nothing but anarchy and failure. Whether this fact has made sufficient impression on them to change their views of the Republic is the point about which it is most important to be informed, and least possible to get trustworthy information. The monarchical majority in the Assembly profess themselves confident that the alleged Republicanism of the country outside the great towns is entirely due to the inertness of the late Government, and to the consequent belief of the peasantry that in voting for Republican candidates they were giving secret pleasure to the authorities. The Republican minority profess equal confidence that the feeling of the country has not changed with the change of Government, and that, in spite of all the new Prefects can do, the complexion of the next Assembly will be unmistakably Republican. Nothing but experiment can decide which of these two views comes nearest to the truth, but if the experiment is very long delayed, it may fairly be inferred that the majority are not hopeful as to the result.

At Versailles, however, where the course and tendency of events can be pretty clearly seen, there is very little groundwork for encouraging views of the future. There has been time since the 24th of May to have organized a formidable Parliamentary Opposition. A minority of more than three hundred was an excellent nucleus for this purpose, and the few votes from the Left Centre which turned the scale were probably not so steeled against their old friends but that by judicious measures they might have been won back. The Opposition would not have been destitute of leaders, for M. THIERS and M. GRÉVY are men of great Parliamentary experience, and M. GAMBETTA has in several ways shown that he understands and appreciates the kind of tactics which his peculiar position demands of him. It was of the utmost moment that the materials thus lying ready to hand should be turned to immediate account. In the first place, an Opposition composed of elements having little real cohesion among themselves cannot safely be allowed to remain inactive even for a day. The three hundred and thirty deputies who supported M. THIERS in the critical division should have been allowed no time to grow cool. It was certain that, if they were not at once committed to concerted action under a trusted leader, many of them would begin to consider whether, after all, their true place was not with the majority. This is precisely what has happened. M. THIERS has for the time withdrawn himself from the Assembly. M. GRÉVY contents himself with giving silent votes. M. GAMBETTA, however moderate his action may be on particular occasions, is not, and cannot be, the leader of an Opposition in which an extremely Conservative Liberalism is the predominant element. Consequently the Opposition has been scattered as sheep having no shepherd. The Government majority has grown from tens to hundreds, and a Ministry which two months ago was seated in power by little more than a dozen votes has been spared all anxiety how to keep that dozen together by the spectacle of a crowd of recruits flocking in from the minority. In the second place, the country ought not to have been

allowed to forget the existence of the Opposition. The tendency of the French voter is to believe in nothing except the Government, and if this disposition is to be cured, it must be by leading the voters to regard the Opposition as a body which is certain one day or other to become the Government. With that prospect before them, Frenchmen may endure for a time to find themselves at issue with their natural protector; without that prospect, the only political consideration which is likely to have much weight with them is whether a Government is to be welcomed or to be simply submitted to. That, supposing them not to be disposed to welcome it, there can be any alternative open to them except simple submission, does not ordinarily enter into their minds. The notion that they can in any way influence the future, that it rests with them to decide when the process of replacement shall be accomplished, is utterly foreign to their habits of thought. Before it can cease to be strange to them, the Opposition must show faith in itself. If it wishes to keep its followers in good heart, it must act as though the men who compose it had a clear purpose in view and a good hope of turning out the Government as soon as an opportunity presents itself. As it is, there has only been one pitched battle since the present Ministers took office, and this, being fought on a badly chosen ground and against the advice of the Opposition chiefs, resulted in a well-deserved defeat. There was no pretext for making vague accusations against the policy of the Duke of BROGLIE's Administration. Its sins are particular and the criticisms bestowed on them should be equally particular. It was idle to suppose that a general charge of excessive Conservatism would in any way weaken their position. Conservatism, even excessive Conservatism, is too dear to the rural Frenchman not to be set down rather to the praise than to the blame of a Government which is fairly open to such an accusation.

In order that the Opposition should be useful, it was essential that it should be formidable; and in order that it should be formidable, it was essential that it should be reasonable in its character and guided by moderate politicians. Both these conditions have been neglected in the present case. The Opposition has not been reasonable, because it was directed against a policy as to which M. FAYRE himself was obliged to admit that it offered nothing that could be taken hold of either for praise or blame. This kind of Opposition tends directly to strengthen the Government, because it exhibits it as the object of blind Radical hate, and in France this at best negative merit counts for something not far short of a positive virtue. It would have been very easy to have singled out particular proposals of the Government which deserved to be resisted step by step. The proposal to give the permanent Committee power during the recess to authorize the prosecution of persons charged with attacking the Assembly is an indirect attack upon freedom of speech. The proposal to appoint army chaplains seems to be regarded—though on the face of things it is not very obvious for what reason—as an attack upon freedom of conscience. But neither of these occasions suited the purpose of the Extreme Left, which is much more inclined to crowd to a single debate on an interpellation than to take the trouble of fighting a Bill in detail. But the fact that the Extreme Left was not anxious to rush in only made a subject the better suited for the purposes of the moderate Opposition. M. THIERS or M. GRÉVY might have spoken on either of these Bills in a manner which would have enlightened and encouraged the Liberal element in every constituency in France. By stating in clear and popular language the relation of the Assembly and the relation of the civil power to the Church, they might have furnished their supporters with a test of easy and universal application by which to judge other acts of the Government. It is greatly to be regretted that such an opportunity has been allowed to go unimproved.

THE HOUSE OF LORDS AND THE LAND.

A SELECT Committee of the House of Lords, of which LORD SALISBURY was Chairman, has lately reported in favour of some extension of the power given to limited owners of charging improvements on the land. It is proposed that limited owners shall be empowered, with the consent of trustees, to spend trust money on the improvement of their estates on redeemable mortgage; that charges on estates shall

be redeemable on a term exceeding by ten years the owner's expectation of life; that the certificate of a surveyor may be dispensed with if the limited owner acts with the consent of the tenant in tail, being of full age; and that trustees may defend the inheritance at law or in Parliament at the cost of the estate. None of the proposed alterations are in themselves objectionable; and perhaps it may be worth while in the next Session to amend the existing law in accordance with the recommendations of the Committee; but it cannot be said that the deliberations of a body of great landowners indicate any revolutionary boldness of conception. The Report is more interesting than the practical conclusion, especially in a humorous summary of the alleged exceptions to the general rule that drainage is profitable. "Drains which were laid thirty years ago by the inventor of the present system of pipe drainage are useless now, because the pipes were only an inch in diameter. Drains which were laid twenty years since, under the superintendence of the engineer of one of the Land Companies, have become worthless since, and have been taken up and relaid. Over large breadths of pasture land expensive drainage has been found to be useless, if not injurious, apparently because it has not been followed by a system of manuring, which would cost from 4*l.* to 5*l.* an acre in addition. Drainage, again, has been found to fail where the owner has neglected to aid it by subsoil ploughing; where he has failed to watch the outfalls; where the soil is ferruginous; where it is gravelly; where it is sandy; where it is so porous as to encourage the downward growth of the roots of trees; and even where it is favourable to the growth of particular kinds of weeds." "You have convinced me," said RUSSELL to IMMAC, "that it is impossible to be a poet." Lord SALISBURY appears not to be far from the conviction that it is nearly as impossible to be a successful drainer; yet he quotes without disapproval Mr. BAILEY DENTON's assertion that, out of 20,000,000 acres requiring drainage in England and Wales, only 3,000,000 have yet been drained. In many cases the conversion of a swamp into useful pasture or arable land is nearly equivalent to the creation of an addition to the surface of the soil; but the operation becomes, through the rise in the cost of labour and materials, every day more expensive; and, as a general rule, drainage is not a profitable operation unless it adds ten shillings an acre to the rental.

The erection or improvement of farmhouses and farm-buildings is, as the Report correctly states, less profitable even than drainage. Lord NAPIER of Ettrick was defeated by a large majority on a proposed amendment to the effect that improvement of farm-buildings is "an indispensable auxiliary to the development of high farming in connexion with underground drainage, and a necessary concession to the expanding social requirements of the farmer and his family." The relation of farm-buildings to underground drainage is but indirect; and perhaps the members of the Committee thought that the demand for drawing-rooms and dining-rooms in farmhouses could not usefully be recorded in a Parliamentary document. They properly hold that the erection of cottages, though it is never immediately remunerative, ought to be recognized as a legitimate improvement of the estate. The reasons for providing labourers with suitable accommodation are sufficiently obvious; and the successor to a settled estate derives a large benefit from the erection by a former owner of substantial cottages. Lord NAPIER failed to obtain the assent of the Committee to a string of resolutions for the encouragement of larch and fir plantations. As one of the conditions of making the cost of plantation a charge on the estate was to be that the land should not have been previously worth more than five shillings an acre, English landowners probably paid little attention to a scheme which would scarcely be applicable to their estates. In some parts of Wales and Scotland poor land is best employed in the growth of plantations; and it is possible that in some cases limited owners hesitate to spend their money for a purpose which can seldom be largely profitable to themselves. A mountain tract may generally be planted and fenced at a cost of less than two pounds per acre; and within twelve or fifteen years the principal, if not the interest, will be returned in the form of thinnings.

As long as the greater part of the land in the country is held under settlements and entails, it is desirable to counteract the effect of a questionable tenure by enlarging as far as possible the powers of the limited owner; but the Report of the Committee furnishes no sufficient answer to the

suggestion "that all the difficulties of limited owners might be solved by prohibiting settlement." There may be social or political reasons for discouraging ownership in fee; but it can scarcely be doubted that the absolute owner possesses the greatest facilities for improving the land. Lord SALISBURY indeed repeats in the Report a remark which he made in moving for the Committee in the House of Lords, that, in the absence of settlements, mortgages would have a tendency to increase; but the opportunity of using to the best advantage the credit which depends on landed security would in itself be an addition to the value of the estate. Money is raised on mortgage either to supply personal expenditure or extravagance, or for more legitimate purposes, including improvement of the land. The subject of discussion in the Committee was the extension of the power of raising money on mortgage under difficulties which are exclusively due to the existence of limitations on free ownership. "A landowner," in the words of the Report, "is led to make improvements more by solicitude for his descendants than in the hope of personal gain"; but it is not easy to follow the inference that "the prohibition of settlements would render this solicitude idle." There seems to be some confusion between the power of settlement and the law or custom of primogeniture. As long as an owner of land, or of any other kind of property, retains the power of disposing of it by will, it would seem that solicitude for his descendants will continue to operate as a motive for improvement. It may be true that some owners in fee take advantage of the powers of the Land Companies to borrow money for improvement on terms which give the loans a priority over previous mortgages. The fact is curious; but it only proves that the owner of an encumbered estate is subject to disabilities analogous to those of a limited owner. In the present state of the law, the greater part of the land in the United Kingdom is, in one form or another, encumbered.

The custom of leaving large landed estates to the eldest son tends sometimes to discourage liberal outlay on improvement. It is evidently unjust that the fortunes of younger children should be diminished for the benefit of the heir; but the objection may be removed by making all investments of the kind charges on the estate; and in the absence of settlements no statutory power would be necessary for the purpose. On the other hand, the hope of perpetuating a family offers a strong inducement to the improvement of the land; and it is highly expedient that the gratification of a natural taste should involve a safe, if not an advantageous, investment. An owner who has a genuine love for his land gets rid of weeds and rushes, or perhaps plants a barren hill-side, not merely in the hope of profit, but mainly from a dislike of visible neglect and waste. When improvements are effected out of income, expectant legatees have no right to complain that the next in succession will derive a benefit which is purchased by a voluntary sacrifice on the part of the actual owner. Though it would be impossible to collect comparative statistics of the liberality of life tenants and of owners in fee in improving their respective estates, it would probably be found that, in dealing with land, as with every other subject matter, perfect freedom of disposition is economically advantageous. The deliberations and conclusions of one of the most Conservative of Committees strengthen the impression which is produced by general considerations. The Committee employed itself in opening a few more gaps in the fence by which the existing law excludes life tenants from interference with the inheritance. It is difficult to resist the inference that the object would be more simply and more perfectly attained by the expedient of leveling the existing obstructions. It is not found necessary to institute through Parliamentary Committees inquiries as to the best mode of improving machinery, or any other kind of personal property; and the only difference between the cases is caused by the custom of tying up landed estates for the benefit of posterity. One of the suggestions of the Committee indicates the existence of a natural prejudice which nevertheless requires examination. It is perfectly fair that trustees should be allowed to oppose Sewage Bills and Railway Bills at the expense of the estate; but the "very severe hardships from the aggressions of wealthy corporate bodies prosecuting plans of public improvement" are scarcely sufficient reasons for compassion or indignation. If landowners in the neighbourhood of towns have to defend at ruinous cost their properties from being "swallowed up by waterworks, or railways, or sewage schemes," the possession of suburban property is not an

unmixed evil. It is by reason of their vicinity to the town that owners are liable to compulsory purchase; but the same circumstances turn their estates from farms into building-land, which is sold, with compulsory purchase or otherwise, by the yard instead of by the acre. In almost all cases the expropriated victims receive from the aggressive corporations more than the value of land which has probably long before ceased to possess any residential interest or value. Landowners, like the rest of mankind, regard questions which directly affect their interests with a pardonable bias.

THE ZANZIBAR CONTRACT.

MR. LOWE has paid the penalty of his original want of frankness in regard to the Zanzibar Contract. It is more than probable that this contract would never have been entered into if it had been foreseen that its real character would have to be disclosed to the House of Commons. It was from the first one of those arrangements into which a Government eager to effect a particular object is likely to be betrayed, but which it rarely perseveres with if it has to do so under the fire of Parliamentary criticism. The Treasury mixed up a political with a postal service, and in their anxiety to establish a line of mail steamers on the Eastern coast of Africa, they did not pay sufficient attention to the mode in which the measure they proposed to take for this purpose would affect the interests of the South African colonists. Upon this part of the question the Report of the Select Committee seems to be fully borne out by facts:—"The fusion into one transaction of two contracts so essentially different in character as that for the 'West Coast Postal Service, maintained by postal charges borne by those residing in or connected with the colonies, and that for the East Coast Service, established primarily for political and philanthropic objects, and maintained by a subsidy, or subsidies, was questionable in policy, and in the result unsatisfactory." When it turned out that the dissatisfaction of the colonists at the terms of the Western contract was sufficiently marked to induce the Government to abandon the contract rather than take the responsibility of asking Parliament to confirm it, the CHANCELLOR of the EXCHEQUER had, as he considered, a very strong case as regards the course he determined to pursue towards the Company with which the two contracts had been entered into. He told the Select Committee that he "had himself negotiated the Eastern contract for 15,000*l.* with the Union Company, on condition that they should obtain the Western, and they had commenced the performance of both services accordingly." Under these circumstances, he "felt himself in honour bound not to attempt to hold them to the Eastern bargain when the other was dropped." He is even of opinion that, "had he attempted to enforce the obligation of the contract to Zanzibar, a Court of Equity would have relieved the Company from the obligation to fulfil it." Consequently he did not even ask the question whether the Union Company would go on with the Eastern engagement on the terms agreed upon, nor did he consider himself at liberty to drop the Eastern as well as the Western contract, and to invite fresh offers from other Companies. It is evident that in negotiating with the Union Company on these terms Mr. Lowe was negotiating with his hands tied. The object in view was not how to make the most advantageous contract, but how to make a contract sufficiently favourable to the Union Company. The House of Commons was in effect asked to give 26,000*l.* a year for services which the Company had originally undertaken to perform for 15,000*l.* Mr. Lowe thinks the increase of price fair, because the inclusion of the Western contract had been part of the consideration for which the Company had undertaken the Eastern contract at such a low figure. It is not necessary to inquire whether this view of the facts is correct. It is enough to say that the facts on which it rested ought not to have been communicated to the House of Commons only at the eleventh hour. There were reasons no doubt why Mr. Lowe had not been inclined to take the House of Commons into his confidence. The Government had treated two contracts as one which ought to have been treated as two, and in their desire to conclude the Eastern contract they seem in the first instance to have been blind to the fact that the cost of putting down the slave trade ought to be paid out of the Imperial Exchequer, not out of the pockets of the South African colonists. Neither of these

confessions was a pleasant communication to have to make to Parliament; but then, if Ministers are only to take Parliament into their confidence when they can do so with credit and satisfaction to themselves, the constitutional value of their frankness is greatly diminished. Did not even the NAPOLEONS and ROUBERS do the same?

The Select Committee recommend that the Eastern contract with the Union Company should not be ratified; but, seeing that the Company has incurred expenses in carrying out for six months a service the terms of which they only accepted in consideration of other advantages, they consider that, before offering the service to a rival Company, or putting it up to public tender, the Government ought to afford the Company the opportunity of electing to retain the service on fair and reasonable terms. Neither of these recommendations is altogether satisfactory. The Committee assume that there is no ground to apprehend that, if Parliament declines to ratify the contract with the Union Company, there would not be found persons competent and willing to undertake it. But at this late period of the Session, is it so certain that, supposing the Union Company declines to accept fair and reasonable terms, the necessary negotiations can be concluded with some other Company in time to get them ratified by Parliament? And after the experience of the Union Company, is it probable that any Company will begin to run its steamers while it is still undetermined whether the contract will be confirmed or not? It seems quite possible, therefore, that the service between Zanzibar and the Cape may for a time be interrupted. Whether this will in itself be a serious misfortune, we will not undertake to say. But inasmuch as the Committee state that the "immediate establishment of the service between Zanzibar and the Cape" was considered by the Cabinet as one of peculiar importance, in view of the negotiations at the time in progress "with the Sultan of ZANZIBAR," it was their duty to have inquired whether the temporary suspension of the service may not be of peculiar and disastrous importance in the present state of our relations with the Sultan of ZANZIBAR. Throughout the Report the contract is treated as a transaction involving considerations of policy rather than of postal convenience; and it seems to follow that these considerations of policy should not have been altogether left out of sight in framing a recommendation which, if carried out, may have a very injurious influence on the policy which dictated the contract. The Committee appear to have jumped at the conclusion that the service will go on, no matter what becomes of the present contract, and to have been encouraged to make this assumption on insufficient grounds by their neglect to inquire into the possible consequences of acting upon it. The recommendation that the Union Company shall have the offer of retaining the service on fair and reasonable terms would have been more valuable if the Committee had stated what fair and reasonable terms are. The Union Company originally considered 29,000*l.* fair and reasonable terms. A little later Mr. Lowe considered 26,000*l.* fair and reasonable terms. The British India Company seem to have considered 16,315*l.* fair and reasonable terms. The Committee are justly "sensible of the difficulty of replying to this question, seeing to how great an extent the 'Eastern service must be a speculative undertaking.'" It is a pity that they were not equally "sensible" of the inexpediency of simply handing on the difficulty to some one else. If it was thought undesirable to put up the contract again to public tender without giving the Union Company the offer of retaining it, it was the business of the Select Committee to reduce that offer to precise figures.

ECCELESIASTICAL APPEALS.

LORD SELBORNE'S amendment has met, though not in the best manner, the only objection of any weight that can be urged to the transfer of ecclesiastical appeals to the new Supreme Court created by the Judicature Bill. The Court will be provided with theological assessors, and will thus be protected against the danger, suggested by the Archbishop of CANTERBURY in a former debate, of unintentionally giving a judgment which would have the effect of ejecting this or that party from the Church of England. The theological faculties at the two Universities would, we think, have furnished better assessors than a select number of bishops; but the risk is so remote that there is no need to be very critical of the mode in which it is proposed to guard against it.

We are anxious before taking leave of this subject to show why the apprehension that the new Court will in the end become the minister of theological exclusiveness, which has been expressed by the eminent ecclesiastic who writes under the signature of "ANGELICUS," may be dismissed, not only as groundless, but as the exact contrary of what is likely to prove the fact. As regards the true function of a Court of Ecclesiastical Appeal there is no difference between "ANGELICUS" and ourselves. We are as convinced as he can be that the continuance of the Church of England as an Established Church depends upon the permitted existence side by side within her pale of the three great parties into which her members are divided. If either one of the three could convert the others to its views, the unity so produced would no doubt be a source of additional strength. But a unity brought about by the rough and ready process of getting rid of opponents would immensely strengthen the attack on the Established Church from without, and proportionately weaken the means of resistance within. The probability that a purely legal Court of Appeal would in the long run be less disposed than a Court composed partly of bishops to have recourse to the process in question constituted one main reason for adhering to Mr. HARDY's amendment. "ANGELICUS" asks why any change should be needed in a Court which in three several instances has vindicated the comprehensive character of the Church of England. To the judgment, he says, of the Judicial Committee in the GORHAM case "the Evangelical clergy owe their legal position; to its judgment in the *Essays and Reviews* case "the Liberal clergy; to its judgment in the BENNETT case "the High Church clergy; and though each of these judgments provoked a momentary irritation in the party "which was thus defeated in the attempt to eject its adversaries, yet the general sense of the Church has acquiesced in the justice and the beneficent action of the "decisions." The "comprehensiveness thus secured to the Church was not, we admit, likely to be disturbed by any judgment in matters of doctrine inconsistent with the principles laid down in these three cases. But it has already been disturbed in matters of ritual by a decision of the same tribunal, and it is upon matters of ritual that the authority of the Supreme Court is likely to be invoked for the future. Ritual has taken the place which doctrine once held as the immediate occasion of displays of excited partisanship; and, strange to say, some of those who are most anxious to keep the Church of England comprehensive as regards what she permits her clergy to teach from the pulpit are most inclined to narrow her limits as regards what she permits her clergy to do when they have moved from the pulpit to the altar. "ANGELICUS" wisely makes no mention of the PURCHAS case—a case of which it is not too much to say that the question to be decided was in its own nature at least as open, and the language the meaning of which was in dispute at least as capable of the interpretation put on them by the High Church clergy, as the question or the words in the BENNETT case. In themselves no doubt the points raised in the BENNETT case were of much greater moment. But, as in Parliamentary contests the motions which give occasion for the most decisive engagements sometimes relate to matters in themselves of small importance, so in ecclesiastical contests it is not so much the amount of principle involved in a question as the amount of principle which is imported into it that makes it critical. It may be a very small thing in itself whether the priest stands in front of the altar or at the side of it; but, if the former position is fiercely attacked and enthusiastically defended on the ground that it involves a particular doctrine, a decision that the clergy are not permitted to adopt it may be as disastrous in its effects as a decision that the clergy are not allowed to teach the doctrine of which it has been accepted as the symbol. "ANGELICUS" would have regarded a decision which had ejected Mr. BENNETT from the Church of England as a mischievous narrowing of the bounds of the Church of England. That is to say, though "ANGELICUS" himself is no believer in the sacrificial character of the Eucharist, he does not wish to see those of the clergy who are believers in it driven out from the National Church. But a clergyman who believes that he is offering a sacrifice will naturally come to associate certain positions with the act which he is performing, and if the one which appears to him most significant is singled out for attack by his adversaries, it is not strange that he should insist upon retaining it with as much

energy as though his belief in the doctrine were involved in it. In point of fact, his profession of his belief in the doctrine is involved in it. He clings to this particular position because, by becoming associated with the doctrine, it has become one of the recognized modes of propagating it. Consequently to forbid him to assume this position is in effect as much to shut his mouth as though he had been forbidden to preach the doctrine; and if this view of the case is once taken by any considerable number of the High Church clergy, a sustained effort to enforce the decision in the PURCHAS case may have the same result as that which "ANGELICUS" would have deprecated in the BENNETT case. The distinction which is sometimes set up between comprehensiveness in doctrine and comprehensiveness in ritual is only valid so long as those who hold by this or that doctrine have not agreed to express their belief in a certain definite manner. Preaching is after all only one of many forms of expression, and if it is once conceded that the comprehensiveness of the Church of England would be destroyed by a judgment which forbade a clergyman to express his faith by his words, it follows that it might equally be narrowed by a judgment which forbade a clergyman to express his faith by his acts.

There is considerably less danger of such a judgment coming from a purely lay court than from a court composed in part of bishops. The Anglican rubrics are usually vague, and occasionally contradictory, and a lay court will be pretty certain to give them the utmost possible latitude of interpretation. On the other hand, there have of late been symptoms on the part of certain bishops of a desire to make the measure of comprehensiveness in the direction of ceremonial decidedly narrower than they are willing to make it in the direction of doctrine. There are several considerations which may induce them to draw a distinction of this sort. In the first place, a bishop knows something about doctrine; and, though he may not think it of very much value himself, he can make allowances for men who put a higher value on it. But about ceremonial he usually knows nothing, and the fact that a clergyman should set any store by it, when by doing so he offends influential or troublesome parishioners, irritates and disgusts him in a very high degree. Secondly, the Ritualist clergy are not as a body famous for their deference to bishops, and a bishop may be excused for holding that the Church would lose nothing by the expulsion of men so deficient in this pre-eminent Christian grace. In the third place, to allow a man to express his faith by his tongue, but not by his position, has an air of compromise about it which is very dear to a bishop's heart, the more so that what a man says in the pulpit attracts much less notice just at present than what he does at the Communion Table, and it is the error which attracts notice that gives a bishop most trouble. For these reasons it seems far from improbable that the narrow policy of the judgment in the PURCHAS case, rather than the comprehensive policy of the judgment in the three cases quoted by "ANGELICUS," would have been the policy most favoured by the episcopal members of the Judicial Committee in any future prosecution in which the Ritualists are defendants. Now that the disposal of ecclesiastical appeals is handed over to a court composed entirely of lawyers, the toleration extended to those who hold Mr. BENNETT's theories will run less risk of being refused to those who follow Mr. BENNETT's practice. We are confirmed in this view by the fact that the Church Association is opposed to the exclusion of bishops from the Court of Final Appeal. "ANGELICUS" will admit that the Church Association is no lover of ecclesiastical comprehensiveness. It can have no wish to see the precedent of the BENNETT case repeated; it has every wish to see the precedent of the PURCHAS case repeated. If it is to be credited with any instinct as to the sort of tribunal from which it is most likely to get what it wants, there is something significant in its dislike of having ecclesiastical cases decided in the last resort by lay judges.

BISHOP WILBERFORCE AS A CHURCHMAN.

IF it had been Bishop Wilberforce's lot to have succumbed to a lengthened illness, painfully dissected by daily bulletins, the world no doubt would have been the richer by many finely laboured essays, duly apportioning that modified praise with which leaders of opinion are wont to photograph departed celebrities. But the suddenness of his death threw the critics on their instincts rather than their calculations, and the result has been a recognition of his exceptional influence more unanimous than we almost

ever remember in the case of any one who had occupied a public position short of the highest. Even the *Record* condescended to a short fit of charity, while organs of advanced opinion could only qualify their testimony with a faint surmise that the influence which they could not deny would prove to be evanescent. We believe that this opinion is likely to be as unfounded in fact as it is shallow in the reasoning which has led to it. The very circumstances which mark off Bishop Wilberforce's reputation contradict the surmise. The author of a successful work may after his death be superseded by some writer who would have been nothing if not for his predecessor's pioneering; each great campaign tends to obliterate its predecessor; the reputation of judges and of statesmen is specially apt to decay; fashions in art are proverbially mutable; and yet the most enduring fame has been earned through supremacy in all these branches of human activity. In contrast to such reputations won by conspicuous ability concentrated upon a single objective aim, is that which can be earned by general influence operating over a diversified area. It is hit or miss in each case. The former venture more silently and quickly proclaims itself to be a success or a failure; while the work of influence is not only slower, but its results have to be assimilated and reproduced by other and, generally speaking, inferior minds; and withal the gauge of its quality is not only the ability with which it has been handled, but the worth of the objects upon which it has been expended. Below its apparent expansiveness there must be a real concentration of aim and idea to which the various manifestations are referable; and, above all things, such aim and idea must not be one of self-advantage. In short, both species of reputation are built upon the foundation of concentration, though in one case the singleness of object asserts itself, and in the other it has to be deciphered. Can such concentration of aim be predicated of the joyous, popular, ubiquitous, witty Bishop of Winchester? We believe that it can, and that the variety of its outward manifestations proved the real intenseness of its inner working.

The scope of Bishop Wilberforce's public life as a Churchman, though probably never so precisely formulated by himself, was to exhibit and to act out among the people of England the Church of England as an institution about which there could be no dispute, but which, existing as it did in the unquestionable order of things, had to be improved and made the best of for the sake, not only of itself, but of the nation within which it ministered. In every detail a keen reformer, he recommended his projects of reform not by the defects, but by the theoretic perfection, of the institution which he was labouring to improve. His sympathy, and, in concurrence with it, his active help, were unbounded for every effort to amend the body on the part of its members, while he was always ready with compassionate counsel for doubt and difficulty, so long as the doubters and the sufferers retained an allegiance, however faint, to the English Church. But to yield to their doubts, and to transfer their services to another communion, was, in his eyes, to desert the flag. It was an act which never could be pardoned in itself, whatever compassion might be vouchsafed to the offender. In quiet times such a character would, no doubt, have been subject to the constant temptation of wasting itself on benevolent trifles. But the fever-heat days in which Bishop Wilberforce's lot was cast have been such as both to elicit the utmost vital force latent in the character, and also to give it the most abnormal opportunities of asserting its influence.

This is very emphatically a Church of England age for the whole people of England. Those who do not belong to that Church are bound together in more than one opposition to it, of which the philosophic opposition is the most fargoing, and the political one the most systematic and audacious, which has been organized for a couple of centuries. In the one case, the Church of England has to fight as the most powerful exponent of revelation, and in the other to demonstrate that its organic constitution is not in itself antipathetic to revealed truth; while those who are within the Church are mixed up in a more than complicated belligerency, both as between each other and as against that double foe which is assailing the outworks. In the forefront stands that very large party of which one wing used to be designated by the contemptuous nickname of High and Dry, and the other now revels in the ridiculous appellation of Ritualists (these two wings, by the way, being by no means on the most cordial terms with each other), which has now for a period of exactly forty years since the first issue of the *Tracts for the Times* been, in spite of many reverses, follies, and treacheries, gaining strength within the English commonwealth, as the representative of that national and traditional Church which English history and English sentiment combine to mark out—a Church which understands how to reconcile a hierarchical constitution, a liturgical worship, a sacramental system, and a dogmatic basis of truth with a liberal recognition of personal liberty of thought. Close to this party are two others as unlike to it as they are to each other—one the softened representatives of old Puritanism, and the other that incoherent body of strong thinkers all of whom cling to an ideal more or less different from the documentary Church of England, and all wish to put up that Church as a clock-case fit to hold works which will best tell the time according to their reckoning. The actual Church of England comprises these three parties, all of whom may be more or less relied on to contend within its borders for supremacy, and yet, with some eccentric exceptions in each direction, to combine together to keep the enemy from invading a fortress which all have a common interest in defending. The type of leader to sustain such a Church in its actual difficulties—to harmonize its present differences,

and to give it a shape for future conflicts of, it may be, a more acrimonious description—would be a many-sided man of concentrated purpose, talent, eloquence, ready wit, adaptability, and sympathy, who belonged to the party which claimed to be the Church, not as it might be, but as it was, and who could devote himself to harmonizing his ideal Church with the actual conditions of the day up to the front of, but not beyond, the maintenance of coherence between his own section and the other parties which shared in his practical conclusions without committing themselves to his antecedent reasonings. These words describe the career of Dr. Wilberforce as Bishop. The fact that he had worked himself into this position out of the ranks of the *ci-devant* Puritan—and now Evangelical—party, to which he had belonged in days when it seemed to represent the deepest popular earnestness, was in reality an element of strength, saving him as it did, on the one side, from conventionality, and on the other absolving him from having to gather at second hand the opinions of those whom he was refuting. Whatever—speaking *ab extra*—may be the merits either of the Low or the Broad School of Churchmanship, it is certain that the High Church party in all its ramifications is, for good or evil, the most characteristic embodiment of that Conservative Liberalism which is the traditional quality of England; and the man who has occupied the post of its leader with energy, wit, and unflagging devotion to duty at a critical epoch, will have left a mark on the national life of his country which does not require to be proved by the unwilling confession of half-hearted bystanders. Add the marvellous personal gifts of the late Bishop, which we pass over in this relation, and the fallacy of the supposition that his influence could have been evanescent is even more apparent. The peculiar feature in his leadership may probably be said to be its universality. For a man who had realized as he did in all its intensity the constitutional connexion between the Church and realm of England to have laboured so long and so successfully for the revival of Convocation, was only natural; for one who appreciated the future responsibility of the English-speaking races to the remaining world to have toiled for the development of Anglican communities in the colonies, in the United States, and in heathendom, was in the inevitable course of events; but for the man who did all this to have devoted for more than a quarter of a century the most of his time to the myriad distractions of services, teaching, exhortation, and organization—confirmations and consecrations, stone-layings, school-openings, and every other form of village gathering—which have been summed up in the character of the greatest diocesan Bishop of this most busy age, was astonishing; for the Bishop so great in his diocese, and so impressive in every pulpit, to be as great in Parliament, was even perplexing; but, after all this expenditure of vital force, to combine an unflagging reserve of wit, of spirits, of information, with a practical capacity which constituted its owner the darling of society, the friend of the helpless, and the referee wherever good and useful work called for ready talent, at the British Museum, or the Bounty Board, or the Literary Fund, was almost to compass the impossible.

The Bishop of Winchester's treatment of Romanism was a conspicuous instance of his characteristic temperament. Representing, as the High Church movement did, a general reaction from the narrow intolerance of Puritanism, it naturally—even in the persons of its staunchest Anglican adherents—fell into a dispassionate attitude towards a system which contained in an exaggerated form some of its own specialities, and by its scholastic assertion of fair play continually incurred suspicion and unpopularity with those multitudes to whom No Popery was a passion even more than a principle; while fresh fuel was continually being heaped upon the blaze of such suspicions, as year after year—sometimes in a sudden impulse of pathetic despair, sometimes in all the frivolity of the lightest heart, sometimes after a season of ambiguous and disturbing double-facedness—the wisest, most learned, and holiest, as it might be, or else the silliest and most selfish of "Tractarians," buried their doubts and troubles in what we make no doubt has always been to the seceder, at the moment of his secession, the infallible Church of Rome. It might have been assumed that, in accordance with his expansive affectionateness, Bishop Wilberforce would have been foremost among those who made themselves conspicuous by their excuses for the actors, though not for the action. Such, however, was far from being the fact; the Roman seceder was to him, as we have already observed, the clandestine deserter from a lawful service, and drumming-out was his rightful doom. No doubt no man had ever suffered more cruelly in his nearest personal affection than the Bishop of Winchester by the Romanizing drain, and it was impossible that sorrows such as he was known to have endured, acting on such a nature as his, should not have left their mark. But behind individual susceptibilities lay the great personal burden by which the whole order of his career was ruled—the entire subjective realization of the Church of England as the appointed corporate condition of religious life for Englishmen. The Deserter was ignorant, misguided, deluded, and a deluder; but for all that he could not help hanging on to that body as existing in spite of himself, and claiming services from him which did not exist the less because ignored. But the Romanist had joined the rebel camp—he had not only deserted from the national army, but had mounted the traitor's cockade; and thus all the incidents, such as the recognition of ecclesiastical discipline, although at the hands of alien prelates and strange courts, or the craving after the beauty and symbolism of worship, even through the burdensome minutiae of Roman ceremonial, which in the eyes of many a High Church-

man might have been urged in mitigation, were to the staunchest of loyalists aggravations of that crime of rebellion "which is as witchcraft."

Rome was, so to speak, the differentiating test which the Bishop was ever ready to apply to novelties of teaching and practice as they occurred. He had too artistic and poetical a mind not to be both personally fond of ceremonial and ready to appreciate its practical usefulness; while his devotion was of that tender and subjective type which craves to embody itself in smaller and stricter organizations within a large community. Accordingly he gave not only liberal, but active, encouragement to that embellishment of churches and services, and that concentration of piety into societies and sisterhoods, which have nowhere made themselves more conspicuous within the modern Church of England than in the diocese of Oxford. But every effort which secured his help and encouragement was to be subject to a rule of impartial incidence of which the Bishop was not only the lawgiver but the administrator. Each and everything was to be Anglican and not Roman, as Bishop Wilberforce used those two words. It may be that this exceptionally rigid limitation would not quite stand the test of absolute logic; it may be that its application was subject to fluctuation; but, whatever it may have excluded, it certainly let in much which those who from time to time most bitterly denounced the exclusion had been the most eager to net, while that which was excluded was probably something which would have converted into ill-tempered hostility the acquiescence which other sections found themselves constrained to accord to the Bishop's arrangements.

It might have seemed an instance of that which word-mongers are fond of calling the irony of fate, and which plainer folks sum up as ill-luck, that a man who so broadly represented such popular instincts, and whose very prejudices were akin to those of the party which most mistrusted the section of the Church with which he had mainly identified himself, should have spent so much of his public life in an attitude of grave opposition, even among his episcopal brethren, with whom he was so great a power, and should after all not reach the highest dignity which a Churchman can accept from a Prime Minister. Archdeacon Wilberforce was talked of some thirty years ago as the certain future Archbishop of Canterbury. Men passed under him as curates who now wreath the strawberry-leaves round their mitres, although one is a disestablished ornament; and now, at nearly seventy, he has died before a retired Bishop of Winchester as tenant of a see still materially crippled by the survival. Ingenious people amused themselves during the Bishop's lifetime by framing a theory of his character such as should account for the want of the highest official success, which deserves a passing notice as a very grotesque instance of the most absolute misapprehension of one of the most transparent of characters. Their fignient was that of a man of unfixed principles and grasping personal ambition, ever overflowing with unreal civility, and ever conspiring behind the backs of his deduced surroundings. Bishop Wilberforce, no doubt, had his faults, but they were precisely contrary to those so flippantly attributed to him. Representative Englishman as he was, he was a representative High Church Englishman; while the gushing cordiality of his personal bearing was partly the irrepressible good nature of an affectionate and joyous character, and partly the reminiscence of that *vieille cour* politeness which an old man's son, reared in a precise circle, carried down to a rough and ready generation of railroad travellers. Difficult as the curate, suddenly honoured by a confidential accolade, may have found it to realize the fact, we believe that he was at the moment of the hand-shaking as much beloved in heart as in gesture. The belief in Bishop Wilberforce's Machiavellianism was an absurdity worthy of the *Record*. In fact, the source of those occasional mistakes which wore from time to time inevitable in a career of such manifold incidents were generally referable to a deficient rather than to an over-developed knowledge of the worse elements of human nature; for, much like Madame de Staël, who declared that the deaf and dumb man with whom she had been roughly paired was one of the most agreeable members of society whom she had ever met, Bishop Wilberforce was wont to mistake patient listening for kindred enthusiasm. Optimist as he was, he was somewhat inclined to believe in his own powers of working the inferior material up to his own quality; and sometimes the most carefully planned undertaking across the seas, when the lieutenant had strayed beyond the twitch of the silken leading-strings, failed to fulfil the roseate expectation. Still the large and buoyant heart never lost hope in the undertaking. The great promoter came smiling up again; the new subordinate had to be found, that was all. The study was cleared, some fresh Committee trooped in from the ante-room, and the work of building up a great English Church at the antipodes gave way to the perhaps more complicated problem of finding money for some National School in the back slums of Lambeth, soon to be cut short, to the vexation of long-winded churchwardens, by the hint that Parliament exacted duties even more important than those of rectifying suburban ignorance.

One thing never occurred to Bishop Wilberforce, and that was to strike work or make conditions as to his activity; and so successive Ministers were never without plausible reasons for overlooking him to fit the trappings on the less muscular or willing horse. Lord Palmerston was in the full odour of sanctity as the Man of God when Archbishop Musgrave died, and so, against the remonstrances of his own colleagues, he promoted the youngest prelate to the Northern Primacy over the head of the son of the

great Yorkshireman, William Wilberforce. Canterbury fell vacant at the instant of Mr. Disraeli's manipulating the first general election of a householder Parliament, and Bishop Wilberforce's succession to the see of London was supposed to be in some occult manner inconsistent with the Protestant cry of the moment. Some of his friends thought that, with the weight of more than sixty years upon him, the Bishop of Oxford would have more wisely declined the much heavier responsibility and newer work of the vast see of Winchester. But it was his nature to welcome work and responsibility from which other men would have shrunk with undiminished credit. Moreover, his earliest clerical recollections, and those personal affections which cast their secret shadow over his otherwise joyous life, clustered round that diocese. He has been called away before he made more than a commencement; but we are sure that these few years will have left the vast South London diocese in a condition far different from that into which it had drifted during the long era of Bishop Sumner's amiable conventionality.

THE MINOR VIRTUES.

THERE is probably a wider philosophy than people generally suppose in the old prudential proverb about taking care of the pence and leaving the pounds to take care of themselves. At any rate, the principle involved in the maxim is one which is and has been very generally acted upon. The ancients, it may be observed, were far more particular and obsequious in their attentions to the *Di minores* than to the superior deities. Divinities like Bacchus, Æsculapius, or Prometheus, received twice as much civility in the way of games, mysteries, sacrifices, and the like, as the upper twelve of celestial society. Perhaps it was considered to be, so to speak, a better investment of piety: for naturally *parvenus* deities, or those of doubtful reputation, like Pan or Priapus, would be more grateful for proofs of respect than others to whom the recognition of mere mortals could not be a matter of any consequence. But possibly the more powerful motive was that it was a cheap and ready way for gaining a character for observance of religious duties. Every one was supposed by courtesy to reverence the great gods; so, to be conspicuously devout, it was necessary to take up with the second-class deities. Something of the same sort may be noticed in our culture of the virtues. In common politeness everybody is accredited with the possession of all the cardinal virtues in their highest degree; consequently any one in modern society who is ambitious of being considered an especially virtuous character is in a measure driven to fall back upon the minor virtues. Hence it is that the virtues of this order are apt to be a trifle more obtrusive than is quite consistent with the aphorism that virtue is its own reward. A man who has—to borrow an expressive phrase from the dialect of sport—"put all his money" on the minor virtue of Punctuality, for example, is compelled to call attention to his punctuality on every possible occasion in order to get credit for it, and thus, by implication, he is always convicting his neighbours of unpunctuality. This naturally arouses a spirit of inquiry as to whether punctuality is, after all, so much of a virtue as to justify any one in making such a fuss about it, just as we can conceive a too ostentatious Supererogarian Ritualism provoking damaging inquiries into the moral character of Pan and his claims to divinity. About the utility and the advantages of punctuality there can be no manner of doubt. Time is a commodity as strictly limited in quantity as coal itself—at least as far as each individual is concerned—and whatever tends, as punctuality does, to economize time is of course a good thing. But it is good only as a means to an end, not as an end in itself, and there are some people who do not cultivate punctuality for the saving of time, but rather devote their time to the cultivation of punctuality. In fact, it may be observed that a large proportion of people eminent in the practice of this minor virtue are people who have more time on their hands than they know what to do with; who, when they have punctually swallowed their breakfasts, have nothing on earth to occupy their minds with except watching for the approach of the luncheon hour. To such people any event which breaks the monotony of the day is an important epoch, just as to travellers in the desert the merest sand-hillock in the distance is an interesting feature in the landscape. It is a positive godsend to them. It gives them something to do and something to think of—or, perhaps it would be more correct to say, excites a certain mental motion which may be considered a kind of rudimentary form of thinking. And yet, forsooth, these people must give themselves prodigious airs of virtue, and crow over all creation, because they never miss a train, fail in an appointment, or are late for anything, as if this precious punctuality of theirs were acquired by severe self-denial, and practised solely from a stern sense of duty.

Punctuality is by no means the only minor virtue which can be irritating in this way. That particular variety of the virtue of orderliness which women glorify under the name of "tidiness" is a most excellent thing in its way, "A sweet virtue, look you," as Launce says, when cultivated in moderation; but who has not groaned under its oppressiveness in the houses of the unco tidy? Who does not know the house where the maxim "a place for everything, and everything in its place" is so rigidly construed, that it seems contrary to the *religio loci* to make use of anything; where books are not meant to be read, but to radiate symmetrically from the centre of the drawing-room table; where when you take a chair you cannot help feeling that in some degree you take a liberty

also; where the end and purpose of every article is apparently to wear a cover of some sort, and the making of covers for things is the main occupation of the females of the family? In their full perfection perhaps such houses are only to be found among the curiosities of provincial middle-class life. The great worshippers of tidiness as an end in itself are people like George Eliot's Dodsons and Tullivers, people with whom it is an article of religion to have "best things" reserved for some dimly contemplated occasion in the remote future. But the Dodson and Tulliver calibre of mind is not confined to any one stratum or formation in the social system. It is simply a variety of the one-ideaed mind, an order of mind by no means sparsely distributed, and apt to be irritating if you are brought into too close contact with it. The unicorn is very well in heraldry, where he has one side of a shield all to himself, but he must have been an abominable nuisance in the Ark with that obtrusive horn of his. In much the same way one-ideaed people are nuisances in society. They cannot keep their one idea out of their neighbours' eyes and ribs, and they are by no means least exasperating when they and their idea are of a dull commonplace nature, as is the case with those who make a minor virtue of tidiness. With the same sort of people cleanliness, also, is apt to degenerate into a minor virtue, and as a minor virtue it is all the more aggravating because there is no saying anything against it. Except in the case of old amours and beggars, and one or two other objects of purely æsthetic interest, it is impossible to have too much cleanliness, and any one assuming and parading it as a virtue holds a perfectly unassailable position. This is what makes it such a favourite with women, more especially with those who pride themselves on keeping the opposite sex in subjection. For making men thoroughly uncomfortable, and reducing him to a wholesome sense of his feebleness and inferiority, there is nothing feminine ingenuity has discovered more effective than that institution which takes the form of a general cleaning, scrubbing, and putting of things to rights. There is, indeed, one occasion on which woman can assert herself with more crushing power. Leech's pencil has caught it in that touching picture of the abject condition of Mr. Peewit, who has just had "a little addition to his family." Careful observers have remarked that when an event of this kind takes place in a household, every female in it, down to the merest chit of ten or eleven, puts on an extra air of importance, carries her head several inches higher, and relentlessly snubs and thwarts the male creature in every possible manner. Strong in her weakness, woman instinctively feels her advantage, and uses it. But, however great her zeal for the authority of her own sex, and the subjugation of the other, her opportunities in this way are necessarily—and, we may add, providentially—limited; whereas, she can, if so minded, have a cleaning day once a week; and the latter event, if inferior in moral dignity to the former, can be made almost equally productive of discomfort to the enemy. As a companion to the one by Leech above mentioned, look at the picture by Dickens of Captain Cuttle suffering under one of Mrs. MacStinger's great cleaning days, "sitting with his legs drawn up under his chair, on a small desolate island, midway in an ocean of soap and water, everything wet and shining with soft soap and sand, and the air impregnated with the smell of dresaltary." Furthermore, it is always one of the essentials of the ceremony that everything should be removed from its accustomed place, and afterwards put just where no one would be likely to look for it; and of course the opportunity is taken to show that disrespect and contempt for man's household gods which is a characteristic of the properly constituted female mind—all which cruelty is made the more cruel by the fact that it is perpetrated in the name of virtue, and that remonstrance is proof positive of depravity in the victim. This was clearly the great charm of cleanliness in the eyes of Mrs. MacStinger. It was such an unimpeachable instrument of torture. "We had some words about the swabbing of these planks," said the forlorn Captain, "and she stopped my liberty." Of course she did.

Then there is early rising. In the whole string of the virtues, major or minor, cardinal or otherwise, there is not one about which the possessors are so abominably conceited as this. People endowed with so uncomfortable a gift are, no doubt, entitled to some little indemnification; but no degree of self-mortification could justify the preposterous airs of superior virtue which people who turn out of bed earlier than their neighbours always give themselves. Nobody was over ten minutes in the society of a confirmed early riser without being made aware of the fact, and, directly or indirectly, enabled for not being one himself. Now, is early rising such a virtue, and are these early birds so very virtuous, that we are bound tamely to submit to this? Of course we know all the stock arguments; they impress them upon us often enough. It is they who get the worm. Well, for our part, they are welcome to it; we don't want worms. Then they gain so many hours over us who lie abed, in proof of which they point out that the *Waterley Novels* were all written before breakfast. Very good; let them produce their *Waterley Novels*; meanwhile we shall take leave to remain sceptical as to the reality of this gain of time. The practice is a healthy one, they say, and they always brag of their superior appetites at breakfast, as if there was something meritorious in an extra consumption of ham and eggs. Now the simple fact of the matter is that in at least nine cases out of ten your early riser is merely a fidgetty, restless animal, who is incapable of repeating after the fashion or at the season ordained by civilized mankind; and as to his inhaling the pure morning air, that is all moonshine; it is pure self-conceit that he inflates himself with. In fine weather he struts abroad

crowding over a slumbering world; in wet he moons about the house a reproach and hindrance to the servants setting about their morning ministrations, and all through the period of family prayers he is filled with pharisaical pride that he is not as other men whom the prayer-bell sometimes catcheth at their toilet. That he makes any use of the hours so gained is in general pure fiction. But even if he does, what then? He adds to his day very much after the fashion of the man who tried to lengthen his blanket by sewing on to the top what he cut off from the bottom. He is very brisk, not to say arrogant, in the morning; but he is useless for all social purposes in the evening. Drowsy after dinner, torpid after tea, he hibernates like a bear during the sociable season ushered in by the candles, and is most lifeless when civilized man enjoys life most. But even in that abject condition he finds something to brag of; for with an insolent yawn, as he takes his bedroom candle, he reminds us that he was up four hours before any of us were stirring.

The cardinal virtues, it may be observed, very often have minor virtues attached to them which play a part something like that of the tender to a man-of-war. The cardinal virtue is too mighty, stately, and imposing an affair to be put in motion on every trifling occasion. It lies at anchor for the most part, reserved for great emergencies, while certain little minor virtues in attendance on it are constantly on the move, keeping up its connexion with humanity. Benevolence, for example, cannot be always brought into action in the intercourse of everyday life. You are bound to have benevolence ready at the service of your fellow-creatures, but you cannot be benevolent to your neighbour at dinner or to the man next you in a railway carriage. Under such circumstances you must be content to allow the work of benevolence to be done by some such little virtue as sociability. Unfortunately, however, the tender in this case is very apt to forget its subordinate position, and give itself all the airs of a first-rate, and then the minor virtue becomes distinctly objectionable. There are few greater social nuisances than the man who plumes himself upon his sociability, and makes a sacred duty of talk. He is a sort of human sparrow, a bird from whom you get neither song nor silence. To keep up a perpetual game of verbal shuttlecock (which he calls conversation) is with him a condition of existence. His aphorism is not *cogito ergo sum*, but *loquitor ergo sum*; and so, lest he should cease to be, he will be talking. Nor is he entirely selfish in this. What is necessary for himself he holds to be equally necessary for you, and consequently his apparently uncalculated assertion of the fineness of the day, forcing you to respond with some similar meteorological hubbub, is in part dictated by benevolent impulses. This, however, of course rather aggravates the infliction, for boredom is doubly bitter when you are expected to be thankful for it. Akin to the sociable talker is the "good correspondent," as he calls himself. As the former piques himself upon his readiness to chatter with any one he comes across, and his ability to keep up chatter for any length of time, so the latter prides himself upon a faculty for spinning letters out of nothing for the purpose of laving distant friends under an obligation. Both are firmly convinced that they are most meritorious persons, and undeniable benefactors to their species, and both consider you a very defective character if you do not fully reciprocate their attentions. We may be excused, however, if we doubt the validity of their claims. If the chatterer is a sociable being, it is simply because he is afflicted with an incontinence of words and a penury of ideas; and as for the good correspondent, his goodness is chiefly due to the fact that time hangs heavy on his hands, and that he is sorely put to it to find something to do.

This is what makes the minor virtues so aggravating. It is bad enough to be crowded over by any one; but to be crowded over by people whose coin of vantage is the possession of an entirely negative character is what flesh and blood cannot help resenting; and it is on these grounds that we hold that society has a right to resist their pretensions. We do not question the virtue itself. We say to them:—sociability is very desirable; punctuality, orderly habits, love of cleanliness, all these are excellent things; and there is even a good deal to be said for early rising in moderation. But what we do not admit is your right to give yourselves those airs of superiority which you are so fond of assuming. Be as punctual as you like, get up at any hour you choose, cultivate the art of writing long letters about nothing as much as you please, but don't call upon us to admire you as model characters on the score of these virtues, for we don't.

THE BERKSHIRE DOWNS.

EVERY one who has gone along the main line of the Great Western Railway with his eyes open—there are people, we believe, who, instead of using their eyes, put up the windows and read shilling novels—must have marked the long line of the Berkshire hills, and, above all, their most strongly marked point, where the eye is caught by the eight-sided tower of Uffington Church, over which the eye, if it be well trained, will be further caught by the figure of the famous White Horse, perhaps first of all by his tail. Possibly those who have been used to other white horses, cut out in later times to commemorate His Most Sacred Majesty George the Third or some personage equally unromantic, may be inclined to cavil at the form of the primitive animal, and to hint that the beast from whom so lank and lean a figure was copied must at least have been strangely out of condition. But, according to the Darwinian theory, we may expect that the forms of horses and other beasts should change in the course of ages.

Thus the Bayeux Tapestry might lead us to believe that the horses of the eleventh century had their tails set on after a fashion which has gone quite out of use among horses of flesh and blood, and which is kept on only, doubtless as an archaism or a survival, among the wooden horses which serve as toys for children. We should therefore be rash if we were to pronounce judgment offhand that the White Horse carved on the side of the "Mons Albi Equi" of Berkshire may not have been a true representation of what horses were in those remote times when the figure was wrought. And it is at least certain that it is not the only horse of the breed, as others of exactly the same cut are to be found on early British coins. At all events, whether those who are learned in horsemanship would approve of him or not, the White Horse is there on the side of the hill to which he has given his name at least since the twelfth century, and where he was doubtless carved very many centuries before that. Readers of Mr. Thomas Hughes will perhaps start at this last saying, and they may rise up in defence of the "tradition" which assigns to the White Horse a date three centuries only before the twelfth. It would be rank heresy in many eyes to doubt that Alfred's victory of *Æscadūn* was won at this end of the downs, and that the White Horse was carved—Mr. Hughes has given us a picture of Alfred's army in the very act of carving it—to commemorate the momentary gleam of success which shone on the West Saxon arms in the year of battles. That year may perhaps be most reverentially described as the eve—such an event may surely have a whole year to its eve, and a Pythian period to its octave—of the foundation of University College. The truth is that this is one of the best cases of the untrustworthiness, or rather of the non-existence, of what is called tradition. People tell you, wherever you go, that there is a "tradition" about such a place, that so and so did so and so there. Now a real tradition, when it can be found, is always of some value. It is quite certain not to give the exact truth; but it is equally certain to give something which has grown out of the truth, and the way in which it has grown out of it is always instructive. By a real tradition we do not necessarily mean that the story should have been handed down from father to son to the present moment without being committed to writing; it is enough if it has been in any way really preserved on the spot, uninfluenced by anything from outside, whether the records of chroniclers or the guesses of antiquaries. But a genuine tradition of this kind is a thing which is hardly ever to be found. When we come to look into the evidence of a so-called tradition, it almost always turns out to have no better root than the guess, lucky or unlucky, of some antiquary a century or two back. The local wise man gives his opinion that the thing was so; the opinion, especially if it be thought to be to the credit of the district, is readily adopted by his neighbours; in the next generation the opinion is no longer an opinion, it has become a tradition on which it would be a slur on the honour of the district to cast any doubt. How little what calls itself tradition is really worth is shown by the fact that so many so-called traditions can be upset by distinct documentary evidence in black and white. To take a familiar instance, local belief, and what calls itself local tradition, assert that Edward the Second was born in a certain room in Caernarvon Castle. It is absolutely certain that he was not born there, because it is known from records that that part of the castle was built by himself. Some one who knew that Edward was born at Caernarvon, but who did not know the dates of the building of the different parts of the castle, must have risked a guess that this particular room was the place; the guess was adopted; what one man said was likely to have happened, the next man said certainly did happen; and so, in a very short time, the guess would become a tradition which it would be a point of local honour to maintain. We cannot in the same way prove that the White Horse was not carved by Alfred because there most certainly was no record made at the time when it was carved; but there is no reason to think that it was carved by him, beyond the guess of a local antiquary of the last century, while there are many strong reasons to make us think that it was not.

The whole matter of the White Horse, and of the historical events connected with the Berkshire Downs, has been within the last two years worked out with great care by Mr. James Parker in the course of several papers read before the Oxford Architectural and Historical Society, followed by excursions of the members of the Society to the spot. Mr. Parker has also gone most minutely into the boundaries of the district as laid down in the various ancient charters. In short, he has got together materials for a fuller local monograph of the highest value. The calm and well-reasoned way in which Mr. Parker makes out every point of his case from the records of the Chronicles compared with the appearances of the ground forms an amusing contrast to the impetuous way in which Mr. Hughes accepts "the local tradition," which turns out to be no tradition at all, but the mere guess of an antiquary named Wise in the first half of the last century. The "tradition" or guess places Alfred's battle of *Æscadūn* at the western end of the ridge; it believes that the White Horse was cut out by the victorious English to commemorate the victory; it is even driven to believe that such a vast earthwork as Uffington Castle just above the Horse was thrown up either by Danes or English, it does not much matter which, as an evening's amusement after a day of marching or fighting. Then there is a detached point near the Horse, which the story calls Dragon Hill, where the more zealous believe that St. George killed the Dragon; but no one seems to have been sharp enough to guess that there Alfred raised the Dragon of Wessex. For all this, as far

as we know, there is absolutely no groundwork beyond the modern name of a house—not a parish—called Ashdown Park, towards this end of the ridge. But any one who compares the ground with the Chronicles, without troubling himself about "traditions" or guesses, will see, as Mr. Parker sees, that the battle must have been fought at the other end of the Downs, the end looking towards Wallingford and Reading. *Æscadūn*—in modern English Ashdown—is not any particular spot, Ashdown Park or any other; it is the name of the whole range of hills. This is made perfectly plain by the language of the Chronicles under the year 1006. There is a central point on the hill, marking, it would seem, its greatest height and looking out over a wide view to the north, which still, under the corrupted shape of Cuckamsley, keeps its ancient name of Owicelmeshlaw. In modern form this ought to be *Quicelmeshlaw* or perhaps *Quicelmeshlow*; the *hlew* or *low* being a vast barrow which is now unluckily partly broken down, and so surrounded by wood that the clump and not the tump is the object which catches the eye in the distant view. Whether the strange form of *Seutchemshly*, which the place bears on the ordnance map, keeps in the unexpected *f*, any trace of the old aspirated sound of *hl* in *hlew*, or whether it is a mere misreading or misprinting, we will not presume to guess. Nor will we venture to guess what was the original date or object for which Owicelmeshlaw was raised. One can hardly doubt that it takes its English name from Owicelm, one of the first two Christian Kings of the West-Saxons; but, as he was a Christian King who in 636 was baptized at Dorchester, and died the same year, his burying-place would be far more likely to be found in the minster of Dorchester—for Sherborne and even Winchester were not yet—than in this heathenish-looking tump on the top of the hill. It may be far older than the time of Owicelm. It may be a beacon, it may be a boundary; it may mark the extent of the three thousand hides of land "be *Æscadūn*" which in 647 Kenwalla gave to his kinsman Cuthred, the son of Owicelm; but at any rate Owicelmeshlaw became in Berkshire what *Pendden Heath* was in Kent. It was, as appears from a charter, in *Codex Diplomaticus*, iii. 292, the place of gathering for the great *Gamōt* of the shire. No place could be fitter for the purpose than this central height. For a district like Berkshire—a long narrow district, with a strip on each side along a range of hills—a spot on the top of the hill was far more central than any town or other place on either side of it. And a place of meeting it remained till very late times; for, according to the local books—which on that kind of point may be trusted—a fair went on there till the reign of James the First. The place then was in every way one of the most conspicuous and well known in the district; and in the beginning of the eleventh century a saying was current that, if the Danes ever got up to Owicelmeshlaw, they would never go to the sea again. It is plain that this prophecy, like so many others, is capable of two opposite meanings; but, at any rate, the Danish army in 1006 was anxious to prove its truth. The story is told, in one of the most graphic and even sarcastic parts of the Chronicles, how, after St. Martin's mass, the Danes set forth from their "frithstool" in Wight, and how at midwinter they went out to their "ready farm" through Hampshire and into Berkshire to Reading, and there they did after their old wont, and kindled their "war beacons" as they went. Thence they went to Wallingford, and burned the whole town; then they tarried one night at Cholsey, and then they went along *Æscadūn* to Owicelmeshlaw (wendon him þa andlang *Æscadūn* to Owicelmeshlawe). Nothing in human language can be plainer; no one can conceive that Danes or anybody else ever marched from Cholsey to Owicelmeshlaw along Ashdown Park; but they went up the hill—"mons qui vocatur *Æscadūn*," as it appears in King Eadred's Charter (*Cod. Dipl.* v. 331)—and went along the ridge till they came to the great barrow. They then went back by another way; that is, they marched down the other side of the hill to the south. The meaning of *Æscadūn*, then, as taking in the whole range, is perfectly clear. As far as the name goes, Alfred's battle may have been fought at any point of the hill, on its top, on its sides, on the lower rising ground below it—the "campestris *Æscadūn* latitudo" of Asser—at any part of the range which may fit in with our accounts in other respects. Being thus set free from any particular "traditional" site, we shall easily see that the battle of 871, the year of the nine pitched battles, must have been fought at the eastern, and not at the western, end of the Downs. In 871, as in 1006, the headquarters of the Danes were at Reading. The battle of *Æscadūn* was fought eleven days after they got there; but in that time two fights had been fought already. On the third day two of their Earls had ridden out to plunder and reconnoitre, and had been defeated, and one of them slain, by the English Ealdorman Æthelwulf. Four days after that there had been a fight at Reading itself, in which the Danes had the victory and Æthelwulf was slain. Four days later in the fight "on *Æscadūn*" itself; by that time King Æthelred and his brother the Ætheling Alfred had come at the head of their whole force. We cannot follow Mr. Parker into every detail of his topographical argument; but it would need some very strong argument the other way to take us to the other end of the hills. Surely, unless some special reason forces us to place it somewhere else, we should place the operations of these four days, like the operations of the seven days before them, at the end of *Æscadūn* nearest to Reading. Mr. Parker has found a very good site at Lowbury Hill, and, if anybody wants a "traditional" name, there is "the King's Standing-ground." The King who stood on that ground is just as likely to have been Charles the First as Æthelred; still the name most likely does record some act of some King, and it is

so far better than a sheer invention like the tale of the White Horse. That all this part of the campaign took place within a very narrow compass is further suggested by the intervals between the fights. While the first three battles all come within eleven days, fourteen days pass between Æcesdūn and the next battle at Basing in Hampshire, and two months between that and the battle at Merton in Surrey, where Bishop Heahmund was killed and where King Æthelred seems to have come by his death-wound.

The whole range of the Downs is a country full of interest, a country full of remains which were ancient in the time of Alfred. The view takes in the whole borderland of Mercia and Wessex, the scene of so much of our earlier, and of a good deal also of our later, history. To the west lies the famous cromlech which bears the name of Wayland, Weland the famous smith of Teutonic legend, though Mr. Parker again doubts whether it is anything better than a guess which connects this primeval relic with the "Welandes smiðða" of King Eadred's charter" (*Cod. Dipl.* v. 332). This we do not pretend to decide; but it strikes us that Mr. Parker goes a step too far when he doubts, what is quite another question, whether the "Welandes smiðða" means the mythical Weland. The cromlech belongs to the race, whoever they were, that built cromlechs; the White Horse, the "castle" as it is called, above it, the other "castle" at Latcombe, the mass of the remains which cover the hill, are doubtless British works which looked much the same at the time of the fight of Æcesdūn as they look now. Of the many barrows on the hill some can be identified with the various "hlæwas" spoken of in the charters, probably Hildeshlæw, Wutoceshlæw, and others. And, at any rate the "Icenhild weg" and the "portstræt" of the charters are there still, and bear their ancient names with hardly any change. The "Ickleton way," as the maps call it, is a broad grassy road, running along the top of the hills, on which cultivation has encroached but slightly, and along the side of which we ever and anon come on one of the thorn-trees which are characteristic of the district, and one of which is spoken of in Asser's account of the fight at Æcesdūn. The whole line is one of those districts where nature and history combine to give a certain freedom and buoyancy of spirit. And its charm is none the less, if its historical associations are searched out by the light of real facts and real arguments, instead of by the easy process of taking guesses on trust.

EVIDENCE TAKEN BY THE ENDOWED SCHOOLS COMMITTEE.

THE Report of the Committee on the Endowed Schools Commission deserves attentive study. Many schoolmasters desired reform, and they are now threatened with revolution. They prayed for a cupful of wind, and angry Heaven answered with a hurricane. The motive power which was sought for the improvement of old-fashioned grammar schools has been used to launch them on a wild career of innovation of which it is impossible to see the end. The Commissioners, calmly confident in the superiority of their own principles, ride on the whirlwind and direct the storm. The coach which they drive has come to move at such an accelerated pace that sober people of various parties are likely to combine in holding on behind and trying to put on the drag. One of the witnesses said that he thought it would be "very satisfactory to the people of England" if the preamble of the Endowed Schools Act contained a distinct recognition that the promotion of Christianity was one of the main designs of the founders of Endowed Schools. It would perhaps be said by the authors of the Act that this, which is not said, is implied, and of course it ought to be implied. But it has become dangerous to trust to implications. When the Endowed Schools Bill was brought in by Mr. Forster, he said that good schools had nothing to fear from its operation; but unfortunately the Head-Masters and Governing Bodies of some of the best schools in England are greatly terrified by what the Commissioners have done, and still more by what the Commissioners have said. When Mr. Forster's words are quoted against the Commissioners, it is answered that all depends on what is meant by a good school. One of the Commissioners under the Act, who was Secretary to the Schools' Inquiry Commission on whose Report the Act purports to be founded, thinks that the people of England have insufficiently read the Blue-book of the Schools Inquiry Commissioners. We can only hope that he may not have to make the same complaint as to the Blue-book of the Committee which has lately inquired into the conduct of his own Commission. We do not think that any impartial person can read the evidence which relates to King Edward VI.'s School at Birmingham without concluding that the Commissioners have gone much too far in interfering with an undeniably efficient school. They are wanting in that practical wisdom which might have taught them to let well alone.

It is, however, difficult to convey any adequate notion of details within the compass of an article, and therefore we will turn to one or two matters of principle. To put the matter plainly, the Conservatives and Church party were, perhaps through their own fault, deceived as to the consequences of a Bill which they allowed to pass with less discussion than was due to its importance. It is only just to say that the Commissioners under the Act were themselves surprised at the operation which has been given to the seventeenth section of it. Lawyers of course know that the marginal note to a section of an Act of Parliament is not part of

the Act, and cannot be quoted in a court of law in support of a proposed construction of the section. But members of Parliament who are not lawyers are apt, when a Bill is brought in by a department of Government, to look at the marginal notes to discover the intention of its authors. Mr. Forster brought in this Bill, with these words in the margin of Section 17: "Governing Body not to be disqualified on ground of religious opinions"; and Mr. Forster's department instructed counsel to argue before certain members of the Privy Council that the effect of the clause was contrary to that of the marginal note, and that under it incumbents of parishes were disqualified to be members of Governing Bodies as incumbents. This episode in the history of the Endowed Schools Commission deserves the fullest possible publicity. In many ancient grammar schools the incumbents of one or more neighbouring parishes are, as might be expected, trustees *ex officio*. The Commissioners judged that it was not only lawful but expedient to adopt this provision, and accordingly their early schemes contained it. But the Committee of Council on Education, urged by Nonconformist supporters of Government in the House of Commons, and countenanced by an opinion of the Law Officers of the Crown, rejected these schemes on the ground that this provision was illegal. In order to settle the question thus raised a sort of friendly suit was instituted between the Committee of Council and the Commissioners, and this suit was heard before certain legal members of the Privy Council selected for that purpose. We are informed that the Solicitor-General delivered a powerful argument against the legality of these *ex officio* trustees, and we infer that this argument prevailed. We know, or at least we have read in the Blue-book, that the Lord Chancellor has declared that his opinion is opposed to that which was given by the Law Officers. We also know that the construction which has been thus adopted of the seventeenth section of the Act is opposed to that which every reader of the marginal note would have supposed to be its meaning. We also know that in this as in other similar cases, one of the parties to the suit being a department of the Government, the same department selected the members of the Court which heard the suit. Lastly, the result is adverse to the Church of England, and inexpedient even in the judgment of persons who do not profess to be friendly to that Church.

The section enacts that in every scheme, with an exception thereafter mentioned, the Commissioners shall provide that the religious opinions of any person shall not in any way affect his qualifications for being one of the Governing Body. The section was intended, as everybody knows, to remove a disability of Dissenters, but it has been so construed as to impose a disability on incumbents of the Church of England. The rule of the Court of Chancery was that it would not appoint a Dissenter to be trustee of a grammar school, and the section was directed to abrogate this rule. Religion should not henceforward "affect" the qualification of any person to be a governor, meaning that it should not impair or take away his qualification. But if the Commissioners, following the terms of an existing trust deed, provided in a scheme that the incumbent of a parish should be *ex officio* a governor, it was said that thus they allowed religion to "affect" his qualification, because his qualification depended on his status, and that depended on his religion. This must have been the view of the Law Officers of the Crown, which was adopted by the Committee of Council on Education. It is a view which, we should think, might easily not be taken, because it depends wholly on a strained construction of the language of the section, and there is nothing elsewhere in the Act to support it. The case was argued with closed doors, and we do not know what the decision was, but we infer that it sustained the Committee of Council in holding that a clause which was intended to remove a disability from Dissenters had imposed a disability upon Churchmen.

It may of course be said that it was the fault of Churchmen to allow a clause thus ambiguously framed to pass. But Churchmen may fairly answer that they as well as Dissenters are entitled to expect some protection and consideration from Government. The same astuteness which was exercised against the Church after the passing of the Bill might have been employed for the protection of the Church during its progress. At any rate the marginal notes of an important Bill ought fairly to represent the effect of its clauses, for otherwise they are likely to mislead those readers who are not lawyers. The marginal note says that governors shall not be disqualified by religion, and the clause has been interpreted to mean that they should not be qualified by religion. The language of the 19th Section, upon which the greater part of the discussion upon the Act has turned, cannot fairly be called obscure, but it has produced effects which many of those who accepted it as a reasonable compromise did not foresee. The results which it has produced are surprising and almost absurd. Thus the grammar schools of Sherborne and of Birmingham were founded under charters similar in terms of King Edward VI., yet the Commissioners have ruled that the former is and the latter is not Denominational under the Act. It happens that in the case of Sherborne there is extant something in the nature of directions as to worship or religious teaching, dated within fifty years after the foundation. But in the case of Birmingham there is nothing of the kind extant that goes back so far. Yet nobody doubts that the practice as to worship and religious teaching in these two schools was identical. When the Commissioners, therefore, declare that Sherborne is, but Birmingham is not, a Denominational school, people say that this may be law, but it is not common sense. In these, as in other schools founded under King Edward VI., the trustees

are empowered to make statutes with the consent of the bishop of the diocese. It would be difficult to contrive any provision which to ordinary understanding would appear more clearly to stamp a Church of England character upon a foundation. Yet this provision became under the Act—at least as the Act has been interpreted—irrelevant. Unless religious instruction according to the formularies of the Church of England is required by the “express terms” of the foundation or of some instrument dated within fifty years after the foundation, the school is not “Denominational” under the Act. It is certainly remarkable that in this, as well as in the 17th Section, language has been adopted which when it comes to be interpreted proves unexpectedly adverse to the Church. We may perhaps venture to say that there must have been some clever persons among the framers of the Act who did not specially charge themselves with the protection of the interests of the Church of England. The fair professions with which the Bill was introduced have been forgotten or repudiated, and the interests of the Church of England have been dealt with according to the letter of the Act. The Dissenters’ view of the early foundations is that they are national and not appropriated to any particular denomination; but even if this point be conceded, it scarcely carries us to the desired conclusion. The Church of England is in possession, and for many purposes, under various systems of law, possession has been wisely allowed to confer title. The Church being in possession, the religious teaching of the schools has been that of the Church, with the protection to Dissenters of a conscience clause. This was the law or practice of grammar schools under the Court of Chancery, and it is at least doubtful whether the Commissioners have improved upon it. They have ruled, or would rule if they were allowed to have their way unchecked, that the great majority of grammar schools are not Denominational, and that therefore there is no obligation upon the Governing Body to give religious instruction upon the principles of the Church of England. They consider it to be their own duty merely to require that the Governing Body and the Head-Master shall make proper provision for religious instruction in the school. The question what the religion is to be in which the instruction is to be given is left to arrange itself according to circumstances. The officers of the Commission think that under this clause some religious instruction must be given; but they do not venture to assert that the religion in which the instruction is to be given must be Christianity. Indeed, if they admitted or asserted this, they would find difficulty in escaping the conclusion of the Court of Chancery that, in the absence of special provision, the religious instruction must be according to the principles of the Established Church.

These matters are sufficiently irritating and disquieting to Churchmen; but if Churchmen stood alone they might not have been able to arrest the progress of this Commission. It happens, however, that not Churchmen only are affected by the meddling and muddling of the Commissioners. Mr. Alderman Lawrence, one of the Liberal members for the City of London, examined the officers of the Commission with particular strictness, and Mr. Locke, the Liberal member for the Borough, has spoken strongly in the House of Commons against their interference with existing bodies of trustees who were doing their duty well. The ordinary Englishman, to whatever party he ascribes himself, hates beyond everything a theorist, and the Commissioners and their officers are emphatically theorists. It is a pity that they have misused a magnificent opportunity; but probably there never was a public body who so misunderstood the public wants and wishes. By arrogance and impracticability they have incurred almost unanimous condemnation.

AMATEUR MONASTICISM.

IT is some time since we last had occasion to notice the eccentricities of the person styling himself Father Ignatius. Of late indeed he seems to have chiefly come before the public in the capacity of a sort of Ritualistic Spurgeon, as he is depicted in Mr. Davies’s book on *Unorthodox London*, which was reviewed not long ago in our columns. But it would appear from the strange case of “Todd versus Todd,” which has just come before the Vice-Chancellor’s Court, that these preaching raids on the metropolis have another object besides that of general edification. We were aware, in common with the rest of the public, that an establishment called Llanthony Abbey existed somewhere in Wales under the direction of Father Ignatius, though we did not know how many or how few inmates it contained; and it now appears that there is also “an establishment for women, called a Convent,” or “Priory,” under the same direction, at Feltham. The reverend father evidently finds his London discourses an effectual means of beating up recruits for these institutions.

On Friday week Mr. John Todd appeared before the Vice-Chancellor, to make the following statement. A fortnight before his son, Richard Alfred Todd, a boy of seventeen, fresh from school, whom he had just placed in his counting-house to learn the business of a merchant, had startled him by the information that he wished to become a monk. Mr. Todd senior, who had probably never thought of monasteries except as an obsolete variety of mediæval Popish corruptions, “could not at first realize his son’s meaning,” and of course did not approve of his project. As to its meaning, however, he was very speedily enlightened. Next morning, without making any sign, Mr. Richard Todd disappeared, and after a diligent search the

following letter, which he had apparently forgotten to destroy, was discovered among his papers:—

Jesus only.—28 Hart Street, Bloomsbury, E.C.—My dear Son,—I will see you here to-morrow (Sunday) at 4 p.m. at my London Secretary’s rooms, if you call. May our precious Lord bless you. In him, I am yours affectionately, Iox. O. S. B. Supr.

The flight, therefore, had been arranged on the previous Sunday. Mr. Todd at once wrote to Father Ignatius, requesting him to induce his son to return home, and on receiving no reply, despatched a second letter through his managing clerk, desiring him to state by telegraph whether the boy was with him. This application produced a telegram from “The Priory, Feltham,” to say that “The person you wrote about is safe and well, and he will be made to write to his friend” (i. e. his father) “at once.” Accordingly next day came a letter from the runaway himself, which, from its strong family likeness to the genuine Ignatian epistles, is suggestive of a common authorship. In this letter Mr. Todd junior informs his father that, in pursuance of his determination “to leave the world,” he had already taken the preliminary step of leaving London, and was staying as a guest at the Convent at Feltham, in order to judge by experience how far he was fitted for the monastic state. This strikes one as a little odd, considering that Feltham is described as a convent for nuns; but it will appear again presently that the distinction between male and female conventual establishments is not very rigidly maintained in the “English Order of St. Benedict.” The writer adds that, if his experience of conventual life proves satisfactory, he will in six weeks’ time take the novice’s vows, that he had long contemplated doing so, and is “perfectly persuaded that he is right”; and he winds up, as though to show that he had already ceased to exercise any independent judgment of his own, by naïvely observing, “the Rev. Father wished me to write and let you know that I am here, lest you should be at all uneasy about me.” The Rev. Father seems, however, to have apprehended, not perhaps unreasonably, that Mr. Todd senior might make an improper use of his knowledge; for when the uncle and brother of the intending novice reached the convent at Feltham, he had already been removed to Llanthony. Thither they followed him, taking letters from his parents and from Mr. West, the vicar of St. Mary’s, Paddington, and after some difficulty they were allowed to see him, “clad in a monastic garb.” But he steadily refused to leave the monastery, and told them he had been informed that the law was powerless, and had often been tried in vain.

On this a solicitor’s letter was delivered to Father Ignatius, to which he sent the following characteristic reply, not only declining to surrender his new disciple, but suggesting a stipend for his maintenance:—

Jesus only.—Llanthony Abbey, Abergavenny, June 13, 1873.—Dear Sir,—Mr. Richard Todd came to my house and solicited permission to become a member of our society. I know nothing of him; he sought me out. At present I believe him to be sincere in his request for my permission to remain. I shall most certainly not use force to expel him unless he misbehaves himself and refuses to go. I believe, in a religious sense, he has acted rightly, and I should not tell him the contrary to please any one. He is free to go or stay, as he pleases; and our house is open to any magistrate or Bishop who may wish to ascertain this fact. I am, dear Sir, a little astonished at your letter. I think you misunderstand the matter. If Mr. John Todd declines to pay for his son’s maintenance in the life which he desires to follow, provided I consider him to be fitted for it, he must do as others have done before him—take a neutral position among us. I have not asked, nor shall I ask, Mr. John Todd for any money for his son’s support; but if in a month’s time he appears unfitted for this severe life, I shall send him back to his friends.—I remain, dear Sir, yours faithfully in Christ, IGNATIUS, O. S. B. Supr.

Four letters subsequently addressed to the boy himself were returned unopened, with a brief intimation that he desired for the next three weeks to be left free from all worldly engagements, in order to decide on his vocation, and that “the Rev. Father is not known here by his secular name, only as the Rev. Father Ignatius.” Here what may be called the preliminary and private stage of the affair came to its close.

On finding all personal appeals unavailing, Mr. Todd took the necessary steps for making his son a ward in Chancery, and his solicitor then wrote to Father Ignatius requiring him to restore the “infant” to his father. The answer to this demand came, not from Ignatius, but from the boy himself, who appears, very literally, to have reckoned without his host:—

Jesus only.—Par.—Llanthony Abbey, July 8, 1873.—Dear Sir,—It is quite news to me that I am “a ward in Chancery.” Directly the Lord Chancellor requires my presence in Court I have no doubt the Rev. Father Superior will allow me to come up for the occasion.—Yours truly,

R. A. Todd.

But when the solicitor’s clerk appeared at Llanthony to serve the petition on Father Ignatius, he refused to see him or receive any papers from him, but wrote a letter saying that he “would not turn out the young man, unless he misbehaved himself or wished to go”; that he felt quite astonished and insulted at any one daring, even by implication, to accuse him of detaining persons against their will; and if the boy’s friends thought he was so detained, they had better apply to the magistrates, whom he should be most happy to welcome into the monastery, but no one else. “I decline to receive any persons or papers, unless magistrates or warrants from them, and as there is not the least shadow of a cause for molesting me in this way, I suppose that I have a right to the same liberty as any other British citizen who pays his taxes.” Under these circumstances Mr. Todd applied for an order to restrain Father Ignatius from imposing any monastic vows on his son, and directing him to restore the boy to his father and natural guardian.

The Vice-Chancellor accordingly directed that "the infant" should be produced in court on the following Tuesday. But when Tuesday came, it appeared from the affidavit of Mr. Francis, the solicitor's clerk, that, on visiting the Llanthony monastery, which is said to contain from thirty to forty inmates, he had only been able to see a monk and a Sister of Mercy—rather an odd combination in the same establishment—who told him that Father Ignatius refused to see him, or have anything to do with the matter, although warned that he would be liable to be committed for contempt of court. The Vice-Chancellor therefore directed that the tipstaff of the Court of Chancery should be sent down to fetch "the infant," and produce him in court. It is possible that Father Ignatius may have had rather hazy ideas as to the authority of the Court of Chancery, but he will now be wiser in this respect. On the whole, "infant" monks are hardly worth the trouble they cause.

This story, amusing as it is on the surface, forces on our notice some graver considerations, if not about monasticism in general, about that amateur phase of it which is just now struggling for domestication in the Church of England. It must not be supposed that Ignatius stands altogether alone in this matter, although his eccentricities have made him the most conspicuous representative of the system, or want of system, to which we refer. If there are no other male communities—and of this we do not feel sure—a great many female communities besides the Convent or Priory at Feltham have sprung up during the last twenty years in England, and our remarks will apply as much to the one as the other. Such cases as that of Mr. Richard Todd are susceptible of a very easy solution, nor is it, perhaps, likely that many young gentlemen of more advanced age will be anxious to take vows of obedience to Father Ignatius. At all events, his recruits hitherto seem to have been largely drawn from the school-boy class. He might appeal, we believe, to the authority of the Council of Trent, which allows persons over the age of sixteen to take lifelong vows; but we do not apprehend that such obviously premature engagements are common, even in the Church of Rome, and in the present day the law would certainly prevent their being entered upon without the full consent of parents or guardians. There are, however, plenty of young ladies of twenty-one and upwards who feel attracted to a conventual life, and with whose liberty of action in the matter the law does not interfere. Now without discussing the general merits or demerits of religious vows, it surely stands to common sense, and ought to be admitted by religionists of every class, that they are very serious affairs indeed to those immediately concerned, and require all the restraints and safeguards which publicity and public responsibility can supply. It is precisely this element of public recognition and restraint which is entirely wanting in the amateur conventionalism which we are dealing with here.

This is the distinction which presumably lay at the root of some comments, reasonable enough in their general drift, made by one of our daily contemporaries on this very case of Father Ignatius. But with that curious ignorance of the simplest details of ecclesiastical history or belief which is not uncommon among writers otherwise well informed, the writer contrived to sustain the point of the distinction in a manner which must appear to those at all acquainted with the subject nothing short of ludicrous. Religious vows, it was argued in effect, are consistent in the Roman Catholic Church, because they can be imposed, and if necessary dispensed with, by a supreme and infallible Pope, who is acknowledged as the direct viceroy and representative of heaven. But in the Church of England, where nobody claims this august authority, where vows are arbitrarily made and imposed by private individuals, and nobody is recognized as having the right of dispensing with them, the system is both inconsistent and doubly dangerous. Now, with the substratum of this argument, so to say, we quite agree, as we will explain directly; but the particular form of expressing it betrays the profoundest ignorance of the rudiments of Church history. There is so little connexion in theory or in fact between the monastic system and the special claims of the Papacy, that it first originated, and still survives in full force, where those claims have never been acknowledged. We are not now alluding to the well-known prevalence of the monastic life among the Buddhists centuries before the Christian era, and afterwards in the Jewish sect of Therapeutæ, but to its origin and growth in the Christian Church. It sprang up, not in the Western, but the Eastern Church; Paul the Hermit and St. Anthony were its first heroes, and Egypt its birthplace. Not till a good century later, but still long before the Pope dreamt of claiming to be accepted as the one supreme bishop and viceroy of Christ—Gregory I., the biographer of St. Benedict, unmathematized such pretensions two centuries later—was it first imported into the Western Church by St. Athanasius. Leading churchmen of the day, like St. Ambrose, St. Augustine, and St. Jerome, lent their high authority to the encouragement of the new rule of life, though not without adding emphatic warnings against its attendant dangers and abuses; and, early in the fifth century, Cassian, who wrote twelve books on the monastic institute, introduced it into France. Towards the end of that century was born St. Benedict, who is usually accounted the father of Western monasticism, and who organized and propagated the system in Italy, and imposed strict vows on his monks. To this day, we need hardly say, the vast extent of the Eastern Church, both in Greece and Russia, is thickly covered with monasteries and convents; and even in the Latin Church, if we are not mistaken, the intervention of the Pope is only on comparatively rare occasions brought into play. Monks and nuns are ordinarily subject to their own

superiors, or to the bishop of the diocese, who receive their vows, and have the power, for sufficient cause, of dispensing with them. But while the particular claims of the Papacy have really nothing whatever to do with the important distinction insisted upon by our contemporary, the public recognition of the "religious life" as part of the regular Church system, both in East and West, and its consequent regulation and control by public and recognized authority, has everything to do with it. It may be considered a mischievous system, and experience shows it to be always liable to grave abuse; but that is not the point. There is all the difference in the world between an amateur monkery, however sincerely and devoutly practised, for which nobody is responsible and which no one knows anything about or has any ostensible claim to inquire into or control, except those personally interested, and an organized institution, the vows and rules of which, in its various branches, are matter of public notoriety, and which is carried on under appeal to publicly-recognized authorities, whose position is at least some guarantee for their fairness and discretion. If Father Ignatius was acknowledged by the Anglican Episcopate, and by English public opinion, as head of the "English Order of St. Benedict," he would so far be in much the same position as a Russian, or indeed a Roman Catholic, abbot. But nobody can know better than himself that he neither has nor is ever likely to obtain any such recognition, though it does not follow that his youthful novices are equally aware of the actual state of the case. And it is just because it is a fancy article, that the isolated and unauthorized discipline of these so-called monasteries and convents, besides having an inevitable air of grotesqueness, is destitute of the safeguards of which such institutions, especially when presided over by women, stand peculiarly in need. Miss Samin, to be sure, did not find much protection in bishop or Pope against the caprice of her female superiors; but we may gather from the published revelations of some of Miss Sellon's former disciples that the irresponsible rule of superiors, who recognize no higher authority than their own, is apt to be still more exacting and capricious. And still stranger eccentricities, on which we do not care to dwell now, were brought to light, if our memory serves us, some years ago in the collapse of Father Ignatius's first monastic experiment at Norwich. The best advice we can offer to his actual or intending novices may be conveyed in the homely proverb that children should not play with edged tools.

LIFE IN CALIFORNIA.

THE civilization which spreads itself westward and southward in North America is much akin to barbarism. Accounts have just arrived of a fatal duel at New Orleans, and an eyewitness of the proceedings remarks, with proud contempt, that in America, when men quarrel, they shoot one another to death with rifles, and are not content to scratch with small swords until a little blood flows, as is the custom in France. The manners of California have already suffered mitigation, and the completion of the Pacific Railway will rapidly assimilate its social aspect to that of the old States of the Atlantic seaboard. But a few years ago noble savages, both white and red, pervaded the country between the Rocky Mountains and the Pacific Ocean, and the condition of the male communities of miners and of the tribes of Indians was pretty much as is described in a recent publication by Mr. Joaquin Miller called *Life amongst the Madocs* (Bentley). Discoveries of gold caused camps to be established. Game was killed or scared away, and fish forsok the polluted rivers. The Indians had to choose between the chance of death by violence and the certainty of death by starvation. "They were not at war with the whites, nor were they particularly at peace." The best men among the miners strove to protect the Indians around their camps, but they could not control their comrades. These camps might contain several thousand men and not a single woman. Such a camp was "a savage Eden, with many Adams walking up and down, and plucking of every tree, nothing forbidden here; for here, so far as it would seem, are neither laws of God or man." There was a town called The Forks, at the junction of three small streams. This town had two butchers' shops, and each of the rival houses sent up and down the streams two mules each day laden with meat. They left so much at each claim as desired, weighed it out themselves, kept the accounts themselves; and yet never was the butcher known to betray his trust. The principal saloon of The Forks was the Howlin' Wilderness, an immense pine-log cabin with earth floor and enormous fireplace. All the important fights took place here, and if you wanted to be well up in the news, or to see the Saturday evening entertainment, you had to have some regard for the Howlin' Wilderness. The proprietors, who stood behind the bar, had bags of sand laid up in a bullet-proof wall inside the counter, between them and the crowd, so that when the shooting set in, and men throw themselves on the floor, fled through the door, or barricaded their breasts with monte-tables and wooden benches, they had only to drop down behind the bags of sand, and lie there, pistols in hand, till the affair was over. These men were wisely silent and impartial in all misunderstandings that arose. They always seemed to try to quell a trouble and prevent a fight, and perhaps they did so. When the battles were over, they were the first to take up the wounded, and do what they could for the dying and the dead. There was a great puncher, hewn from super-

pipe, that had once been a monte-table back on the outside by the chimney. Many bodies had been laid out in the course of a year to stiffen on this board. Nothing draws like a bar-room fight in California. "I have known miners, standing on their good behaviour, who resisted the temptations of hardy-gurdy houses, bull-fights, and ball and bear encounters, who always wrote home on Sundays, read old letters, and said the Lord's Prayer; but I never yet knew one who could help going to see the dead man or the scene of the six-shooter war-dance whenever the shots were heard."

Mr. Miller professes to have lived among the Modocs, and has certainly studied society in the mines. The respect—slight perhaps, but evident—which the miner pays to Sunday is universal both in California and Australia. It is almost all the visible religion that is found at early settlements. The race for gold leaves all churches behind; but missionaries of the more active sects soon appear upon the scene. But at The Forks, in that dreary winter, there were neither women nor ministers to mitigate the hardness of the miners. There was a tall man, a sort of half sportsman and half miner, who had a cabin close to town, and who seemed to take a special interest in these battles. He was known as "Long Dan," always carried a pistol, and took a pride in getting into trouble. A gambler called, from his grand look and manner, "The Prince," warned him that he would die with his boots on. "Now, see if you don't; if you keep on slinging your six-shooter round loose in this sort of way, you will go up the flume as slick as a salmon—die with your boots on before you know it." Dan smiled blandly as he tapped his ivory pistol-butt, and said, "Bet you cigars I don't! Whenever my man comes to the centre, I will cull him, see if I don't, and get away with it too." The metaphor here used by Dan is taken from the game of poker, in which miners delight to get rid of their gold. Soon after this conversation pistol shots were heard at the Howlin' Wilderness, and Prince rushing thither learned that "it was Long Dan." As a friend and neighbour of the wounded man, room was made for him at the monte-table, and Dan whispered to him a request to take off his boots. The Prince hastened to comply, and again Dan whispered to him, "Prince, Prince, old boy, I've won the cigars! I've won 'em, by the holy poker." And so he died. Many stories similar to this are told, and it has been seen in other countries besides California that the habitual current of thought can hardly be turned by the close approach of death. There is a remarkable account in this book of the hanging of two gold robbers, English and Scott, by a Vigilance Committee. They were given ten minutes to prepare for death. At the end of that time the only rope the Vigilants had was thrown over a beam, and they approached Scott, who was on his knees. "No, no," cried English, "hang me first and let him pray." They left Scott, fastened the rope round the neck of English, and mounted him on a keg. Then English turned to Scott, and said, "Scottie, pray for me a little, can't you? Damn'd if I can pray!" Then he laughed a low strange chuckle, and they kicked away the keg. Scott pleaded hard for life, but finding the Vigilants inexorable, he took off his necktie, strung his finger rings on it, and, saying "Send these to my wife," submitted to his fate.

When the winter was past and the tracks were open, civilization presented itself at The Forks in the shape of a small judge in a big "stove-pipe" hat. Miners will allow nobody to wear a beaver hat or to be called by his right name. But a big man took the little judge under his protection, saying, "It's all right, boys. He shall wear a hat as tall as Shasta if he likes, and let me set eyes on the slyster that interferes. It's a poor camp that can't afford one gentleman anyhow." The big man proceeded further to explain that he was ready "to chaw up and spit out" the first man who raised a voice against the judge and his beaver hat. It was suggested that, as they have got a judge, they may as well put him to work, so he appears as prosecutor of a man, called from his likeness to one of the suits at cards "Spades," who had undoubtedly murdered two or three Indian children during the winter. Spades is put upon his trial. He seats himself upon a three-legged stool before the judge, remarking, "Ef I ain't out o' this by dark, I'll sue somebody's moccasins, see if I don't." An eyewitness of the murder appears, but on the other hand a witness states that at the exact time named he was playing poker at two bits a corner with Spades in the Howlin' Wilderness. Hereupon the prisoner was acquitted. The court being new to its business omitted a few trifling observances, one of which was swearing the witnesses. But probably that would not have made any difference. The court adjourned after the acquittal, and practice at another bar proceeded with conspicuous success. The next incident was a quarrel between the judge and the doctor, both of whom being regarded as the natural enemies of the settlers, the affair was viewed by The Forks with equanimity. A big minor expressed public sentiment by saying,

Fight dog and fight bar,
Thar's no dog of mine thar.

However, the judge and the doctor did not fight. Both the judge and Spades were soon afterwards murdered by stabbing, and the doctor incurred suspicion. Just at this time the Prince and the author and their family, consisting of an Indian boy and girl, quitted The Forks, and they took the doctor with them. Immediately after their departure an officer with a warrant arrives to arrest the doctor, and an exciting chase follows up the slopes of Shasta. The party, guided by the Indian boy, dodges the officer and escapes until nightfall, when they are detected by kindling a fire. "Hands up, gentlemen! hands up! Don't trouble your-

selves to move! There, that will do! You are the ones we want. Pass in your checks." This expression, "pass in your checks," is common among the miners. Both parties encamp for the night, and, as might be expected, the officer and his assistants are overcome by the brilliant strategy of the Prince and the Indian boy. They incautiously lie down by the fire with their three heads close together, so that the Prince can cover them all with a big double-barrelled gun. "It's your pot, Prince, take it down. You hold the papers. Called us on a dead hand, you did." These words indicate surrender. The officers are dismissed, much to the disappointment of the Indian boy, who was prepared to scalp them.

Mount Shasta is about three hundred miles north of San Francisco, and about one hundred miles east of the Pacific Ocean. It is commonly spoken of as part of the Sierra Nevada, but it stands apart like a great tower, of which the connecting wall has been destroyed. To the east of Shasta lie arid, sage-brush plains. To the south, at the distance of a hundred miles, lies the Sacramento Valley. "Silver rivers run here, the sweetest in the world. They wind and wind among the rocks and mossy roots, with Californian lilies, and the yew with scarlet berries dipping in the water, and trout idling in the eddies by the basketful." There is much in this book to support the received idea that the climate and scenery of California are among the finest in the world. The rivers have now been polluted by miners' refuse exactly as our own rivers are at home. It is startling, and not altogether satisfactory, to observe how rapidly new districts are assimilated to the older American civilization as the stream of emigration flows more copiously towards the West. American writers sometimes complain that their country's growth excites only feeble admiration in England. But we have acquired the habit of regarding the growth of population on two sides. When we hear that the inhabitants of a town number close upon half a million we do not fall into unbounded rapture, because we painfully remember the questions of education, drainage, and house accommodation which thus force themselves upon our Parliament. The questions which arise in a newly civilized country like California are different, but equally important. The book from which we have derived the material of this article was written for the purpose of discussing that most painful of all questions, the fate of the native races whom the immigrants have dispossessed. Much power of imagination has been employed to excite sympathy for the Modocs, but their story, however pitiable, does not differ from that of many other tribes. If an affecting narrative could have availed anything, the *Lark of the Mohicans* would have arrested a process of extinction which has now reached from the valley of the Hudson to that of the Sacramento. We hope to return on another occasion to the distinctly Indian portion of this book. It is in substance a discourse on the text supplied by a Modoc chief. "It is die if we go, and die if we stay. We will die where our fathers died."

THE DUKE OF ST. ALBANS AND THE QUEEN.

IT would be ridiculous to waste words of anger on the Duke of St. Albans because he made a silly little speech about the political sympathies of the Queen at a Liberal meeting at Nottingham, and because he defended his conduct by making another silly little speech in the House of Lords. In proposing the health of Her Majesty, the Duke said to the Nottingham Liberals:—"I may remind you that her earliest impressions on Government were guided by the great Liberal leader of the day, Lord Melbourne, and she is supposed never to have forgotten the principles and party of her teacher." Coming from an officer of Her Majesty's Household, such a speech was, of course, an astonishing piece of folly, to be excused only on the plea that the Duke is young and inexperienced. But he might easily have repaired the mischief he had done if, when the Duke of Richmond asked for an explanation, he had frankly confessed that he had made a mistake, and had promised not to do it again. Instead of this, he made matters worse by a startling impertinence. Citing the eminent authority of *Maunder's Treasury* to show that Lord Melbourne had really made the Queen a Liberal, he roundly called the Duke of Richmond a fool. Such a reply might seem a little coarse if it were to come from a cabman fighting with his fare about a question of overcharge; and, coming from a peer who is at once a Duke and a member of Her Majesty's Household, it is one of the most surprising speeches ever heard in the House of Lords. If a bishop were to let off a volley of expletives, the memory of such an exhibition might live long after his sanctified eloquence had been forgotten; and, for the same reason, the Duke of St. Albans may hope to find a permanent place among the curiosities of patrician vulgarity.

Meanwhile this unconventional young nobleman has revived a curious and delicate question of constitutional ethics. It is superfluous to say that Her Majesty is not open to the charge of being a political partisan, and that no English sovereign has ever been so impersonal in the best sense of the word. What her own political sympathies are it would be impertinent to inquire, and Her Majesty has certainly given no one a right to make them a subject of speculation. It is enough to know that Liberals and Conservatives find her equally ready to give effect to the will of the nation. But such decorous reticence with respect to the political opinions or personal wishes of the sovereign is a thing of yesterday. It had no existence in the stormier days of English

politics, and it did not become an accepted principle until the present reign. Nor indeed could it have become a commonplace of discussion until all the fiercest strifes of English public life had been burned out, and until the balance of power had inclined from the Crown and the aristocracy to the body of the people. Charles I. could hardly have been a constitutional sovereign in the modern sense of the term, when the nation was divided into two great parties which differed about fundamental questions of religion and politics, when neither would accept a compromise, when each was ready in the last resort to draw the sword, when the fate of the Church and the Throne seemed to depend on the issue of the struggle, when the King himself was passionately devoted to one of the two sides, and when his party ceaselessly urged him to make use of his prerogative. Like conditions existed in a less degree during succeeding reigns, and no party scrupled to make use of the King's sympathies to gain its own ends. There was no doubt a growing impatience of the power which was exercised by the Court, and very open protests were made in Parliament against its intrigues. But the Court had always a stout body of defenders among the partisans with whom it worked, and its very assailants were apt in their turn to make use of its insidious power. Nor did any one dream of affecting not to know the political opinions of the sovereign. The country perfectly well knew what Ministers George I. and George II. disliked. It is a favourite theory that the despotic instincts of George III. were fostered by the German teaching of his mother and the Scotch teaching of Lord Bute; and so they doubtless were. But such a man in such a time would have formed strong opinions and would have tried to govern as well as reign, even if he had never received a lesson charged with the despotic maxims of the small German Courts or of a country which, like Scotland, had hitherto been ruled by a turbulent aristocracy. For he found great power lying ready to his hand, and a crowd of the most exalted men in England eager to say that he ought to use it in order to defend the Empire, the Church, and the Throne. Such was the counsel of the greatest lawyer then living, Lord Mansfield. During one of the most critical battles between the Court and the Whigs, Lord Mansfield told George III. that, in his opinion, the King should generally abstain from taking any part in political discussion; but that, when the lawful rights of the Crown or of Parliament were to be asserted, it was fit and becoming that he should make known his opinions. Such advice would cover any act of kingly authority; since it would be easy to show that the rights of the Crown, or the rights of Parliament, are imperilled in every great political fight. What could have been a clearer invasion of the rights of the Crown than a demand that the rebel States of America should be allowed to throw off their allegiance to their lawful sovereign, constitute themselves an independent Republic, and thus abridge the territories of England? How could the King, as the representative of a regal caste, and the head of the Church of England, make peace with that Republic of France which was built on regicide, which aspired to overthrow all kings, and to spread the glad tidings of Atheism through the whole earth? Or how could the King play so fast and loose with the rights which belonged to the Crown as to free the Catholics from those penal disabilities which had been imposed for the preservation of the Protestant religion from the craft of Popery?

If George III. had been a man of broad mind, or of sceptical instincts, he might no doubt have brushed aside such difficulties; but, being what he was, he could not, and he was pushed forward into despotic ways by the whole strength of the Tory party. The Whigs were of course enraged that the King should threaten to visit with his lasting displeasure all who should disobey his will; that he should cause Colonel Barré and General Conway to be removed from their military commands for voting against the Court; that Lord Temple should have been ordered to show the Peers a private protest of the King against Fox's East India Bill, and an intimation that His Majesty would regard those who should vote for it as his personal enemies. The temper of the Whigs was vividly revealed by Dunning's famous motion "that the influence of the Crown has increased, is increasing, and ought to be diminished"; and by the still fiercer motion of Baker that such proceedings as those of Lord Temple were a high crime and misdemeanour, derogatory to the dignity of the Crown, and dangerous to the liberties of Parliament. The feeling of the House was shown by the fact that both motions were carried. But there is no reason to suppose that the country was equally indignant, for Pitt was able to take office in the face of the majority which had thus censured the King; and, although he was a mere youth, and had not a single first-rate debater on his side, he soon became one of the most powerful Ministers that England had ever seen. He could not have gained such a place if a majority of the ruling classes had not been indifferent to the intrigues of the Crown, or glad that the King had used his influence to defeat the Whigs. When Fox was the guiding spirit of the Government, the Tories published a caricature in which the King was pictured as in goal; and the loyalty of the English people, there can be no doubt, was shocked by the thought that the Whigs were making their sovereign a moral prisoner. George III. could not have incessantly interfered with the Government unless he had been supported by a majority of those who held political power. Nor are the Whigs themselves free from the suspicion that they hated not so much his interference as his opinions, and that they would have willingly availed themselves of any courtly intrigues which would have enforced the principles of the glorious Revolution of 1688. Fox did not conceal his belief that the Prince of Wales would instantly turn

out the Tories and put in the Whigs, on becoming Regent, nor did he see anything unconstitutional in such an exercise of sovereign power. Fox eagerly urged also that the Prince should be armed as Regent with the full powers of a King, and it needs a great stretch of credulity to believe that the Whig leader would have employed his powers of rebuke if the Prince had, in the heat of party warfare, done unto the Tories as his father had done unto the Whigs. At least the lessons of his early friends had failed to teach George IV. that the duty of an English King was to do nothing but assent to the wishes of his Ministers, for he interfered much with their policy, and, if he had not weakened his will by habitual dissipation, he would have interfered more. Nor had William IV. altogether learned that his duty was to express no opinion about public events, but merely to obey the prompting of the House of Commons, and to sign formal papers. It was not till the present reign that the Sovereign became impersonal in political strifes, and showed no favour to any political party.

One of the reasons why the Crown has thus surrendered what the French would call its power of initiative, lies no doubt in the overwhelming authority which has gradually been acquired by Parliament. It has obtained so direct and so unchallenged a control over all the departments of State and over the Ministry that, when it speaks by the voice of large majorities, it can virtually do what it likes. But there is another reason why it is now easy for the Sovereign to hold aloof from party politics. The present reign has been one of the quietest in the whole history of England. The only contests which have stirred up real anger of the old kind have been the fight against the Corn Laws and the battle for the disestablishment of the Irish Church. Even that anger would have seemed tame to men who had taken part in the fierce contests which disturbed the reign of George III.; and in other respects the present reign has been a time of almost parochial calm. Hence there has been no strong temptation to drag the sovereign into the arena of the combats which the parties wage with each other; and both Conservatives and Liberals have found it easy to agree that no references should ever be made to the political opinions of the Queen, that she should be assumed to have no political opinions of any kind, and that she should be treated as a divinity set over both factions, unmoved by the passions of either, and ready to do the will of the nation. How admirably Her Majesty has done her part in these delicate relations it is needless to say. It is usually assumed that the Crown and the House of Commons have at last found out their true places, that the present arrangement will be lasting, and that there can never be a repetition of the bitter and dangerous struggles between the King and the Whig or the Tory party. It must be remembered, however, that no positive law prevents the Sovereign from interfering with political affairs in a hundred subtle ways; nor is such conduct forbidden by any precedents of long standing. It is said, indeed, to be prohibited by the spirit of the Constitution; but the spirit of the Constitution means the temper of the public mind for the time being, and that temper might change. We can easily imagine how the change might come about. Some "blazing principles" of the old kind might fill the country with violent passions, and make both parties disdain compromises. At such a time one incautious word from the Sovereign might cause him to be hailed as a partisan; for an excited faction would not scruple to use the influence of the Crown if it fancied that it could thus gain its own ends, or if it believed that it could win in no other way. It may be said, no doubt, that the House of Commons has become so strong as to be able to defy the Court; but we are assuming a case in which the Commons would be so divided as to give the Court a powerful minority, which might any day become a majority. We are also assuming the constituencies to be so divided and so excited that one party would welcome any alliance which would give it victory. In such a case we might again have a party of "the King's Friends." We might also have frequent dissolutions at the bidding of the Court. We might find Ministers kept in office in spite of protests from the Lower House. And all this would be defended on the ground that the Court was only expressing its opinion at the bidding of a large body of the people, and was compelled to act as a combatant. It is necessary to bear in mind that the constitutional rule that the Sovereign is politically impersonal is the product of a quiet time, and that its scrupulous observance depends in a great measure on the personal character of the ruler. And this makes it the more important that such indiscretions as that of the Duke of St. Albans should be sharply checked.

THE GOOD TEMPLARS.

WHAT is a Good Templar? There is a class of men, in many ways deserving, who dwell in the Temple and occupy themselves with the study and practice of the common law. This class is sometimes called Templars, but we doubt whether they could be considered "good" in the special sense of cultivating philanthropy and abstaining from intoxicating drinks. The order of Good Templars seems to be an American variety of tætotalers. They have an organization similar to the Freemasons; they wear collars and badges of gorgeous colours; they place capital letters before or after their names; and they meet in lodges and transact business which they appear to think important. Questions of internal discipline are discussed at these lodges, and the decisions given are recorded and published in a digest of which a copy is now before us.

The passion which the members of this and other institutions of popular origin discover for distinctions and decorations is remarkable. The colours and patterns of badges, and the right to wear them, are discussed with the minute care of a master of ceremonies at Versailles under King Louis XVI. In defiance at once of democracy and grammar, Simeon B. Chase, P.R.W.G.T. of Great Bond Village, Pa., promulgates the rule that "all lodges must have some kind of regalia; a simple rosette is not a regalia." Another rule is that "a scarf is not a regalia." This word "regalia" forms a title in the Digest under which the above rules, derived from actual decisions of Good Templars' Lodges, are arranged. Another rule is "Officers of Degree Temples may wear stars upon their regalia; it is not necessary." All these decisions were given by American lodges, and, to judge from this publication, Massachusetts, Connecticut, and Pennsylvania must be pervaded by a mania for decorations. One touch of nature makes the whole world kin, that all desire stars and garters, or some equivalent. The love of ceremony is as general as that of ornament, and perhaps we cannot better gauge the opportunity of the Roman Catholic Church in the United States than by observing that that Church offers the readiest means of gratifying what this book shows to be the desire of a numerous class of citizens. When it comes to gorgeous ritual, that Church is hard to beat, and these Templars are avowedly Christians, although they probably consider themselves to be far as the poles asunder from the Roman Catholics in doctrine. Perhaps they are, and perhaps also this does not greatly matter; for the Romish Church knows well how to make ceremony prominent, and to throw dogma into the background. There is, however, one broad and probably irreconcilable difference between the Temple and the Church of Rome; the Templars are their own priests, and they would be very unlikely to relinquish the priestly office to a select class. Having made themselves priests, it might have been expected that they would proceed to construct a religion; but they take their stand upon the Bible, although they seem to adopt little of ordinary Christian doctrine. A reported case decides that a member cannot be guilty of contempt for refusing to appear before a Committee of Trial on the Sabbath Day, "for that involves a question of conscience." Thus the Society seems to recognize the rule of interrupting ordinary business on the Sabbath as obligatory on some of its members. The Society disapproves, but does not appear absolutely to prohibit, tobacco. A resolution of the Grand Lodge of Canada recites that the use of tobacco, not only indirectly, but in many cases directly, leads members of the order to patronize bars and other places where intoxicating liquors are kept, and, "believing the use of tobacco to be an injurious and filthy habit, therefore we would again urge on all members to discountenance its use in all forms and on all occasions." The same Grand Lodge of Canada decided that a "P.W.C.T." appointed during the first quarter's existence of a lodge is not entitled to the honours. It seems good law as well as sound common sense to say that "a member cannot be a Past Worthy who has not been a Worthy Chief."

The Society has been much exercised upon the "cider question," and a writer of authority is quoted in this volume as having solved this question on principles which ought to be generally recognized, but which "prejudice, early habits, and want of philosophical thought" have failed to accept. This writer seems to admit that it is doubtful whether cider ought to be classed among alcoholic or intoxicating drinks. He probably had in view that cider is the common drink of working people in large districts of America, as it is in the West of England. He could not mean to say that it is impossible to get drunk on cider; but he may have observed that the quantity necessary for that purpose is so large that the stomach is liable to be overcome before the head. Anyway he treats the intoxicating quality as doubtful, and he solves the question of using it by reference to a familiar text. He thinks that cider "may make our brother to offend"—that is, although we may be sure that it will not make us drunk, we are not sure that it will not make somebody else drunk, and therefore we should abstain from it. The view of the quality of cider which this passage admits to be tenable accounts for the fact which our own agitators forget, that in some parts of America where a prohibitory law exists, cider is excepted from its operation. By parity of reason, table-beer ought to be excepted, and we believe there are places where lager-beer is under the same rule as cider. This book speaks of "domestic beer" as unfermented, and not liable to ferment, and therefore a lawful beverage for Good Templars; and it also speaks of other drink which is "liable to ferment," and unlawful because it is impossible to tell when this drink may have so far fermented as to contain alcohol.

The decisions upon the lawfulness or otherwise of particular drinks form a large and important portion of this Digest. It is lawful to drink even wine when prescribed as a medicine "by a moral and temperate physician." Many cases turn upon the definition of a *bond fide* patient. It is not enough to feel what elderly ladies employed in washing and cleaning call a sinkingness. The habit of requiring bitters to give appetite must be overcome, for bitters contain alcohol. We had thought that lager-beer was in the same doubtful class as cider, but we find it clearly prohibited. So also is ginger wine and "rhubarb, commonly called pie-plant wine." A rescript of G.W.O.T. Giles (Wis.) declares that "patent lemonade (if I know what it is) is not liquor, and not intoxicating." Another rescript allows "root beer," which is not intoxicating, and will not become so by keeping, to be drunk by

members. But still this "root beer" may be an occasion of stumbling to weak brethren who may not be careful to discriminate between what is and what is not intoxicating. We do not know what "root beer" is, but we should conjecture that only a very weak brother could get drunk on it. Nevertheless St. Paul's words should be borne in mind, for the causes of intoxication are various, and even salmon has been known to range among them. Another rescript declares that "to drink cider as an article of food" is unlawful, for "in such case it becomes a beverage." Yet all these decisions still seem to leave the question doubtful. We find a list of "questions for discussion in lodges" apparently intended for people who like to argue for the sake of hearing their own voices; and among these questions we find this—"Is sweet cider intoxicating?" A method might be adopted for settling this question which would be much more satisfactory than any number of speeches.

Freemasons are favourably known in England for their willingness to get up balls, but we regret to find that the goodness of the Templars is incompatible with such frivolity as dancing. They are forbidden to attend balls at any place where liquor is sold, and they are also forbidden to make their own organization ancillary to giving balls. Between these two rules they must be nearly excluded from dancing, although their authorities do not absolutely condemn it. In a subordinate lodge a motion was made "that a Committee be appointed to make arrangements to get up a dance, or something of that kind," to celebrate the anniversary of the lodge. The W.O.T. declared this motion out of order; an appeal was taken, and the W.C.T. was sustained. But on appeal to a higher Court it was decided that the motion ought to have been entertained. Dancing and sweet cider seem to rest under a similar doubt as to legality, and perhaps it might be useful to try the two in combination for an entire evening, and then pronounce judgment on the result. We learn that ladies are eligible as Good Templars from the fact that Mrs. Lucy A. Small was tried for using insulting language in a lodge. As soon as we learn this, we become alive to the importance of the selection of colours for the badges of various degrees in the lodges. The colour of the degree of fidelity is blue, and that of the degree of charity is purple. Lady members must be careful to conduct culinary processes so as to commit no breach of obligation. Thus a member went to a public-house, and openly bought whisky for the purpose of preserving fruit. The judgment in this case declares that the member violated her obligation, and further that it is not necessary to the preservation of fruit or jelly that paper wet in liquor should be placed over it. Another judgment declares that if a sister takes brandy sauce with pudding, not knowing that the same contains brandy, and having been assured by her hostess that it does not, she does not violate her pledge. Currant wine may be manufactured for family use as medicine, and it is difficult to fix the quantity that may be thus manufactured. But if the lodge have reason to suspect the use of currant wine in a family as a beverage, a committee of investigation may be appointed. The term beverage, which occurs so frequently in these discussions, is defined to mean "any drink taken to satisfy thirst." A rescript declares that "cider in mince-pies becomes a beverage when freely used, and there is no necessity for using it, as vinegar is equally good." There are probably few English people who would not contentedly renounce cider in mince-pies, but we might cling with some affection to brandy in plum-pudding. We believe that the highest authorities direct a small quantity of brandy to be worked into the fabric of the pudding, and as this brandy is undeniably eaten, we should object to its being treated as a "beverage."

The order of Good Templars has been meeting this week in London, and the purple or crimson regalia, with gold trimmings, are described by the reporters as picturesque and imposing. One of their ceremonies comprises an oration in praise of water, "beautiful symbol of spotless purity." It is painful to reflect that London water for the most part would be found on analysis scarcely susceptible of the praise of purity. Indeed it must be owned that water-drinkers in London labour under considerable difficulty.

REVIEWS.

TYNDALL ON LIGHT.*

THE public on this side of the Atlantic will doubtless welcome Professor Tyndall's *Lectures on Light* with scarcely less gladness, if with somewhat less wild enthusiasm, than that with which they were greeted on their delivery in America. Nothing of course can make up for the absence of the living charm and the *visu vis* which won the hearts and minds of the audience, and carried the speaker on a wave of popular excitement from one American city to another. Those, however, who are familiar with the spell exercised by eloquence and scientific fire such as Professor Tyndall's, can realize the effect his warm and vivid utterances must have produced upon hearers peculiarly susceptible of such impressions. And as they read they have but to supply from memory or imagination the presence and the tones of the lecturer, in order to understand, if not to catch in their full degree, the enthusiastic feelings of the crowds that seemed to

* *Six Lectures on Light*. Delivered in America 1872-1873, by John Tyndall, LL.D., F.R.S., Professor of Natural Philosophy in the Royal Institution. London: Longmans & Co. 1873.

hang upon his words. The Lectures, cast now into a more continuous form, and supplemented by new matter which invests them with more of method and completeness, are marked throughout with Dr. Tyndall's well-known freshness of thought, clearness of exposition, and firm grasp of physical truth. In these qualities, as in his power of enlisting the sympathies while compelling the convictions of his hearers, he is excelled by no scientific expositor of our day. In the form which his expositions of science have taken during the recent course, his judgment or tact has signally displayed itself.

Instead of taking the shape of a formal enunciation or proof of first principles in physics, or even of systematic procedure by way of formula and definition, Dr. Tyndall's thoughts have the air of springing spontaneously out of the impulse of the moment, and hanging together by such threads as the run of fancy or turn of an experiment may supply. The style, no less than the substance, of what he has to teach is colloquial rather than didactic. Taking up, as if by haphazard, the instrument or the apparatus on the table, he compels it, as it were, to unbosom itself of whatever special secret of nature it has to tell, and through the window thus opened into the world, closed hitherto to ordinary eyes, to make manifest what an endless vista of truth and beauty reveals itself to the mind. Starting in the first lecture from certain elementary phenomena, illustrated by a well-chosen and successful series of experiments, he makes it his object to point out how those theoretic principles by which phenomena are explained take root and flourish in the mind of man, tracing the special stages of growth which have more emphatically marked the science of optics. To a popular audience nothing can be more engaging than this method of procedure. The mind is never called upon to master technical or complex formulas, nor is the memory weighted with abstruse and perpetually recurring definitions. It must be surprising at the end of a lecture such as this to observe on looking back how many steps in advance have been gained with little or no apparent effort. The simple notions of reflection and refraction have been made respectively clear, with the modes of quantitative measurement applicable to each phenomenon. From the simple ideas of the ancients, the course of inquiry is traced through the Arabian physicist Alhazen in the twelfth century, through Roger Bacon, Vitellio, and Kepler, till the law of refraction was laid down by Snell about the year 1621, what he calls the index of refraction being shown as a constant quantity for each particular substance or medium. The law of reflection from partial towards total were in like manner ascertained by him in the cases of various media, as air, water, glass, or mercury, absolute totality being only later attained in the Nicol prism. The lecturer is here led to enumerate what is known as the principle of reversibility, underlying as it does all optical phenomena, the fundamental law of reflection having been proved by Sir John Herschel to be readily deducible from it. This law is explained by the simple experiment of a ray passing obliquely from air into water and from water into air. The velocity of light as measured by Roemer in 1676, and carried on by Bradley, and of late more approximately determined by the delicate experiments of Fizeau and Foucault, as well as its modifications by the media through which it passes, as air or water, illustrating in its course the principle of "least time" in nature, is made popularly intelligible, as is Descartes' application of Snell's law to the explanation of the rainbow, with the reason why a rainbow is never seen reflected in the sheet of water, however tranquil, which it spans. We can hardly imagine a better exposition in simpler terms of the analysis of solar light and the composition of the spectrum than that in which Dr. Tyndall follows the great discovery of Newton to its more recent modifications in the hands of Young, Helmholtz, and Maxwell, reducing all differences of hue to the three primaries, red, green, and violet, curiously as this conclusion is shown to have been anticipated in the rare work of Christian Ernest Wünsch (Leipzig, 1792) which was brought recently by Sir Charles Wheatstone to the knowledge of the lecturer. A special point most difficult for the popular apprehension to realize in general is that there is no colour generated by or residing in any natural body whatever. Physical bodies have showered upon them, Dr. Tyndall explains, in the white light of the sun the sum total of all possible colours, and their action is limited to the sifting of that total, the appropriation from it of the colours which really belong to them, and the rejection of those which do not. Nor is it the portion of light which belongs to them, but that which they reject, which gives bodies their colour. In speaking of the absorption of light by all bodies, even the most transparent, as in the case of water, the lecturer may be theoretically right in stating that we have only to increase the depth of water sufficiently in order to quench all light. But, when instancing the sea-depths as a proof of this extinction of light, and observing that, looked upon properly, there are portions of the Atlantic Ocean to which one would hardly ascribe a trace of colour, at the most a tint of dark indigo reaching the eye, we question whether Dr. Tyndall has sufficiently weighed the fact that the body of water into which we are looking down has an opaque bottom. Could we look upwards from the bed of the sea, at whatever depth, who knows what degree of transparency might still be apparent? The discovery of animal and vegetable organisms of the most gorgeous colours at depths of 2,000 fathoms and more must give rise to much speculation as to the power of light to pierce watery masses of that amazing depth. Nor is it enough as yet to take refuge with Dr. Carpenter or Professor Weyl's Thomson in the theory of light being diffused by the

phosphorescence of organisms floating in the upper layers of the ocean.

The history of the emission theory, as evolved by Newton and retained so lately by Brewster, together with that of the wave theory due to the genius of Young and developed by Fresnel and Arago, harmonizing as it does with the phenomena of sound, will be appreciated by all whose notions of the subject are hazy or imperfect, or who have to clear up the ideas of others upon it. Though many portions of the series are of course more novel or original, yet none will be found more masterly or thorough. Further on we get more into the arcana of optical phenomena, and are treated to striking views and demonstrations of the most recent gains to science. Diverging to some extent for a moment from his immediate line of investigation, Dr. Tyndall enters upon the structural arrangement or architecture of crystals as an introduction to their action upon light. Tracing to its origin the notion of polarity, he briefly states the elementary laws of magnetic action, showing how out of the simple notion of attraction arose the theory of gravitation and the planetary motions; and how in later times have been developed those fine ideas of magnetic curves by which Faraday was so much fascinated. The progress of science in the vision of the lecturer will very probably, by connecting the phenomena of magnetism with the luminiferous ether, prove these lines of force, as the great experimentalist loved to call them, to represent a condition of this mysterious substratum of all radiant action. The remarkable analogy which is presented by the accumulation of steel filings round the poles of a magnet, and the aspect of luminous rays emitted by the magnet, is vividly shown in the accompanying illustration. In the new ideas of molecular structure as produced by polar force is opened a way for the intellect into an entirely fresh and boundless region. Illustrations of the crystallizing force are here given in the action of nitro or of ammonium chloride of ammonium dissolved in water, or in that of a voltaic current sent by means of a platinum wire through a solution of acetate of lead. The result is seen in the elegant and symmetrical frond-like forms which resemble the effect of frost upon the window-pane. An exquisite specimen of the feathery plumes formed by the crystallization of water under unusual cold, supplied by Professor Joseph Henry from a photograph, forms the frontispiece to the present volume, and is the subject of an interesting note in the appendix. Another note has an interest as showing the germs of these more advanced views of crystallization in connexion with molecular physics and light working in the lecturer's brain as long ago as the year 1855. A great part of the later lectures is taken up with the bearings of crystallization in the case of various substances upon optical phenomena. Single and double refraction, polarization and depolarization as shown by experiments with plates of tourmaline and Iceland spar, the varied and exquisite phenomena evolved by the Nicol prism, the polariscope and spectroscope, the magnetization of light and heat, leading up to the important generalization of the substantial identity of light and heat themselves—these are successive steps in the evolution of his great subject by which the lecturer kept his audience edited and entranced.

The heat of the electric beam, shown by the combustion of paper and similar bodies in the focus of rays from the electric lamp, formed probably a new demonstration to many of those present; and Herschel's discovery of the dark rays of the spectrum, further investigated by Dr. Draper in America, as by Brewster, Stokes, Dr. Tyndall himself, and others amongst ourselves, must have been found a frequent source of novel and valuable ideas. The sixth and last lecture is mainly given to the subject of spectrum analysis, with a sketch of its discovery, its application to solar and molecular physics, yielding, as it already has for practical results, new primary substances in the metals Rubidium, Cesium, and Thallium. This attractive subject is further illustrated in the appendix by some extracts from Mr. Spottiswoode's recent admirable discourse at the Royal Institution, setting forth the phenomena of polarized light by experiments with his large Nicol's prism, in continuation of those of Foucault and Fizeau. Plane, circular, and elliptical polarization are obtained by different positions of the analyser. When subjected to prismatic dispersion, the spectrum is seen furrowed by bands of complete darkness, similar to Newton's rings, diverging, in a beautiful effect, from the centre in a fan-like form, the fan opening out at the red end of the spectrum.

Gathering up, by way of summary and conclusion, the scattered threads of his remarks, the lecturer dwells with force upon the love of truth for its own sake as lying at the root of all science. Not for profit or applause, but for its intrinsic worth, should knowledge be cultivated and held in honour. From no lips could words so pure and chivalrous fall with greater appropriateness or force. The noble dedication of the substantial fruits of these lectures to scientific ends in the country in which they were delivered speaks more emphatically than mere words could do of the spirit in which the true votary of science will fulfil what he feels to be a holy calling. If anything could transcend the services rendered to knowledge by this and other contributions of Dr. Tyndall's to the literature of physics, or could augment the pride which his countrymen must feel in having been so ably represented across the Atlantic, it is the monument which the lecturer has left to all time of unselfish toil, intellectual energies nobly exerted, and disinterested devotion to the cause of truth.

RECOLLECTIONS OF A FRENCH PAGE.*

THIS is a book with no great claims to historical value, but which contains some curious information about the *personnel* and *etiquette* of the French Court at a period which, though divided from our own day by less than a hundred years, seems, when viewed across the intervening chasm of the Great Revolution, to have receded into the remoteness, if not into the obscurity, of the middle ages. The author of these "Recollections" is Felix, Count of Hézéques, who was born in the year 1774, and appointed in his twelfth year Page of the Chamber to King Louis XVI. This post was exchanged, before the final overthrow of the Monarchy, for a captain's commission in the Guards. Having joined the ranks of the *émigrés* at Coblenz, he subsequently took part in the campaign of 1792. The next four years were spent in exile, during which he sought to improve his mind and extend his knowledge by travel. At the close of 1796 he returned to France; and eight years after, wisely resolving to accept the new order of things, he took service under the Tricolor flag, and ultimately was placed in command of the Legion of the Sonno, which took a noble share in the campaign of 1814, that ended in the fall of Napoleon. This was the close of his military career. The remainder of his life was spent in "honourable administrative functions," until his death in 1835.

Though these memoirs were composed in the year 1804, the opinions of the Count are emphatically those of a Page of the ancient *régime*. He has not a good word for Neckar, or Lafayette, or Talleyrand, or any of the men of the Revolution; while of the States-General he naively says that he cannot fancy that any sovereign exists who does not shudder at the name. Of the King, to whose virtues he does full justice, he mentions some amusing traits. He has some remarks on his Royal master's "constitutional vigour," which sometimes made his proceedings rough, "so that what he only meant for a slight joke would sometimes leave painful traces." In one of the rooms of Versailles was a shovel so heavy that it took a strong man to hold it out at arm's length. The King would often perform this feat, with a little page standing on the shovel as well. Scandalous stories were afloat of Louis' intemperance; our ex-Page indignantly repels the charge, and explains how the calumny might have arisen. When the King had been hunting at Rambouillet, he had his supper there and returned very late at night. He would arise half asleep, with his legs stiff, dazzled by the glare of the candles and torches, and find it hard to mount the stairs. The servants who saw him with the notion of his debauchery in their heads thought him excessively drunk; while within his own rooms, and recovered from his sleepiness, he would begin to converse and talk about his hunting with details that appeared wearisome enough to a drowsy Page at three o'clock in the morning. Poor King! destined, thanks to his own clumsiness, in small matters as in great, to be the target of unmerited slander. Of the invasion of Versailles by the mob on October 5th, 1789, M. d'Hézéques gives a detailed account; but, beyond his assertion that the bandits who broke into the Queen's apartments were led by the Duke of Orleans in person, there is nothing very striking in his narrative of that memorable incident. The King had been hunting at Meudon that afternoon, but returned in time to force his way through the crowd of women who surrounded the approaches of Versailles. Lafayette arrived at eleven o'clock in the evening, "with a smile on his lips and treachery in his heart." His supineness is attributed by our author to a desire to frighten the King into going to Paris, that "he might be master and director of events." This picture of the general as an ambitious conspirator is ludicrously inapplicable to the real Lafayette, into whose character vanity and feebleness largely entered, but whose honesty of purpose and loyalty to the cause of the Constitutional Monarchy was unquestionable. Our ex-Page shows more fairness in refuting the exaggerated stories of the violence of the mob which have obtained currency. It was said that the Queen's bed was pierced with bayonet thrusts; but M. d'Hézéques, who examined it two days afterwards, found no marks of violence upon it. Only two of the bodyguard were killed. Our author records it, "to the shame of General Lafayette," that the heads of those two unfortunate officers, slung at the waist of a monster with a long beard, were exhibited at the side of the carriage in which the Royal Family were escorted to Paris. "What posterity will hardly believe," he adds, "the company halted at Sèvres, while hairdressers with daggers at their throat were compelled to dress and powder these livid and bloody heads."

Perhaps the most interesting chapter in this book is that in which the establishment of Royal Pages at the Court of Versailles is described. They were divided into two classes—Pages of the Chamber and Pages of the Great Stable. To be received as page it was necessary to prove at least two hundred years of direct noble descent, and to have an allowance of six hundred livres for minor expenses. Of all further care and expense the parent of the Page was relieved. The Pages of the Chamber were eight in number; their service was entirely within the Palace, and as it did not require height or strength, often began at nine years old. Owing to their small number, the education which they received was much better than that bestowed upon the Pages of the Stable. Their duty consisted in being present at the King's levée, in attending him to mass, lighting him upstairs on returning from hunting, and presenting his slippers on his retiring to bed. When we learn

that one dress alone for a Page of the Chamber cost fifteen hundred livres, it is not surprising "that the economical spirit of Cardinal de Brienne did not forget the pages." Their number was largely reduced, and the two classes merged in the department of the Grand Stable. The Pages of the Stable were a much more noisy and independent set of young gentlemen. It is curious to find that something very like the Eton system of "fagging" was one of their most cherished traditions. The authority of the elders over the new ones resembled a kind of oligarchy. The first year was passed in the novitiate of being a fresh boy, and a very severe novitiate it was. The most perfect and passive obedience was the first quality of a fresh boy. A fresh boy had no property; he was obliged to obey the slightest sign of a senior, and his slightest faults were severely punished with tasks or stripes. In addition to Eton "fagging," we find something like "Winchester slang." One of the etiquettes was to employ none of the names in ordinary use in colleges. The words "passages," "refectories," "classes," were scrupulously exchanged for "corridors," "halls of study," &c.; and a fresh boy who called his comrade his schoolfellow would be saluted by that nickname all the time he was in the service. The prerogatives of the seniors were occasionally abused. M. d'Hézéques mentions a case in which a page was branded on the back with the print of a red-hot spur. But cruelty of this kind was not common; and upon the whole the severity of the ordeal which the "fresh" boys underwent had its advantages. The pages heard mass daily in the chapel; after which their mornings were employed in the riding-school, a few hours only being devoted to study. To an earnest educationalist, our author's description will not suggest a very satisfactory course of training for gilded youth. But regarded as a school of fine manners and graceful accomplishments, and what was of still more moment, as an instrument for attaching the young nobility to the person of the Sovereign, the pages' establishment constituted an important part in the pageantry of the old French Court.

M. d'Hézéques chronicles many details connected with the King's levée and retiring to rest. It was part of the latter ceremony for the monarch, after a short conversation with his courtiers, to retire with the chaplain in waiting within the railing which surrounded the Royal bed for the purpose of devotion. The chaplain held a long taper-stand of silver gilt, with two tapers in it, while he recited a Latin prayer. At the end of the prayer, the taper-stand was handed to any gentlemen whom the King wished specially to distinguish. This honour was so much coveted, that even the Marshal de Broglie, a Marshal of France, covered with glory at forty years old, could not conceal his vexation at failing to obtain it. If a prince of the blood was present, it was he who had the right to put on the Royal night-shirt, which was considered a great honour. One custom was inexplicable to our ex-Page. Under the King's bolster was placed a change of linen tied to a little sword. A small reflection of a loaf of bread and two bottles of wine was always placed at the bedside, and called the "en cas," or food ready in case the King should need it. The servants sat on stools within the enclosure round the King's bed, no one being allowed to walk about the room. No one ever opened the door when coming in or going out, but asked the usher to open it; and, instead of knocking at it, scratched gently. All went out of the Royal presence backward; and there was an exquisite flattery of the monarch in the rule which made it more polite to one's companion to precede him in leaving the Royal chamber, so that, coming last, he might enjoy the longest view of the King. Courtiers of the old school used to bow to the State bed, even when the King was not present; and even the "most modernized" of them always retreated to the wall if the King advanced towards them, and when quite forced against it, kept on shuffling their feet in the hope of attracting the attention of the Sovereign. No one not on very intimate terms with the King could address a word to him, and then only in the third person. The ceremony of the King's levée was quite as elaborate as his retiring. In the time of Louis XIV. it really meant the King's rising from bed at eight o'clock in the morning. But by degrees the hour receded and the levée became a sort of ornamental toilette, which took place two or three hours after the King's rising. In Louis XVI.'s time it was held at half-past eleven. At that hour the King came out of his private apartments in morning dress and entered the room of ceremony. A servant cried out "Wardrobe, gentlemen!" whereupon the princes of the blood, the great officers of State, and the gentlemen who had the privilege of the *grandes entrées*, among them any of the King's *ci-devant* tutors, entered. The toilette began, the King putting on his shirt and stockings. Then the door was again opened, and the same voice called out, "The first entrée!" On this summons appeared the doctors and the servants of the wardrobe not on duty. When the King had nothing but his coat to put on, they called "The chamber!" Then all the officers of the chamber entered, the pages, the equerries, the chaplains, and all the courtiers admitted to the *entrée* of the chamber. When the King was entirely dressed, the folding-doors were flung open, and all the rest of the officers admitted, together with the strangers. The King's hair was never dressed till he was entirely clothed. After his levée, he went into a dressing-room, where his embroidered clothes were covered with a great gown, and the barber servant, who had prepared the hair on rising, finished the dressing and added the powder. No wonder that from the tedious *minuties* of so intricate a ceremonial, daily repeated, the poor King escaped with glee to his favourite walk on the roof of the Chateau (in the mouth of our ex-Page, it is always the Chateau, not the Palace, of Versailles), whence it was one of his

* *Recollections of a Page at the Court of Louis XVI.* Edited from the French by Charlotte Yonge. London: Hurst & Blackett. 1873.

chief amusements to observe through his telescope all who came or went.

The observance of Maundy Thursday at the old French Court differed in some respects from the practice of other Courts. On that day etiquette ruled that the monarch should give a touching and edifying example of humility. The preacher was permitted to give free rein to his eloquence, and lash the vices and scandals of the Court. But the chief ceremony was the washing of the feet, not of certain poor persons, but of twelve little children, who were taken to represent the twelve Apostles. After the washing came the children's supper, consisting of twelve dishes for each child, which were handed to them by the Royal Princes. The parents were allowed to be present with large baskets, into which the victuals were transferred, and carried home to be enjoyed in private. Another custom is mentioned in connexion with this season of the year. It was usual to serve up a dish of green peas to the King on Good Friday, however severe the weather might be, or whatever the time of Easter. These peas did not come from the Royal gardens, but from Vincennes, where a gardener was hired specially to raise them by means of hot-beds and forcing.

"Ceremonies," says our reminiscer, "are one of the strongest ramparts of Royal authority. Etiquette is the axis which protects sovereigns from familiarity and contempt." It proved, alas! but a sorry segis to the unfortunate Louis XVI., whose native homeliness was only brought into stronger relief by the elaborate ceremonial by which he was environed. To a quick-witted nation, fermenting with a new spirit of scepticism and mockery, there could not but be a sense of anachronism and a touch of the ridiculous in all this minutely regulated kotowing and doll-dressing. Nothing but extraordinary personal dignity on the part of the central figure in the pageant could make it imposing or majestic. In an age which believed in the divine right of kings, and with the Grand Monarque for the central object of a courtly adoration, the "toilette" of the King may have been an impressive spectacle; but with revolution in the air, and nothing but the good-natured clumsiness of a Louis XVI. to group itself around the ceremony must have dangerously approached the confines of the ludicrous.

INDIAN TRAVELS OF APOLLONIUS OF TYANA.*

LOOKING on the cover of this volume, which bears only the names of the author and of Apollonius of Tyana, we expected to find within it a new examination of the alleged acts and teaching of that mysterious personage, or a treatise on the history of imposture generally. The title-page shows, however, that the book is not concerned either with the miracles or with the theology of the philosopher, and that even his travels cover but a small portion of the ground to be traversed; and a perusal of the first chapter teaches us that the real question turns not so much on his travels as on the genuineness of the journals kept by the Syrian Damis, who is said to have been his companion. The answer to this question carries us but a little way to the main purpose for which the papers composing this volume have been put together. This object is to ascertain, if it be possible, the exact measure of intercourse between Imperial Rome and India during the first six centuries of our era, and this end Mr. Priaulx hopes to reach by carefully sifting the evidence for or against the trustworthiness of the accounts relating to the embassies which during that long period are said to have found their way from the East to the West. This evidence is scrutinized with an industry, closeness, and learning which would do credit to Sir Cornewall Lewis; and here, as in reading the pages of that great historical critic, we may fairly feel that the process which sweeps away some fancied facts really adds to the sum of our knowledge. In other respects there is a vast difference between the two writers, and any comparison between them would be an injustice to Mr. Priaulx. Sir Cornewall Lewis had to touch historians that historical evidence is like any other evidence, to be handled in the same way and with the same spirit as all other testimony. To do this he had to smite down many an idol whose worshippers resented his act in amazement and wrath. In short, he had to fight a great battle, and he had both the excitement and the pleasures of the conflict. The idols were smitten; but the work was done with a quiet sarcasm and a suppressed humour which make many of his chapters infinitely amusing. Mr. Priaulx's task lay within a narrower compass. He wished simply to ascertain what amount of historical truth might be contained in the narratives of embassies from India to Roman Emperors from the days of Claudius to those of Justinian. The importance and interest of the earlier embassies to Augustus and Claudius could not be disputed; but his inquiries into the history of the later ones led him to unexpected conclusions on the relations of the Roman Empire with the East generally. Of the papers which compose this volume, and which are now reprinted after revision from the Journals of the Asiatic Society, the latest appeared in 1863, shortly before the publication of M. Reinaud's work on the same subject. Mr. Priaulx confesses candidly that his papers seemed to excite not the least interest; that nothing more than the desire to supply some omissions and correct some faults in his papers has led him to reprint a small number of copies; and that, if he had been aware of M. Reinaud's intention of taking up the subject, he would not have thought of trespass-

ing on ground which he regarded as belonging peculiarly to that distinguished French scholar. Such a result would have been in every way unfortunate. There may be few who will care to enter into the inquiry at all; but when a writer carrying the weight of M. Reinaud gives to the relations of Rome with the distant East an importance far beyond that which they seem to have possessed, it is well that a writer to whom this view appears to have but slender justification in fact should put forward his side of the case. Thus, while in M. Reinaud's work we have the evidence exhibited for the purpose of showing the overpowering influence exercised by Imperial Rome over the most distant kingdoms of the East, in Mr. Priaulx's eyes this overwhelming predominance so far fades away as to make it certain that, although the idea may have excited the wonder and speculation of kings and princes, it never influenced their policy or impressed the imagination of the people. The conclusion is certainly not without its significance and importance; and Mr. Priaulx has made good his title to a respectful and patient hearing.

The travels of Apollonius may be soon dismissed. The Ninevite Damis is said to have left a journal of all the wonders which he had seen in the company of the Sage; and, indeed, the fact of his having left such a document is scarcely open to question. But nothing was heard of the book until, more than a century after his death, some one of his family presented it to Julia Domna, the wife of Alexander Severus. Had she ordered its publication precisely in the state in which it came to her, we should still have been unable to say whether it may or may not have been tampered with in the interval; but, instead of doing this, she placed it in the hands of the rhetorician Philostratus, with the charge that he should re-write and edit it. At once, then, the journal is deprived of any weight which it might have derived from the authority of Damis, and its trustworthiness must be admitted or denied wholly on internal evidence. This evidence Mr. Priaulx examines at every step with praiseworthy care; but his toil in this instance may be almost set down as much ado about little or nothing. Any journal would stand at a desperate disadvantage which professed to record anything said or done by a man with whom falsehood has been so busy as with Apollonius of Tyana. It may at once be set aside as worthless when, in spite of its ingenuity, its keenness of wit, and sharpness of repartee, we find that it only repeats statements or exaggerates errors made from the days of Hesiod and the historians of Alexander downwards, and that the Brahmins and Sophists or sages of the East think, speak, and act not like Hindus but like Greeks. If in the one case Prometheus is heard groaning on the crags of Caucasus, here his chains are seen. If the earlier men had spoken of the long life of elephants, Damis had seen the still living beast on which Porus had gone forth to encounter Alexander. If Herodotus could describe the never-failing tables of the Ethiopians, Damis had witnessed a marvel still more nearly akin to the wonder of the Holy Grail. He had seen the four tripods move onwards of their own accord, followed by bronze cup-bearers; he had seen the banquet spreading itself out on the earth, which instantaneously put on a vesture of grass, and the several dainties placing themselves in the hands of those who wished to eat them. The conversations with the Hindu sages exhibit that mere glorification of Greek philosophy which, having been administered in increasing doses from the days of Alexander onwards, had at last rendered Greeks as anxious to be recognized as the instructors of the East as the Egyptians of an earlier day had been desirous of claiming for themselves the origination of Greek science, religion, and art. The conclusion seems to follow irresistibly. Either Philostratus has put his own lies into the mouth of Damis, or Damis has crowded his pages with falsehoods which absolutely deprive him of all title to credit.

The narrative of the Indian embassy to Augustus is decidedly more important. Nicolaus of Damascus met the ambassadors at Antioch Epidaphne; and their credentials, he said, were written in Greek on parchment which bore the name of Porus. The reality of a mission sent to Octavianus cannot be disputed. It is noticed by Horace, and is said by Strabo to have been sent by a king named Pandion or Porus; but while the geographer, mourning the lack of materials for his account of India, asserts that only one embassy reached Rome in the days of Augustus, Dion Cassius holds that there were many, and speaks of one which reached him at Samos, bringing amongst other gifts the first tigers which were exhibited to the Roman people. These tigers are not among the presents named by the Damascene Nicolaus; but if the statement be true, we see at once the inconsistencies and contradictions of the several narratives of the mission. St. Jerome refers it to the year 26 B.C., while Orosius brings it to Tarragona, where Augustus was kept from 27 to 24 B.C. by the Cantabrian war. Thus the chronology of these two writers is irreconcilable with that of Dion. It has indeed been contended that there may have been more embassies than one, as indeed Dion asserts that there were; but Mr. Priaulx lays stress on the ambassadorial letter given by Nicolaus, in which no previous contracts or overtures are mentioned, and insists that no such repeated offers were needed to secure peace where war was impossible. But, more than this, the authority of Pliny would bring the event down to a much later date, since, according to him, a tiger was shown in Rome for the first time at the dedication of the theatre of Marcellus in the year 11 B.C. Thus far the examination seems chiefly to give weight to the story of Nicolaus. In Mr. Priaulx's words, it is

confirmed in several particulars, and in none satisfactorily impugned. We

* *The Indian Travels of Apollonius of Tyana, and the Indian Embassies to Rome, from the Reign of Augustus to the Death of Justinian.* By Osmond de Beauvois Priaulx. London: Quaritch. 1873.

accept the Indian Sophist, we accept the Hermes, we accept the beggarly presents; and because we accept so much, we accept also the Greek letter, and the Pandyan or Paru, King of Kings; for we believe, as Strabo also evidently believed, that what Damascenus wrote, he wrote from his own knowledge. But how then explain what is so at variance with our established notions?

The explanation added is certainly forcible. It is not to be supposed, he contends, that they could have delivered a Greek translation of a letter which they had received in their own language. The translation might or might not be faithful; it was in any case a fabrication of their credentials. They had been four years on their journey; most of the ambassadors had died, and most of their presents had been sold to save them from hunger on their journey—all circumstances tending to show that the message must have come from no sovereign who could command direct communication with the West. But further, Damascenus mentions a native of Burgosa as accompanying the expedition, and Barygaza is a trading town at the mouth of the Nerbudda, while a kingdom of Pandya extended along the western shore of the Indian peninsula. Finally, after the fall of the Persian Empire, Palmyra and Alexandria were the two great marts for the importation of Indian products to the West. Mr. Priaux gives reasons which seem decisive against the notion that this embassy could have come through the former place; but the Alexandrians, watched and opposed by the Arabs, had a plain motive for seeking to establish a direct trade, and to enlist the services of any petty rajah whose Buddhist faith would free him from the scruples and exclusiveness of the Brahmins. The people of Barygaza were at this time Buddhist, and the rajah might be easily persuaded to aid the scheme.

This brief summary does but scant justice to the whole argument of Mr. Priaux. The papers on the later embassies are even more forcible; and at the least they offer in favour of his general position an amount of evidence which certainly cannot be dismissed with contempt. Mr. Priaux's work may be taken along with Mr. Rawlinson's History of the Parthian Empire as evidence that the power of Rome was not quite so widely felt or so deeply dreaded as we may have been disposed to imagine.

STONEHENGE.*

WE have read somewhere—perhaps, like Lord De Ros, at the end of the Dictionary—of some people in Arcadia (not Sir Philip Sidney's Arcadii, but the one in the middle of Peloponnesus) who gave themselves out as *πρωσέγοντες*, people older than the Moon. If the course of the migration of nations would allow, we should certainly set them down as near akin to the famous Welsh gentleman who put the date of the creation of the world as a marginal note in his pedigree, and that at a point a good many generations after the first recorded ancestor. In Wales, and in Celtic countries generally, we are often reminded in various ways that the breed is by no means extinct. There is a class of people of whom Mr. Lowe and Mr. Froude might say with perfect truth what they say with such remarkable lack of truth of the Universities of Oxford and Cambridge—that they learn nothing but what they might have learned a hundred or two hundred years ago. But we hardly expected to find a full-grown and unaltered specimen of the race in so reasonable a part of the world as Wiltshire, writing among all the associations of the two Salisburys, Old and New. Mr. Gidley describes himself as "Chaplain of the Hospital of St. Nicholas, Salisbury," and "translator of *Bede's Ecclesiastical History*." We do not at this moment remember Mr. Gidley in this last character, but, unless our memory altogether fails us, we do remember him as the winner of a prize for English verse at Oxford so long ago that his success might almost pass for a part of ancient history. Certain it is that Mr. Gidley's notions about Stonehenge and about things in general must have been fossilized at a very early time. The word *History*, and the word *Modern* in his title-page, must both be taken in a non-natural sense. To be sure, he gives us, by way of ancient history, a great number of extracts from ancient historians; but, as they contain nothing whatever about Stonehenge, they cannot be looked on as history for the purpose in hand. As for "modern observation," by the "light" of which Mr. Gidley views Stonehenge, he is so far from having reached the last light that he has not even reached the last darkness. Mr. Gidley writes about Stonehenge in utter unconsciousness of Mr. Fergusson and his theories. In itself this might be a gain; but then Mr. Gidley does not seem to have heard of anybody or anything later than Stukeley, Davies, Duke, and such like, except that, as an inhabitant of Wiltshire, he could hardly help having heard of Dr. Thurnam, and that his thanks "are due to Mr. E. T. Stevens, of Salisbury, the author of *Flint Chips*, for important information, and for the loan of books relating to the subject." Save for these local lights, Mr. Gidley seems to be in exactly the same state of mind as the people who attend a Welsh Eisteddfod. He believes the whole thing as firmly as M. Henri Martin. He dishes up afresh the crude nonsense of a pre-scientific generation, as if it had not long ago been proved to be nonsense, or rather as if it were not such acknowledged nonsense that no man who has the faintest notion what scientific treatment is would think it worth his while to prove anything about it. In fact, the range of our knowledge is widened when we find that there is a man, a member of an English University and living in a civilized

English city, who, at this time of day, not only believes in the "Arkite religion of the Cymry," but seems not to know that anybody has had any doubt about the matter. To be sure this particular craze has some advantages over other kindred crazes. It is hard to prove a negative, but we think we could prove that King Hannibal Grylls never reigned at Marazion, because the words which affirm that he did do at least make an intelligible proposition. But when we are told that the religion of the Cymry was Arkite or Helio-Arkite, we cannot undertake to say that it was not, simply because the words Arkite and Helio-Arkite convey to our minds no meaning whatever. Mr. Gidley however has no doubt about the matter; he tells us in his preface that

Mr. Davies, the author of "*Celtic Researches*," and "*British Druids*," appears to have fully established the Noachic, and Arkite, character of the early religion of the Cymry, by the traditions, or myths, which existed among them, relative to the Great Deluge, and of which he makes mention.

Mr. Gidley starts with a prodigious mass of pre-scientific ethnology about Cymry, Cimbri, Cimmerici, Celts, Gauls, and what not, out of all which we must pick out one charming passage, though it is a little long. There is such a beautiful simplicity in going to Verstegan for a heap of facts as specially belonging to his time, which, so far as they are facts, are just as true now as then; while the notion that the Germans turned the French initial *g* into *w* in such words as *war* and *warden* is such a putting of the cart before the horse as we do not meet with every day:—

A strong although not quite direct proof that both the Cymry and Celts were called Galli, or Gauls, is that both appear to have been called *Wala*, or *Weala*, or some similar name equivalent to *Welsh*, by the Teutonic or German races. Verstegan, the author of "*A Restitution of Decayed Intelligence*," observes that the name *Weala*, *Wals* or *Welsh* is equivalent to *Galli* or *Gaulish*; the *g* used by the French being often changed into *w* by the Germans, as *Gardien*, "warden"; *guerre*, "war." *Wales* is still called by the French *Pays de Galles*; Cornwall, he says, was called *Corwallis* (now *Conrowalle*); and the Prince of Wales is called *Prince de Galles*. He says that in his time Lombardy, or *Gallia Cisalpina*, was called by the Germans *Welshland*, and hence, by the vulgar, Italy was called *Welshland*, and the Italians *Welshers*. Also, that the lower Germans, or Netherlands, called the inhabitants of Hainault and Artois *Walens*, or *Walsons*, and their provinces, *Walsland*, and the French language, *Wals*. Also, that the part of Brabant where the French language was spoken was called by those who occupied the other part, *Wals-Brabant*; and that a part of West Flanders where the French, and not the Flemish, language was spoken was called *Flandre-Gallieant*, and in Flemish, or Low-Dutch, *Wals-Vlaenderen*.

This is hardly to be beaten, except by a German Dictionary that we have, in which the word *Wulsch* is explained to mean "Italian," and "figuratively, *strange*."

We confess that we get a little puzzled when we read that "the Cymry appear to have resembled the Celts in many respects," and how "the Celts are considered to have been descendants of Japhet"—the Chaplain of St. Nicholas at Salisbury seems to get his spelling of the patriarch's name from either the Vulgate or from Captain Marryat's novel, rather than from the Authorized Version—how "they were a people cognate to the Cymry, as being alike descended from Gomer"—and, more remarkably still, how "the striped plaid points very distinctly to the Celto-Gallie origin of some of the Scotch." After all this, it is rather hard when Mr. Gidley tells us that "the influx of Celtic, as distinguished from Cymric immigrants, into the British Isles is not clearly traced by history." If Mr. Gidley cannot trace it, we are sure that we cannot. But when Mr. Gidley tells us that "Caesar states that the Celts in Gaul were called 'Galli' or 'Gauls' by the Romans," and that "akin to this appellation are the words 'Gael' and 'Gaelic,'" we should like to set him before the back of Dr. Todd's volume lettered "War of the Gaelic with the Gaill," and to ask him which of the two he thinks have most to do with his "Galli." The following passage again is very odd for any one to publish in 1873:—

It is likely that some of the inhabitants of Scotland are, as one tradition reports, of Scythian origin. The likeness of the name "Scot," or as it is in the Erse language, "Scit," to Scythian, is remarkable; and Lord Byron tells us that he was much impressed with the resemblance in figure, manners, and dress, including the kilt, between the Highlanders and the Albanians, who were of Scythian descent, being identical with the Alani (a name signifying "mountainers," and derived from the Sarmatian word "Ala").

In the next page we get "the Helvetii or Swiss," which however is somewhat redeemed by the remark a little lower down that the name of "the Scotch Wallace" "denotes that he was by descent a 'Walas' or 'Wealas,' the name given by the Anglo-Saxons to one of the Celts or Cymry." We should have thought that the name "Wealas" could not have been given to any number short of two of the Cymry; but we will not complain, as so great a hero as William Wallace is doubtless entitled, like Behemoth, to a "pluralis excellentiae."

Mr. Gidley holds that "the name Druid is probably preserved in the modern surname of Drew or Drewe, which is common in the West part of England." Perhaps it might be harder to see the connexion in the true form of the name *Drewo*, or in *Dreucun*, which town, from its French form *Dreux*, Mr. Gidley infers to have been a city of Druids. So *Stanton Drewo* "is understood to mean the stone structure or enclosure of the Druids." It does not need much understanding to see that *Stanton* means a "stone structure or enclosure," and it is possible that the place may have taken its name from the megalithic remains. But alas for the Druids—the Drew part of the name is simply that of a family who became possessed of the manor in the time of Henry the Third. While among the stones, we find Mr. Gidley arguing that "Stonehenge being supposed to be a Druidical structure, has something in common with *Cromlechs*, which are

* *Stonehenge, viewed by the Light of Ancient History and Modern Observation.* By the Rev. L. Gidley, M.A. Salisbury: Brown & Co. London: Simpkin & Marshall. 1873.

also conjectured to be Druidical works." One would have thought that a writer who knows something about Dr. Thurnam, and even of the Danish antiquaries, would have got beyond the stage of conjecture in these matters, just as it is strange that a translator of Bede first tells us that the English Chronicles are a "great authority and of undoubted credit," then that "this Chronicle, although truthful, is a most one-sided history," and, lastly, that it is "a meagre and disingenuous register of events." There is also something queer in Mr. Gidley's way of quoting, as in p. 14, where "Stukeley quotes Camden," and that "a writer named Montanus states that Johannes Theophilus" gives a certain description of six stone statues of Druids. Mr. Gidley would seem to have but a distant acquaintance with Montanus, but to be on the most intimate terms with Johannes Theophilus. We can only say that we have followed the praiseworthy example of our betters in looking in Dr. Smith's Dictionary, and that we know no more about Johannes Theophilus, to say nothing of Montanus, whether the heretic or any other, at all events in connexion with Druids, than we did before.

But perhaps it better becomes us to try and learn something of the mysteries of Arkite and Helio-Arkite worship, as in these backsliding days, when people are taking to Comparative Mythology and such like, we may not have another chance. We are astounded at the threshold by finding that the Arkite religion, after all, was not strictly orthodox:—

The ancient religion of the Cymry seems to have been that which, having been perverted, is called Arkite; but which was originally the religion founded on the Covenant that the Almighty made with Noah.

Presently we learn a little as to the nature of the corruption, which certainly strikes us as odd:—

The simple and pure patriarchal religion of the Cymry appears to have been corrupted by the elevation of the Ark and the revered patriarch to the rank of Deities, in the same way as the Jews made the brazen serpent an object of worship (2 Kings xviii. 4), and the Church of Rome has deified the Virgin Mary, and, as one may say, the Saints, and has unduly exalted St. Peter in the person of his supposed ancestors. A further corruption of religion afterwards took place, when the Sabian worship was introduced, as we may suppose, by the Phœnicians, and became blended with the already corrupted Noachic religion, so as to form with it the Helio-Arkite worship.

Stonehenge, it seems, was made after these changes had taken place, and the corruption which followed them must have been of a very lamentable kind, for we read in another place:—

That the structure of Stonehenge had reference, as most other early temples of a similar kind had, to mysteries which are called *Phœlia*, can scarcely be disputed.

After a while other changes took place, and the Helio-Arkite seem to have got nearly as bad as Papists:—

The original Noachic religion of the Cymry was founded on a Divine revelation, and so a true and authentic religion; and it appears from the compositions of the Bards, that, after the introduction of Christianity, the names of Nô and Eeey were used for those of Hu and Keli, which clearly shows that they recognized the identity of Dryvan (their Noah), and Hu (the deified Noah), with the great Scriptural Patriarch. We may assume then that the religion of Christ became, to a certain extent, blended with the earlier religion, in some such way as the Sabian worship had before been joined to the Arkite. We shall the less wonder at this when we consider that the Church of Rome has probably ever been considerably leavened with the superstitions of Pagan Rome.

Now it is really strange in these days, when any man who can read, much more any man who has had his education at an English University, has the means of learning with very little trouble what the results of scientific research are, that any man should go calmly repeating all this antiquated nonsense, as if it were something about which there was no doubt, sometimes even as if it were something new. In this last notion perhaps Mr. Gidley may not be altogether mistaken. It is sometimes safe to repeat a genuine primeval Joe Miller, when a more modern joke would be at once scouted as stale. Helio-Arkite speculations are so utterly out of date that most scholars of our day never so much as heard of them. It is amusing to hear Mr. Gidley quoting Stukeley, Davies, and so forth with profound reverence, as if they were names which could not fail to command belief. Now it is ungrateful for those who enjoy the benefits of later stages of progress to forget what is owing to those who did good service in the earlier stages. Even Stukeley and his class are not useless. That is to say, they are often witnesses to facts. They set down what they saw and measured, and they saw and measured many things which nobody can see and measure now. Thus far they have done us a service for which we are thankful. And there are of course other writers of times gone by whose labours are worth far more than this, men who have laid a real foundation of sound and critical research on which others have had simply to build up. To such men it is no blame if their work now often seems imperfect or inadequate, or even inaccurate in detail. All that their defects prove is that no work can be done all at once. But when it comes to the speculations of Stukeley and other oracles of such writers as Mr. Gidley, they are simply worthless. Mere guesses without criticism are simply worthless at any time, whether it is Stukeley or Mr. Ferguson who makes them. What Mr. Gidley's book proves is the singular and rather disheartening fact, that there are people who still accept this kind of stuff as if it were worth something. For our own part, we have no opposite theory about Stonehenge to set up against that of Stukeley or Mr. Ferguson or anybody else. What there is no means of knowing we are satisfied not to know. Mr. Gidley himself tells us with much solemnity:—

Some scientific men trust for revelations to the bowels of the earth, and

look for information to be procured by the pickaxe and shovel. The surest light which we have to guide us is that of history.

There are cases in which the pickaxe and shovel can tell us more than any written records. There are other cases in which the pickaxe and shovel can tell us nothing, but where written records can tell us a great deal. There is a third class about which neither pickaxe nor records can tell us anything. And in this class we put Stonehenge. We know not who built it, or when it was built, or why it was built. And we see no means of finding out. We only know negatively that its rugged stones were not set up after men had carved the graceful acanthus leaves of Silchester. That it was built by Helio-Arkites we can neither deny nor affirm, till some one has more clearly explained to us what a Helio-Arkite is. If Mr. Gidley or anybody else can bring us any evidence, whether written with the pen or dug up with the pickaxe, to such evidence we shall be ready to listen. But we decline to accept guesses; and, as we have as yet nothing before us but guesses, we are content to know nothing about the whole thing.

INGO AND INGRABAN.*

OF all living German novelists, the lightest touch perhaps belongs to Gustav Freytag. This is not in itself saying very much, for though German literature abounds in admirable and delightful tales for mature readers as well as for children, prose fiction in its more developed form has not advanced with very perceptible strides among the Germans since their classical period. There are German novelists of high contemporary repute whom it is as difficult to read as French lyrical poets of the ordinary type. But Herr Freytag has many high qualifications besides that of a prose style which is positively readable. He has in turn adorned many branches of literature. As a journalist and political biographer his fame stands justly high; his last published work, the *Life of Karl Mayh*, is not less graceful in form than it is healthy and honourable in spirit. As a dramatist he is one of the few Germans of the present day who have successfully rivalled the French on their own ground. In paying him this tribute we have, however, no intention of referring to his classical tragedy of the *Fabi*, but rather to his delightful efforts in high comedy, which will long keep the German stage. The *Valentine* is to some extent in Scribo's manner, but perfectly original and superior to Scribo in depth of feeling; the *Journalisten* anticipated much of the fun of *Rebajas*, and is yet German to the core in both sentiment and humour. These are not Herr Freytag's only attempts in the drama, the laws of which he has discussed in what we take leave to think one of the best and soundest modern theoretical works on the subject, recently republished in a second edition. But of late years he has achieved popularity chiefly as a novelist. His *Debit and Credit*, besides doing honour to the best type of that very various being the German merchant, and flattering national feeling against the Poles, was considered by many persons a successful attempt to transplant into original German fiction the minute humour of Dickens, which German readers have always warmly appreciated. His *Lost Manuscript*—in our opinion a far happier effort—occupied itself with social interests and ideal tendencies more peculiarly German; it is a truly national novel in every respect, and its occasionally professorial amplitude of treatment seems upon the whole to accord well with the breadth and fulness of its design. He then seemed to have deserted fiction for what the Germans term *Culturgeschichte*, and his volumes of *Pictures of the German Past*, based on genuine research and warmed by true patriotism, have been recognized as worthy the study of the historical inquirer, while they are so pleasing in form and unpretentious in treatment as to have easily acquired a popularity which they are not likely to lose. But so far from regarding this work as the crown of a most deservedly prosperous literary life, he is once more before the world as a writer of fiction; and in his romance of *The Ancestors* obviously essays to produce what, if successfully completed, will be the *magnum opus* in the long list of his works.

We have said that Herr Freytag possesses, comparatively speaking, a lightness of touch by which not many German novelists either of the present or of the past are distinguished. But it will not for a moment be supposed that this work, of which the two stories of *Ingo* and *Ingraban* form the first instalment, resembles in airiness of texture and facile delightfulness of composition such a collection as e.g. M. About's *Contes de la vieille roche*. The Frenchman, like the German, apparently set himself the task of showing what is the result of blood; but the Frenchman is content with a lively satire of the present, while the German laboriously pursues so much of the development out of the past as is to be found within historical limits. Though expressly deprecating the supposition that he seeks to write *Culturgeschichte* in the guise of fiction, M. Freytag means to do nothing less than trace the history of a German family or line from the times of the great popular Migration down to those of the new German Empire; and, beginning with a fugitive Vandal of the fifth century, to reach "the last descendant, a merry fellow who is at the present day walking beneath the German sun, without troubling himself much about the deeds and sufferings of his ancestors." The moral, or psychological, truth

* Die Ahnen. Roman von Gustav Freytag. Erste Abtheilung: Ingo und Ingraban. Leipzig: Hitzel. 1872.

Our Forefathers. A Novel. By Gustav Freytag. Translated by Mrs. Malcolm. London: Asher & Co. 1873.

which it is designed to teach seems to be this—that the inheritance of the past is not lost in the course of time, but accumulates its influence from succeeding generations; that freewill and creative power may grow simultaneously, so that on no generation is imposed a heavier task than it is able to perform. This doctrine of the moral development of a people as typified in that of a family, which is only an application of Herder's doctrine of the moral development of the entire human race, is in truth a worthy theme; but time alone will show whether it is possible within the framework of a fiction to exhibit a harmonious picture of that progress which it needs a high inspiration for either poet or historian to recognize clearly in the winding course of a long series of centuries. At the same time it cannot be denied that the novelist, who works essentially according to the laws of epic art, has a clear right to such a theme; there is no epic unity but that of subject, though a corresponding duty is incumbent upon the epic poet not to trifle with the mere pretence of an idea.

Herr Freytag in a few well-chosen words—for he has long been a courtly liberal—dedicates his work to the Crown Princess of Germany, and reminds her that his narrative describes a district of which Her Imperial Highness loves the inhabitants, the hills, and the woods. Thuringia then is chosen as the typical German district where we are to watch in successive volumes the development of a line of Germans; and it is happily chosen, for Thuringia, at the present day the heart of Germany, has remained a borderland as well as a centre, and the contrasts between Germanism and Slavism, as well as the differences between North and South, have here at various times come into direct contact. On the advantages which this choice of scene will furnish for subsequent volumes it is needless to touch till we can judge how they have been used; but as one of the homes of the Minnesingers, and the birthplace of the greatest of the Reformers, as the scene of a peasant's War and a nest of petty Courts, as consecrated by the glories of the classical age of German literature, as the battlefield of Prussia's overthrow, and a seedplace of her rise to the hegemony, the theatre of Herr Freytag's historic romance opens the prospect of a series of pictures which will embarrass him by the wealth of their variety alone.

At present we are offered two stories in which the more languid reader is not likely to find the most selective part of Herr Freytag's romance. The hero of the first, which dates just before the period of the great Migrations, is a Vandal prince of the name of Ingo; the hero of the second, who is a contemporary of Charlemagne, is Ingo's Thuringian descendant, Ingraban. Times such as these, as the author truly remarks, are more easily understood by the poet than by the historian; but considerable art is requisite to enable even the poet to move with ease amidst such strange surroundings. Indistinctness of colour is certain to enfeeble the interest of the reader, while abundance of detail is resented as unfamiliar and incapable of verification. To our mind, Herr Freytag has most nearly approached success in his first story, where he had least to help him; the traces of effort are not indeed wholly absent, but neither are they unpleasantly predominant; and if it is impossible to refrain from a feeling of gentle satisfaction when one reaches the end of the story, this satisfaction is not wholly due to the cessation of the strain which any and every tale of the fifth century of the Christian era must put upon a reader of not more than ordinary robustness. The story of Ingraban, on the other hand, in which Winfried and his fellow-missionaries seem by comparison quite familiar faces, is altogether more commonplace in subject, and, if it calls for a slighter effort in the reader, also rewards it less fully.

Ingo is a fugitive Vandal prince, who, exiled from his home on the Oder by a dynastic intrigue, takes service with the Alamanii against the Romans, and, after achieving prodigies of valour in a great battle against the troops of the Cæsar, escapes with no token of his heroism but the Roman banner of which he bears the mystic dragon's head in his wallet. Hospitably received by a "prince" of the Thuringians who dwells at a distance from the Court among a free peasantry grudging its dependence upon the Thuringian king, he for a time conceals his birth beneath the guise of an ordinary warrior, taking his place humbly at the bottom of the bench. But he is discovered on the occasion of the arrival of a wandering minstrel, who sings of the very battle of which he was the hero. The king of the Thuringians is jealous of the hospitality offered to the strange warrior by the prince who has sheltered him; and sends for him and his companions who have joined him to his Court. The Queen conceives a passion for him; but he is made safe against her wiles by his love for the fair Irmgard, the daughter of his first host, to whom he has confided his token. In the end he effects his escape from the royal Court, and returns to the woodland borders, where the jealousy of a noble creates new troubles. He slays the noble in a duel; and emigrates with his followers to found a new settlement in the valley of the Idis. Then ensues the capture of his affianced love, and, finally, the siege and destruction of his settlement. He falls with all his men, and his wife bears both child and token into a dim future of wanderings.

In such a story everything depends upon the manner of the narrative; and the author has, we think, succeeded in constructing a pleasing poetic picture of prehistoric German civilization, without wearying his readers by doubtful details, or misleading them into conjectures as to his probable historical allusions. In the same spirit we shall not attempt to engage in any identification of period or localities, or point out where he has been more or less adequate in points of detail—for, we are not criticising, a

Gallus or Charikles in a Teutonic dress; but we shall rather translate, with what success we may, one or two passages, though the merits of the author's style, which through the whole of this story is sustained in a high key, must necessarily vanish in our hasty rendering.

The following is the description of the *Nothkampf*, or duel for life and death, between Ingo the Vandal and Theodulf the Thuringian:—

To the deadly contest in the meadow, which the sun may not behold, Ingo repaired in the grey of the next morning with his sword-fellows Berthar and Wolf. Beneath their feet the snow groaned; the wind of the night blew round their heads, and drove clouds of snow from the mountains into the valley; the black canopy of clouds concealed all the light of heaven; only the spirits of death prevailed on earth; they cried out of the wind, in the giant trees they stirred, and in the icy water they resounded, the tidings that of two men bound by their oath to a single hearth, the one was to be taken away from the light of the sun, and to descend into the cold realm of mist. Berthar pointed silently into the dawning; on the other side of the rivulet stood three men; it was Theodulf, with Sintram and Agino, his companions. "Their feet were the nimblest," said Ingo discontentedly; "praise those who first turn their back on the misty meadow." Before them lay the place of the fight, a sandy eyot with a thin covering of snow, surrounded on both sides by whirling water. The helpers [seconds] saluted one another without a word across the rivulet; they stepped to the willows by the brink of the shore, cut sturdy branches, and peeled the bark with their knives. Then Berthar and Sintram leapt through the water, both treading the soil of the meadow at the same time, and marked off the fighting-place with white staves. Then each of them stepped to an end of the eyot, the one upstream, the other downstream, and beckoned with his arm to the combatant. The combatants bowed their heads before the aiding gods, and murmured the blessing for the deadly contest (*Nothsegen*); then they waded through the water to their companions. The helpers retired across the rivulet, and the deadly fray sprang against one another, shieldless in helmet and chain-armor, brandishing their swords. Steel met steel; around them the wind groaned and the icy water rushed. It was a hard fight between man and man; not unworthy proved Theodulf of the fame which he enjoyed among his feres; for a time the contest lasted which leads so speedily to death, and Berthar beheld discontentedly the red of the dawn, the harbinger of day. Then Theodulf stumbled under a heavy blow, and again Ingo sprang at him, and brake his head with a heavy stroke of his sword through the iron helm, so that a stream of blood poured forth, and the Prince's man sank backwards upon the snow. Ingo swung himself over him and raised his sword, meaning to pierce his throat with the point. At the same moment the first ray of light broke across the hollow; the red beam fell on the countenance of the wounded man; in the fear of death Sintram forgot the ordained silence, and cried across the rivulet, "Spare him, the sun sees it!" With the beam of light and the cry a gentle thought fell into the wrathful soul of the victor; he swiftly drew back his sword and said, "The lady shall not behold that I stab the man of my life. Live, if live thou canst," and he turned aside. Theodulf, on the ground murmured raising his hand against him, "I owe thee no thanks." But Ingo leapt through the icy water to the bank, and turned his back upon the eyot and the fallen man, while Berthar said reproachfully, "For the first time the King proved miserly when he paid a deadly enemy's travelling-money into the hand of mist."

By way of contrast the following passage may indicate how pleasantly the author depicts the lighter as well as the darker side of his nation's heroic age:—

The lady passed to the kitchen-house, wherein mighty fires blazed on large plates of stone. The youths were busily employed before the house in cutting into pieces the beasts of sacrifice, great stags and three hinds of the forest, and in affixing the flesh to the points of long spears. And the maidens sat in a long row plucking numerous poultry, or with their hands they rounded spiced dough of wheat into balls of a size worth the beholding. And boys of the village with laughing faces awaited the time when they should turn the spits, so that they too might have a dainty share on the banquet of the heroes.

Meanwhile the men of the chieftain were stirring about the great hall. In the middle of the court stood the mighty building, formed of thick beams of pine; a staircase led to the opened door; within, two rows of lofty pillars of wood bore the beams of the roof; from the pillars to the walls ran on three sides raised stages, whereon stood in the midst, opposite the door, the seat of honour of the master of the house and of the noblest among the guests; beside it a finely adorned space, like unto an arbour, for the women of the house, so that they might look upon the festive banquet of the men so long as they desired. And the youngest of the men adorned the wooden arbour with blooming branches which they had cut in the field. But outside, Wolf drove to the house a large waggon with rushes and cedrus, which he had cut on the bank of the neighbouring pond, to strew the floor with them.

"It is well to be here, guest," Wolf began, with salutations to Ingo; "to thee too our lady was gracious; thou walkest in new garments woven by our women. How likest thou the wear of cloth made by the maidens of Thuringland?"

The second story contains, as we have said, more elements of general interest in the character of the Christian missionaries and the Slavonic barbarians; and the story itself is perhaps more finished and rounded than its predecessor. But the task was much harder to fit a pleasing romance with verisimilitude of details to the period of four hundred years before the beginnings of modern German civilization in the age of Charlemagne; and while *Ingraban* is equally far from being a failure, *Ingo* is nearer to a noteworthy success. Future volumes of this strange work will probably cause both *Ingo* and *Ingraban* to be remembered chiefly in their descendants; but there are few, if any, living writers of fiction who could have solved the first and least attractive part of a literary task of this description so adequately and gracefully as Herr Gustav Freytag.

READER'S AFRICAN SKETCH-BOOK.*

MR. WINWOOD READE in the preface to his book tells us that, "though the texture of the work is light, the labour bestowed upon it has been immense." For years, he says, he has never ceased to study African literature, and he has "devoted to

* *The African Sketch-Book*. By Winwood Reade. 2 vols. London: Smith, Elder, & Co. 1872.

the perusal of African books as much time and toil as most men devote to the study of a profession." As the result of his eleven years' study of Africa, "three years from the life, and eight years from books," we have this somewhat curious medley under the name of the *African Sketch-Book*. We have narratives of journeys, essays, histories, and tales, all mixed up together. He interrupts the course of his explorations to insert some "sensational" tale, which "is intended to illustrate the manners and customs of the natives"; or some essay on history in general, which is intended no doubt to illustrate Mr. Winwood Reade's extensive reading. He is ready at any moment to fly off to Alexander's campaigns in Persia, to Æschylus, Pericles, Euripides, Pyrrhus, the Chinese, the Chaldeans of Babylon, the Arabs of Yemen, the Indians of Guzerat, and the Origin of Species; while he has read, it would seem, all the books of travels of which Africa can boast, from the *Periplus of Hanno* (a Carthaginian Log-Book, as Mr. Reade calls it) to the Letters of Mr. Henry M. Stanley. We should place more confidence in the account he gives of the books we have not read if we found him accurate where we are able from our previous reading to test his accuracy. It was scarcely necessary, for instance, to bring King Pyrrhus into a book on Africa, except indeed that Pyrrhus used in his army elephants from Asia, and elephants also are found in Africa. "There is a river in Macedon, and there is also moreover a river at Monmouth," and likely enough "there is salmon in both." But not equally likely is Mr. Reade's statement that "Pyrrhus took a squadron (of elephants) into Italy when the Greek colonists of Naples (*sic*) called him over to protect them from the Romans." In his account of the Niger he goes greatly out of his way to blunder. He writes:—"Herodotus was the first to hear of this river; Æschylus wrote of it in his *Prometheus Unbound*." The passage to which Mr. Reade refers occurs, of course, not in the *Prometheus Unbound*, but in the *Prometheus Bound*. But this is a trifling error compared with the statement that Herodotus, who was more than fifty years younger than Æschylus, could have supplied him with information as to the river Niger. If, as is likely enough, Herodotus was about eleven or twelve years old when the play was written, he must have shown in his childhood an extraordinary zeal and capacity for discovery to have been the first to have heard of a river at such a vast distance from his home. But scarcely less startling is the rashness with which Mr. Reade states as an undoubted fact that both the poet and the historian wrote of the Niger. It is not at all impossible that the *ποταμός Αἰθιοπίας* of Æschylus may be the Niger, but it is a matter which must always remain in the greatest uncertainty. The following passage moreover is a strange misrepresentation of what we read in Herodotus:—

There was near Cyrene, on the borders of the Desert, a tribe of Berbers called the Nasamonians. Some young men of good family, ambitious of distinction, formed a club to explore the great sea of sand, and to go where none had been before. They passed through the Land of Wild Beasts and then through the waterless waste, and arrived on the banks of a river which contained river horses and crocodiles. The natives of the land were black men of short stature, and carried them off to their city on the banks of the river, and after some time allowed them to depart. This story was told to Herodotus at Memphis in Egypt by the Steward of Sacred Things, and that river was the Joliba.

Now, in the first place, Herodotus heard this story not from "the Steward of Sacred Things," nor, for anything we are told, in Memphis, but from some Cyrenæans. Moreover, the formation of the club and the existence of the river horses are equally due to Mr. Reade's fertile imagination. Whether the story has any truth in it, and whether, even if it is all true, the river was the Joliba, is a matter for discussion, and not for confident assertion. While we are on Greek subjects, we should be glad, by the way, of an explanation of "the process which the Greeks called *σάτυριον*." When we get on to such very learned subjects, we are like Mr. Reade himself among the tribes of Africa, and feel that we equally stand in need of an interpreter. He must moreover attach some very strange meaning to the term "Unitarian," for he says that a King and his nobles were Unitarians, because they had no religion, and did not attend at a sacrifice offered to an alligator. He quotes Addison, but not without blundering. He says, "I feel that I am doing right, and often repeat to myself the words,

'Tis not in mortals to command success;
But do you more, Sempronius—deserve it."

When at length he does command success and catches sight of the Niger, he is disappointed to find how little recognition his discovery meets with. His chief journey, he says, "fifty years ago would have made a sensation, but now it has not excited the slightest interest among English geographers." Certainly the narrative of it, from the style in which it is written, failed to excite the least interest in us. It is given in the form of a diary, and we come across such passages as the following:—

When you read this you will enter a sick man's chamber—a prisoner's cell. I am now confined to my bed; all strength is gone from me. I never see my face, for I have no looking-glass; but my hand, as I write, startles me—it looks wasted and old. But my spirit is not subdued. If it is death which is approaching, it will find me prepared. When I came to this country a second time I knew that the chances were even against my return. What does it matter after all? Life at the longest is not so very long.

We are as children playing by the sea-shore, the Ocean of Time at our feet. We build our little mud castles, we scrawl pictures and words on the soft, yielding sand, and in a brief space the flood-tide pours towards us: the Death-waves bear us to the sea and obliterate our work. But some there are who write upon the rocks.

I write on the sand: I build on the sand. Be my work good or bad, it must soon be destroyed.

We have fevers in England which, at their height, set the patient to talk nonsense. It is, we hope, a peculiarity of the African fever that it sets a man to write nonsense.

In spite, however, of this occasional fine writing and these inaccuracies, there is a considerable amount of interesting matter in Mr. Reade's work. As for the tales, we do not pretend to speak of them. They are altogether out of place, it seems to us, in such a work. We tried one of them and did not feel in the least tempted to read another. But the book is a large one, and there would be plenty of reading left even if the eleven tales were cut out. The author's travels have been over that part of Africa which, though the most talked of by the men of the last generation, has been a little forgotten by ourselves. The Nile, with its brilliant band of recent explorers, has drawn away our thoughts from the Niger; and it is to the Niger and to the coast line round the Gulf of Guinea that Mr. Reade's travels have mostly been confined. At one time he visited the Gorilla country, and, like other writers, discredits the statements of Mr. Du Chaillu. When he was talking to some native hunters "a roar of laughter," he says, "followed my announcement that Mr. Du Chaillu had shot gorillas himself. He had shot birds and small monkeys, they said, but that was all." The hunters told Mr. Reade that he would never be able to see a gorilla so long as he persisted in wearing boots. In the chase after them they themselves "go naked and often on all fours, and their black bodies seen through the foliage resemble those of the wild animals whose movements they imitate." The daily return of the hunters from the chase, not only of the gorilla, but also of any other wild animals, is curiously described:—

The hunters returned in the afternoon, and the others ran to meet them, and welcomed them as if they had been gone for years, murmuring to them in a baby language, calling them by their names of love, patting their breasts, and laying arm upon arm, shaking their right hands, caressing their faces, and embracing them in every possible way, except with the lips; for these poor benighted creatures have never discovered our civilized method of endearment.

To those gallant sportsmen who drive down to Hurlingham to shoot pigeons these demonstrations of joy must seem very silly. But the African savages have this justification for their sport, that whenever they take life, they risk life. For "these bush people," in Mr. Reade's words, "like the wild beasts, live in continual danger, for they are always at war. The men who go out hunting, the women who go with their pitchers to the brook, are never sure that they will return." He points out a contrast in their character which is curious, but by no means uncommon. It has been often noticed in the Chinese. He had been telling a horrible tale how a woman was drowned, and her child burnt alive for witchcraft, and had added that "the Africans are connoisseurs in cruelty." "And yet," as he goes on to say,

these same people are timid and gentle in their ordinary moments; they seldom ill-use their wives, their children, or their slaves; they are frightened by the severity which prevails on board a man-of-war.

On a hunting party which he joined with these people "was a man so completely crippled that he could move only on all-fours; and nevertheless he carried the seven nets, and scrambled along as quickly as the others walked." Mr. Reade goes on to add:—

There was something so eager and even anxious in his manner—it was so evident he wished to prove he was as good a man as the others, in spite of his infirmity, that I turned to Mongilomba, and said with a missionary air, "Is it not good of that poor fellow, instead of staying idle at home, to work just as hard as an able-bodied man?" "I should think he does," replied Mongilomba; "this people would very soon kill him if he did not."

We are sorry to learn that in Africa, as well as in Japan, the foreign fashions are too strong for the native fashions. It is well known that even already Japanese work has lost much of its originality, and there can be little question that before very long it will have lost its great distinctive merit, and become a feeble copy or adaptation of that style of art which reigns without a rival at South Kensington. Mr. Reade says that in Africa "it is considered more genteel to wear a dirty rag of English cotton, such as we use for a duster, than the grass-kilts of the country, which are often beautifully made."

Our author gives a curious account of a grand palaver that he attended, where every one sat squatting on his heels. "The King had a long staff in his hand. After he had spoken, he handed it to his cousin, who passed it on in the same manner. No one interrupted the man who held the staff, and the meeting was conducted in the most orderly manner." If South Kensington can give a lesson to Africa, Africa, it would seem, might equally well give a lesson to Westminster. He tells an amusing story also of some Portuguese merchants who asked him "if it was really true that in England we had our dinner-plates warmed before the fire." When they heard that this was done even in the height of summer, "they shuddered, and their faces shrivelled up with sympathy, and they rubbed their hands, exclaiming, 'Oh, very cold—very cold indeed!'" Some other Portuguese, who lived in Angola, could not be persuaded that he had not come to spy out the land with a view to its being occupied by the English. They were indifferent, except so far as they dreaded they might lose their slaves without compensation. It was in vain that Mr. Reade assured them that he had come simply to travel for his own pleasure, and "that 'Palmerston' did not even know of his existence." The more he protested, the less he was believed, and at last his servant warned him that he ran a good chance of being poisoned. But here he shall tell the story in his own words:—

I accordingly adopted a formula, which satisfied my conscience and gave intense satisfaction to my hosts. "Senhor so-and-so," I would say, "I give

you my word that I am not sent by the Government, and that the English have no desire for Angola." Here Senhor so-and-so would nod and wave his hand, much as to say, "I understand; private mission; instructions, &c." "But," I continued, "I can safely promise you this, that if our Government takes Angola (mind, I say it won't, but if it does), every planter shall receive the full value of his slaves; and, if my humble opinion is taken on the matter (I don't think it will be, but still if it is), your interests, my dear and honoured friend, shall not be neglected." Here I would look at the Senhor in a very knowing manner, his face would become radiant, and he would be happy for the rest of his days; whereas, if I had told him nothing but the truth, he would have lived in a continual state of anxiety and alarm.

In another district in the occupation of the Portuguese he was surprised to hear the natives on Christmas Eve singing English carols. He found out that the English had years ago occupied this country, and that "the natives had been taught to sing carols on Christmas Eve; those songs had come down from generation to generation, and had spread far and wide. So excellent," Mr. Reade goes on to add, "is the memory, and so fine is the ear of these people, that although they did not understand the meaning of the words, they pronounced them correctly, after all that lapse of time." He has some curious customs to tell of as existing in the kingdom of Dahomey. "All cocks who crow on the King's highway eschew to the Crown; these birds are therefore muzzled by their owners." He tells us, moreover, that at a certain season of the year "men are stationed along the road from the capital to the fort (a distance of sixty miles) forming a complete line, and a volley of musketry is fired, beginning at the capital and ending at the coast." Every year, too, along the same line "a girl is passed down from hand to hand, without her feet once touching the ground." It is no wonder that "she arrives more dead than alive." Mr. Reade had not seen either of these curious proceedings with his own eyes, and we cannot but suspect that there is some exaggeration in the account he heard. To form such lines as these, at least one hundred thousand men would be required. Even if the King of Dahomey has so many men, we doubt if he has so many muskets. Mr. Reade has an essay on the slave-trade. He tells us with the utmost confidence that "slaves were originally called in Latin the 'spared' or 'preserved' (*servi*, from *servare* to save)," and that "the delicate beauty of the female sex indirectly proceeds from slavery," while "the iniquitous slave trade has indirectly been the means of making us wealthier, happier, and better men." Boswell, we remember, argued that "to abolish the slave-trade would be to

Shut the gates of mercy on mankind."

Mr. Reade approves of its abolition; but he is one of those who see good in everything. To use his own impressive words, "We look again and again on the tear-stained, blood-stained pages of life; there we learn that animals have mounted in the scale on a ladder of corpses." If the pages of the *African Sketch-Book* at their final revision had been frequently stained by the mark that is made *transverso calamo*, we should have had a book that would have gained in interest as much as it had lost in length.

PATER'S STUDIES OF THE RENAISSANCE.*

THESE remarkable "Studies" are among the signs of the times. Since the days of the purists, when Mr. Ruskin denounced the Renaissance as hollow and unholy, a singular change has come over the younger generation who are now in turn moulding the literature and art of the country. Poetry, painting, and criticism alike—the poetry and pictures of Mr. Rossetti, the poetry of Mr. Swinburne, not to mention a host of imitators, the paintings of Mr. Burne Jones, together with divers critical writings such as the work now before us—all tell of a modern renaissance of the old Renaissance, of a new life sometimes surrendered to passion and to pleasure, but in its better aspects aspiring through the ministrations of the arts to conditions of high mental enjoyment and pure æsthetic culture. Mr. Pater, it is right to say at the outset, is free from the grossness which has been laid to the charge of "the fleshly school"; and yet in his system the imaginative faculties are fed, the æsthetic functions sustained, through the medium of senses which are not only subtle, but strong in the life-blood of passion. The critic to whom Mr. Pater most nearly approaches is Mr. Sidney Colvin; for each art is the best part of nature, a vital essence in life, at once a luxury and a necessity conducive to mental growth. Nature, art, and the recipient mind thus viewed stand not only in reciprocity, but become one and indivisible. Criticism thus arising, whatever be its infirmities or its limits, is at all events free from servile and dead conventionalism.

At the outset we have a right to ask Mr. Pater what he means by the Renaissance. In his first essay, that on "Aucassin and Nicolette," a French romance of the latter half of the thirteenth century, he places himself in the position of those historians who fancy they have tracked out a pre-Columbian discovery of America. In like manner Mr. Pater, following in the wake of certain French writers, has discovered a pre-Renaissance—to use his own words, "a Renaissance within the limits of the middle age itself, a brilliant, but in part abortive, effort to do for human life and the human mind" at the end of the twelfth and the beginning of the thirteenth century "what was afterwards done in the fifteenth." If the reader can manage in one breath to get through a single sentence which by its inordinate length belongs to the manner of by-

gone centuries rather than to the terse type of the nineteenth century, he need not despair of mastering the author's meaning:—

For us the Renaissance is the name of a many-sided but yet united movement, in which the love of the things of the intellect and the imagination for their own sake, the desire for a more liberal and comely way of conceiving life, make themselves felt, prompting those who experience this desire to seek first one and then another means of intellectual or imaginative enjoyment, and directing them not merely to the discovery of old and forgotten sources of this enjoyment, but to divine new sources of it, new experiences, new subjects of poetry, new forms of art.

Mr. Pater in a strain of heated rapture rather than of cool criticism proceeds further to develop this idea of a middle-age Renaissance. As far as we are able to understand his meaning, the movement comprises pointed architecture, romantic love, "the sculpture of Chartres and the windows of Lausanne," and especially Victor Hugo's *Notre-Dame de Paris*. This so-called "Renaissance within the middle age" is also traced in the poetry of Provence, in the legend of Abelard and Héloïse, with the possibility of a prior origin among the Arabs. A leaf from the *Arabian Nights*, it is suggested, might have been borne from the East by a breeze to the South of France or to the banks of the Seine. Such flights of imagination might easily have at once landed us in China or Japan. The reader runs no doubt some danger of being carried far away by an alluring imagination and by a singularly seductive diction. There is a sense of Oriental colouring, a fragrance as of full-blown roses, in these florid descriptions of the sentiments and surroundings of Héloïse, the Troubadours, and others. We are told that a spirit was abroad rebellious in its love of freedom; human passion, the worship of physical beauty, the enjoyment of leisure, luxury, and refinement, first kindled in France, passed, it is said, from the banks of the Seine, "penetrated the early literature of Italy, and found an echo in Dante." Mr. Pater puts the matter as follows:—

One of the strongest characteristics of that outbreak of the reason and the imagination, of that assertion of the liberty of the heart in the middle age, which I have termed a mediæval Renaissance, was its antinomianism, its spirit of rebellion and revolt against the moral and religious ideas of the age. In their search after the pleasures of the senses and the imagination, in their care for beauty, in their worship of the body, people were impelled beyond the bounds of the primitive Christian ideal; and their love became a strange idolatry, a strange rival religion. It was the return of that ancient Venus, not dead, but only hidden for a time in the caves of the Venusberg, of those old Pagan gods still going to and fro on the earth, under all sorts of disguises. The perfection of culture is not rebellion, but peace; only when it has realized a deep moral stillness has it really reached its end.

The keynote thus struck in France is skilfully played on with variations when the scene changes to Italy. The author gains profundity as he proceeds in his second essay to discuss Pico della Mirandola, the Mystic. He frankly admits that "the Renaissance of the fifteenth century was in many things great rather by what it designed or aspired to do than by what it actually achieved"; he then tells how "*Gods in Exile*" were brought back to Italy, how means of reconciliation was found between the religion of antiquity and the religion of Christ, partly under the persuasion that historic religions obey common laws, conform to external circumstances, and respond to deep movements in the human mind. And undoubtedly it was by some such truce between the Gods of Greece and the Saints of Christendom that the arts of Italy in the time of Leonardo da Vinci, Michael Angelo, and Raffaele attained a consummation neither before nor afterwards approached. We think it equally clear that painters, sculptors, and architects of a prior generation, including Perugino, were elevated, though possibly imperceptibly to themselves, by the flood-tide of the Renaissance, which certainly had begun to flow before the dates usually assigned to the movement. It will easily be understood how diametrically opposed are these teachings to Mr. Ruskin's famous dogma propounded in the Edinburgh Lectures, that from the spot and from the hour when Raffaele in the Vatican painted the "Kingdom of Poetry presided over by Apollo," "the intellect and the art of Italy date their degradation." "The doom of the arts of Europe went forth from that chamber." The contradiction to which we point is the more noteworthy, inasmuch as Mr. Pater, by his tone of thought and style of diction, might almost pass for a disciple of Mr. Ruskin. The neophyte shows a proneness to emotional epithets such as tender, lovely, sweet. But the resemblance extends from language into the realm of fancy, from lucid narrative to pretty metaphor and felicitous comparisons. We seem to recognize something Ruskinian in the following neatly handled word-picture:—

When the ship-load of sacred earth from the soil of Jerusalem was mingled with the common clay in the Campo Santo of Pisa, a new flower grew up from it, unlike any flower men had seen before—the anemone with its concentric rings of strangely bleached colour, still to be found by those who search long enough for it in the long grass of the Maremma. Just such a strange flower was that mythology of the Italian Renaissance which grew up from the mixture of two traditions, two sentiments, the sacred and the profane. Classical story was regarded as a mere datum to be received and assimilated.

The three essays on "Sandro Botticelli," "Luca della Robbia," and "The Poetry of Michael Angelo," though interpreted with transcendental thought, we may pass by without much loss. And yet we will just stop on the way to point to a mannerism in phraseology which shows either that the author is carried away by his power of language, or that he saves himself the trouble of thinking by ready resort to some favourite conventional term. This blemish especially struck us in reading of Michael Angelo; accordingly we went back to count certain superabundant epithets, and were not at all surprised to find that "sweet," "sweetness," and "sweeten" occur twenty times. Such sugary writing is

* *Studies in the History of the Renaissance.* By Walter H. Pater, Fellow of Brasenose College, Oxford. London: Macmillan & Co. 1873.

sickly. But, again, Mr. Ruskin must have the credit of setting the example, as when he extolled a pair of cat's whiskers for tenderness.

The disquisition on Leonardo da Vinci will be read even by those who are versed in the whole library that has grown out of the most fertile of themes in the Italian revival. Subtle and searching insight is shown in that part of the artist's career which lies on the frontier of the natural and the supernatural, which touched on divination, "clairvoyance," the alchemist's secret, with the strange approaches in animal creation to phases in humanity. We are told that in Leonardo was awakened "some seed of discontent which lay in the secret places of his nature. For the way to perfection is through a series of disgusts." Da Vinci plunged into the study of nature, "he brooded over the hidden virtues of plants and crystals, the lines traced by the stars as they moved in the sky, over the correspondences which exist between the different orders of living things, through which, to eyes opened, they interpret each other; and for years he seemed to those about him as one listening to a voice silent for other men." The drawings in the Ambrosian Library, Milan, evince the many-sided studies of a genius which stretched to universality. The examination of these and other tentative and experimental designs does not tend to substantiate the author's conclusion that they are little more than "dreams thrown off by the overwrought and labouring brain." Neither are we quite prepared for the well-sounding generalization that "two ideas were specially fixed in Da Vinci, as reflexes of things that had touched his brain in childhood beyond the measure of other impressions—the smiling of women and the motion of great waters." We do not happen to know to what works "the motion of great waters" can refer, and we incline to think that, as for "the smiling of women," an expression which degenerated into a sicklied mannerism, Leonardo has less to answer for than Laini and some others of his disciples. With greater justice is the assertion made that the two elementary forces in Leonardo's genius are "curiosity and the desire for beauty." The one led on to the mystery of the "Medusa," on which Shelley penned one of the finest sonnets ever inspired by picture; the other asserted itself in the sensitive loveliness of Madonnas, and in a beauty which approaches the divine in the head of Christ in "The Last Supper." The critic as he proceeds actually assumes the aspect of the cabalist and the clairvoyant; indeed clairvoyance is brought to bear on both Michael Angelo and Da Vinci. Whether this visionary belief can be fairly added to the other advanced creeds of Mr. Pater we cannot positively assert. But at any rate he holds that the daughters of Herodias as drawn by Leonardo are clairvoyants. The passage is so exceptional that Mr. Pater ought to have the full benefit of it:—

They [the daughters of Herodias] are the clairvoyants, through whom, as through delicate instruments, one becomes aware of the subtler forces of nature and the modes of their action, all that is magnetic in it, all those finer conditions wherein material things rise to that sublimity of operation which constitutes them spiritual, where only the finer nerve and the keener touch can follow; it is as if in certain revealing instances we actually saw them at their work on human flesh. Nervous, electric, faint always with some inexplicable faintness, they seem to be subject to exceptional conditions, to feel powers at work in the common air unfelt by others, to become, as it were, receptacles of them and pass them on to us in a chain of secret influences.

The "Conclusion," designed probably to connect into unity the scattered component parts, may be taken as a confession of the author's creed. The Preface had already described the age of Lorenzo—the culminating point of the Renaissance—as a time of general elevation and enlightenment, when artists and philosophers did not live in isolation, but breathed a common air and caught light and heat from each other's thoughts. "It was the unity of this spirit which gave unity to all the various products of the Renaissance." The last paragraph in the book carries the inquiry to a consummation; it points to the be-all and the end-all of every phase of art, past, present, and to come. The moral taught seems to be that life is short, but that art can make it long; that the wisest men give themselves to art and song, and thus get as many pulsations as possible into the allotted time. Art comes "professing frankly to give nothing but the highest quality to your moments as they pass, and simply for those moments' sake." Passages occur which read like the dedication of passion. And that such people as Victor Hugo are made to stand up prominently as apostles says little for the soundness or sobriety of the system.

ALCESTIS.*

A NOVEL that even aims at being poetical is an uncommon thing. It comes easier to hand to describe garden parties and five o'clock teas, to trace the happiness of a modern English lady and gentleman through decent and subdued vicissitudes, or, if something more vehement is desired, to find stirring episodes in the equally obvious police-court, or take refuge in paradoxes of crime which have now become novelists' commonplaces. Still more rare is it to find in the venture of an untried writer (for such we conceive *Alceste* to be) so much success as has been attained in this case.

The author is evidently a musician, and the book is a genuine offspring of musical and artistic enthusiasm. The reading of it leaves an impression not easily effaced, but one somewhat different from that which is usually left by a work of fiction. This seems to call on the musical rather than the literary feeling to

respond to it. The scenes of *Alceste* do not store themselves up in the same compartment of the mind with the graceful pictures of *Old Kensington* or the severely elaborate structure of *Middlemarch*; they go to add their influence to the subtle atmosphere where memory keeps still resonant the clear-toned sonata and the rushing symphony; and the imagined harmonies of the opera on whose fate the catastrophe turns, and from which the romance takes its name, mingle with echoes of Bach and Scarlatti. The time of the story is laid a century ago, when the modern wealth of music first sprang from the union of Italian grace with German depth and power; and its local interest centres in Dresden, then as now a favoured home of art and all things beautiful. Josquin Dorioz, the hero of the tale, begins his career as a wanderer outside the Hof Theater, where the eccentric bass and his adopted child Lisa rescue him from his solitude with the generosity which is a second nature to artists; he lives to hear this same Lisa Vaara, who has grown up with him as a sister, take the chief part in his own opera of *Alceste* at the same theatre. But many dangers and trials come between, and though the highest aspirations of the composer are fulfilled, they are fulfilled only at the price of two lives. Before we say more of the story, however, let us give the author's own account of the surroundings into which we find Josquin introduced:—

But that musical Germany of his time was indeed a favourable place for a romantic musician. In every village there were dancers for whoever would fiddle to them; in every farm-house and homestead the musician was welcomed, to lead perhaps a family quartet, or while away the evening by playing solo to the assembled household; in every large church, in every town, was the old organist, brimful of learning, lordling it on his organ-throne over parson and people. Everywhere music teemed with the glorious sons she brought forth, a race of giants, to be the fathers of all musicians to come, and every where honour was done to her in however dry and primitive a fashion; for is there not a quaint mixture of pedantry and trifling—old age and childhood—in the music of that period?

It is not to be supposed that because the book is full of music, it is a series of disconnected sketches or rhapsodies. It is held together by a consistent and well-ordered plot; and this again distinguishes *Alceste* from the numberless productions which know no mean between scrambling somehow through two or three volumes with no plot at all and entangling the course of events in desperate intricacies from which it is rescued only by desperate remedies. Here we find a central idea clearly conceived, and developed with power and feeling which are unquestionable, and with skill which, notwithstanding allowances that may be sometimes required when we miss the facility that only comes by experience, is actually considerable, and gives excellent promise for any future undertaking by the same hand. As it is, the working out of the plot is so good that we need not fear to spoil the reading of the book beforehand by disclosing too much of its outline. The history of Josquin Dorioz is one which presents itself in many shapes both in fact and fiction; it is a conflict between two lives in the same person, in which the higher life wins, but so that the man perishes in the victory. He is respectable in right of his father, and musical in right of his mother; we find him a pupil of the Capellmeister Hasse at Dresden, having chosen music and fled from the respectability of the relations in whose charge he was left as an orphan. Even the regularities of a musical education come amiss to him. This is the Frau Capellmeisterin's account of him:—

We are talking of a little fiddler whom I consider a genius; the Capellmeister there won't hear of him though . . . the boy has been giving trouble in the choir, and he won't admit him to the band. He calls him a Frenchman, and says he has no conscience—a little brown thing, with the fire breathing through every pore of his yellow French skin, what should he know of conscience?

The musical reception at which Faustina Hasse thus takes up Josquin's cause is described, though it is but an introductory episode, in a way to make us regret that we cannot dwell upon it. The real trial of the musician's life, with which the first part of the novel has to do, lies in the temptations of the world outside his vocation. His playing captivates Count Lichtenberg, a "bald and languid" musical amateur, who, being of a visionary turn, is in his languid way a fanatic about art. He finds in young Dorioz the very musician he wants. "In you," he says, "I have seen the spontaneity and freshness of genius. No theories for me, no talk! If the angel Gabriel came down from heaven to convert me to a theory, and I knew he thumped when he played, I should not be converted." And so Josquin is established as Kammermusik at the Lichtenberg villa, and on his first day there two notable things befall him; he sees the Count's niece Cécile playing the harpsichord at her window, and the Abbé Paradis, the Count's secretary, proposes to read Euripides with him. The sight of Cécile is the beginning of a hopeless passion, which, after distracting the musician for a time from his calling, drives him back, when his hope is finally destroyed, to give the remnant of his life to music with a more intense devotion than at first. The reading of Euripides results in Josquin's opera *Alceste*, the success of which at last crowns his second love, though at the cost of a sacrifice he never knows of. It is this sacrifice that gives a double meaning to the name of the romance, and that makes its ending so tragic. The tragedy is of a kind that few modern writers of fiction have successfully dealt with. It is more ancient than modern in its spirit; it has something of the Greek loftiness and completeness, and is brought about by such an irony of fate as was ever present to the Greek mind, little by little weaving the trivial threads of daily circumstance into indissoluble bonds. The art with which this is planned is a remarkable feature of the book.

* *Alceste*. 2 vols. London: Smith, Elder, & Co. 1873.

Up to a certain point all things seem to conspire in favour of the young composer. The siege of Dresden causes the patron to quit his villa and betake himself to Vienna to preserve his æsthetic serenity. The Count's chamber musician goes with him, and, while losing somewhat by his passion for Cécile and other distractions, gains much in varied experience; best of all, he receives a decisive impulse from the first performance of Gluck's *Orpheus*. The passage where this is described is alone an ample warrant for our surmise that the author must be a musician:—

All who love music know it—the power of the first wave of violins in the overture or symphony to wash us of all our dullness and dryness, to carry us straight out from ourselves. In that first delight our personal confusions seem to be merged into a universal satisfaction, our pitiful dogmas and theories into living, fresh assents. We believe in law and harmony—yes, though it be the unconquerable won of the world that weighs on our hearts, they rush out to meet joyfully all the sorrow of the world—inhuman, unearthly power of sound! To our musician, the first rush of instruments in the majestic allegro was a spell to break him away from himself, and the strong fresh overture prepared the heavens for the sublime story of the old Greek.

The curtain rose; there was the tomb of Eurydice, dead, spite of her husband's mighty power; shepherds strewed it with leaves and flowers, and Orpheus himself was stretched in despair over the funeral stone, his great lyre fallen from his hands. Now loud swelled the dirge of the shepherds' chorus, and now, through it, came piercing the cry of anguish from his lips, "Eurydice!" Then he remained alone; and entranced, Josquin heard the tender air that follows, and the impassioned recitatives, when in the music-god is wrought up to defy the power of death and seek his wife at the gate of hell. Love appeared then; and in tender strains, told of the sanction of the gods, and with a great major burst of song, accompanied by rushing violins, Orpheus departs for the land of spirits.

We read how these wonderful recitatives struck Gluck's Italian contemporaries with scorn. Josquin thought of Hæse, and nearly laughed aloud. His heart was leaping up in joyful recognition of the master, whom he felt from henceforth he must serve.

Josquin's choice is made, and he returns to Dresden. His inspiration, enriched by knowledge, exalted by love, and tempered by adversity, brings forth its perfect fruit. Lisa Vaara, his early companion, now his devoted sister in art, has become the reigning singer of the opera, and will joyfully undertake to interpret his music with all her power and sympathy. The master Gluck himself has seen and approved the work. Cécile is indeed lost; she has loved Josquin Dorioz as much as it was in her nature to love, but she had no strength to rebel against the other destiny sorely arranged for her by the Count Lichtenberg. She has married a prince and passed out of the story. But *Alceste* is well-nigh won.

The fatal obstacle which now comes in is the Hof-Intendant von Plauen, on whose will the acceptance of the opera depends; a pedantic and selfish *dilettante*, who in his perverse and pedantic way has fallen in love with Lisa. What is still worse, he is beyond measure jealous of Josquin, not knowing the Lichtenberg episode, and not believing in nor understanding (to use the author's phrase) "that rare and subtle thing, friendship between man and woman," as, indeed, conventional persons seldom do. While *Alceste* (after many preliminary difficulties) is in rehearsal, Von Plauen makes a formal offer of marriage to Lisa; and on its being rejected, the performance of the opera is indefinitely postponed. Josquin, already in failing health, is broken down by this last blow. He is to go to Italy for a chance of life. The Intendant will not be moved to pity or justice. At last Lisa resolves on the sacrifice which alone will save her friend's work, and may make his last days happy, even if it is too late to save his life: a sacrifice less magnificent in show, but in truth harder to bear than that of the legendary *Alceste*:—

She needs to be strong in her purpose, for almost alone she must act it out; and how unheroic, how difficult is action! *Alceste*, inspired by love, lays her tender body down by the side of her husband to wait for death; this poor *Alceste* may not be passive, though death itself would seem to her now welcome rest. She must return home at once, and looking round on all she has loved so long with the bitterness of farewell, take pen, ink, and paper with all fear of being too late to write to Count von Plauen that she is willing to be his wife.

And so Josquin, knowing nothing of these things, but only that the Hof-Intendant's caprice has again changed, lives to see his opera performed, and to thank Lisa for her divine singing in *Alceste*, and he goes to Italy and there dies contented; and Lisa Vaara marries the Count von Plauen, and the people at Teplitz think she has a strange temper. The sacrifice is accomplished, and no Hercules comes to the rescue of this *Alceste*.

This conclusion will be unwelcome to those who think it necessary to the ending of a novel that at least one couple should be happily married. Those who look beyond mere amusement and estimate work by its artistic merit will find in it, we think, evidence of unusual power. An objection which might with more reason be made to the general plan of *Alceste* is that there is little variety of interest. It is a musical, and almost exclusively musical, romance; and we cannot say that readers who have no music in their souls are likely to be much pleased by it. However, we know of no reason why the interest of a novel should not be specialized in this way if there is a sufficient special circle of readers for it. We have schoolboy novels, military novels, and sporting novels, and why not musical novels too? Indeed, George Sand has set the example in *Consuelo*, which is nearly as full of music as this, though, we need hardly say, altogether on a larger scale and covering a much wider range of feeling, and she is the one writer whose influence on the author of *Alceste* seems to have been strongest. There is no direct imitation, but there are reminiscences of *Consuelo* in one or two individual incidents as well as in the general handling.

It must not be supposed, on the other hand, that in the absence of important digressions there is nothing in the book to relieve or vary the sustained musical tone. Much observation and humour are shown in the incidental descriptions. One of the best of these shows us Josquin Dorioz paying a visit to his respectable aunts who had come to look after him in Dresden:—

It was a white panelled room, the ceiling heavily decorated with arabesques. Between the long dreary windows hung a high green-coloured glass. The tall candlesticks, ready on the table, looked conscious of being the best in the house; even the snuffers had that air of respectability that the properties of the best rooms in a family run always possess. In the centre of the polished oaken floor sat Josquin's married aunt and Crescentia, in their usual afternoon composure. The latter looked just a little more faded. That was the only change he could see, and the pervading smell of *mandarine* and the long pieces of work of which each lady held an end in her tambour frame, brought a tired remembrance to his brain of fusty aprons, that had begun to shoot in green and yellow floss silk in the Vienna drawing-rooms ten years before. Outside, the sun was shining in the garden. There were divine pictures for who would look at them; music for who would listen; life was progressing; people thinking new things. Here the afternoon seemed to be shut out—life to have stopped. Dingy fustiness, complacency, and dullness—these things made Josquin shiver.

There are other things we should have liked to notice specially; but we have in this case preferred indicating the construction and scope of the story to selecting details; for good description in detail is frequently met with, but good construction in the whole is rare.

Of course *Alceste* is not faultless. It appears to be the first work of its author, and shows occasional marks of inexperience. Here and there we find subordinate parts developed out of proportion to the main work, the connexion of incidents not sufficiently clear, or a point slurred over which ought to have been distinct. Especially the conclusion is somewhat hurried, so that the final motive seems scarcely adequate, and the action too abrupt. There are also sundry verbal inaccuracies of the petty sort that will creep into almost every manuscript, but which a practised writer is on the watch for, and corrects in the printing. But we see no fault—unless it is a fault to be in love with art and music—which is either serious or likely to remain unamended; and we have no hesitation in welcoming the unknown author of *Alceste* as a considerable addition to our force of living novelists.

AMERICAN LITERATURE.

THE spirit and temper of Mr. Caleb Cushing's work on the Treaty of Washington* are such as would be anticipated by any one who remembers the tone and character of the American Case, Counter-case, and Argument, in which the American advocates indulged before the Tribunal, and the manner in which the "Indirect Claims" were foisted into the Case, and insisted upon as long as it was possible to press them without the certainty of breaking up the Arbitration altogether. In Mr. Cushing's narrative everything that can be said in justification of America is stated in the broadest and most violent form, while no notice is taken of the grounds on which an opposite view was sustained by some of the soundest of American jurists as well as by men of every shade of opinion on this side of the Atlantic. Everything that is susceptible of an interpretation offensive or insulting to Great Britain is twisted into the most outrageous shape that it will bear; every point that was decided in our favour is carefully slurred over; every point ruled against us is made the most of. We might not expect an American statesman to acknowledge the wanton and indecent character of the taunts and invectives against this country with which he and his colleagues filled their pleadings; but we find them here repeated, justified, and deliberately recorded when all excuse for such a renewal of offence has been removed. We might not expect to receive an acknowledgment of the moderation, dignity, and temper displayed by the advocates of England; but we have reason to feel that our conciliatory bearing and temperate reserve have been thrown away when an American holding so responsible a position as Mr. Cushing inveighs against us for appealing to the innumerable precedents found in the history of his own country to justify, and much more than justify, our action in the case of the Confederate cruisers, and indulges in repeated imputations of foul play and intentional neglect against the English Government. Mr. Cushing was not likely to appreciate the cogency and conclusiveness of Sir A. Cockburn's examination of the whole case from a point of view which, though widely differing from that of Continental jurists, is that which had, until the *Alabama* controversy arose, been common to the two countries whose maritime law rests on English precedents, and had been more vigorously asserted by America than by ourselves; nor to admit the justice and necessity of a rebuke to the intemperate and insulting language employed by himself and his colleagues. But it is obviously unfair in him not to remind his American readers that he and his assistants had indulged in the gravest aspersions on the character of a British statesman who was not before the Tribunal, and who could not defend himself; aspersions which Mr. Adams himself had on a former occasion distinctly declared to be false, and which, as Mr. Adams did not think it necessary to repeat his condemnation of those aspersions from the judgment seat, it was scarcely possible for the English arbitrator, who knew their falsehood, to leave unnoticed. A

* *The Treaty of Washington; its Negotiation, Execution, and the Discussions relating thereto.* By Caleb Cushing. New York: Harper & Brothers. London: Tinsley & Co. 1873.

good deal of space is occupied with abuse of the Lord Chief Justice on account of his conduct in Parliament and on the Bench prior to the Arbitration; and the book is rather a general invective against England, and the Arbitrator appointed by her, than a history of the Treaty of Washington and the Arbitrations of Geneva and Berlin.

Mr. Macfarlane's *Coal Regions of America** is a very full, minute, and exhaustive account of the different coal formations of the United States and Canada, as far as they are yet known. He describes particularly the five great carboniferous districts of the States; that extending from Pennsylvania through the Middle and Southern States into Alabama; that of Michigan; that of Illinois, Indiana, and Kentucky; that of Iowa, Missouri, and Kansas; and a fifth, very imperfectly explored, in Texas. He shows in detail the situation and extent of the various beds in each formation, as far as known, their several boundaries, the number and quality of the coal seams, and the manner in which their direction and trend have been altered and disturbed by subsequent geological movements, giving at the same time very careful expositions of the geology of each field and basin. He also enumerates the mines at work in each place, describes their character, the quantity of produce, the methods of quarrying, working, and bringing up the coal, and enters particularly into every circumstance of interest connected with their operation. The quality of the different beds and seams of coal is a matter of especial importance, into which he goes at great length, and which materially affects the conclusions that might be drawn from mere geographical distribution. For example, there are seams which produce only what is called "red-ash coal," a kind distinguished by the peculiar pink colour of the ash; there is the ordinary white-ash coal; and there is the anthracite, which burns almost entirely away, leaving little or no ash at all. But the three important divisions are anthracite, bituminous coal, and lignite. The first, of which a considerable quantity exists in Wales, but which is little consumed in this country, is the staple product of the Pennsylvanian mines, and the principal mineral fuel of the States. Its merits are considerable; its great drawback, as described by Mr. Macfarlane, is that it will burn only when strongly heated, so that a hot wood fire must be made and lighted for some little time before the anthracite takes fire; and a strong draught is also desirable. The bituminous coal resembles our own common coal; the lignite, which is the only mineral fuel found in the Far West and in the Pacific States, is a species of imperfectly formed coal—wood not yet hardened into the thoroughly mineral form of the older relics of the carboniferous forests—and is of very inferior value. The distribution of the fuel which is the first requisite of steam-power will probably confine the manufactures of the United States in future generations—even more, proportionately to their extent, than those of England are confined—to particular districts; and create a distinction of interests quite as great as that which divided North and South between the coal-producing, manufacturing States chiefly north of the Ohio and west of the Mississippi, the semi-tropical or planting Gulf States, the metalliferous regions of the interior, and the splendid agricultural territory on the Pacific slope. Unhappily, so much coal is wasted, not only by the same modes of negligent working which have hitherto obtained in England, but by recklessness on the part of the owners, who sacrifice large quantities of good fuel in order to work quickly only the best and most profitable kinds, that future ages may find themselves cheated out of a large part of their rightful share in the boons of nature.

Mr. Knox's *Underground*† connects itself with the subject just mentioned only in that it contains some curious, and now and then interesting, accounts of visits to mines, of mining operations, mining accidents, and mining adventures. But it has no pretension to completeness, unity, or even coherence. It is a medley of all sorts of materials—anecdotes and descriptions, personal experiences and borrowed narratives; extracts from newspapers, giving minute accounts of terrible disasters in coal and other mines; traditions respecting old dungeons and their ancient owners and occupants; fictions more or less obvious, and exaggerations more or less glaring, respecting the midnight mysteries of city life; explorations among the Chinese of San Francisco and among the gamblers of Homburg and Wiesbaden; stories of the fortunes made out of Pennsylvanian oil-wells by swindlers and adventurers in the nineteenth century, and of the tortures suffered by heretics in boiling oil-vats and blazing furnaces in the fifteenth; stories of the "underground railway" of the times before the Civil War, by which fugitive slaves were assisted to escape to Canada, and of speculations in underground railroads of a more literal character, such as London knows; gold and silver washing; iron and salt mines; beer-cellars and oyster-cellars; the coolie trade and the tricks of Wall Street; tunnels and caves; crimes and detectives—all things, in fact, that in reality or by metaphor can be brought under the title. Here we have everything actually or allegorically subterranean, everything connected with moral or

material darkness, and all jumbled together with a disregard of order and relation, a profound contempt of all association of ideas beyond that supplied by the notion, or rather the word, "underground," which, if it be not a little bewildering to the reader, indicates a courageous indifference to conventional rules. The style is as free as the construction—sometimes simply reckless, sometimes painfully comic—and the illustrations are sometimes drily matter-of-fact, sometimes wildly sensational. The critic, in fact, can say nothing for a book that violates all law, order, and common sense; the uncritical reader may find that, when the author does not struggle to be lively, he is sometimes entertaining; and when he condescends not to be original, he—or his materials—may even prove interesting.

The portion of Mr. Livingstone's works* presented to the reader in these volumes is not the most interesting to the general reader, but is perhaps the most valuable, certainly the most striking, monument of his intellect, his originality, and his industry. If his name chance to be remembered by future generations, it will certainly be as the author of the Criminal Code of Louisiana, which, whether we may approve it in detail or not, was certainly one of the first and most remarkable endeavours to constitute a practical system of criminal law on distinctly philosophical principles. The circumstances of Louisiana at the time—with no law clearly entitled to respect, and three or four distinct systems of law all more or less confused and uncertain, Spanish, French, and American, dividing the allegiance of her citizens and administered by her courts—gave Edward Livingstone, when he was invited to become her lawgiver, a degree of independence and a freedom of scope which he who has to codify and improve an existing body of jurisprudence, or even to frame a new code for a nation which has already fixed customs and ideas on legal points, can hardly enjoy; and he made the most of his privilege. This is not the place to discuss the views on which his Code was based. But we may note one of two interesting or curious details. He requires that a person thrice convicted of any crimes whatsoever (not including misdemeanours), even though each crime was of a different character, should be imprisoned for life. In this way he would have rid society of all who obstinately persist in living by plunder. But then he sentences the worst class of murderers only to imprisonment for life; so that a prisoner once sentenced as a confirmed thief would have nothing more to fear; nothing to restrain him from murdering his gaolers, or committing any other atrocity which might further his escape or gratify his temper. He forbids duels under heavy penalties; but he also inflicts heavy penalties on any man who shall provoke another to fight; thus giving, to some extent, that protection against bullies which our law failed to give, and for want of which it was so long ineffective. The introductory Reports on which the principles of both his Codes are discussed are especially valuable, and may well be compared with the Notes on the Indian Criminal Code in the collected edition of Macaulay's works.

We have noticed former editions of the "American Annual Cyclopaedia,"† which is in the main a political, in a lesser degree a literary and biographical, in a still less degree a scientific, record of recent progress and of the year's events, under the guise and on the plan of a dictionary. We need not say more of the volume before us than that the Treaty of Washington and the Arbitration of Geneva supply the most important part of its new matter, and that much of the information obtained by the recent Census will be found, in a more convenient shape, in its pages.

The Annual Report of the New York Chamber of Commerce‡ for 1872-73 recalls the part taken by that body at the most critical point of the *Alabama* negotiations in urging their Government to abandon the Indirect Claims, and accept the Supplementary Article tendered by Great Britain. It also contains some interesting Reports and resolutions relative to the Coinage Bill, and the advantages of a single gold standard, which are deprived of part of their practical value by the existence of a depreciated paper currency, but which are not the less intrinsically sound and interesting, as exhibiting the views of the chief commercial community of a country where, among other classes, the wildest errors of the "mercantile theory" appear to be generally prevalent. We confess, however, that we are a little surprised to see that the Chamber, or a large part thereof, attaches so much importance to the correspondence of the American silver dollar with the French five franc-piece. Surely merchants who pay all their international engagements through the medium of paper ought to be the last to exaggerate the advantages of an international coinage, as distinct from an international monetary system; advantages which amount to this, that an American traveller need not change his money before leaving New York, unless he means to go by way of England.

* *The Complete Works of Edward Livingston on Criminal Jurisprudence; consisting of Systems of Penal Law for the State of Louisiana and for the United States of America.* With the Introductory Reports to the same; to which is prefixed an Introduction by Salmon P. Chase, Chief Justice of the United States. 2 vols. New York: National Prison Association. London: Trübner & Co. 1873.

† *The American Annual Cyclopaedia and Register of Important Events of the Year 1872-3.* Embracing Political, Civil, Military, and Social Affairs, Public Documents, Biography, Statistics, Commerce, Finance, Literature, Science, Agriculture, and Mechanical Industry. New York: Appleton & Co. London: Sampson Low & Co. 1873.

‡ *Fifteenth Annual Report of the Corporation of the Chamber of Commerce of the State of New York for the Year 1872-3.* Compiled by George Wilson, Secretary. New York: Press of the Chamber. London: Sampson Low & Co. 1873.

* *The Coal Regions of America; their Topography, Geology, and Development.* With a Coloured Geological Map of Pennsylvania, a Railroad Map of all the Coal Regions, and numerous other Maps and Illustrations. By James Macfarlane, A.M. New York: Appleton & Co. London: Trübner & Co. 1873.

† *Underground; or, Life Below the Surface: Incidents and Accidents beyond the Light of Day; Startling Adventures in All Parts of the World; Mines, and the Mode of Working them; Under-currents of Society; Gambling and its Horrors; Caverns and their Mysteries, &c.* By Thos. W. Knox. Author of "Camp-fire and Cotton-field," "Overland through Asia," &c. Hartford: Burr & Lyde. London: Sampson Low, Marston, Low, & Sealte. 1873.

The *History of the Massachusetts General Hospital** is one of those elaborate memorials of local interest—records of Colleges, lists of State officials, descriptions of cities, and so forth—with which the press of America teems. Who is expected to read page after page of forgotten names, complimentary speeches or funeral orations, and extracts from familiar histories and unheard-of biographies, we can no more conceive than we can understand who will purchase a solid, elaborately printed volume which contains no single fact of interest to any human being unconnected with the State Hospital—nothing more than a record of the proceedings of the Trustees, the change of officers, the varying fortunes of the Hospital, and the benefactions that from time to time increased its means—nothing that can instruct the student of medicine or entertain the student of literature.

Dr. Dunglison's *History of Medicine*† deals much more largely with the earliest ages of the science than with its later developments. Nearly a third of the volume is devoted to Jewish, Chinese, and Brahmin traditions; Empedocles has his turn; Hippocrates, Aristotle, and Galen have each a chapter, or the chief part of one, while Harvey only gets a paragraph. It would clearly be impossible to treat so wide a subject satisfactorily in four times the space of the two hundred and fifty small pages of large type which are here given to it; and the book is indeed a mere summary of what any student of medicine whose taste led him to the antiquities of his profession might pick up in any respectable library.

Leisure Moments‡ is the title of a collection of verses by Miss H. Helen Nunez, in which there is so even a level of quality and character from the first page to the last, that we cannot guess which are the pieces written, as the preface assures us, "nearly as far as the childhood of the author," and which have had the benefit, such as it is, of mature powers and ripened experience. *The Heroine of the White Nile*§ is a lady who preceded Sir Samuel Baker in some part of his journeys, and fell a martyr to her missionary zeal. *The Other Girls*|| is a characteristic story of American life, with some thoroughly native touches such as redeem the heaviness of *Queechy* or the mannerisms and affectations of Mrs. Stowe, and with much of the peculiar quality which made "Faith Gartney" a favourite in certain quarters.

* *A History of the Massachusetts General Hospital (to August 5, 1851)*. By N. I. Bowditch. Second Edition, with a Continuation to 1872. Boston: Printed by the Trustees from the Bowditch Fund. London: Sampson Low & Co. 1872.

† *History of Medicine from the Earliest Ages to the Commencement of the Nineteenth Century*. By Robley Dunglison, M.D., LL.D., late Professor in Jefferson Medical College of Philadelphia, &c. Arranged and Edited by H. J. Dunglison, M.D. Philadelphia: Lindsay & Blakiston. London: Sampson Low & Co. 1872.

‡ *Leisure Moments*. By H. Helen Nunez. Philadelphia: Lippincott. London: Trübner & Co. 1873.

§ *The Heroine of the White Nile; or, What a Woman Did and Dared*. A Sketch of the Remarkable Travels and Experiences of Miss Alexandrine Thand. By Professor William Wells. New York: Nelson & Phillips. London: Trübner & Co. 1873.

|| *The Other Girls*. By Mrs. A. D. Whitney, Author of "Faith Gartney's Girlhood," &c. &c. With Illustrations by J. S. Harley. Boston: Osgood & Co. London: Trübner & Co. 1873.

NOTICE.

We beg leave to state that we decline to return rejected Communications; and to this rule we can make no exception.

THE SATURDAY REVIEW

OF
POLITICS, LITERATURE, SCIENCE, AND ART.

Price 6d.

CONTENTS OF No. 926, JULY 26, 1873:

The Payment of the French Indemnity.
The Bishop of Winchester and Lord Westbury. The County Franchise.
The Sultan and the Khedive. The Government and the Opposition in France.
The House of Lords and the Land. The Zanzibar Contract.
Ecclesiastical Appeals.

Bishop Wilberforce as a Churchman. The Minor Virtues.
The Berkshire Downs. Evidence taken by the Endowed Schools Committee.
Amateur Monasticism. Life in California.
The Duke of St. Albans and the Queen. The Good Templars.

Tyndall on Light.
Recollections of a French Page. Indian Travels of Apollonius of Tyana.
Sponsheng. Ingo and Ingraban. Roud's African Sketch-Book.
Pater's Studies of the Renaissance. Alceste.
American Literature.

CONTENTS OF No. 925, JULY 19, 1873:

The Anarchy in Spain.—Mr. Forster's Bill.—Paris.—The Antarctic War.—The Government and the House of Commons.—The Persian Contention.—The French Commercial Treaty.—The Galian Schools.

Inaccessible Jollity.—Johnson's Remains.—The New Scheme of Swiss Federal Reform.—Heroes at Home.—French Political Errors.—The Irish Members and the Reporters.—Church and State in Hungary.—The Great American Lecturer.—The Lords' Report on Heroes.

Lord Clifford of Chudleigh.—Relation on Russian Folklore.—The Statutes of the Church of Lincoln.—A Ship in the Penn.—Madame Boncœur's Correspondence.—Helmley's Handbook of Hardy Trees.—Thomson's Photographs of China.—Penruddock's—German Literature.

London: Published at 38 SOUTHAMPTON STREET, STRAND, W.C.

ADVERTISEMENTS.

CRYSTAL PALACE.—PARTICULAR ATTRACTIONS

THIS DAY AND NEXT WEEK.

Saturday (July 26).—Serenade Summer Concert, English Ballads, &c.
Monday.—Swimming Poles; Great Fountain Display.
Tuesday.—Opera, at 3; Great Fireworks.
Wednesday.—Opera, at 3; Miss Blanche Cole's Benefit.
The Fine Arts Courts and Collections, including the Picture Gallery (the Works on sale), the Technological and Natural History Collections, all the various Illustrations of Art, Science, and Nature, and the Gardens and Park always open. Music and Fountains daily.
Admission, Monday to Friday, 1s.; Saturday, July 26, 1s.; Saturday, August 2, 2s. 6d.
Guinea Season Tickets 5s.

THE SOCIETY OF PAINTERS in WATER-COLOURS.

The SIXTY-NINTH ANNUAL EXHIBITION will CLOSE on Saturday next, August 2. A Full Mail Boat, from Nine till Seven.—Admission, 1s.

ALFRED D. FRIPP, Secretary.

ELIJAH WALTON EXHIBITION, including "A Storm on the Sea" and "A Sand Storm in the Desert," and many new and important Drawings, Alpine and Eastern. NOW OPEN at Burlington Gallery, 101 Piccadilly. Tea to Six.—Admission, with Catalogue, 1s.

DORE'S GREAT PICTURE of "CHRIST LEAVING the PHARISEUM," with "Night of the Crucifixion," "Christian Martyrs," "Fragrance da Rimini," "Nephtys," "Andromeda," &c., at the DORE GALLERY, 35 New Bond Street. Ten to Six.—Admission, 1s.

OPEN SCHOLARSHIPS WITHOUT EXAMINATION.

The HUNTER Trustees are prepared to grant at their meeting in December next One or more Scholarships of £200 per annum each, for Two Years, to students of any University in Great Britain and Ireland, between the Ages of Twenty-one and Twenty-eight, to enable them to study Theology and Mental and Moral Philosophy at Universities in Germany, Holland, or Switzerland (or elsewhere), subject to the approval of the Trustees. Full particulars may be obtained of the SECRETARY, to whom Applications for Scholarships must be forwarded before October 1, 1873.

University Hall, Gordon Square, W.C.

A. H. PAGET, Secretary.

LONDON INTERNATIONAL COLLEGE, Spring Grove, near Isleworth.—THE AUTUMN TERM COMMENCES on September 15.—Further information may be obtained by applying to Dr. EDWARD SCHMIDT, the Principal, at the College.

DOVER COLLEGE.

President.—The Right Hon. Earl GRANVILLE, K.G.
Head-Master.—The Rev. WM. BELL, M.A., late Scholar of Ch. Coll., Cambridge.

A liberal education by Graduates of the Universities.
Tuition Fees, from Ten to Fifteen Guineas per annum. Board in the Head-Master's House, £40 per annum.

The College will re-open about September 12.
Apply to the HEAD-MASTER, or the HONORARY SECRETARY.

WILLASTON KNOCKER, Esq., Town Clerk.

BRIGHTON COLLEGE.

President.—The Earl of CHICHESTER, Principal.—The Rev. C. BIGG, M.A., late Senior Student and Tutor of Christ Church, Oxford.—There are special Modern Forms, affording every necessary preparation for the India or Army Examinations. The School is well endowed and is perhaps the healthiest public school in the Kingdom.—Apply to the Rev. the SECRETARY.

TRINITY COLLEGE, GLENALMOND, Perth.

Warden.—Rev. R. THORNTON, D.D.
A School on the model of the greater Public Schools in England. There is a resident Medical Officer. For particulars apply to the WARDEN.

The School will meet on Tuesday, September 9.

WIMBLEDON SCHOOL, SURREY, S.W.

Head-Master.

Rev. JOHN M. BRACKENBURY, M.A., of St. John's College, Cambridge.
Rev. CHARLES J. WYNN, M.A., of Jesus College, Oxford.

Assisted by Nine Resident Masters and other Professors.

The chief aim of this School is to combine the tone and discipline of the Great Schools with the assistance of experienced Masters in the study of those branches of learning which are generally neglected in the education of Ladies. The real work done is tested by the Competitive Examinations for Military, Naval, and Civil Appointments.

The School, which is limited to One Hundred Boys, is divided into small Classes, so that each Boy receives much individual attention.

The Honours obtained during the last Ten Years include Eighty successful Candidates for the Competitive Examinations for Woolwich and Ninety for Sandhurst, and of these Six have at different times obtained the First Place on the Lists.

At the Examinations held last May, Four were successful for Woolwich, and Four for Direct Commissions.

THE NEXT TERM commences on Tuesday, September 2.
For further particulars apply to either of the HEAD-MASTERS.

HIGHFIELD SCHOOL, Weston-super-Mare.—Conducted by

a Wrangler, assisted by a Graduate in Classical Honours. Terms, 25l. Specially adapted for delicate Boys.—Address, GEORGE HEPPEL, M.A.

LADIES' SCHOOL, Mary Street House, TAUNTON, for

the Daughters of Gentlemen.—The Education given is a thoroughly sound one, and the assistance of experienced Masters is procured in the study of those branches of learning which are generally neglected in the education of Ladies. The real work done is tested by the College of Preceptors and the Oxford Local Examinations, and by Examinations privately conducted in the School itself. Four Pupils passed the Senior Oxford Local Examination and one the Junior, in June last. And at the Examinations of the College of Preceptors, Eight Third Class, Three First Class Certificates, including special and Honour Certificates, and the College First Prize for English subjects, were gained by the Pupils. Inclusive terms do not exceed 50 Guineas per annum. Full particulars will be forwarded on application to the LADY-PRINCIPAL. The highest references given.

FOLKESTONE.—Mr. W. J. JEAFFRESON, M.A. Oxon

(formerly Principal of the Elphinstone High School, Bombay), will continue, with the assistance of a Graduate of Honour, to receive PUPILS for the Universities, Indian Civil Service, Woolwich, and all Competitive Examinations.—Terms and References on application.

INDIAN CIVIL ENGINEERING COLLEGE, Cooper's

HILL, CANDIDATES for admission are specially prepared by the Rev. Dr. WRIGHT, M.A., M.D., F.R.S., formerly Professor of Mathematics, Addiscombe, and late Examiner of Candidates for Appointments in the Indian Civil Engineering Service. Pupils may be Resident or Non-Resident.—Address, 67 High Street, Chatham, S.W.

EDUCATION in GERMANY.—Cannstatt, near Stuttgart.

Professor HIRSCH, whose Establishment for YOUNG GENTLEMEN (since 1853) is recommended by the Rev. Dr. Charteris, Professor in Edinburgh, Rev. Dr. Buchanan, of Glasgow, and by many Gentlemen in England and Scotland, will have a few VACANCIES after the holidays. Studies resumed September 1. For prospectus apply to Professor H., Cannstatt, and to F. HONWOOD, Esq., 108 Palmerston Buildings, Old Broad Street, London.

EDUCATION in GERMANY.—ENGLISH PARENTS who

wish for their SONS a comfortable Home, can meet with it in the house of a Professor, residing in a Town picturesquely situated near the Rhine, where there is a celebrated Public School. Terms and highest references in London if desired.—Apply personally, or by letter, to Herr S. KOCK, Hildesheim, N.

COMFORTABLE HOME, with PRIVATE TUITION.—A

MARRIED RECTOR, Graduate of Trin. Coll., Camb., an old Rugbyian, who takes FIVE PUPILS, has vacancies for his next Term. Classics, Mathematics, French, and thorough German. Pupils for whom fond of a country life. Terms, 150 to 250 Guineas, inclusive.—Address, H. E. L., Holgate Rectory, Mutha Woodcock, Selwyn.

DIRECT COMMISSIONS.—No Pass no Pay.—A

WRANGLER, six of whose Pupils were successful last time, is prepared to receive CANDIDATES on the above terms.—X. Y., Hambley's Library, Gloucester Road, N.W.

A OLERGYMAN wishes to take charge of a DELICATE or

BACKWARD PUPIL, Healthy Village, South. Pony Phaeton, &c. Terms, £120. Address, A. B. Z., care of Frederick May & Son, Advertising Agents, 100 Piccadilly, W.

NORTH GERMANY.—One or Two Vacancies in a READING

PARTY, under the charge of a CAMBRIDGE GRADUATE.—Address, K. W., Grammer School, Southwark.

FRENCH.—Conversation, Reading, Special LESSONS on

Preparation.—Translation.—Correspondence, by Dr. CLAUDON, Parisian, 42 Strand (Opposite the Charing Cross Station). Dr. CLAUDON is M.D. of Paris, and has had ten years' successful experience in Teaching. List of references sent free.

Wholesale Depot, 20 GREAT TITCHFIELD STREET, OXFORD STREET, W.

MINISTERS AT THE MANSION HOUSE.

LORD LYTTLTON, in accepting on Thursday night the decision of the House of Lords to give him and his colleagues on the Endowed Schools Commission only one year's grace, confessed that he could hardly expect more, as he had nobody to back him except a Government smitten with paralysis. If this is the description given of the Ministry by a faithful supporter when he is speaking of Mr. GLADSTONE and the rest of the Cabinet, it is easy to understand what appearance the Cabinet must make when, as at the Mansion House banquet, Mr. GLADSTONE is away. The occasion had been looked to with some interest, as it was hoped that Mr. GLADSTONE would have taken the opportunity to explain in a more easy and unofficial way than is possible in Parliament what he really thinks of his political position, with what eyes he regards the Session that is closing, and with what hopes and intentions he is looking forward to the future. Some such declaration might have been very useful, for the Cabinet has in the last few days been passing through such a dark valley of humiliation that the supporters of Mr. GLADSTONE and the country generally would have welcomed any statement from him which would have lifted the Ministry to a higher and brighter region, have inspired the belief that Mr. GLADSTONE reasonably hopes to regain his position, worthy of him by trying what another Session of the present Parliament will do for him, and have thrown a veil of welcome oblivion over the quarrels and blunders of his subordinates. But this was not to be. Mr. GLADSTONE was too ill to attend the Lord Mayor's dinner, and the cause of his illness was overwork. In one way this calamity is creditable to him. No one, friend or foe, fails to bear hearty testimony to Mr. GLADSTONE's unremitting industry, and to the zeal in every direction that he displays. But that Mr. GLADSTONE should be so overworked is a very painful fact. It may be a bad or a good thing that the Chief of a Cabinet should rule his Cabinet absolutely, and rise above all his colleagues; but if he does this, one inevitable consequence is that, directly any accident incapacitates him temporarily for carrying on his labours, everything and everybody are at sea. Never was the necessity of the presence of Mr. GLADSTONE among his colleagues made more conspicuous in the House of Commons than it has been during the few last days when illness has been pressing on him. It is he who has had to correct Mr. ARDEN, and to avert deserved censure from Mr. LOWE by silently reminding the House that, if public justice demands that Mr. LOWE should be rebuked, public convenience demands that this rebuke should be spared. Had it not been that to attack Mr. LOWE was to drive Mr. GLADSTONE from office, nothing could have kept the House from censuring the CHANCELLOR of the EXCHEQUER by an overwhelming majority. The GLADSTONE Cabinet, in short, is nothing without Mr. GLADSTONE, and happily the strength and spirits of Mr. GLADSTONE imperiously require rest; but there is only one way of giving him rest, and that is by the illogical and somewhat ungrateful process of voting against, or forbearing to vote for him and his supporters, at the next election.

The Lord Chancellor has always hitherto had the reputation of possessing a character to which a taste for irony was altogether foreign. His amiability, his sincerity, his cultivated aptitude for honestly making the best of any cause committed to him, even when to predicate the supposition that, under cover of praising a Cabinet of which he was a member, he would have a quiet fling at it, and hold up to slight ridicule its weaknesses and its shortcomings.

But if an ironical speaker had wished to do his best to damn his friends, with faint praise, he could not have selected his topics more judiciously than by keeping in the groove which the Lord Chancellor marked out for himself at the Mansion House. It fell to his lot, as Mr. GLADSTONE was away, to describe the career and recount the principles of the Ministry during the past Session. What the audience really thought of this Session and its history was sufficiently marked by the hearty cheer evoked when the CHANCELLOR remarked that the Session was now nearly at an end. Of course there was something to be said about the Judicature Bill, and the good effects it is to produce; and the CHANCELLOR, with paternal tenderness, threw in a good word for his own little Bill relating to the transfer of land, of which probably not one in twenty of his hearers remembered the most fragmentary outline. But this was not much for a Cabinet like the great GLADSTONE Cabinet to have done, and it was incumbent on the CHANCELLOR to travel into wider fields, and discover if possible some other successes for a paralysed Ministry. He was not wanting to the occasion. England had, under the guidance of an enlightened Government, achieved great triumphs within the last few months, which it made him proud, and might well make his audience proud, to think of. And what were these great and glorious successes? They were that the Sultan of ZANZIBAR has been coerced into making a treaty, that the representative of England has secured the precious right of audience at the Court of China, and that the SHAN has been received with a magnificent welcome. These were the noble achievements for which the country has to thank the GLADSTONE Ministry. We have actually made a petty barbarian tyrant afraid of us, as he happened to have a port open to our ironclads; we have won the right of addressing the monarch of a decaying Asiatic State without his putting us to open shame; and we have shouted and retired, but money as if it had been water in honour of a much poorer Asiatic prince, to style whose kingdom decaying would be to run the risk of seeming to offer him ridiculous flattery. The SHAN has had a very strange career in his European wanderings, and his visits have been put to very strange uses; but perhaps, the strangest thing of all, connected with his rambles has been that, long after he has left England, he should then turn up as the friend and, in a measure, the preserver, of the GLADSTONE Ministry. The criticism is as obvious as it is just, that if fifteen members of Parliament were chosen by lot, they might fairly expect to form a Cabinet capable of bringing the Sultan of ZANZIBAR to reason, forcing China to treat English Ministers with respect, and welcoming a SHAN. That the CHANCELLOR should not see this, and should describe these tiny feats as the worthy achievements of a great Ministry, is surprising, and drives us back upon our confidence in his simple honesty, to avoid the impression that he was yielding to the temptation of having a bit of fun, and gently sneering at the body to which he belonged.

The guests of the Lord Mayor had, however, one pleasure which is a comparatively rare one, for they heard Mr. BRUCE speak, and as Mr. BRUCE's speeches in Parliament this Session have been almost exclusively confined to explanations of the views of the Home Office as to decisions of juries, it is a comfort to get him on more general topics, and hear his views about them. He returned thanks for the House of Commons, and his great point was that the House may be likened to the famous engineer who, when he wanted to think over the problems of a difficult job, used to go to bed for days together, and only

get up when he had found the solution. The House of Commons having reached the end of the Session may now, as Mr. Bruce said, go to bed for some months and think over the past and the coming Session, and then it will have the opportunity of getting up, if the Fates allow it to get up at all, refreshed and wiser. An ordinary member of the House of Commons might object that what Mr. Bruce said was much truer of the Cabinet than of the House. When the Session is over, it is the Ministers, not their supporters or opponents, who ought to go to bed and think over things. Mr. Bruce at least cannot be in want of materials for thought, however long he lies in bed, as he has at the lowest computation fifty or sixty very important matters under his gravest consideration. If he would but take even a week in a quiet back room, and think about cubs, it would be most interesting to know the result. Mr. Gladstone's speculations might probably take a wider range. He has earned his rest, and sorely needs it. He has had trials and anxieties and humiliations without end, and, when his work ceases for a time and he has leisure to think over the whole position of things in the political world, he will find enough to perplex him. His reflections will not be by any means wholly of a painful character. He has during his Premiership, in spite of some faults and many blunders, won the admiration and gratitude of large sections of his countrymen. He has proved his incontestable superiority to his colleagues. He has inspired the universal conviction that he has done his very utmost to promote what he considered to be the interests of the public, and in the last wearisome four months he has borne up with courage against physical debility, and has shown patience and a measure of magnanimity in the mode in which he has met a state of things with which his character and his antecedents little fitted him to deal. But he will have to consider how long all this is to go on, and whether there is any fair prospect that what Lord Lytton calls a paralysed Ministry will get up the least or a paralysed however long and resolutely it may lie in bed.

SPAIN.

SOME time must elapse before the confused anarchy of Spain can crystallize itself into definite and intelligible forms. The original promoters of the revolution succeeded one another with increasing rapidity, and then disappeared into merited obscurity, and perhaps into ill-deserved safety. FIGUEROA balanced himself at the top of the revolving wheel for three or four months; PI Y MARGALL, representing a more advanced stage of disorder, kept his footing for a fortnight; and now SALMERON is vainly exhorting his countrymen to aid him in tying up the conflicting winds in the bag which he helped to open. CASTELLAR, who has perhaps done more harm to Spain than any other living man, abstains from taking an official share of responsibility for the general ruin. He talked down the Monarchy; he got rid of the legal Cortes; he convoked an Assembly of partisans in which he hoped to make other eloquent speeches; and now he finds that in the opinion of the Republican Government the indefinite prorogation of the Cortes is the first condition of the revival of order. If more important questions were not pressing, it would be interesting to learn whether the most fluent and florid of orators is yet convinced that a lawless population is not to be governed by words. The Minister of the moment has, like his immediate predecessors, been a Republican agitator; but he seems to be exempt from the suspicion which attached to PI Y MARGALL of complicity with the insurgents. It is to the credit of his judgment, if not of his consistency, that he is anxious to get rid of the Cortes, so as to rule by some more rational instrument than universal suffrage. It was time to dismiss a Cabinet which had exceeded all the extravagances of revolutionary tradition. Even the French Jacobins were ready when they were in office to punish resistance to their own commands with condign severity; but Señor STEN, a principal colleague of PI Y MARGALL, informed the Cortes that he would not use force against the members of his own party, or, as he called them, co-religionists, even though they were engaged in armed rebellion against the Government. Modern Republicans habitually prefer faction to patriotism; but no one had before propounded the doctrine with the same cynical simplicity. The faction which first attained notoriety in the Paris Commune has long since reversed all the recognized laws of morality. It remains for its partisans to make govern-

ment impossible by securing immunity to all rebels who conform to a sectarian test.

Of the numerous traitors who are tearing Spain in pieces, General CONTRERAS is perhaps the least incomprehensible. Having induced a part of a province and two or three towns to declare themselves independent of the national Government, he seems to have collected a few thousand men, and it was lately reported that he was marching on Madrid; but, according to later advices, he has established a Government at Carthagena, with, amongst other functionaries, a Minister of Foreign Affairs. It would seem that he is rather a claimant of supreme power than a mere promoter of secession. Any military adventurer who had, under any pretext, made himself master of the capital, would summarily dismiss and forget his professed zeal for provincial independence. If Murcia or any other part of Spain affects to cast off its relation to the State, it might seem to be a necessary consequence that it could have no pretence for attacking the capital or any other seat of foreign authority; but patriots of the order of CONTRERAS are not in the habit of binding themselves to consistency. PI Y MARGALL, who was charged with conspiring at the escape of CONTRERAS from Madrid, may perhaps have wished to receive the aid of a military faction against his own Minister of War, General GONZALEZ, who finally overthrew the Government. It is not known at present who organized the conspiracy which resulted in the revolt of the naval squadron at Carthagena. Half-a-dozen men-of-war, including ironclads, must be a troublesome incumbrance to a revolutionary leader. It is impossible to reconcile the successive and conflicting movements of the progress or partial failure of the sporadic rebellion which extends over large parts of Spain. Sometimes it is said that Seville or Valencia is on the point of surrender; and Barcelona wavers from day to day between loyalty and secession. According to a statement which has since been contradicted, the Government artillery at Valencia had deserted to the rebels; but the insurgent faction may perhaps at any moment make terms with the Government. The towns which share in the insurrection, and even the extreme faction, are probably subject to internal dissensions.

The vindication of the Spanish revolution by the apologetics of Sheffield murders and of Paris massacres will be expected with reasonable curiosity; but perhaps they will be well advised in waiting before they describe the changing form of the Republic of the minute. The consequences of equality and fraternity have never before been carried so far; but possibly the Spanish Incomprehensibles may prove that the possibilities of crime and folly have not been yet exhausted. The Federal Republic seems to have passed as completely out of fashion as the Cortes by which it was to be organized, or as the monarchy which it was to supersede. Valencia, Seville, and Carthagena trouble themselves with no Federal relations to other towns or provinces, though they agree in asserting the great principle of the despotic supremacy of every local mob. If they succeed for a time in organizing a system of isolated tyrannies, they may perhaps afterwards seek to form alliances for their mutual safety. For the present, all national allegiance and unity are repudiated by the faction which monopolizes political activity. If the Republicans formed a fifth part of the population before the proclamation of the Republic, the secession of all but the lowest and most reckless part of the population must by this time have reduced the number to a tenth; but no other faction is ready to fight, and in consequence of the demoralization of the army, no effective resistance can be offered to the dominant minority. When it is said that all parties are preparing to rally round the Government, there is no indication of any active purpose of interference by the respectable portion of the community. The difficulties which beset the Government must be constantly and rapidly accumulating. Troops cannot be raised or maintained without money, and it is impossible either to collect the taxes or to borrow. The revolutionary clubs, according to custom, demand forced contributions from the rich, and property will probably be subjected to heavy and arbitrary burdens; but all resources of the kind will soon be exhausted without materially relieving the embarrassments of the Treasury. The rebel leaders, though they will be exposed to similar difficulties, can better dispense with the command of money.

The most significant of recent Spanish events is the offer of SERRANO, TORRE, and the generals of the monarchy to

co-operate with the actual Government in the restoration of order. They also are largely responsible for the revolution of which they have been victims. If SERRANO and his allies had behaved with ordinary good faith and loyalty, King AMADERO would still be on the throne; and the ruffianly adventurers who are now fighting for power and plunder would still be confined to their native obscurity. SERRANO has overthrown two monarchies, of which the less creditable was nevertheless incomparably preferable to the barbarous anarchy of the Republic. There is no reason why he should not, if possible, retrieve some portion of the character which he has forfeited by his inconstancy and blindness. His adhesion and that of his military colleagues to the Government would be important if only he could find an army to follow him. It is possible that some of the troops who have encountered disaster under NOUVILLAS and CONTRERAS might be willing to follow their ancient chiefs in a campaign for or against the Republic. The patriots apparently thought that SERRANO was still formidable when they lately despatched an assassin to Biarritz to murder him; yet it is not easy to understand where he can collect a respectable force. The acceptance of his services by the Government of Madrid would be equivalent to a provisional abdication. Neither SALMERON nor CASTELAR could expect that a victorious general would maintain or re-establish either a Unitarian or a Federal Republic. The triumph of the old army would imply the restoration of the BOURBON dynasty, probably in the person of the young ALFONSO. SERRANO has offended against Queen ISABELLA too deeply to be forgiven; nor would he be inclined to rely on her gratitude or her clemency. The time for a restoration has probably not yet arrived. It is better that the Republicans should prove to the satisfaction of the whole country their inveterate inability to govern or to submit to the government of their own party. It may be hoped that they will have rendered a Republic impossible in Spain, if not in Europe, for more than one generation.

THE REJECTION OF THE RATING BILL.

MR. STANSFELD'S labours on his modest Bill for the amendment of the law of rating and valuation have for the present been wasted. The question was not urgent, and the measure was far from faultless; yet it may be doubted whether the House of Lords exercised a sound judgment in summarily rejecting the Bill. Defects of detail might have been remedied in a future Session, and Mr. STANSFELD deserved credit for declining to adopt the vexatious proposals of his predecessor. There was some force in the suggestion that the Bill could scarcely be amended in its principal clauses without a risk of infringing the sacred and troublesome privileges of the House of Commons. Rates are local taxes, and it is admitted that the House of Lords can take no part in imposing or in adjusting fresh burdens on the subject. If, therefore, new liabilities are improperly attached by the House of Commons to any kind of property, it seems that the House of Lords can only redress the grievance by sending back the whole subject for reconsideration. On the other side, it is evident that the same difficulty must recur whenever a Rating Bill is passed by the House of Commons, unless indeed its provisions are absolutely unobjectionable. Although the House of Lords has always asserted a constitutional right to reject Bills relating to taxation, its power ought only to be exercised on rare and extraordinary occasions. The few precedents of interference in modern times are not encouraging, although the repeal of the Paper duty was, by the vote of the House of Lords in 1860, postponed for a year. In the following Session Mr. GLADSTONE, by the device of including the entire Budget in a single Bill, compelled the House of Lords to choose between a total derangement of the fiscal system and a compulsory acquiescence in the decision of the House of Commons. Although the same mode of coercion could scarcely be applied to a Rating Bill, the weaker of the two branches of the Legislature ought to avoid all occasions of collision. The House of Lords has lately strained to the utmost its own privileges; and the claim preferred by Lord CAMERON has, though not without protest, been practically admitted by the House of Commons. It is, therefore, not to be expected that any privilege affecting taxation will be surrendered or suspended when the next Session furnishes an opportunity of reproducing a Rating Bill. The provisions to which Lord HENRIKER and the Duke of BEDFORD objected will probably be

revived in an aggravated form; and if a second Bill is rejected, the proposed alterations will become questions of privilege rather than of calculation and expediency. Many of the reasons which originally justified the claim of the House of Commons to the exclusive control of taxation may have become obsolete; but the House of Lords has in the interval declined in power, nor can it expect any enlargement of its functions. It is on the whole convenient that taxation should proceed from a single source; and rates must follow the rule which applies to taxes. The authority which imposes duties ought to regulate their apportionment; and the House of Lords is not responsible for any inaccuracy of adjustment. According to the contention of Lord CAMERON, the transfer of a part of the jurisdiction of the House of Lords could not, even if it were admitted to be expedient, properly be proposed in the House of Commons. On the same principle, the merits of Mr. STANSFELD'S Bill would only have concerned the House of Lords if the whole measure had been irreconcilably opposed to justice; and the majority of the House of Lords cannot really have believed that the removal of two or three exemptions was beyond the competence of the House of Commons. The Government expressed its willingness to give effect to any suggestions which tended to the improvement of the Bill.

The principle and the mode of rating metalliferous mines, woods, and game had been fully discussed in the House of Commons. It was finally arranged that the rate on tin and copper mines should be levied in proportion to the royalty; that woodlands should be taxed as if they were devoted to the growth of crops or to pasture; and that the owner or occupier should be rated according to the value of the right of shooting. Lord HENRIKER, in a speech which showed a minute knowledge of details, proved that in some respects the measure would not operate with perfect equality. The case of timber-trees intermixed with saleable underwood had not been fully considered, and the respective interests of tenants for life and remainder-men would be in some degree modified by the imposition of a rate on growing timber. A House which mainly consists of landowners is not well advised in representing the tenure which it favours as an obstacle to legislative changes which may be otherwise desirable. If it is thought expedient for the perpetuation of landed families to split up a single property into different estates held in possession or expectancy, actual owners and reversioners ought to arrange their relations among themselves in such a manner as not to impede fiscal or general legislation. If trees ought to be rated, the tax would be assessed with perfect ease on an owner in fee, and Parliament ought not to hesitate in imposing an equitable charge because the life-tenant may incidentally be made to contribute to the benefit of his successor. The Committee of the Lords on the Improvement of Land attribute much importance to the same object of protecting the actual owner against the remainder-man. The complications which arise from the general use of settlements deserve little consideration when they happen to conflict with the public interest.

The question of rating game would have been easily solved if the subject had not been affected by prejudice. The rent which a tenant would give for the land when the right of sporting was not reserved by the landlord furnishes a simple and accurate rule of assessment. When the right of sporting is let separately, the same total is divided into two parts, although in some cases the agricultural rent added to the game rent might exceed in amount the entire rent which would be paid by a single tenant. There is a risk of injustice when the owner lets the land at nearly or quite its value, reserving to himself the right of sporting, but not strictly preserving. It would be unfair that in such a case he should be taxed on the rent which might be given by a sporting tenant for the purpose of maintaining a large head of game. The constitution of Assessment Committees scarcely offers sufficient guarantee of impartiality, because landowners are always in the minority; but, as the House of Commons had, after discussion, arrived at conclusions which were not flagrantly unfair, it would have been better that the peers should not even be suspected of showing special favour to the class of which they are the most conspicuous members. Woods and game alike belong to landowners, and the greatest landowners in the kingdom sit in the House of Lords. It is true that they have in few cases any reason to fear readjustment of rates; for land is seldom let at its full market value in England, and Mr. STANSFELD'S Bill was not extended to Scotland. The majority which defeated the Bill

felt confidence in its familiarity with the subject of local taxation, and it was probably influenced rather by conviction than by private interest; but it was unfortunate that the rejection of the Bill should to a certain extent exempt landowners from taxation.

Spirited and ambitious peers who are dissatisfied with the small share of business allotted to the House of Lords appear scarcely to appreciate one of the principal causes of their comparative inaction. The Government, which in both Houses necessarily regulates the distribution of business, cannot be expected to confide its measures to the mercy of a hostile majority. Mr. GLADSTONE himself is not unwilling, when he has a reasonable chance of support, to relieve the labours of the House of Commons by introducing important Bills in the House of Lords. The Judicature Bill, which forms the only considerable result of the Session, was first discussed in the House of Lords, not only because the LORD CHANCELLOR was its author, but also because it was known that it would receive candid and favourable consideration from Lord CAIRNS. Scarcely any second instance can be cited of a measure which could have been prudently commenced in the House of Lords by a Liberal Government. The Scotch Education Bill, which two or three years ago originated in the House of Lords, was largely altered, in opposition to the wishes of the Government, before it reached the House of Commons. The Rating Bill was necessarily introduced in the ordinary course. If it had passed into an Act, it would not have produced any considerable sensation, nor would it have removed the impression that the Government has during the present year been either indolent or unsuccessful. The House of Lords has now provided the Ministers with a sufficient excuse for failing to redeem the pledge of dealing with local taxation. If an unpretending and moderate Bill was received with so little deference, there would have been little use in proposing for the acceptance of the House of Lords a more sweeping or more comprehensive measure. It is now not improbable that in a future Session a project of local government, which the House of Lords would be competent to discuss and amend, may be intentionally combined with a Rating Bill, on which the question of privilege would again be raised. Mr. STANFELD seems to have recognized the importance of keeping the subject of rating apart from all political and social controversies. According to the Ministerial statements, it was thought necessary or proper to adjust all questions of internal distribution of burdens among ratepayers before the larger enterprise of adjusting Imperial and local taxation was commenced. If, in consequence of the vote of the House of Lords, the Government should in the next Session recur to Mr. GOSCHEN's more ambitious scheme, the landowners would have little reason to congratulate themselves on their temporary triumph. It is true that no considerable measure is likely to be passed before the end of the present Parliament; but in proportion to their conscious inability to legislate, the Government will be tempted to introduce measures on which they may expect to be defeated, for the purpose of obtaining support at the general election. One profuse bid at the national expense has already been made for the favour of popular constituencies. In all probability another offer will be devised with the express object of separating the farmers from the landlords; and the consideration of any bargain which may be negotiated will probably be paid out of the rates. The tenant-farmers may perhaps have already been hopelessly alienated from the Liberal party by Mr. GLADSTONE's proposal of ousting them from the possession of electoral power by the introduction of household suffrage into the counties. Nevertheless the farmers may have their price; or at least the Government may believe that they can be bought.

THE PROROGATION OF THE FRENCH ASSEMBLY.

THE Message in which Marshal MACMAHON takes leave of the Assembly for the recess is pertinent and dignified. Perhaps there is a shade of contempt in the assurance that the deputies may take their departure without uneasiness, since the Marshal pledges himself that nothing will occur in their absence to endanger the maintenance of public order. If so, it is a contempt which the majority of the Assembly has no title to resent. By choosing Marshal MACMAHON as President in the room of M. THIERS they showed that they felt safer under the rule of a soldier than under the rule of a civilian; and probably the PRESIDENT does but express their own conviction when he tells them

that the country will go on much the same whether the deputies are working at Versailles or taking their holiday at a watering-place. The interest of French politics has for the time been transferred from the Legislature to the Executive. The Conservatives, after protesting against the Radical Dictatorship of M. GAMBETTA and the Republican Dictatorship of M. THIERS, have shown themselves incapable of devising any other order of government. They have themselves revived the Dictatorship, only this time they have put it in commission. It is divided between Marshal MACMAHON and the Duke of BROGLIE, and the point which it is really important to know is what the share of each really comes to. In what relations do the PRESIDENT and the PRIME MINISTER stand to each other? Is Marshal MACMAHON a constitutional President in the sense in which the Conservatives used to entreat M. THIERS to be a constitutional President? Or is he a constitutional President in the sense in which M. THIERS himself understood the phrase? Upon the answer to this question the Duke of BROGLIE's position depends. If Marshal MACMAHON holds himself bound to do the will of the majority of the Assembly as conveyed to him by Ministers possessing its confidence, there is no real security against a monarchical *coup d'état* beyond the present impossibility of the majority agreeing upon the particular Monarchy in whose favour the *coup d'état* is to be effected. If the Legitimists and Orleanists could patch up their quarrel during the vacation, they might present an address to Marshal MACMAHON in the first week of their re-assembling praying him to proclaim the Count of CHAMBORD or the Count of PARIS King, and to put his sword and his army at the disposal of the new sovereign. If, on the other hand, Marshal MACMAHON holds himself bound to hand over the Government to his successor in the same state in which he received it, he would reject any such request from the Assembly as being beyond their competence to present or his to grant; and as his opinion on this point would probably be known to the Duke of BROGLIE, the chances are that no such petition would ever be framed. If the Marshal takes a rigidly technical view of the position of the present Assembly, he will naturally incline to the former alternative, since in the latter the Assembly is the sovereign of France; and whether it does or does not represent the country, its right to determine what form of government shall be imposed upon the country is equally indefeasible. In the spirit, however, no representative Assembly, however august, can have the right to decide fundamental constitutional issues when it has ceased to represent the constituencies which returned it, and for this reason the Marshal might refuse to allow any radical change in the form of government without a previous appeal to the country. No conclusion as to his views upon this question can be drawn from the language of the Message. The PRESIDENT engages to ensure that the legitimate authority of the Assembly shall be everywhere respected; and only a Radical of the most extreme type would wish him to say anything else. The question upon which Conservatives and Liberals part company at present is not the question whether the authority of the Assembly is legitimate—in a sense that is admitted by both parties. It is the question whether this legitimate authority is limited or unlimited. The Message gives no indication which of these theories is adopted by Marshal MACMAHON.

The larger part of the Message is naturally devoted to the approaching end of the German occupation. By the time that the Assembly shall have met again, it will no longer see on French territory any other than a French army. If the Right were capable of feeling shame, they would review with something like compunction their conduct towards the statesman by whose labours alone Marshal MACMAHON has it in his power to give the Assembly this assurance. It is true that the deliverance of French soil from the presence of German troops is in a measure "the common work of the patriotism of all"; that while M. THIERS powerfully contributed by successful negotiations to prepare the way for it, the Assembly aided him by their constant support, and the "laborious population . . . contributed to hasten their own liberation by their readiness to accept the heaviest burdens." No doubt if the Assembly had refused to pass the measures by which the payment of the indemnity is to be met, and still more if the nation had refused to pay the taxes out of which the interest of the loan must be provided, M. THIERS's exertions would have been defeated. But to say this is merely to say that the strongest, equally with the weakest,

man cannot use his strength to any purpose if he has not air to breathe or room to move his arms. It is when these indispensable conditions are forthcoming that the difference between the strong man and the weak man unmistakably asserts itself. Under a President less able than M. THIERS the good will of the Assembly and of the French people would have been of no avail. The one might have been willing to vote taxes, the other might have been willing to pay them; but without the sense of security which M. THIERS contrived to create, both at home and abroad, the loans would have been far harder to raise, and the Germans would not have allowed the payments of the indemnity to be anticipated. The Right may perhaps point to the security which they now enjoy under Marshal MACMAHON, and contend that, if he had been made President earlier, he would have been able to do all that M. THIERS has done. Those who argue in this way forget that the strength of Marshal MACMAHON's position is mainly due to the devotion of the army, and that the army is itself the work of M. THIERS. If a soldier had watched over its creation, it is more than possible that the German Government would not have remained so quiet during the process. Besides this, if Marshal MACMAHON had been President in 1871, it is exceedingly doubtful whether the Republican party would have acquiesced in his rule. That they might have been forced to submit to it is possible; but between the condition of France after a civil war not, as under M. THIERS, confined to Paris, but extending over all the great towns, and in the South over many even of the rural districts, and the condition of France now that order has been maintained for more than two years by the civil power alone, there is all the difference in the world. The Assembly may flatter itself if it pleases with the notion that it has had an equal share in the liberation of the territory; but Frenchmen who are not blinded by passion or terror will agree that it has been the work of M. THIERS in a sense which is altogether exceptional and paramount. As regards the manner in which the day of the departure of the German army is to be observed in France, the language of the Message, is marked by soldierly good taste. France, says Marshal MACMAHON, "would rebuke noisy manifestations little suited to her memory of the grievous sacrifices which were the cost of 'peace.' That these sacrifices have brought forth their proper fruit is a legitimate cause for gladness, but it would argue the meanest kind of vanity if the fact that they have been endured were to be forgotten. In so far as France has been freed from foreign occupation, Frenchmen have a right to rejoice; but in so far as she has been freed by the surrender of two provinces, and by an enormous money payment, their joy must be tempered by sorrow. To put the latter element in the affair out of sight, and to dwell only on the former, would be to show that they have derived no benefit from the lessons of the war. If France is ever to be strong again, it must be by careful study of the causes that have made her weak. It must be said of the great mass of the nation that they have known how to maintain this reserve. If there has been any foolish depreciation of their enemy, or any foolish exaltation of themselves, it has come from that contemptible class of journalists who find their most appropriate employment in ministering to the worst side of the French character.

If the Permanent Committee are commonly prudent, the vacation will probably pass over quietly enough. The absence of the Assembly from Versailles will remove one cause of political disturbance, and the Republican leaders are probably too well aware of the critical nature of their position to depart from a policy of moderation. No doubt there is a considerable section of the majority to whom internal quiet is a cause of active regret. They would like to see the Republicans do something violent in order that the Monarchists might have an excuse for doing something still more violent in return. From this point of view it is to be regretted that the task of attacking the Government as occasion offers should have devolved entirely upon M. GAMBETTA. If he displays the moderation which, though far from uniform, has at least characterized his action at some critical moments, he will do great service to the cause of the Republic. But it is difficult not to question the wisdom of M. THIERS and M. GAZOT in allowing the reputation of the Opposition in the country to depend on the self-control of a single politician.

RUSSIA AND KHIVA.

THE Russian Government and nation may well regard with complacency the conduct and the results of the Khiva campaign. They were from the first well aware that they had no formidable resistance to encounter on the part of the enemy; but they were probably surprised by the utter inefficiency of the native forces. The real difficulties of the expedition were overcome by careful forethought and admirable organization; and the arduous nature of the enterprise was illustrated by the failure of one of the columns to cross the desert. The number of camels collected for the campaign was enormous; and yet it seems not to have been excessive. The health of the troops appears throughout to have been excellent; and they had every reason to rely with confidence on the judgment of their commanders. The large sums which must have been spent on the campaign will probably be found a profitable investment, even if the national honour had not required that the insolence of the Khan of KHIVA should be punished. The chiefs and tribes of Central Asia will be more than ever convinced that the Russian arms are irresistible, and that distance and the hardships of the desert offer no sufficient defence against the Western invaders. As in the Abyssinian expedition, the victory was crowned by a final success. The KHAN, who had in the first instance escaped from the city, thought it prudent to return and to surrender; so that General KAUFMANN had the satisfaction of concluding the war by the occupation of the capital. The Russians might perhaps have been embarrassed by the necessity of providing an administration for a strange and barbarous country. It must be in every way more desirable to employ the existing authorities, who are not likely for the present to dispute the commands of the conqueror. The KHAN could probably have performed no more unpalatable act of submission than when he issued the decree by which slavery is abolished, and the captive population is restored to liberty. The profound reverence for the Emperor of RUSSIA which he professes in the preamble of the decree of liberation is probably more than usually sincere. No attribute but irresistible strength would produce the same feeling of veneration in the mind of a half-civilized Oriental despot. The Russian Commander-in-Chief will take care that the order is strictly obeyed.

The condition of the Russian captives and of the more numerous Persian slaves who were kidnapped by the roving Turcomans for sale to the inhabitants of Khiva seems to have been in the highest degree wretched. In many Mahometan countries, and especially among the Turks, traditional humanity and religious sympathy go far to make domestic slavery tolerable; but the Russian prisoners were, as Christians, entitled only to the treatment of infidels; and the Shoahs of Persia were perhaps, as heretics among orthodox Sunnites, regarded as still more suitable objects of persecution. The Mahometan tribes of Central Asia probably excel all competitors in cruelty, having not advanced so far in economic cultivation as to understand that slaves, like beasts of burden, are most useful and profitable when they are well treated. The compulsory liberation of the slaves who have carried on all the industrial occupations of the country will cause profound discontent, and even distress. In other countries an enfranchised population remains upon the land; and it is for the most part found possible to hire on more or less onerous terms the services which had been before gratuitously rendered. The foreigners who till the fields of Khiva will leave the country in a body under Russian protection, and the feelings of their former masters will resemble those of the Egyptians when the Israelites crossed the Red Sea. It is not easy to understand how a race of predatory warriors will contrive to maintain themselves by the degrading and unaccustomed method of agricultural or pastoral industry, and there is reason to fear that when the Russian occupation is withdrawn, the trade in slaves will be resumed with more than ordinary activity. The veneration of the KHAN for the EMPEROR will scarcely affect the tastes or habits of his clansmen; but henceforth public opinion in Khiva will be opposed to the practice of kidnapping Russian subjects. It will not be thought safe or convenient to provoke the vengeance of their powerful protector, and probably the motive of the Russian Commander-in-Chief for insisting on the abolition of slavery will not be understood. Some of the liberated Persians may find it difficult to obtain a maintenance in their own impoverished country; but if the accounts which have been given of the character of slavery

in Khiva are not exaggerated, it is scarcely likely that any of the freedmen will voluntarily remain in the country.

The future state of Khiva is obscure; but at present General KAUFMANN has rendered a great service to humanity; and the restoration of the independence of the Khanate is, whatever diplomatic engagements may have been made, not to be desired. The extraordinary bitterness of the Russian press against England is apparently caused by a suspicion that some undue concession has been made to the exigency of the English Government. Some of the semi-official journals have even thought fit to assert that inquiries were instituted at Khiva for the purpose of ascertaining whether the former contumacy of the KHAN had been prompted by the Indian Government. To a journalist at Moscow or at St. Petersburg it is probably unintelligible and incredible that when Lord NORTHBROOK advised the KHAN, through his Envoy, to grant the reasonable demands of the Russians, he should have simply expressed his own genuine opinions and those of his Government. It is highly improbable that General KAUFMANN should wantonly seek for a cause of quarrel with England, and there is every reason to believe that the promises which were given through Count SCHOUVALOFF will be performed with all reasonable promptitude. When the Russian Government undertook to evacuate Khiva after occupying the capital, the EMPEROR and his advisers had probably considered the grave inconvenience which might arise from the permanent retention of so inconvenient a post. There is nothing but a guarantee against hostile acts to be obtained by governing a poor and distant province; and the desert, though it has been successfully traversed, is now, as before, interposed between the Russian dominions and the fertile part of Khiva. It would be necessary to maintain a permanent base for operations against Khiva, if the capital contained a Russian garrison, continually exposed to the risk of insurrection and blockade. General KAUFMANN will probably content himself with the erection and occupation of one or more forts on the road to Khiva; and if it is true that the Oxus can be made navigable from the Sea of Aral upwards, the Russian flotilla will always secure the influence of the paramount Power. As the Russian journalists truly state, Khiva is not a stage on the road to India, which is more nearly approached by some of the former Russian conquests.

It is not impossible that the impending marriage of the Duke of EDINBURGH with the Princess MARY of Russia may interrupt the stream of invective which has tended to create unfriendly feeling between the countries, since the journalists of Moscow and St. Petersburg caught the mantle which was partially disused by their brethren in New York. It has been said again and again with perfect truth that there is no necessary conflict of interests in Asia between Russia and England; and if at any future time the Russian Government adopts an enlightened commercial policy, all pretext for dissension might soon disappear. At present Russian writers not unnaturally complain of the tendency of English goods to inundate the markets of Central Asia. The chimerical scheme of M. DE LESSEPS for making a railway from Orenburg to Peshawur is regarded with little favour by Russian patriots, because it is supposed, not without reason, that improved modes of communication might tend to the advantage of English trade. At present every extension of Russian territory diminishes the demand for the products of England and India, by erecting an artificial barrier for the prevention of commercial intercourse. Fortunately there is nothing to lose by the conquest or by the possible annexation of Khiva, as the only staple trade of the country is the traffic in slaves. It may be hoped that the mission of Mr. FORSYTH may result in the conclusion of a commercial treaty with the ruler of Eastern Turkestan; but it is not improbable that some alleged incompatibility between the concessions respectively made to Russia and to England may hereafter cause diplomatic complications. The approaching family alliance may perhaps exercise a favourable influence over the policy of the Imperial Government, although it would be unreasonable to rely too strongly on domestic relations when they conflict with political interests. The English nation regards the connexion with complacency, rather on the ground of the high station of the Imperial family than in the expectation of any political advantage. It is now stated that the negotiations for the marriage were conducted by Count SCHOUVALOFF when he visited England ostensibly for the purpose of effecting an understanding with respect to Central Asia. It is not impossible that the

conciliatory disposition of the Imperial Government may have been in some degree attributable to the expectation of a domestic alliance with England. Happily there is at present no occasion for dispute or remonstrance.

THE TREASURY AND THE DEPARTMENTS.

A WEEK ago the air was full of wild rumours as to the desperate intentions of the Opposition towards the CHANCELLOR of the EXCHEQUER. The scapegoat on whose head all the sins of the Government were to be visited had at last been found. It was not quite ascertained whether the Zanzibar Contract or the misappropriation of Post Office balances was to supply the occasion for the decisive blow; but there was no doubt that it would be one or other of them. As it turned out, there was yet a third point in Mr. LOWE's conduct of business which was to present itself for criticism. If the relations of the CHANCELLOR of the EXCHEQUER with the POSTMASTER-GENERAL are unsatisfactory, his relations with the FIRST COMMISSIONER of WORKS are more unsatisfactory still. From this furnace of expected blame Mr. LOWE has somehow come out unhurt. Whether the fact of three attacks coming in one week for Mr. AYTON's speech on Wednesday was at least as hostile to Mr. LOWE as either Mr. CROSS's speech on Tuesday or Mr. SCLATER BOOTH's on Thursday—weakened the force of each, or whether the Opposition thought that, as misunderstandings between the Treasury and other departments of the Government might occur under any Administration, it would be setting a bad example to make them the subject of votes of censure, does not appear. What does appear is that Mr. CROSS, who led the attack on Tuesday, proposed to censure Mr. MONSELL rather than Mr. LOWE, and that Mr. SCLATER BOOTH did not propose to censure anybody. Mr. GLADSTONE resisted the first part of Mr. CROSS's motion, on the ground that it censured Mr. SCUDAMORE, who ought, he maintained, to be protected from the disapprobation of the House of Commons by the fact that, as one of the permanent servants of the Post Office, he is responsible, not to Parliament, but to the Parliamentary chiefs of the department. The truth of this plea is beyond dispute, but its pertinence to the matter in hand is exceedingly doubtful. The words of Mr. CROSS's motion were that the House of Commons "re-cords its disapprobation of the conduct of the Post Office," and on any ordinary canon of interpretation a censure thus directed against a department is meant to hit the Minister who is responsible for the defence of the department in Parliament. Mr. GLADSTONE claimed the right of explaining Mr. CROSS's motion by his speech; but even if this right be conceded, it is hard to see how it served Mr. GLADSTONE's object. It is true that a large part of Mr. CROSS's speech was taken up with Mr. SCUDAMORE, but this is accounted for by the impossibility of making his narrative intelligible without a very frequent introduction of Mr. SCUDAMORE's name. As soon as the facts had been set out, and the time for drawing an inference from them had come, Mr. CROSS bade good-bye to Mr. SCUDAMORE and devoted all his attention to Mr. MONSELL. If Mr. SCUDAMORE had been left to do exactly as he liked, what, said Mr. CROSS, was the use of a Postmaster-General? The Postmaster-General "was bound to look to the efficiency of the Post Office service, and if there were irregularities, he was responsible for them." Mr. MONSELL ought on his appointment to have made himself acquainted with the state of the Post Office accounts, and had he done so, he would soon have discovered that they were in a state which called for the exercise of great discretion and judgment. Mr. MONSELL exercised neither. He allowed his subordinates to correspond with the CHANCELLOR of the EXCHEQUER, instead of reporting to himself; and if he chose to waive his authority in this way, "he could not expect the business of the department to be well carried on." It certainly would not have occurred to any one of less ingenuity than Mr. GLADSTONE to find fault with this language on the ground that it was a censure of Mr. SCUDAMORE and not of Mr. MONSELL.

Mr. MONSELL's defence of his conduct was perhaps the wisest he could have put forward. He pleaded guilty to the charge of having allowed Mr. SCUDAMORE to do what he liked, and then recommended himself to mercy on the ground that he had found Mr. SCUDAMORE holding a wholly exceptional position in the Post Office, and that, in allowing him to retain it, he had but followed the example of the Duke of MONTROSE and Lord HARTINGTON. To this it may be

rejoined that so long as an exceptional position is not abused there may be no harm in it. The complaint against Mr. MONSELL is, not that he allowed Mr. SOUDAMORE a greater measure of independence than is ordinarily accorded to public servants, but that he took no steps to keep himself acquainted with the purposes on which this independence was turned. Nor, as a matter of fact, is it only where the Telegraph Department is concerned that Mr. MONSELL has neglected the work he was appointed to do. In his evidence before the Committee of Public Accounts he has unburdened himself on this point with singular frankness. "Undoubtedly," he says, "the system has prevailed of a great deal of 'business, and business of very considerable importance,' being transacted by the CHANCELLOR of the EXCHEQUER with the Secretaries of the Post Office, without the POSTMASTER-GENERAL having anything to say to it. . . . I happened to take a good deal of interest in the question of the investment of the money of the poorer classes in Government securities, and had myself submitted privately a plan which I thought a very good one to the CHANCELLOR of the EXCHEQUER some time ago upon the subject. I found that in the month of January last he arranged a different plan with Mr. SOUDAMORE, of which I knew nothing until Mr. SOUDAMORE informed me about it. Then, with regard to Post Office ocean contracts, questions of very considerable importance in connexion with the Australian Contract and the Zanzibar Contract (contracts which I think ought to come under the cognizance of the Postmaster-General) were arranged by the Secretary with the CHANCELLOR of the EXCHEQUER." We question whether so naive a confession of incompetence has ever yet been made. The Postmaster-General is an official of high rank and consideration, presiding over a most important department, and served by a singularly able staff. Mr. MONSELL now comes forward with the admission that, as regards whole classes of business, and this "business of very considerable importance," the staff manage things as they like, and, if they want official authorization for their proceedings, go to another Minister to obtain it instead of to their own chief. Mr. MONSELL must be a singular proficient in the grace of Christian humility, or he would not have endured being passed over in this way by his nominal subordinates; and, what is more extraordinary still, he has a rival in the race for canonization in the FIRST COMMISSIONER OF WORKS. The account which Mr. AYRTON gives of his position in regard to the Treasury is nearly identical with Mr. MONSELL's, though it is fair to say that Mr. MONSELL's statement was made in answer to a question put by a legitimate authority, whereas Mr. AYRTON's statement was made without a shadow of excuse, and apparently for no other purpose than to embarrass the CHANCELLOR of the EXCHEQUER. The relations between Mr. LOWE and Mr. AYRTON are reported to be of a kind which makes it the most natural thing in the world for either of them to do his best to make life a burden to the other; but if Mr. AYRTON were troubled with any superfluous sense of self-respect, he would feel it impossible to remain in office, if office really subjects him to the treatment which he describes himself as undergoing at the hands of Mr. LOWE. We should say the same thing in Mr. MONSELL's case, were it not that he would have been content to suffer in silence had it not been for the intervention of a Select Committee; whereas Mr. AYRTON, in his anxiety to prove Mr. LOWE a bully, has come forward without any invitation to exhibit his bruises to the House of Commons.

As regards the action of the Treasury towards the other departments, its injudicious interference is perhaps even more blamable than its insufficient control. In the present CHANCELLOR of the EXCHEQUER the Treasury possesses a chief of remarkable energy, and this energy appears to have been largely displayed in doing other people's business for them. Whether it is or is not desirable that the Treasury should take the initiative in matters which do not technically belong to it, it is clear that, so far as it becomes an executive department, it ceases to be of any use as a controlling department. The functions of artist and critic cannot be united to any useful purpose in the same person. If Mr. LOWE had not been in the habit of communicating directly with the Secretaries of the Post Office, Mr. SOUDAMORE would hardly have dispensed with the consent of the POSTMASTER-GENERAL to his use of the Post Office balances; and even if the POSTMASTER-GENERAL had approved of the use of them for the purpose of telegraph extension, the matter would still

have come before the Treasury with full notice and in its true colours. If the negotiation of the Zanzibar Contracts had been left to the POSTMASTER-GENERAL, the contract to which so much just exception has been taken would never have been entered into; or if it had been entered into, it would have been presented to the House of Commons as something altogether exceptional—something proposed, not by the Post Office in the interests of postal convenience, but by the Cabinet in the interests of national policy. That two ideas so completely distinct in themselves could have been confused as they were confused by Mr. LOWE, is largely attributable to the fact that he had taken the POSTMASTER-GENERAL's work out of his hands in the first instance, and had then mixed it up with work which never could have belonged to the POSTMASTER-GENERAL. Mr. LOWE has good reason to congratulate himself that he has been let off so easily. If any one of his errors of judgment had stood alone, it might have been of more importance that it should be sharply noticed. But the combination of so many in the same Session has evidently alarmed even Mr. LOWE, and if the Treasury will only take warning by their own proved shortcomings and their chief's narrow escape, there ought to be no difficulty in providing adequate security against the recurrence of similar scandals.

THE FRENCH TREATY OF COMMERCE.

IT was at the end of the July of last year that M. THIERS received the special reward he asked for from his admiring supporters at the moment when the negotiations and financial arrangements by which he had secured the liberation of the territory had been completed. He had set his heart on a law being passed under which duties should be laid on raw materials, and he prophesied that the country would receive a revenue from this source which would fall only just short of four millions sterling. The Assembly disapproved of his law and disbelieved in his figures; but this Bill was the whim of the Liberator, and, if the Liberator insisted, he deserved perhaps to have his caprice gratified, and there were great difficulties in the way of getting the forthcoming loan floated unless M. THIERS was in every respect satisfied. This year, on almost the same day of July as that on which the Bill was voted, a Bill was voted by the Assembly repealing the tax. No one spoke for the Bill or against it, and the pet measure of M. THIERS died in the silence of universal condemnation. No revenue worth speaking of has been collected under it, and its failure has been complete. It failed for the same reasons which have made it impossible for France to adhere to the treaties of commerce negotiated with England and France by the THIERS Ministry. M. THIERS was over-sanguine as to his powers of getting foreign Powers to fall in with his wishes. He took it for granted that he could get nations, when existing treaties place them in a position of advantage, to reduce themselves to the level of those nations whose Treaties of Commerce had expired. He thought more especially that nations reputed to be so friendly to France as Austria and Italy would forego whatever advantages they might possess and would sacrifice the interests of individuals in order that they might help France in its hour of distress. By the Treaty of Frankfurt M. THIERS himself created a new difficulty, for by that treaty he placed Germany in the position of the most-favoured nation, and it was therefore to the interest of Germany that nations exceptionally favoured should retain the benefits they possessed. This probably made the negotiations of M. THIERS for a rectification of all existing Treaties of Commerce much less likely to be successful; but even apart from the adverse influence of Germany, M. THIERS found little disposition in the most friendly nations to comply with his wishes. A Government cannot be generous and good-natured in matters of this sort. It has to think of those of its subjects whose interests will be affected, and who have embarked their capital and made all their arrangements on the supposition that during the time covered by the treaty they will enjoy uninterrupted the privileges secured by the terms of the convention. No nation is supposed to be more friendly to France than Austria, and it so happens that Austria is the nation whose Treaty of Commerce with France guards her against imposition of dues on her shipping arriving in French ports, other nations coming in for the same advantage under "the most-favoured nation clause." When the Bill for imposing duties on foreign shipping was proposed by the THIERS Government, the

Reporter of the Committee of the Assembly appointed to investigate the merits of the measure announced that the Committee were in favour of the measure, but he only did this because he was assured by the Government that Austria would consent to give up its advantages. He declared a few days ago in the Assembly that without this assurance he could never have agreed to a favourable report. M. THIERS said that Austria would make this sacrifice simply because he very much wished Austria to make it. Events have proved that he was entirely wrong, and therefore France has had to vary to a very large extent its financial policy towards other nations.

The only nations which were affected by the imposition of the shipping dues were England, the United States, Denmark, and Greece. Belgium was theoretically liable to be injured also, but apparently it has no mercantile marine to which the burden could attach. The United States immediately resorted to reprisals, and put on an extra duty of ten per cent. on French goods arriving in French vessels. England energetically remonstrated against a measure which fell with such special weight on her commerce, and Lord GRANVILLE was most resolute in protesting against what was almost a hostile preference given to every other considerable nation over England. But the representations of England might have had little effect, if it had not been evident that France, instead of gaining, was losing greatly by the incidence of the new tax. Rumour said that Antwerp was outstripping Havre, and that Genoa was springing into sudden prosperity at the expense of Marseilles. Goods destined for France from England were sent to Antwerp, and thence forwarded overland. The Greeks sent their vessels to Genoa, and the transport of the minerals of Elba has been diverted in the same direction. It must, however, be owned that it is not clear that this diversion of the Elba trade, on which great stress was laid by those who spoke in the recent debate in favour of abolishing the shipping dues, is really to be attributed in any great degree to the cause which those speakers assigned for it. As Italian vessels have not to pay the new shipping dues, there seems no very clear reason why they should not take the minerals of Elba to Marseilles, as they used to do; and it is probable that the real reason of the new direction the trade has taken is to be found in the opening of the Cenis Tunnel. Coal is sent from France to Elba; and in return ores are sent from Elba to France. It appears that the coals and ores can be now conveyed more cheaply by the Cenis line and Genoa than by the Lyons line and Marseilles, and the cause of this comparative cheapness can scarcely be the incidence of the shipping dues. If, apart from these dues, it would pay better that the goods should be carried by Marseilles, why, we may ask, do not French vessels carry them now? These new duties are supposed to be a special instrument for aiding and encouraging the French mercantile marine: but, if the French mercantile marine cannot manage to carry goods between Marseilles and Elba, what can it do? It has no differential duties to pay; and, if the route by Marseilles is the more profitable one, it ought to be able to secure to Marseilles the enjoyment of its natural advantages. It is not necessary to descend into doubtful details of this kind to show the inexpediency of these shipping dues. They practically touch England only, and their effect has been, on the one hand, to interfere with the course of trade between England and France, and, on the other, to drive into the hands of the Germans an increase of shipping business. This is a fact which Frenchmen may do well to think over very seriously. England is weighted with a duty, and a void is thus created in the shipping trade. France and Germany are on the same footing so far as the dues go, but it is Germany, not France, that steps into the vacant place. It is the German mercantile marine, not the French, that gains life and vigour, and assumes new proportions under the fostering care of French legislation. It is not wonderful that the condition of the French mercantile marine should fill Frenchmen with alarm. It is at best in a state of stagnation. Between 1859 and 1869 it actually receded, if the amount of tonnage representing subsidized vessels is deducted. The Protectionists in the Assembly aver and there seems no reason for doubting their assertion, that France cannot build ships to compete with foreign built ships, and that, if the construction of French ships is not artificially encouraged, the French shipyards will in course of time be closed. The speakers in the Assembly, almost without exception, treated the present state of things as one of a transitory character. When in 1877 all existing treaties have expired, then France will be free to invent

and apply those ingenious devices by which the prosperity of its mercantile marine is to be once more assured. Meanwhile the Government undertakes to issue a Commission at once, which is to examine the state of the mercantile marine very carefully, and see what can be done for this suffering interest. It is not easy to understand what any one thinks can be done for it. The only hint of what is really meant was given by the MINISTER of COMMERCE, who said that the State already did something for the marine by the subsidies it gave. This points in an intelligible direction. The mercantile marine languishes, because if it tries to compete with the marine of other nations, it trades at a loss. But if the State were to supply funds handsomely, it might turn this loss into a profit, and then the mercantile marine would be happy.

In March last, two days before the date when the Treaties of Commerce with England and Belgium would have come to an end, a year since the notice to terminate them having then elapsed, the Minister of Commerce of M. THIERS'S Government, acting in accordance with the views of the Parliamentary Committee to which the consideration of the Treaties of Commerce had been referred, submitted to the Assembly a Bill providing that the Treaties of 1860 and 1861 should remain in force until the Assembly had had an opportunity of deciding whether it approved of the terms of the new treaties which were to be substituted. When the Assembly met in May, the Committee had arrived at the conclusion that the new treaties were adverse to the interests of France, and that the best thing was to let the old treaties remain in force until 1877. The Committee would have reported, it is said, in this sense even if M. THIERS had remained in power; and it is scarcely possible to see how M. THIERS, even if the Assembly had not quarrelled with him on his general policy, could have persevered successfully in his financial schemes. He had been obliged to prepare a sudden Bill permitting the old treaties to remain in force provisionally, and the Assembly could scarcely have been induced to abandon them and substitute the other treaties which M. THIERS had negotiated. Probably M. THIERS would have given way, if on other grounds he had wished, and had been able, to retain power. He would have given up the new Treaties of Commerce, and the shipping dues and the taxes on raw materials. He could have scarcely had any reason for not doing so, the basis on which his main arguments had been founded, the willingness of Austria and other friendly Powers to cancel their treaties, having been cut away from him. The new Ministry only did willingly and quickly what M. THIERS would have done reluctantly and after many delays. What the new Government did that was specially its own was, directly it was installed in power, to call together the Council of Commerce and consult it; and the Council unanimously reported against the tax on raw materials, and in favour of letting the Treaties of 1860 and 1861 remain in force. Thus fortified, the Ministry has now asked the Assembly to abrogate the tax on raw materials, and to establish till 1877 the operation of the old treaties, and the Government has used all its strength to get the requisite votes passed before the prorogation. The policy adopted was not a new policy belonging specially to the new Government. It was the policy of the Assembly generally, and of the bulk of commercial men in France, and it was a policy which was gradually being forced on M. THIERS himself by the inexorable logic of events. The credit which the new Ministry deserves is that they have pushed forward a salutary change which, if they had been inactive, might have been delayed some months longer, to the great prejudice of the mercantile interests of the country. The new Ministers may be zealous Free-traders, or they may not; but there is not much in what they have done with regard to the Treaties of Commerce, or in their speeches on the subject, which shows them or the Assembly they were addressing to have any very definite opinions as to Free-trade. As Austria and Italy and other nations to which France is bound until 1877 would not give up their position under existing treaties, a system of taxation and differential duties based on the assumption that they would give up their position, became absurd and impracticable. This is all that the Assembly or the Ministry have so far arrived at; and although it is very sensible so far as it goes, it must not be exaggerated into a sign of the sudden conversion of Frenchmen generally to doctrines of an enlightened political economy.

A HAPPY FAMILY.

ANYBODY who has observed the manner in which the present Ministry, from the very first day of their entrance into office, have set themselves to conduct public business, will not be greatly surprised to find that the result has been not only to produce a dangerous degree of heat in the official machinery at various points of contact, but to throw some parts of it out of gear altogether. The disclosures of the last week or two as to the internal condition of various departments of Government and the relations between different classes of officials are quite unprecedented. Never before, we should think, has the administration of the country fallen into such a hopeless state of deadlock and bewilderment. The confusion, jarring, and discord, the personal squabbles and official antagonisms are such as to make one wonder, not indeed that extravagant contracts should be made off hand without anybody being responsible for them, or that large sums of money should be misappropriated at pleasure by subordinate officials, but that anything like administration should be carried on at all. It would seem to be the merest accident that Mr. SCUDAMORE did not carry his appropriations further, and that a great many other officials did not take the opportunity to supply their own, or what they chose to suppose to be the public, wants, by following Mr. SCUDAMORE'S example. It is not only in one, but in a number of departments, that we find disorder and anarchy. One day we have the War Office proposing a vote which the Treasury has refused to sanction. Another day it is the FIRST COMMISSIONER of WORKS who protests against the autocracy of the CHANCELLOR of the EXCHEQUER; and the Board of Trade and the Treasury are also on bad terms. The SECRETARY of the TREASURY complains that important business is transacted behind his back, and the CHANCELLOR of the EXCHEQUER retorts that a Secretary who does not know the difference between a minute and a memorandum, and who presumes to think he has authority to write a minute, must not expect to be consulted. As for the poor POSTMASTER-GENERAL, he is left to moon about by himself, nobody taking any notice of him except the porter told off to take him his lunch, until suddenly a great scandal explodes, and then he is dragged forward as a scapegoat. Mr. MONSELL happens to take a personal interest in the Savings Bank system, and he seems, in his innocence, to have imagined that his position would impart a certain weight to his recommendations on the subject. He sends in a long report to the Treasury, and finds some months afterwards by pure accident that Mr. Lowe and Mr. SCUDAMORE have settled quite a different plan between them, without even sending him word that they had done so. It is easy to say, and it is certainly true, that no man of the least spirit would submit to be used in this way; but it should also be said that no Minister with the faintest perception of the obligations of official intercourse would expose a colleague to this humiliation, or tamper with the discipline of the public service by treating directly with subordinates, and ignoring the responsible heads of offices. It appears that the CHANCELLOR of the EXCHEQUER and the FIRST COMMISSIONER of WORKS are not on speaking terms, but it may be doubted whether their relations are any the less pleasant on that account.

These things, it must be remembered, are not mere slips by the way; they are part of a regular system of doing business. It seems to be taken for granted that an earnest Ministry can have no time for conventional civilities, and that in fact they would be rather derogatory to its serious character, as savouring of the levity of the unregenerate Palmerstonian period. It was Mr. AYRTON who hit upon the characteristic plan of substituting curt memoranda for the old style of letters, with their surplusage of "Sir" and "Your obedient servant," in the transaction of the work of his department; but in this he was only carrying out the spirit of the Ministry, whose perfect righteousness could brook no compromise with formal courtesy. If an abuse had to be checked, or an economy enforced, it must be done in the most abrupt and summary way, and without the slightest regard for the feelings of the probably innocent persons who were affected by the change. This was the error which Mr. CHILDERS committed at the Admiralty. Whether or not his reforms were judicious and indispensable, it is impossible to defend the dogmatic haste and harshness with which they were enforced. And much the same thing has happened in almost every branch of the Government. The traditions of

the public service led those who were connected with it to suppose that they would be treated with the sort of civility and consideration which is usual in the intercourse of gentlemen; but this, it seems, is a form of snobbishness which is no longer to be tolerated. It is enough for a "master among his slaves," as Mr. AYRTON once described himself, to make himself heard by the crack of his thong, and quill-drivers have no more right to look for civil words than architects and market-gardeners. If they get the market price for their labour, let them be content. Some excuse may perhaps be found for Mr. AYRTON in the disclosures of the present week. Possibly, when he rushed out so savagely upon poor Dr. HOOKER, he may himself have been suffering acutely from the treatment of the Treasury; and if Dr. HOOKER had only taken his revenge on an under-gardener's boy, the circle would have been complete. We have always held that the appointment of Mr. AYRTON to an office for which he was so notoriously and grotesquely unfit showed a great want of consideration for those who were in any way associated with that department, and for the public interests involved. But nothing could be more indefensible than the dogged persistence with which Mr. AYRTON has been retained in office after he has taken every means to prove his outrageous incapacity. An odd contrast may be remarked between Mr. AYRTON'S angry protest against the dictation of the Treasury on Wednesday, and the meek and confiding acquiescence in the superior wisdom of Cabinet Ministers which he exhibited in regard to the Park Rules at the beginning of the Session. Of course there can be no room for question as to the principle on which subordinate officers must act. They are liable to be overruled by their superiors, and it is for them to consider whether, under the circumstances, they can conscientiously remain in office. If Mr. AYRTON has been snubbed, he should recollect that he laid himself open to it by taking upon himself to ignore the Treasury and to make a road without asking its consent.

In one of Sir ARTHUR HELPS'S books there is a proverb of his own invention, which we would earnestly recommend to the attention of the Government as a subject of meditation during the recess. It is this:—"Always make the four salaams every day to your 'friends';" meaning, of course, that it is dangerous to dispense with the usual forms of courtesy even with your most intimate companions. These forms are really not so idle as some members of the Government would seem to suppose. There is not much saving, either of time or of stationery, in dispensing with the "Sirs" and "obedient humble servants," and in cutting down orders to their hardest and curtest form; and the effect of such communications on those who receive them does not invariably tend to inspire zeal. It has been pleaded by a popular writer that HENRY VIII. might have been a better man in a world without women, and it is possible that the present Ministry might succeed in transacting business more smoothly and pleasantly if they could be relieved from the embarrassment of having to make allowance for human nature. Mr. GLADSTONE and his colleagues have occasionally appeared to forget that public officials are their own "flesh and blood," as well as the masses of working-men. It is impossible that a great body of officials of all grades, having many of them delicate and responsible duties to discharge as affecting each other, can be kept in good order, and in that easy state of mind which is indispensable to hearty work, without a scrupulous observance of the courtesies of personal intercourse. After all, it should be possible to be heroic without being rude and unmannerly.

THE SESSION.

THE main history of the Session is briefly told. It is the history of the defeat, the resignation, and the restoration of the Gladstone Ministry. Mr. Gladstone in the old days of excited electioneering undertook to settle not only the Irish Church and the Irish Land questions, but the thorny question of Irish Education. He had put off redeeming his pledge on the last head for two years; but the time had come when, in his opinion, he had no choice but to see whether the good fortune which had befriended him in dealing with his other Irish Bills would not smile on him if he tried his hand on an Irish University Bill. The secret of the precise scheme of the Government was profoundly kept, and when the nature of the measure was unfolded by Mr. Gladstone on February 13th, with his usual lucidity, copiousness, and persuasiveness, it seemed as if he had secured another great success. Liberal

members applauded, Conservatives were almost glad to think that a subject so full of anxiety to both parties seemed in a fair way of being got rid of, and outside critics had no very adverse criticisms to offer. But before the day for the second reading arrived everything had changed. The basis of Mr. Gladstone's scheme was that the University of Dublin should be the only Irish University, that it should be supplied with a modest amount of funds to form prizes open equally to all denominations, that it should be under the direction of a Council in which the influence, if not the preponderance, of Catholics should be unmistakable, and that it should teach everything that could be taught in it without giving the Catholics offence. When the general proposal was resolved into its component parts, it was found that each of its elements excited in a different quarter the fiercest opposition. In order to make the University of Dublin the only Irish University, the Queen's Colleges were to be sacrificed, and this roused the wrath of the friends of mixed education and of local facilities for University instruction. In order to allow the Catholics a share of the national wealth devoted to the encouragement of learning, prizes were to be opened to the whole of a population of which Catholics form a considerable majority. But the Catholics, or at least their bishops, protested that what they wanted was not the liberty to compete with other people, but the endowment of distinct places of Catholic education, and that they would have this or nothing. In order to get a Council favourable to Catholics, it was proposed that a share in the constitution of the Council should be allotted to a number of petty Catholic seminaries scattered over the country, and even Catholics of the better sort complained of the degradation of learning to which this would lead. Lastly, in order that the teaching of the University might be inoffensive in Catholic eyes, it was proposed that modern history and philosophy should be excluded from the subjects of instruction, and that the teachers should be bound over by heavy penalties so to teach as to hurt no one's religious feelings. And this, in the opinion of enthusiastic lovers of high education, made the University unworthy of its name. When the debates on the second reading began, the Bill was without a single friend of any weight or eminence outside the Cabinet; and the greatest mortification of all to the Government was to find that those for whose benefit and to meet whose pleasure the Bill had been studiously framed were dead against it, and that it was to be opposed at all hazards by the Ultramontane party. Balled in this quarter, the Government did what it could to conciliate its other opponents, and it declared that the suppression of the Queen's Colleges, the composition of the Council, and the gagging clauses as they were termed, were not of the essence of the Bill. But it was all in vain. On the morning of March 12, the Government found themselves in a minority of three, and Mr. Gladstone and his colleagues at once resigned.

Then came the famous Ministerial crisis, which kept every one for days in a state of the most delightful uncertainty, and which was prolonged because Mr. Gladstone insisted that Mr. Disraeli was bound to take the Premiership by way of penalty for his success, whether he liked it or not, and Mr. Disraeli insisted that he was not bound, and would not take it. Now that we can look back calmly, and with the advantage of subsequent experience, we can say that Mr. Gladstone was right to resign office, for he would otherwise have created an impression of insincerity and want of dignity; and that Mr. Disraeli was right not to take office, as his party was not strong enough in the country to justify the step. As usual, Mr. Disraeli amused himself with assigning ingenious reasons for a course dictated by the humblest considerations of prudence. He struck out and amplified with abundant rhetoric the notion that the division had taken place at the wrong time of March, and that this was a fatal barrier to the formation of a new Government. Either, he said, the Ministry must have taken votes on account, and had an immediate dissolution, or it must have gone through the Session shaping its Estimates for itself, and in both cases it would have been at the mercy of its enemies. He further added that, as the Conservatives had been so long out of office, they had no knowledge of a long series of official documents, without which they could not know what to propose, and so they could have no policy to offer to the country. The obvious fact was, that the Conservatives did not feel sure of a majority if they did dissolve. An Opposition which can rely on a new general election giving it a working majority does not trouble itself much about the time of year when its triumph takes place, and needs no policy but that of its own success. But the leaders of the Conservative party judiciously concluded that the country was not ripe for a Conservative Ministry, and that the best course was to wait until differences about beer and education had spread further division in the Liberal ranks. Mr. Gladstone resumed office, and no changes were made in the composition of the Ministry; and since the middle of March he and his colleagues have led the life which usually falls to the lot of Ministers who resume office after a defeat. They have had little control over Parliament, and have had to abstain almost entirely from legislation. They have also been discredited by some strange blunders and shortcomings; but they have managed to exist without undergoing any absolutely fatal humiliation, and without their rivals gaining much ground, and they have managed to carry some measures of considerable importance.

The Judicature Bill was introduced in the Lords by the Chancellor on the same evening as that which was signalled by Mr. Gladstone's explanation of the scope of his Irish University Bill. Although it has passed through some perils, the Judicature Bill has survived the various kinds of opposition it encountered, and

that it has so survived is the sole Ministerial success of the Session. If the Government has not got an Act passed which deserves to be considered as establishing a satisfactory Supreme Court, it has got an Act passed which may, if it is largely and wisely amended, be made the foundation for the establishment of such a Court. The Chancellor had done exactly what Mr. Gladstone had not done. He had found out, principally through the dearly bought experience of his predecessor, who could oppose any scheme effectually, and what were the terms on which their opposition could be evaded. If Lord Cairns and Chief Justice Cockburn smiled on his Bill, it would have a chance of becoming law; and what Lord Cairns insisted on was that the House of Lords, while giving up its jurisdiction in English appeals, should retain it in Irish and Scotch appeals; while the Lord Chief Justice demanded that the divisions of the new Court should perpetuate the names of the old Courts of Law, and that the chiefs of these Courts should be as great men as they had ever been. Lord Selborne drew his Bill in compliance with these conditions, and strove further, as he conceived, to lighten his task by proposing that his new Court should not have anything to do with ecclesiastical appeals. The Bill, although containing many good elements, had two great defects. It did not furnish the new Court with anything like an adequate staff of Equity Judges, and the scheme of pleading sketched in the schedule was very vague and imperfect. Lord Cairns, after directing the Bill to be sent to a Select Committee, attempted to remedy in some slight degree the first of these defects, by providing that the Lord Chancellor should sit in his own Court and not act only as Appeal Judge, and by a slight increase of the number of judges of first instance. A proposal made by Lord Salisbury, and repeated at a subsequent stage by Lord Redesdale, to strengthen the House of Peers by the creation of judicial non-hereditary peerages was rejected, and the Bill was sent, much in the shape in which it had been proposed, to the Commons. It was introduced there by the Attorney-General, who made a most encouraging speech, from which it seemed certain that the main defects of the Bill would be remedied. But a change soon came over this smiling state of things. The Government would not listen to any proposals for increasing adequately the Equity strength of the new Court, and it insisted on the miserable economy of cutting down the salaries of the highest order of judges, and even on making ex-Chancellors earn their pensions. The House also shaped the main lines of the Bill after its own fancies, and, with the assent of the Government, determined that all appeals, Irish, Scotch, and ecclesiastical, should be referred to the same tribunal. Lord Cairns said a few fatal words of warning in the House of Lords as to the consequences of thus upsetting an arrangement made with him, and in the terrible and incomprehensible name of Privilege forbade the Government to rob the House of Lords of the high function of hearing Irish and Scotch appeals. The Government meekly submitted, and the Chancellor tempered the effect of the transfer of ecclesiastical appeals by providing for a certain number of bishops to sit as assessors when such appeals are heard. Thus the Bill has been got through, and one of the best things that can be said for it is—that some of its worst faults—its miserly treatment of the Appeal Judges, its insufficient provision of judicial strength, and its inadequate system of pleading—are capable of easy amendment by the light of common sense and practical experience.

The minor measures foreshadowed in the Queen's Speech related to the Transfer of Land, Local Taxation, the amendment of the Education Bill, and the constitution of a new Railway Tribunal. The last of these measures was merely the embodiment of the recommendations of a Committee of the previous Session, and excited no opposition. The Government attempted to deal with the remainder, but time and strength failed them. The Lord Chancellor gave a sketch of what he thought might be done to simplify the transfer of land; his main idea being that titles with different degrees of validity should be registered according to the degree of validity they possessed; that after a time registration should be compulsory when sales of land took place; and that the time of prescription should be shortened. Lord Cairns gave the project a faint blessing, and nothing more was heard of the Bill. Local Taxation was entrusted to Mr. Stansfeld, who confessed that the time for deciding on the relations of Imperial and local taxation did not seem to him to have come, and that he must begin by getting all the real property in the country made rateable. He had to assent to an illogical exception in favour of Ragged Schools, and he and the House of Commons spent day after day in subtle disquisitions about woodlands and mines; but at last he got his Rating Bill through the Commons, only to find it rejected, after a short examination, by the Lords. Strong Governments can carry piecemeal measures, as people believe in there being a whole of which instalments are offered them; but they are indifferent when a weak Ministry offers them the sixteenth part of a loaf. Mr. Forster's Education Amendment Bill did not go far, for he let it transpire that his colleagues had kept him back from trying to make education compulsory; but it was a good Bill as far as it went, as it forced Guardians to send to school the children of persons receiving outdoor relief, and it transferred to the Guardians the task of paying school fees for the children of indigent persons. The latter portion of his scheme Mr. Forster was ultimately compelled to withdraw, and to make Denison's Act obligatory is his single and humble achievement. Even in this, however, it has been discovered that he has once more shown himself the treacherous enemy of Dissent, and he is to be vicariously punished by a Nonconformist plot to

start an impossible candidate in every constituency where to start one would be to damage the chances of a supporter of the Government. In some minor matters the Government got on fairly well; their Army and Navy Estimates raised no serious opposition, and by a popularity Budget, the surplus obtained by deferring the payment of half the *Alabama* indemnity was divided between the payers of Income-tax and the consumers of sugar. Mr. Ayrton averted the wrath of his enemies at the beginning of the Session by the modest plea that he was but the servant of greater men, and the task of defending the new Rules for the Parks was confided to Mr. Bruce. No serious objection was made to the proposals of the Government that the Australian colonies should be allowed to levy their Customs duties without consideration for the mother-country, that Canada should have the promised bonus for the suspension of the Fenian claims, and that the authority to preserve peace in Ireland, as peace must be preserved there, should be prolonged. Foreign politicians also have caused the Ministry no trouble. The House of Commons was willing to sanction a protectionist Treaty of Commerce with France, and was glad to hear it had been abandoned; the mission of Sir Bartle Frere was justified by its success; and the alarms created by the advance of Russia on Khiva subsided before the explanations of Lord Granville, the welcome announcement of the intended marriage of the Duke of Edinburgh with a Russian Princess, and the absorbing interest of running after the Shah.

The Government, therefore, has not got on altogether badly. If its misfortunes had been unchequered, it could not have continued to exist; but it has been tossed about, and has had dirt thrown on it in many painful ways. The scandals of the Zanzibar Contract and the Post Office expenditure have been the most serious blots on its history, for they showed how far maladministration can go in the hands of the most trusted public servants. Even at the very outset of the Session the censure of the Opposition made it obvious that the Ministry had neglected altogether to take into consideration the very important subject of the mode in which the Rules of the Washington Treaty were to be communicated to foreign Powers, and Mr. Gladstone even imagined that they had been communicated. The whole subject and its importance were a perfect novelty to the Cabinet, and they had to learn their position and their duties in regard to it through the unpleasant process of listening to speakers whose criticisms were unanswerable. They yielded with rather a bad grace to the necessity of allowing Mr. Fawcett's humble Bill for the Abolition of Tests to supersede their defeated scheme for dealing generally with Irish Education. They got out of the difficulties that seemed to threaten them from the side of the pugnacious Father O'Keefe by securing the appointment of a Select Committee to hear the explanations of those whom Father O'Keefe looked on as his enemies, and then by Lord Hartington writing a letter of instructions to the Commissioners which settled nothing, but seemed about equally favourable to each of the contending parties. But the Government was not allowed to name its Committee as it thought best, and the House insisted on an independent member from each side being added to see that the inquiry was properly made. The Commons, after a very warm debate in a full House, refused to adopt Mr. Crawford's proposal for the rejection of the scheme for remodelling Emanuel Hospital; but the Lords do as they like with regard to schools touched by the Commissioners, and Lord Salisbury has become the sole judge of appeal against the Commissioners; so that persons discontented with such schemes do not trouble themselves about the Commissioners or any Government body, but fly for sure succour to the Lords. Whether there is much to criticize in their Indian policy is doubtful, but at any rate they have escaped all effective criticism in regard to it by the usual device of cramming all discussion of Indian affairs into the space of a few hours snatched from other business on the eve of the prorogation. They have further had to consent that the operation of their Bill for extending the duration of the Endowed Schools Commission shall be limited to a single year, Lord Lyttelton, who was principally concerned, avowing that it was useless to contest the point, as he had nothing to rely upon except the support of a Government stricken with paralysis. Towards the end of the Session the Government sustained a series of small but vexatious defeats, coming rapidly one after another. Mr. Plunkett beat them as to the treatment of Irish Civil Servants. Mr. Richard forced them to frame a Royal answer to an address asking for a non-sensical scheme of general International Arbitration; and the Lords by an overwhelming majority obliged them to promise a Commission to inquire into the alleged grievances of officers under the scheme for the Abolition of Purchase. Mr. Lowe's Bank Bill was a failure, for it pleased none of the different sets of financial theorists, and could scarcely ever have been beneficially operative; and the Attorney-General in vain tried to persuade the House to alter the number and dispense with the unanimity of Juries. Official proposals of a novel kind which are at once disposed of are so soon forgotten that they generally do not do much harm to any one; but when a Government is weak, and its reputation sinking, everything that turns against it adds somewhat to the sense of its discredit.

In a Session when the Government is almost powerless for legislation, it is not to be expected that private members can do much, and what may be termed the standing crotchets of different cliques in or out of Parliament have been disposed of this year rather more quickly and decisively than usual. The Lords found time during the Ministerial crisis to put their annual extinguisher on the Deceased Wife's Sister Bill. The financial

opponents of the Contagious Diseases Acts could not make their voices heard in the House of Commons. The dangerous whim of extending the suffrage to women, although unfortunately it receives the countenance of the two Parliamentary chiefs, was rejected by the Commons, and, as it is pleasant to have to record anything in his favour, it may be noted that no one made a more effective speech against it than Mr. Bruce. The very large majority of 321 against 81 settled the doom of the Permissive Bill, fear of the too powerful licensed victuallers doing perhaps more to produce the result even than the overwhelming force of argument. A majority equally decisive disposed of Mr. Miall's project of disestablishment, and Mr. Gladstone invited Mr. Miall to observe that his position was now at its best, as the new Parliament was likely to be less favourable to him than the present. The Burials Bill was elevated by an accident into an occasion of a great party struggle, and no less than two hundred and eighty Liberals voted for it; but Mr. Morgan had to be satisfied with this barren honour, and could not get his Bill any further on the road to the Statute Book. Mr. Plimsoll, who easily obtained a Royal Commission to inquire into the evils which he stated to exist, had to apologize to the House for some of his statements affecting the honour of members, and gradually lost ground as it became evident that he considered every one who disagreed with him, or who would not do exactly as he wished, a wicked enemy of British seamen, and his own Bill was talked out of existence on a Wednesday. The House of Commons once more repeated its manifestation of dislike to Mr. Fawcett's proposal to throw election expenses on the constituencies; and the Government, while giving a sudden and vehement support to Mr. Trevelyan's measure for extending household suffrage to counties, resolutely opposed two attempts to open the dangerous and difficult question of the redistribution of seats. As the Home Secretary declined to introduce a Bill recasting the law on conspiracy, and urged the humble but honest plea that he could not conceive how such a Bill ought to be drawn, Mr. Harcourt attempted to supply the defect, and his Bill has had at least the good fortune to reach the Upper House. Mr. Mundella has been equally unsuccessful with regard to his Factory Bill, which probably deserved more attention than he could secure for it, although Mr. Gladstone seemed to show it some favour, as he allotted an exceptionally large portion of the last week of the Session to its discussion. But the country, as a rule, loses little by the extinction of the Bills of private members which are drawn without responsibility, fear of consequences, or hopes of passing. Perhaps, as a specimen of what Bills can be like under such circumstances, Mr. Palmer's Married Women's Property Bill deserves notice, as, under the plea of remedying a tiny legislative omission with regard to ante-nuptial debts, it boldly altered the whole position of husband and wife, and erected them into independent traders accidentally coupled by the tie of cohabitation.

It is one of the functions of Parliament to make inquiries on subjects of popular interest, and to afford an opening to persons or bodies who have fancies they wish to air or grievances they wish to publish. At the beginning of the Session the price of coal made householders very uneasy, and a Committee made the most elaborate inquiries into the recent history of the coal market, and satisfied the public that the only substantial reason for the high price of coals was the unusual demand for manufacturing purposes. In the same way horses are inconveniently few and dear, and Lord Rosebery got a Committee of the Peers to look into the matter, and to establish that the only thing to be done was to trust to the enterprise of private breeders. The propriety of Parliament meeting in November was once more debated, and Mr. Gladstone described how delighted he should be to get to the country in June, only he did not believe he should be more likely to see the country in June because he had to come to London in November. Lord Russell proposed to cure the evils of Ireland by abolishing the office of Lord-Lieutenant, and Lord Stanhope suggested that an Order of Merit should be invented which would reward the services, flatter the vanity, and foment the jealousies of the world of literature, science, and art. Religion, too, has as usual suggested its special subjects of discussion. The Lords have discussed the pernicious consequences of confession in England, and the inutility of Church patronage in Scotland; and ingenious, if not prudent, friends of the Church of England have suggested that its bonds should be relaxed, and its operations diversified, by the indiscriminate admission into the pulpit of any person whom the incumbent might wish that his congregation should have the benefit of hearing. Lord Carnarvon invited the Government to give a practical proof of that burning interest in Persia which the visit of the Shah was said to have created in the national bosom, and to back up Baron Reuter in carrying out his wonderful concession. Lord Granville sternly refused to do anything in the way of giving Baron Reuter effectual support, and no one was able to say what he could have done for Persia and Baron Reuter which would not have exposed England to great difficulties and risks. The Government also stifled the hopes raised by Lord Hartington last year, and announced its determination to have nothing to do with the purchase of Irish Railways. Mr. Gladstone did indeed offer to do something for Irish Railways, as he thought that Government might lend money to replace debentures, and might befriend all legitimate schemes of amalgamation. The experience of this

Session is, however, not very reassuring to the promoters of schemes of Railway Amalgamation, the two great schemes of the year—that for amalgamating the London and North-Western and the Lancashire and Yorkshire, and that for amalgamating the Midland and Glasgow and South-Western—having been rejected by the Local Committees appointed to consider them. Parliament also, while attending to the grievances of other people, has paid some little attention to its own. Mr. Munster vindicated the character of his friends by invoking the terrors of Parliamentary procedure against the publication of words in a newspaper defamatory of Ultramontane members, and for a moment it seemed as if Mr. Mitchell Henry was going to prevent any speeches being reported in revenge for the too scanty notices which he contended were given of the speeches of Irish members. Fortunately he was soon brought to reason, and proved accessible to the argument that, as reporting is a trade, reporters may be trusted to report the speeches of Irish as of any other members, provided that the merit of the speeches will make it pay to report them.

The deaths of Lord Westbury and the Bishop of Winchester have left blanks in the House of Lords which will not be easily filled up, for scarcely any legal peer contributed more than Lord Westbury to the eminence of the House of Lords as the supreme Appellate tribunal, and no one rivalled the Bishop of Winchester in the skill with which he maintained that harmony between the Established Church and lay society which it is one of the primary objects of the presence of bishops in the Upper House to perpetuate. Lord Wolverton, too, although he had never taken any part in the proceedings of the House, was an excellent example of the best sort of men who recruit the peerage in virtue of the possession of wealth, energy, and commercial notoriety. His death removes from the Lower House one of the most useful subordinates of Mr. Gladstone; and next Session, if no dissolution intervenes, the new Whip will have a hard task with an expiring Parliament and a wearied Ministry. As to individual Ministers, there is no change of position to remark, except that Mr. Lowe of all people has laid himself open to censure by extravagance in a contract, and insufficient control over a dependent office, errors from which he might have been thought to be especially safe. Mr. Ayrton, too, has chosen to reveal serious dissensions between himself and Mr. Lowe, and the effect of his disclosures has been equally damaging to the attacker and the attacked. Whether the present Parliament is to see another Session, and what would be the result of a general election, are points sufficiently uncertain to make any conjectures tolerably plausible. Isolated elections have gone on the whole against the Government, but not to such a degree as to show that a new Parliament is likely to give a satisfactory majority to a new Ministry. Mr. Gladstone has gone so far in his provisions for a general election as to furnish his supporters with a new cry, and to suggest Household Suffrage in Counties as one of their watchwords. But this is not going very far, and probably, if no unforeseen event arises, the Ministry may prefer the certain to the uncertain, and may think that the least of the evils from among which they have to choose is to linger on for another Session, and see whether in a twelvemonth something may not be struck out by good fortune or ingenuity to consolidate and animate their party before a new election takes place.

AMERICANS IN EUROPE.

IN the last month or two the number of American visitors to Europe has been increasing so fast that the tide of intercourse between the Continents begins to set as regularly back towards the Old World as the Gulf Stream. These visitors have multiplied so marvellously that the cabinfuls of respectable passengers on the Cunard and Inman liners must almost compensate numerically for the drain of the poverty-stricken steerage loads from Liverpool or Cork, Hamburg or Bremen. The Americans are not the people to be lightly balked of their holiday if they have once set their hearts upon it, and many of them had long ago made up their minds that Vienna was an excellent excuse for leaving home. The rush to Europe had fairly set in before anything had occurred to stop it. The fliest comers were in Austria already suffering from the horrible weather which kept Europeans who had been on the brink of departure shivering over their start. Like the foxes of the fable, in their communications with their homes the Americans who had already committed themselves dwelt upon all that was pleasant, and touched very lightly on the drawbacks and disagreeables. It is certain that the letters of the Correspondents of their leading journals depicted things very much in rose-colour, while the extravagant prices which frightened every one else were perhaps almost an inducement to Americans who had set aside a "pile" of dollars that must be dissipated. A bustling broker from Wall Street will punctiliously go through the work which the ladies of his family have mapped out for him, but none the less is he very grateful to the accidents which may precipitate his return to the business of his affections; while as for the ladies, they are in love with spending for its own sake. In spite of everything, the rush has been going on without remission, and steadily gathering volume. Steamers of tremendous tonnage have been starting almost every day from New York and New England; yet their berths have been at a premium, and their saloons crowded to suffocation. So great has been the influx, that one of the leading Transatlantic Steam Companies has very sensibly opened offices in London, where helpless customers who are cast adrift for

the first time upon our shores may be furnished with advice as to their future proceedings. Wherever you travel on a leading Continental line, you might, if you were to judge by your fellow-passengers, fancy yourself seated in the cars of the Union, while some of the more pretentious Continental hotels have become as Transatlantic in their tenants as the Fifth Avenue in New York or the "Grand" at Paris.

As is the way with selfish human nature, we naturally ask, in the first place, how this formidable incursion is likely to affect ourselves. There is a good deal of truth in the old saying, "The more the merrier," when there is plenty of room for every one; and it might be assumed that people socially disposed, starting on a summer holiday, would rather welcome the prospect of plenty of society of similar speech and kindred origin. Lot foreigners say what they will—and we must confess that appearances justify their speaking as they do—we know that the Briton is not the misanthrope they believe him. If he often sits silent when travelling alone, it is because he is shy of strangers, with whom, as he fancies, he has few sympathies, and because he cannot be voluble or even civil with the few broken words that rattle loosely about among his thoughts. His birthright did not comprehend the gift of a kind of lingual kaleidoscope which can arrange stray odds and ends of speech with rapidity and precision in an endless variety of pretty, though meaningless, patterns. But when he has passed twenty-four hours in communion with himself, see how he brightens up when he is launched somehow in talk with a countryman. The austere man grows playful and facetious, the reserved man becomes effusive, while fastidiousness itself ceases to stand upon trifles, and overlooks the most glaring distinctions of caste. The *habitué* of bow windows in St. James's makes himself unaffectedly affable to the honest dyer from Lower Thames Street, who is bound for the Rhine and the Oberland with the good-humoured partner of his joys, while the ritualistic curate confides his impressions of scenery and foreign forms of religion to the burly bosom of a sporting young brewer from the midland counties. Such being really the inveterate gregariousness of our English nature, this American incursion should surely add an attraction to summer travel on the Continent. At least we should have plenty of people with whom we could exchange small talk if we chanced to be socially disposed, and if we felt unsociable they need not bore us. Further, our intercourse with intelligent Americans would introduce us into a new world of ideas, and that we take to be one of the greatest enjoyments of rational travel. Perhaps it may come to this in time when the two nations get used to each other, but for the present there are very few of us who are able to look upon our cousins in the light of acquisitions, and the absence of attraction would appear to be mutual.

It is not altogether easy to explain the reason to our satisfaction. It is true that, regarding the matter from our English point of view, there are certain salient peculiarities about our American friends which it is impossible to ignore, and which are naturally distasteful to us. To begin with, there is that unmistakable shibboleth of speech. We object to nasal utterances; we are inclined to shudder at some of the fresh and forcible expressions with which Americans taint the springs of early English, although we may smile at these Americanisms in the New York journals and in the droll writings of the humourists of the Far West. In female mouths especially they jar harshly on our sensibilities. It may be that we feel a certain responsibility for the manners and behaviour of people who use our own language, who resemble us in features, and are sprung in great measure from our English stock. For it is certain that a very slight experience of travel makes us accept with tolerable complacency, or at least resignation, the German lady who shovels down her peas with the knife she clutches in her fist, as well as the French commercial gentleman who tucks his napkin into his shirt-collar and carefully cleanses his plate with his bread. No doubt English and Americans would learn to like and respect each other's good qualities were they to meet in villages on the shores of the Nyanza or away among the huts of the Kirghis in the Steppes of Asia. Like the American admiral in Chinese waters in war time, they would remember that "blood is thicker than water," and fraternize cordially enough. But on the highways of the civilized world the mutual repulsion is a disagreeable fact. Mounted parties of the respective nations cross each other on the Wengern Alp like members of rival tribes observing an armed neutrality; and in a train on the banks of the Rhine, or a steamer on the Upper Danube, they draw aside into hostile camps, and send solitary members of the opposite race to Coventry. There is one thing, however, which must be remembered, and that is, that the Americans who make themselves most conspicuous when travelling, and whose disagreeable peculiarities are apt to discredit their countrymen generally, are people of the rougher and ruder sort. And the same remark applies to our own race, under similar circumstances.

Then, in the American influence in raising foreign prices we have a substantial grievance which rankles not unnaturally, and this season it is taking more offensive proportions than ever. The travelling American may be said to lavish his capital where the Englishman is economizing his expenses. It is very much the fashion of the American at home to live from hand to mouth, and to spend successive fortunes almost as fast as he makes them. He makes no provision for older sons, nor does he pretend to provide very handsomely for any of his male children. They must work for themselves as their father did before them; the luckier for them if they are started higher up on the social ladder. For himself he is too familiar with examples of the melancholy uncertainty of riches to

be very eager about storing them. Indeed, it is almost the part of a prudent man to make sure of enjoyment while he has the means. What a comfort it ought to be to a speculator going into liquidation previously to beginning again to reflect that he has had a deal of spending out of the proceeds of his last venture. Governed vaguely by notions like these, although, perhaps, he scarcely translates them into words, the American comes over for his European tour. He sets aside a liberal sum for his expenses, and, as we said before, he does not care how soon he is back at his work. He has no great reason to check the extravagance of his family, and he has every inducement to enjoy every comfort which money can procure him while his travels last. He bids for the best rooms in the hotel; there is naturally a sharp competition in the height of the season; landlords learn that they may charge very much what they please, and, as we know, it is much more easy to send a tariff up than to get it lowered again. He finds himself in countries where it is the practice to drink wine at dinner, and where there are no bars where you can liquor up from breakfast to bed-time. He changes his habits easily enough, and gets curious in costly vintages. When one item habitually figures heavily in your bills, it may be taken as an axiom that all the others have a tendency to swell in proportion; and when the total of the bills is large, it is a mere bagatelle to be over-generous to the servants. Besides *nouveaux riches* who are cast away in a crowd with plenty of money burning in their pockets naturally assert their superiority for the time by casting their small change recklessly about them. Guides and porters get utterly corrupted and demoralized by the thunder-showers of dollars that fall in the hot season. If landlords do not respect these liberal patrons of theirs, it is only "human nature" that they should make slight account of less pretentious guests who are compelled to be frugal.

So it is no wonder that people of moderate means, snarling already under a steady increase of charges, should look with undisguised anxiety to the results of the American invasion of the year, and regard with something like aversion the members of the invading force. They might be content to try to bear it with more philosophy did they feel that the mass of Americans profited by their trip or even enjoyed it thoroughly. As for the profit, it would be rash to speak decidedly, for quick and very intelligent people may be learning fast when they look least like it. All we can say is, that their system of travel strikes us as a bad one, and that what they learn under it must almost necessarily be superficial and conventional. They hurry from place to place even faster than the average English cockney, because they are always in excellent training for pace, and have been freshened by the long voyage across the Atlantic. They are driven along by the Furies in the shape of a craving for change of scene, a longing for excitement in the absence of their habitual avocations, and a crushing consciousness that the time before them is shorter than their allotted task. They rush through noble scenery, along the crowded high roads, and dare not allow themselves to loiter in those sequestered nooks where Nature is really to be seen and courted in her beauty. When they do linger for a time in a capital, in Paris for example, they leave their wives and their daughters to do the churches, the galleries, and the shopping, and seek recreation and repose in the restaurants, cafés, and bankers' ante-rooms where their countrymen most do congregate. Small blame to them, as an Irishman would say. Those blessed intervals that almost carry them back to the States are, for a certain class of Americans, almost their only seasons of real enjoyment, although perhaps it was scarcely worth while crossing the Atlantic to indulge in them. If appearances are not altogether deceptive, we can speak with more confidence as to the pleasures of their trip than as to its profit. There is no mistaking the worn and wistful look which tells of continual effort and an irrepressible desire to have it all well over. With its rapid repasts and its interminable distances, America turns out far harder and more wiry travellers than most countries. Still, the constant change of scene, diet, and climate for months on end; the eating habitually, as it were, with loins girded and staves in their hands; the perpetual catching of trains at untimely hours; the being cooped up among the crowds in waiting-rooms under the charge of autocratic jacks-in-office, and being compelled to race for seats heavily handicapped by their latest purchases, must be a severe strain on the strongest system. No wonder that towards the middle of his time abroad the most active American tourist oscillates between despondency and despair, and that the wearing struggle imprints its traces on the wasting features. We cannot help thinking that many Americans in Europe will sympathize with us if we venture to express a wish that some of them had stayed at home.

THE OLD CATHOLICS AT LUZERN.

WE have commented more than once, when speaking of Swiss matters, on the singular process known as *Rekurs* or *recours*, a process singular enough in itself, and almost more singular as being an example of a fully established legal fiction in a Constitution only five-and-twenty years old. The Confederation guarantees the constitutions of all the Cantons; it follows that, if the constitution, either of the Confederation itself or of any Canton, is broken, the Federal power has a right to step in. On the strength of this principle, every man who thinks himself wronged by any act of the administrative or judicial authorities of his own Canton—one might almost say every man who has a law-suit

decided against him in a cantonal court—at once says that the cantonal constitution has been broken to his prejudice, and carries his complaint, first to the Federal Council—the *Bundsrath* or Executive body—and thence, if he fails there, to the two Houses of the Federal Assembly. It follows that much of the time of the Assembly is taken up with discussing matters which, according to our notions, are simply matters for an ordinary court of law. The obvious course would be to transfer the hearing of these appeals—for such, in truth, most of them are—from the Federal Assembly to the Federal Court. But, among all the proposed reforms, there seems very little disposition to carry out this one, which to an Englishman seems the most needful of all. We may believe that the Federal Assembly, like all other gatherings of human beings, does not like to give up any power that it has got; but, besides this, there is a deeper ground for unwillingness. To allow a regular appeal from the Courts of the Cantons to the Courts of the Confederation would go further to wound the feeling of cantonal sovereignty than any of the centralizing measures which have been lately proposed. That feeling is less wounded by a process the theory of which is that the Federal power steps in only to guarantee the constitution which the Canton has made for itself. But the practical result is that the Federal Executive and Legislature are set to debate and vote about a great many things which are simply questions of law for a Judge. To us this seems the more strange, at a moment when we are stripping one branch of our own Legislature of judicial functions which it has held for ages.

During the winter session of the present Assembly a *Rekurs* was brought, which, besides illustrating the nature of the process, bears upon several questions of high interest both in Switzerland and out of it. In this case the complaint was lodged immediately with the Federal Assembly; only the National Council, with praiseworthy modesty, asked the Federal Council to report on the matter before it undertook its discussion, and the result is a recommendation from the Federal Council not to entertain the question at all. The recommendation strikes us as a wise one, but it has been a little long in coming, for the National Council referred the matter to the Federal Council as long ago as December 21, 1872, while the Report of the Federal Council did not appear till July 4, 1873. Perhaps the duty of drawing up a new scheme of constitutional revision has hindered the Federal Council from attending to other things.

The *Rekurs* of which we speak touches the condition of the Old Catholics in the Confederation, and especially in the Canton of Luzern. There is in the city of Luzern a branch of the Society of Liberal Catholics, the object of which is the advancement of the Old Catholic cause. The Committee of this body wished that what is called a "religious conference" should be held by Professor Reinikens of Breslau, in one of the Catholic churches of the city. This "religious conference" is explained to be a kind of sermon, in which the preacher strongly exhorts his hearers to stand fast in the Old Catholic position. But the sermon is further accompanied by singing and playing on the organ, and the question has been raised whether the singing and organ-playing does or does not give to the conference the character of an act of religious worship. The Committee of the Society applied to the Communal Council of the city of Luzern, in which the ownership of the churches is vested and which acts as the ecclesiastical administration, for leave to use for this purpose the old Franciscan church, now a succursal church to the Catholic parish of Luzern. The Communal Council gave them leave, but the State Council of the Canton stepped in and forbade the use of a Catholic church for the purpose, and the conference was in the end held in the Protestant church. The Committee of the Liberal Catholics appealed to the Federal Assembly, who, as we have seen, referred the matter to the Federal Council. They of course called on the Government of Luzern for their answer to the complaint, and the arguments used on all sides are set forth in the Message of the Federal Council to the Assembly. They are well worth study in times when the relations of ecclesiastical and civil societies are becoming of such paramount importance everywhere.

The Communal Council granted the request of the Committee on the ground that all its members were members of the Catholic parish of Luzern, and that they saw no reason to deny them the temporary use for a religious purpose of one of the churches under their administration, especially as the use of another of the churches under their administration had been often granted for a considerable time to non-Catholic bodies, among them the Free Church of Scotland.

The State Council of the Canton, in the decree by which they annul the permission given by the Communal Council, base their refusal on the constitution and law of the Canton. A church, they argued, is designed only for the worship of the religious body to which it belongs. Unless the law otherwise provides, it cannot be used, even temporarily, for any other purpose, without the consent of the ecclesiastical administration and of the chief minister of the church concerned ("l'ecclésiastique préposé à l'église dont il s'agit"). And, even if such consent is given, the State Council, as guardian of public order, may forbid any such extraordinary meetings in public buildings ("interdiction des réunions extraordinaires dans des édifices publics"). The parish priest of the city, under whose authority are all the Catholic churches of Luzern, had not given his consent, and, if he had, the State Council would still have had the right to forbid the use of the church, if it thought good. The State Council, however, the Liberal Catholics have by the Constitution falling to hold

their meetings and conferences where they will, provided they do not interfere with the rights of anybody else. But it adds that to use a church which is lawfully assigned to the use of any religious body for the purpose of religious controversies directed against that body is contrary to law, as an infringement of the "confessional" (denominational) rights guaranteed by the Constitution, and is dangerous to the order and tranquillity of the Canton.

The appellants, as we should call them—*recourants* is the technical word in the French version—set forth that the refusal of the State Council is a breach of the article of the Federal Constitution which guarantees the free exercise of the worship of all recognized Christian confessions. They cast aside as irrelevant what the State Council had said about the consent of the parish priest and about the danger to public order; they say that the conference was an act of religious worship, and that the real question is whether the Old Catholics are among the recognized Christian confessions whose freedom of worship is guaranteed by the Federal Constitution. They say that the act of the Luzern Government implies that the guaranty given by the Federal Constitution to the Catholic confession extends only to those Catholics who admit the new dogma of infallibility. They maintain that they are themselves Catholics, members of the Catholic parish of Luzern, members of the Catholic body as it stood when the Federal Constitution guaranteed its right of worship, and that a dogma put forth since that Constitution was enacted cannot take away their rights. They argue that, though they do not form a *commune*, still the *commune* is not the only form which a confession may take, and that they are members of a body which several *communes* elsewhere have actually joined, and which may therefore claim the rights guaranteed to a recognized Christian confession. They therefore ask that the act of the Luzern Government may be annulled, and that, if this cannot be done, a Federal law may be passed to secure their constitutional rights. Towards the end of their argument they use these words, as they stand in the French version:—

Toutin, les égarda qu'on doit avoir pour le bien de la patrie font à eux un devoir d'acquiescer à la demande des *recourants*, attendu que les *conférences* du nouveau système politique religieux, créé par le syllabus et le concile du Vatican méritent l'existence de l'État suisse.

This argument illustrates the confusion of judicial and legislative functions which is implied in the very nature of these appeals. The argument is to the point, as addressed to a legislative or executive body whose business it is to make or to propose changes in the law. It is quite out of place as addressed to a judicial body, whose only business is to carry out the law as it finds it. But for the purpose in hand, the Federal Council and Federal Assembly must be looked on as judicial bodies. Their present business is not to determine whether the law as to the relations between Church and State can be improved, but to declare whether the law, as it stands, has or has not been broken by the State Council of the Canton of Luzern.

The Luzern Government answers at length in a Report dated January 27, 1873. This paper sets forth the law of the Canton as to religious liberty and the like, as embodied in the existing cantonal Constitution. By this Constitution liberty of conscience is inviolable, and no man can suffer in any way in his civil or political rights on account of his religious opinions. The free exercise of worship is fully guaranteed to the recognized Christian confessions; to all other denominations it is guaranteed only within the bounds of good morals and public order, whatever those may be. Lastly, the Roman Catholic confession is not only guaranteed, but enjoys the full protection of the State.

The State Council goes on to argue that by a recognized Christian confession in the sense of the Federal and cantonal Constitutions must be understood a community recognized and organized by the State, and having a basis of public right. Two confessions only answer this definition, the Roman Catholic and the Evangelical Reformed. These two are known to the State as organized bodies. All who belong to neither of them are Dissenters. Such Dissenters have full liberty of conscience; they have full liberty—within the bounds of good morals and public order—to practise their worship; the right of association secures them in the common practice of their worship; still they have no ground of public, but only of private, right; the State knows them only as individuals, not as communities. Again, the conference which it was proposed to hold is looked on by the State Council as not being an act of worship, and therefore as not coming under the guaranty given by the Constitution to acts of worship.

They go on to argue that, if it had been an act of worship, the complaint would still not have been well founded. The Luzern Government, as such, knows nothing of the Old Catholic controversy. The Catholic churches of Luzern are assigned for the worship of the Catholic body, which worship has been in no way altered by late events. They cannot be lawfully applied to any other purpose without the consent of the authorities of the body to which they are assigned. If the complainants are members of the Catholic body, they cannot claim any rights except such as they enjoy in common with the other Catholics of Luzern. If they profess to be a separately recognized Christian confession, whose worship has been hindered, the State Council answers that, supposing the confession to be an act of worship, still the Old Catholics have never been officially recognized as a separate confession, and that even a recognized Christian confession has no right to disturb the rights of another confession equally recognized.

They go on to argue that, according to the constitution of

Luzern, the State Court has power to annul the act of the Communal Council.

The Federal Council admit the arguments of the Luzern Government. The Old Catholics of Luzern, they argue, have not been hindered from holding their conference, but only from holding it in a particular place. As a matter of fact, they have held it elsewhere. The Confederation guarantees the rights of recognized confessions, but it has nothing to do with a dispute, where the Federal Council hold this to be, within the bosom of a particular confession. They hold that neither the Federal nor the Cantonal Constitution has been violated. They add that the complaint should have been first made to the Grand Council—the Legislature—of Luzern; and also that the Communal Council, whose act was annulled, would have had a better right to bring a *Rekurs* than the Society of Liberal Catholics.

All this is worth studying, especially when so many are so fiery hot on both sides. And while we are writing this, there comes to hand a debate in the Federal Assembly on the complaint of the clergy of Solothurn against the law just passed in that Canton for making their holding of cures terminable instead of for life. These points also may perhaps afford us some matter for consideration.

WOMANLY DIGNITY.

NATURE, which has given weapons of assault or means of defence to almost all living creatures, has made man audacious, and has endowed woman with dignity. And dignity has the best of it. In fact, womanly dignity may be accepted as one among many explanations of that legendary power which turned the bravest man to stone, and made the might of the strongest like water in their bones. What can any one do against it? As well try to penetrate the amadillo's coat of mail by a needle, or make a hole in a pachyderm by a popgun, as fire a woman to passion or melt her to pity when she has once entrenched herself in the stronghold of her dignity. No argument can shake her, no reasoning convince her; despair dies away to querulousness, and the pleadings of love itself fall dull and blunted from her stately self-possession like so many toy shafts hurled against a polished and impenetrable surface. Indeed, how can you rage in anger, or abase yourself in entreaty, to a creature who is killy polite, loftily unmoved, not to be gilded into the smallest demonstration which would put her in the wrong and give you a vantage-point against her, and whose calm eyes look at you with a kind of superior scorn which, while it maddens you, offers no point of attack? What can you do? Simply nothing. The means of defence which nature has given are unassailable, and a dignified woman is mistress of the situation by the very power of negation, if by none other. But there are various kinds of dignity, and if some are more exasperating than others, some are very lovely, and among the greatest charms of womanhood. There is in particular that soft dignity which belongs to women who are affectionate by nature and timid by temperament, but who have a reserve of self-respect that defends them against themselves as well as against others. These have a quiet dignity, tempered by much sweetness of speech and manner, that is the loveliest kind of all, and the most subtle as well as the most beautiful. They are like the Lady in *Comus*, and seem to cast the spell of respect on all with whom they are associated. No man, save of the coarsest fibre, and such as only physical strength can control, could be rude to them in word or brutal in deed; for there is something about them, very indefinite but very strong withal, which seems to give them special protection from insolence; and a loving woman of soft manners, whose mind is pure and who respects herself, is armed with a power which none but the vilest can despise. This is the woman who gets a precise obedience from her servants without exacting it, and whose children do not dream of disputing her wishes; who, though so gentle and affable, stops short of that kind of familiarity which breeds contempt, and with whom no one takes a liberty. For this one can scarcely give a reason. She would not ramp or rave if she was displeased, she would not scold, she could not strike; but there is a certain quality in her which we may not be able to formulate, yet which would make us ashamed to pass beyond the boundaries of the strictest respect, and which restrains others less consciously critical than ourselves as certainly as fear. It is the respect we pay to those who respect themselves; the consideration and honour which all real purity of nature demands and obtains. This is womanly dignity in its loveliest aspect, and the kind we all desire to see in women, whom it would not harden, nor render less than loving.

Then there is the more aggressive, strutting, stage kind of dignity, which we meet in historical romances chiefly, where "avaunt 'base caitiff" is a phrase of power, and where an unprotected damsel, in a robe of "rich samite bright," with her back hair down and carrying a small jeweller's shop on her person, is able by the magic of her dignity alone to defend herself from the base designs of marauding barons and the depredations of meaner knaves—laming the wild beasts among men as Una tamed her lion. This is a picture exquisitely fascinating to the young, and firmly believed in. We doubt, however, if any enthusiastic girl would find she possessed the gift if she went into a thieves' quarter in London with her purse in her pocket and her dignity as her sole safeguard; and we think she would do better to trust to the police. This kind of dignity, translated into the home life, is a troublesome sort of thing; but sometimes it is

intensely odd, if one can afford the time to be amused; and a dignified woman of the stage heroic kind, who "draws herself up to her full height," as novelists say, and speaks in an octave below her usual voice when she is offended, is pretty sure to have plenty of occasion for the exercise of her talent.

There is another kind of dignity—the grim kind, repellent and iron-bound—whereby you feel yourself pushed back before you have made an advance; where indeed the whole rule of life seems to be to repel on all sides. Women afflicted with this species of dignity are always on the look-out for assaults, and consequently are always thrusting their shield of defence in your face. You do not want to trouble them in their dignity; you are not thinking of invading that or this sacred province; yet you are suddenly met by an assumption of offended majesty, which makes you feel as if you had received a blow. Some playful word, some laughing and ridiculous accusation, or quite innocent allusion, and you are treated as a misdemeanant who has grievously offended against good manners and womanly dignity. There are some women constitutionally incapable of understanding anything like playfulness, and who can make no distinction between fun and impertinence, a laughing humour and taking liberties. They wrap themselves up in a robe of majesty, and resent as rudeness any homely touch which ignores their stately drapery. They are women about whose affairs you know absolutely nothing, though you may be their friend of a lifetime. You never hear them tell the most harmless anecdote frankly, but always with a severe air of mystery and something hidden; you never hear them discuss the least important subject freely. You would not dare to ask them, friends as you are, things which you would ask a comparative stranger without hesitation, and they never volunteer information. They would consider it a liberty if you wanted particulars as to the treatment they had pursued, say in such or such a case of illness; and they are far too dignified to help the inexperienced of their youngers by their own acquired store. One often wonders what these women are as mothers with young daughters to instruct; and whether their dignity can unbend so far as to give lessons to girls who have everything to learn. They are so grim, so far removed from any of the kindly familiarities, the maternal tenderesses of ordinary women, that we find it hard to believe there can ever be moments in which, or persons to whom, they can condescend to be natural. Akin to these, but not identical, are the coldly dignified women—those who keep themselves apart from their world for want of warmth to coalesce. They are not so aggressive as the grim ones, and not so apt to take offence or so keen to see an insult where none was meant; but they are as impenetrable, and as impervious to humour. The difference between the two kinds lies in the temper; the dignity of the grim being dignity soured by ill-humour, that of the cold being dignity hardened by indifference. Neither is admirable, and both are common; and woe to the luckless man, most probably of a jovial, weak-backed nature, who has fallen into the power of either. He has to expiate by a life of self-suppression for the one part, and of perpetual stumbling into offence for the other, the terrible mistake he made in early youth, when a girl's cold self-possession was called by a finer word, and no account taken of the time when a just endurable characteristic would have become exaggerated.

There is, again, another kind of dignity of the æsthetic range; a kind of thing that says, "No common person am I," and that demands exceptional homage, as well as repels rudeness with scorn. This is a very favourite kind with the women who hold the theory that women are of a divine order of nature, and that men are—not to put it too strongly—brutes. They exact a different ordering of circumstances altogether for themselves, and especially that they should be protected from the lower conditions of life. Ask these women to do unpleasant work, and see how their dignity takes arms at once, and how offended and indignant they are at your suggestion. They are of the Brahminical order, according to their own estimation, and they are to be spared what others have to endure. Have they not their dignity to support, and is not their nature æsthetic and their right to immunity from the common lot undoubted? These æsthetic women are ominently impractical, and their dignity is in general a tremendous nuisance. They are so very fine, so very pure, they hold nature to be so gross, humanity in its reality so dreadful, and all things, save their own womanly dignity, so common, that there is no dealing with them on anything like a practical basis; and if you speak to them of life as it is, and not as it is made to appear—in a cloud of pink muslin and with an atmosphere of attar of roses—they are revolted, and think you are wanting in respect. Unreal as well as æsthetic, they are both useless and unsatisfactory. To be sure, they cultivate art, and know the right colour of a ribbon, and how to arrange a drawing-room picturesquely; but as all the chambers inhabited by the human family are not drawing-rooms, as there are sick-rooms and lazarettos, the womanly dignity which must not be invaded by the mention of either is but a poor kind of thing for working life, and its æsthetic specialities are but meagre compensation for its æsthetic absurdities.

The fact is, useful as womanly dignity is as a womanly possession, it can be carried to excess, and from a virtue become a vice. So long as it is an honest defence-work against the rough assaults of superior strength, it is both good and fair; but when it assumes to be more than this, it becomes an exaggeration, and, as such, ridiculous. There is no law by which women can be exempt from a share in the troubles and sorrows of human life; and even their dignity cannot always protect them from things that override all but nature. Still it is a valuable possession, and

women had better have too much of it than too little; for, though too much renders them absurd, too little makes them contemptible, and between the two there is no doubt as to which is worst.

MR. GOSCHEN'S DIFFICULTIES.

MANY questions which embarrass shipbuilders would be settled by a naval war. The survivors, if there were any, of a battle would know much more clearly than can now be known what sort of ship or other engine would be desirable for fighting. The Admiralty makes experiments which have a distressing unreality; and, under the guidance of little beyond theory, it is obliged to incur vast expense. We have built the *Devastation*, and we are going to build the *Inflexible*; and when she is finished we shall build something else, and still perhaps we shall be far from finality in shipbuilding. The most recent idea appears to be that submarine torpedoes will supersede artillery, and that for defence against them the ship's armour must be carried on her bottom. This idea has been suggested by recent torpedo practice at Portsmouth, in which a squadron of boats supplied with sham torpedoes has been "making believe," as children say, to blow up the turret-frigate *Monarch*. We understand that, according to the rules of the game, the *Monarch* ought to consider herself blown up. The attacking party, in four boats, left Portsmouth Harbour soon after 10 p.m., and making a cautious approach from the eastern entrance of the roadstead, the *Monarch* was observed lying at anchor, evidently on the look-out for the flotilla, with her own boats lowered and manned, and rowing guard round her. The four torpedo boats—steam-launches painted white—made a dash at the frigate through her circle of guard boats. One boat, carrying what is called a "light" torpedo, got near enough to drop it overboard within sufficient distance for it to do its work. Another boat, after having her rudder unslipped by one of the guard boats, continued her course for the frigate, and struck her with the torpedo. The other two boats appear to have failed in their attack. The reporter to whom we are indebted for this account suggests that the principal object of the experiment may have been to ascertain the best colour for painting boats, so that they may not be seen from a ship at night. We do not say that this suggestion is not correct, for it is quite possible that after so long a peace the Admiralty may be very much in the elements of knowledge of what belongs to war. But the records of the British navy contain some hundreds of examples of boat attacks upon ships at night. Every possible artifice was used to approach as near as could be to the object of attack without detection. In exploits of this nature Lord Dundonald particularly excelled, and now that he and almost all his gallant comrades are departed, we have a solemn discussion raised whether white or grey paint renders a boat least visible in darkness. It is, however, comfortable to find, that after wandering in the mazes of science, our navy is coming back to hand-to-hand fighting, which every man and boy on board ship can understand. It is clear that in such an engagement as was represented at Portsmouth the victory would be with the side on which were the better seamen. It takes a seaman to guide a torpedo under a ship's bottom on a dark night. This was exactly the kind of invention in which Lord Dundonald would have delighted, and indeed it is highly probable that something of this nature may have suggested itself to his fertile mind. It is more easily seen how to apply a torpedo than how to resist it; but we may venture to assert that one of the old sort of naval captains would have managed to take care of his ship without putting six inches of iron under her bottom. Indeed such an officer would have desired nothing better than to catch his enemy making the attempt.

The use of fire-ships is then earnest parallel that can be found in naval history to torpedoes, but we do not find that they were often employed against British ships, for the simple reason that the offensive was seldom taken by Britain's enemies upon the ocean. Fire-ships were used with great effect against the Spanish Armada in the narrow seas, and in modern times they were used, to the intense consternation of the enemy, in Basque Roads. The destruction caused by fire-ships would be less rapid, but would not be less complete, than that caused by torpedoes. The danger from fire-ships was never forgotten by British cruisers in former times. Thus, when Lord Gambier's fleet was preparing to attack the enemy in Basque Roads, the ships were anchored in constant readiness for action, and for slipping their cables, leaving buoys upon them. Two boats from each ship of the line with fire-grapples were also to be sent every night after sunset on board the advanced frigates, to be ready to tow off the French fire-vessels the instant they approached. Lord Gambier at the same time contemplated an attack of this kind upon the enemy. "It was," said he, "a horrible mode of warfare, and the attempt very hazardous, if not desperate; but we should have plenty of volunteers for the service." Lord Cochrane—afterwards Earl of Dundonald—who knew the French coast well, and possessed unusual resources in himself, did not consider the attempt desperate. He was sent by the Admiralty to conduct it under Lord Gambier, and his arrival with a squadron of fire-ships warned the French Admiral of the contemplated attack. He directed the boats of the French fleet to assemble at the close of day near the boom which had been thrown across the Channel, for the purpose of boarding and towing away the ships, and of engaging any British boats that might be sent

to assist the fire-ships in their operations. It will be seen from these quotations how close was the resemblance to the proceedings lately rehearsed at Portsmouth. If a fire-ship was less terrible than a torpedo, it must be remembered that the ships of 1809 were much more destructible than those which are now afloat. A fleet at anchor at the mouth of a shoaling river, with wind and tide setting in to the anchorage at night, might well feel nervous at the thought of an attack by fire-ships, and when the attack was made the French officers fairly lost their heads. The fire-ship in which Lord Cochrane was broke the boom by her weight and the strength of the wind and tide, and thus effected a clear passage for the other ships. Lord Cochrane was so resolved to see the service he had undertaken properly executed, that he and his officers and men nearly perished with their vessel. They were exposed to imminent danger of another kind in puffing back against a strong tide and a rough sea to the advanced frigates of the British fleet. The French boats, which had been carefully drilled to oppose the fire-ships, could not, or at least did not, act in such bad weather. Letters of French officers vividly describe the confusion and terror of that night. The fine three-decker *Océan* cut her cables to escape one fire-ship, then grounded and was grappled by another. It is difficult to conceive that even a torpedo could be more dangerous than one of these fire-ships when she had fairly fastened upon an enemy. The ship conducted by Lord Cochrane carried 1,500 barrels of gunpowder closely rammed together and certain to explode when the fire reached it. To add to the peril and horror of the scene two other French line-of-battle ships fell on board the *Océan* while she was entangled with the fire-ship. Yet her crew managed to deliver her from this dangerous embrace. Not one French ship was burned, but all were aground, and when the receding tide exposed their sides and bottoms, on which they had no iron plates, a few well-directed shots might have destroyed them. Lord Cochrane asserted that, with the help of the frigates and the line-of-battle ships of least draught, he could have easily destroyed the entire French fleet. He came very near destroying it by the use of a method somewhat similar to the torpedo, and the cause of his success was the extraordinary skill and daring with which he used this method. The torpedo is probably not so expensive as some other modern appliances of war, and therefore it may be supplied in large numbers. With an ample provision of these engines, and skill to use them, we ought at any rate to render our own coast safe against attack. To fix a torpedo under the bottom of a British cruiser, if she is handled as British cruisers used to be, ought to be as difficult as it is to put salt on a bird's tail. The "fish torpedo" has propelling power in itself, but the ordinary torpedo must be taken to the enemy, if the enemy will not come to the torpedo. In fact, the boats of one combatant must approach the ship of the other, and in former times the crew of a British ship would have liked to see the enemy's boats that would have done this. It was, in fact, all the other way. British sailors were constantly obliged to get into their boats and go and attack hostile ships. An ordinary cutting-out enterprise was, to say the least, as hazardous as placing a torpedo.

The perplexities of our Admiralty as to the kind of man-of-war we ought to build can only be solved by experiments which are certain to be costly and very likely to be disappointing. But the tendency of recent invention is rather to depress the value of ponderous defensive construction and to exult that of light and active vessels for attack. It cannot matter how much iron a ship carries on her sides if she is liable to be assailed by torpedoes fastened under her bottom. There may perhaps be a method of strengthening a ship's bottom against a torpedo, but if this be not possible, it certainly will be always possible to fight those who attempt to apply a torpedo to her. Thus we should return to the simple tactics of early times. Supposing the "fish torpedo" to be brought to the perfection which is theoretically possible, the most sure way to oppose it would be to employ very swift and quickly moving ships. Apparently it must be very difficult to make good practice with this submarine artillery, even when its construction has been considerably improved. But if ships were liable to be struck, a small ship would be as safe as, or perhaps safer than, a large ship; and thus we should be relieved from the necessity of building, at the cost of half a million of money each, enormous ships as to which we cannot feel absolutely certain, except by trial, whether they will swim. A sailor might perhaps consider some recent proposals for shipbuilding from the point of view that he is liable to be shot only at rare intervals, but he is liable to be drowned every day. It is satisfactory to observe that a sound principle has been adopted for coast defence. We are building a large number of small barge-like steamers, or floating gun-carriages, each armed with one very heavy gun. In the latest example of this class the recoil of the gun after firing causes it to descend; it is loaded beneath the deck, and then raised by hydraulic power for firing. The additional protection thus afforded to the crew must be balanced against the danger of disarrangement of machinery. Speaking generally, simplicity should be preferred to every other quality in military engines, but this particular invention deserves further trial. If our navy should come to be composed chiefly of small fast ships, each armed with one or two heavy guns, it will be such a navy as Drake or Nelson could have commanded. The question will then be only whether skill and courage will exist among our seamen. These qualities can be had for no price, and it is better to pay a fair price for them, and it is better to spend money on men who never fail in duty rather than on ships

which may possibly not answer to calculation. But for the present we must proceed contentedly in building the *Infexible* and her successors.

THE DAILY TELEGRAPH IN SYNOD.

THIS is not the first or the second time that we have become acquainted with the inexhaustible resources of the Correspondent of the *Daily Telegraph*. Only last Good Friday our ubiquitous informant was present at all the principal Roman Catholic and Ritualist "functions" in London, besides being able to describe the "beautiful natural cathedral, roofed with azure and floored with emerald," which few eyes but his own can have discerned on that murky day, and the "crimson clouds of apple blossoms," which it may safely be assumed that no mortal eye has ever beheld before or since. But there is something grander even than natural cathedrals and Good Friday functions. "Our Own Correspondent" has lately assisted at "the Provincial Council of Westminster," which he assures us, in language too oracular to admit the profane test of criticism, "is a direct outcome from the great (Ecumenical Council of Trent," and appears to be in some unexplained sense coeval with it. For in his twenty miles or so of railway journey from London to Ware the Correspondent "seemed to be going back some three hundred years in history," and thus reached a period which he presently identifies with "the middle ages themselves." His notions of chronology appear indeed to be a little hazy, for St. Edmund's College, Ware, where the Council assembled, is described as "dating back more than a century," though the *Catholic Directory*, which is not likely to depreciate its antiquity, gives 1795 as the date of its foundation. To this "fine old institution" the Correspondent went, or rather "sped," last week, and he was welcomed with a truly mediæval hospitality. He arrived in the middle of dinner, the high table being occupied by no less than fourteen bishops, and very soon found himself quite at home among the ecclesiastics, though whether he got a seat at the high table does not appear. In fact, he at once felt himself to be in fairyland. He was, or had supposed himself to be, a Protestant; but his Protestantism, we are afraid, is in serious jeopardy. We forget who it was that advised an ingenuous youth about to start for "the grand tour" on the Continent "to take care he was not ravished by the first Popish church he entered." But nobody ever stood more sorely in need of the caution than the Correspondent of the *Daily Telegraph* at Ware. He seems to have been something more than ravished the moment he set foot on the enchanted ground. We can only compare his feelings to those of the astonished youth in the *Arabian Nights* who went to sleep by his father's grave, and woke, after a rapid night journey through the air, to find himself in the bride-chamber of a magnificent palace some thousands of miles away, with the Vizier's daughter for his bride. At the very moment of his arrival in the "quiet Hertfordshire village," the Correspondent became aware that he had passed into a new world. "Nothing could be more picturesque than the eve of that Council"—it had not yet begun—with the Papal standard floating over St. Edmund's College, and nothing more solemn than its "Indiction," which is accordingly reprinted *in extenso* in the columns of the *Telegraph*. Every order in the Church was represented there, "from the sub-deacon up to the Archbishop of Westminster himself," who, we are carefully informed—and a well-known passage in *Lothair* had prepared us for the otherwise startling announcement—did not eat any dinner, but enjoyed "the balmy summer evening in front of the College," while his Suffragans were less poetically occupied in the refectory. There were Franciscans in brown, and Dominicans in white, and Benedictines in black, and bishops with gold chains and pectoral crosses; but the remarkable point about them all was that, with costumes so far more ornamental than those of their Protestant rivals, they bore their dignity much more meekly. There was an entire "absence of all hauteur," and the Correspondent "could not help contrasting it mentally with a meeting of Protestant bishops, archbishops, and clergy," though he wishes to disclaim any intention of disparaging the latter. Considering the very strange and uncomfortable sort of garb, which decidedly is not picturesque, in which Anglican prelates are condemned to array themselves both in church and out of church, we can quite imagine that a more easy and graceful style of vesture may be conducive to greater ease of manner. And yet we remember a recent Life of a Catholic bishop, who was described by his admiring biographer, himself a high dignitary, as distinguished for his "fine pontifical strut." But if the bishops were charming, the chapel and its services were even more delightful. "The beautiful Benediction office of the Church was sung during the evening," and this gave our enthusiastic worshipper, who had an eye to business even in his devotions, "an opportunity of examining the noble chapel, one of the works"—but certainly not one of the best works—"of the elder Pugin." The High Altar, and what our critic terms the "Sacarium" (a term appropriated, we believe, by Roman Ritualists to the sink in the vestry), was, he assures us, magnificent. The stalls, the rood loft, and the excellent organ, all excited his warmest approbation; and by the time he retired to rest—in a "comfortable, but not of course luxurious," chamber—the process of ravishment seems to have been almost complete.

But it was not till the Correspondent woke next morning that his Protestantism was thoroughly shamed out of him. At six o'clock

the sound of a bell rang along the corridors filled him with a sense of his own deplorable condition. He "felt the most unconscionable heretic to be lying there under the very shadow of the crucifix," which seems to have been judiciously placed in his chamber, while his good neighbours were getting up and going to mass. The thought became so intolerable that he could not compose himself to slumber again, and speedily "emerged" from his bed to find bishops and priests reciting the holy office in every part of the House. At length, directly after breakfast, the grand function of the day came off. For the elaborate description of the procession, and the various grave and reverend dignitaries who took part in it, we must refer our readers to the letter itself, unless they are content to take the writer's word for it that "a more magnificent *coup d'œil* can scarcely be imagined." The brilliant sun, the various rich vestments—really "crimson" this time, we believe—the perfect grouping, "all went without any hitch, as smoothly as though it had all been rehearsed beforehand," as no doubt it had. Many persons exclaimed that they had never seen anything like it out of Rome. But, while the Correspondent was dazzled by the glitter of gold and jewels and crimson copes, crossbearers and pastoral staff, he had room for graver reflections too. Bishop Ullathorne's sermon, indeed, of one hour and twenty minutes, as he complains with pathetic resignation, he was not allowed to hear, though that does not prevent him from assuring us that it was "a scholastic discourse bearing strictly on the spiritual life"; another Correspondent, who was also of course excluded, goes so far as to designate it "a very learned and very able discourse." But the function alone, without the sermon, sufficed to confirm the impressions made on the "unconscionable heretic" by the matin bell. He "felt that it was not a mere pageant, but a real representative gathering of Catholic England," which sounds a little odd, as he had just informed us that the Catholic laity were represented by Lady Herbert of Lea, Sir George Bowyer, and two other gentlemen only. And he adds, "on the authority of the Archbishop himself," who appears to have conversed with him most affably, that the bishops alone have votes in the Council. However, the bishops who wore those splendid vestments, and knew so well how to group themselves, and who were all the time so charmingly devoid of all *hauteur*, may surely claim by themselves to represent Catholic England, if not the whole Catholic world. For, "as one looked along the lines of bishops and clergy . . . one could not but feel that the real power of the Catholic Church was present at the Council." And that again was suggestive of yet more serious—in the Correspondent's peculiar state of mind we can hardly say more alarming—considerations. He "could not quite forbear from wondering what effect such deliberations might have on the faith of England." Clearly, if the first tinkling of the mass-bell which preceded the opening of the Synod has convinced one Englishman that he is a most unconscionable heretic, it is impossible to say what might not be the effect of a fortnight's deliberations, with two more "solemn public functions," on the rest of his heretical fellow-countrymen. But then unfortunately they are not there to see and hear. And by the time the decrees have been drawn up, and sent to Rome for confirmation, and sent back again, even the readers of the *Daily Telegraph* may not improbably have forgotten all about the matter. Whether one of the objects of the Provincial Synod is to promulgate the Vatican decrees our informant does not say, but we should have been disposed to conjecture, if he had not instructed us better, that it was more likely to be "an outcome from" the Vatican Council than from the Council of Trent. In any case the prospect is an alarming one, and we commend it to the serious attention of Lord Harrowby and the Church Association. They are wasting their precious energies on the delinquencies of "Protestant bishops, archbishops, and clergy," who understand nothing of the perfect grouping of processions, and do not, or did not till quite lately, wear copes or carry pastoral staves, while all England is in danger of being—to use a phrase of Mr. Ruskin's—"stitched into a new religion," by the gorgeously embroidered vestments and solemn deliberations of the Fathers of the Church assembled for high debate in the fourth Provincial Council of Westminster. Let Exeter Hall look to it, and take a lesson from "Our Own Correspondent" by devoting its superfluous capabilities of wonderment, which are not inconsiderable, to "wondering what effect" these Popish practices will have "on the faith of England."

EVIDENCE TAKEN BY THE ENDOWED SCHOOLS COMMITTEE.

II.

IT will be remembered that the Schools Inquiry Commission made an elaborate Report upon Grammar Schools which was the basis of the Endowed Schools Act of 1869. The Commissioners appointed under this Act have stated that they have been guided "to a large extent by the views laid down in this Report." They did not consider that they were bound by all the specific recommendations of the Report, but they did think that it was their duty to put the main objects of the Report into practice. This is their own view of what their duty was. Let us see how they have performed it.

The Schools Inquiry Commission dealt with the question of religious instruction in grammar schools in a spirit which, if not altogether satisfactory, was at least very different from that which has guided the Commissioners under the Act. It

was reasonable to suppose that religious instruction was one of the "main objects" of the Report which the Commissioners would feel it their duty to put in practice; and therefore Churchmen have been surprised to find that under the Act, as the Commissioners were working it, the religious instruction of by far the largest number of grammar schools would depend on local politics and other fluctuating circumstances. It must be remembered that the question in these schools is not between the Church of England and any particular sect, but between the Church of England and no Church or sect at all. It is sometimes suggested that, as regards some of these endowments, the Puritan party in the Church may have been ousted by the High Church party; but this question, if it could in any case be raised, would be a question within the Church itself. There is no party outside the Church that can show even a plausible title to these endowments. The argument that a grammar school was meant for all the inhabitants of a town may be admitted with the qualification that it was meant for all who will use it as a grammar school as hitherto understood—that is, as a school which teaches religion as a necessary part of education. The Schools Inquiry Commissioners had some of that practical good sense in which their successors have been lamentably deficient. They were able to see the wisdom of letting things alone as long as it was not absolutely necessary to disturb them. They say in their Report:—"It does not seem necessary to abrogate any rules contained in any such deed or scheme which directs the religious instruction to be based on the formularies or to be in accordance with the doctrines of the Church of England, or of any other religious body. . . . Liberty of conscience would be sufficiently protected by the above-described right of exemption and appeal. And provided liberty of conscience be respected, there are two reasons for leaving things as they are; one is that the parents appear to be tolerably satisfied that it should be so, and the other that the rule being already in existence is so far less a grievance; for people are always more ready to bear what they dislike when it has come down from the past than when it is new." It is a pity that the Commissioners should have been unable to see the wisdom of "leaving things as they are" at Birmingham and elsewhere.

The Schools Inquiry Commission, of which Mr. Forster was a member, made some concessions to the views of Nonconformists which were perhaps scarcely justifiable. Thus they say, "There appears to be no reason for maintaining the rule of law which assumes that, wherever the contrary is not plainly specified, the instruction is to be in accordance with the doctrines of the Church of England." It might be answered that it appears reasonable to maintain this rule until a better rule be proposed in its stead. But they go on to say, "There seems to be no necessity for interfering further with any rules for regulating the religious instruction which are at present to be found in any trust deed or scheme older than the present century." The Church of England might reasonably expect, under an Act passed to carry into effect the recommendations of the Commission, as much as this recommendation equitably interpreted would give to her. It would give to her much that she has been deprived of by the action of the Commissioners. It is true that in the case of Birmingham School the existing statutes bear date in the present century, but it is notorious that they merely re-enact rules which existed long before. If any explanation were wanted of the recommendation above quoted, it was furnished by the Bishop of Exeter, who was a member of the Schools Inquiry Commission. He appeared as a witness before the Select Committee on the Endowed Schools Act, and said:—"I thought that the proposals of the Schools Inquiry Commission were based upon just principles, that where a school had been originally founded, and had always remained attached to a particular denomination, it shall still remain attached to that denomination, but otherwise not." In another passage he says:—"It would in my mind turn on this—whether or not the perpetual usage from the beginning was of such a character as to show that, although there was no express direction to that effect, it was the intention that the school should belong to a particular denomination; if I could see reason for thinking that, in a particular instance, it could be fairly made out to the satisfaction of impartial men that the original purpose of the school was to belong to a particular denomination, and that it had always remained in that denomination, I should hold that, on the principles laid down in the Schools Inquiry Report, that school should remain in that denomination; but if it appeared to be mere usage, and nothing else, then I should say that such a usage ought not to override the claim of all persons alike to stand on an equality in such a school." We commend this exposition of the "principles laid down in the Schools Inquiry Report" to the particular attention of the Commissioners, who profess to have been "very largely guided by the sentiments expressed in that Report." As regards "usage and nothing else," it will be time enough to consider cases of that kind when they arise. It suffices, for the present, to remark that Birmingham is not such a case.

The Commissioners are not responsible for the language of the Act, but only for their application of it. The complaint against them is that they have disregarded the intention of the Act, which appears in the preamble. The 19th clause of the Act is, as we have already pointed out, objectionable, because it produces surprising and absurd results. But this clause and apply it to the schools which came before the Commissioners. Suppose that Birmingham School was to be "Denominational" under the clause. . . .

that the Commissioners would be bound to insert in a scheme for Birmingham—

- (1) A Boarders' as well as Day Boys' Conscience Clause.
- (2) Religious opinion not to affect qualification for Governing Body.
- (3) Masters not required to be in Holy Orders.

The Boarders' Conscience Clause would hardly affect Birmingham, which is essentially a day school; and this clause only requires that, if masters of boarding-houses are unwilling to receive boys exempted from religious teaching, provision shall be made for them to be received as day boys. The other two provisions fall far short of obliterating all distinctive religious teaching from the school. If the Commissioners had applied the test proposed by the Bishop of Exeter in his evidence, what would be the fair result? They would have inquired whether the perpetual usage from the beginning was of such a character as to show an intention that the school should belong to a particular denomination. Waiving for the moment the question as to the existence and sufficiency of any express direction, can there be any doubt as to the usage, and the inference to be drawn from it? Could it be made out "to the satisfaction of impartial men" that the original purpose of the school was to belong to a particular denomination—namely, the Church of England? Unfortunately the Commissioners have not inspired confidence in their impartiality. Giving them credit for good intentions, we are obliged to say that they, like the department of Government by which they are supervised, have fallen under an influence adverse to the Church of England. If Dissenters are, as they say, half the nation, why, it may be asked, are they to have everything their own way? Why is the Church of England to be subjected to a compromise which is all give and no take? The case of Birmingham was eminently a case for "leaving things as they were." A witness stated before the Select Committee that in point of religious teaching this school had always been conducted "on the most liberal principles." There were children of members of every religious denomination in the school, and without complaint or dissatisfaction, so far as the witness had heard. He stated that he and others were very anxious that the Commissioners should settle the religious instruction in their scheme, in order to remove it from the Board of Governors where they feared it would cause great contention. The witness said:—"We asked, in our objections to the scheme, that the religious instruction should be in conformity with the doctrines of the Established Church in order to make it precise, but we were told by the Commissioners that there was no chance of that being accepted; and then we said that we should be satisfied with any reasonable provision that the Commissioners might frame. We suggested, in lieu of that, that it should be 'in the principles of the Christian faith.'" The Commissioners insisted upon retaining their usual form of clause, that "the Governors shall make proper regulations for religious instruction" in the school, which means that rival parties in Birmingham shall fight over this question at every possible opportunity. If we ask why there was no chance of the proposal of the existing Governors being accepted, the true answer must be that the Commissioners were controlled by Government, and Government was controlled by the majority of the House of Commons. There was nothing in the Endowed Schools Act to prevent the proposal of the Governors of Birmingham School being accepted. The Commissioners might have provided in their scheme that the religious instruction should be in conformity with the Established Church. They would thus have proceeded, in pursuance of the preamble of their Act, to carry into effect "the main design" of the founder of the school; and they would also have followed the recommendations of the Schools Inquiry Commission, the rule of the Court of Chancery, and the guidance of expediency and common sense. But they would undoubtedly have displeased an active and noisy party in the House of Commons.

The absurdity of the 19th Section of the Act is well shown by the application which a majority of the House of Commons made of what they were pleased to call "the principle of this Section" to the Public Schools. These schools, seven in number, were dealt with by the Public Schools Act of 1868, and they were exempted from the operation of the Endowed Schools Act of 1869. The Special Commissioners appointed by the Public Schools Act, when they made statutes constituting new governing bodies for the schools, provided that the members of these governing bodies should be members of the Church of England. When these statutes came before the House of Commons, the Government was compelled by its supporters to consent that "the principle" of Section 19 of the Endowed Schools Act should be applied to schools to which the Act itself provides that the Act shall not apply. The result of applying the test of this Section was that Harrow was found to be, but Rugby was found not to be, "Denominational" under the Section. Surely this was *reductio ad absurdum* of the "principle." Harrow is a Grammar School founded in 1571 for the instruction of youth of the parish of Harrow. Rugby is a Free Grammar School founded in 1567 to serve chiefly for the children of Rugby. A public Act of Parliament of the year 1771 provides that the Master and Ushers of Rugby School shall instruct the boys "in the principles of the Christian Religion, Morality, and good manners," and shall hear the younger boys say their Catechism. This enactment, being more than two hundred years after the foundation, was held insufficient to make the school "Denominational," although there can be no doubt that it merely gave Parliamentary authority to the existing practice. But in the case of Harrow a body of statutes and rules made by the founder are in existence. The Public Schools Commissioners in their

Report on Harrow say that "the rules are now practically obsolete," and they do not even take the trouble to set them out in their appendix. Yet a clause in these rules requiring instruction in "doctrines or formularies" was held to make Harrow "Denominational" according to the new "principle." This result, however, did not satisfy the inventors of the "principle." Incredible as it may appear, they proposed to accept so much of the award as was in their favour, and to repudiate the rest; and Mr. Gladstone could not bring himself to say that his Government would be no party to this audacious substitution of might for right. The "principle" was only applied to the religious qualification of the Governing Bodies, and no attempt was made to deal with the religious teaching of the schools. But when a party of young and enterprising men have got hold of a "principle" they may go far. One of the Endowed Schools Commissioners seems to think it a pity that these seven schools should have been exempted from the jurisdiction of himself and his colleagues. We fancy, however, that his Commission has given the country enough of "principles" to last it for a long time.

SIX A PENNY.

SOME well-meaning persons have undertaken to arouse the working-man's reverence for Church and Constitution by supplying him with six small newspapers for a penny. The conceptions which prevail of the working-man are various. On the one hand, he is supposed to be incapable of carrying his money past the door of a public-house; and, on the other hand, he is regarded as a good little boy, for whom a good little newspaper ought to be written. The Conservative party has never been strong in journalism, but we could not have believed until we saw it that anything so futile as the *County Daily Newspaper* could have been proposed as a means of "increasing Conservative feeling throughout the kingdom." The "marvellous fact" that a single copy of this newspaper is sold for one farthing implies another marvel—that purchasers can be found for it. As a newspaper it is of little value, because the news is necessarily given with such close abridgment as to destroy its interest, and as an organ of Conservative opinions it is strangely imbecile. The "efforts of cheap and pernicious literature" can only be counteracted by efforts equally strenuous on behalf of "Christianity and good government." A Shrewsbury clergyman thinks that such a paper as this is much needed "to supersede papers of a decidedly objectionable character," and he asks the editor, "Could you not make it larger?" An equally pertinent question would have been, "Could you not make it stronger?" The most probable effect of circulating it would be to produce a desire for newspapers which really do supply news, and thus the sale of journals of "a decidedly objectionable character" would be promoted. We should think that a working-man who really cared for news would rather have a sixth share of a sufficient newspaper than the whole of this meagre summary. It might be possible to produce a complete weekly newspaper for a penny, and if such a paper were well written and well managed, it would be capable of exercising a salutary influence in politics and religion. Suppose that by doing the business of a weekly newspaper thoroughly well, a regular sale of half a million were obtained, the opportunity thus afforded to a powerful writer might be of incalculable value. As many copies as could go by post for a penny would be sent by post to a town or village, and then sold or given away.

Such a newspaper might be a powerful support to the cause of "Religion and Order," particularly if it were written in plain English. The squire and the parson might distribute it in their neighbourhood with reasonable confidence that they were combating successfully the influence of "low-toned weekly newspapers." But such a newspaper would need, among other things, a name. The founders of the *Six a Penny* have taken a good idea and spoilt it. Let us suppose a war like that with Russia, in which the popular feeling was strongly interested. This paper would fail to supply the demand thus created for news, because people wish to have not merely brief announcements, but details. "Tell us all about it," is the familiar expression of a universal wish. There is another point in which we think the managers of this paper are mistaken. It might be assumed without express statement that advertisements must be paid for, but money is money even when it comes out of the pocket of a working-man. We should think that what are called the "masses" would scarcely be conciliated by a notice which appears in the front page of this paper, that as the space for advertisements is limited, "only those announcements likely to interest the numerous noblemen, gentlemen, and clergymen who are its subscribers can be inserted." The religion and morality of these columns are for working-men, but the advertisements address only the upper circle of society. It is manifestly implied that the noblemen, gentlemen, and clergymen who subscribe do so for the good of others, and thus the idea of help and patronage is suggested in a way which, we should think, can hardly be agreeable to the subjects of it. Our advice to the authors would be to make their paper good and sell it cheap, and to say as little as may be as to their own beneficent intentions. They can help religion without proclaiming quite so loudly that religion needs their help, and that they have determined in the most noble and generous manner to afford it. A newsmen ordered sixteen dozen of the opening number, and the editor remarks that "such enthusiasm is a good token for the Church of England." If the newsmen expected, as

he probably did, to get his money back, enthusiasm is scarcely the word for a transaction of a commercial nature, nor do we discover that the Church of England has in that transaction any special interest. In the name of the Prophet, figs! In the name of religion, six newspapers for a penny! A correspondent, to whom more justly than to this newsmagazine belongs the title of enthusiast, considers that this paper should be read aloud, and thus the divine order of the world set forth. Of course, it is true that every newspaper which records a day's progress of the world does set forth a divine order of things, but a penny newspaper would not claim any particular merit on this account. We do not see that the merit of the performance is enhanced by the fact that only a small fraction of a penny is charged for performing it. A clergyman who has ordered 360 copies of the paper to stitch in with his parish magazine appears to us to have correctly appreciated its character. It is to the other daily papers what a parish magazine would be likely to be to an ordinary monthly. Of course, if the parishioners will read the magazine, it can do no harm, and it may do some good. But this is not the way to control the "pernicious influence" of the publications which, whatever be their principles, are addressed to men, and not to children. A Dorset vicar shows more wisdom than the majority of clerical correspondents. He recommends "plain words for the masses" and, if he had added, "strong sense" to his prescription, it would to our mind have been perfect. The best example of useful writing for this class is to be found in the works of Cobbett, and we can readily conceive the contempt which Cobbett would have expressed for the *Six a Penny*.

The editor mentions that "numerous laymen have sent kindly letters with cheques." This, as he truly says, is the most effectual aid he can receive. "There are thousands of our readers to whom a cheque for 5*l.* 4*s.* would be no tax." These, we presume, are the readers for whom the advertisements will be selected. In return for a cheque of this amount, any four persons named would receive twelve copies of the paper every day for six months, "which would no doubt be circulated among the most worthy of their parishioners." Here again the idea of patronage occurs. The "most worthy" of the working-men are to be selected, and presented gratis with this farthing rushlight of the world. The recommendation to the editor to use plain words does not, we think, justify him in announcing that, through the correspondence of his paper, he feels as if he had shaken hands with "no end of noblemen, clergymen, ladies, and gentlemen." He need not consider it his mission to impart the vulgarisms of what calls itself society to the working class. We regret to observe that he is not far from that most odious kind of vulgarity which is commonly called flunkeyism. "The very first name on our subscribers' list is that of a nobleman who has guided the foreign destinies of England, and almost the next is that of one who in the sister island not many years ago was second in command." This paragraph is sufficient to justify the judgment which we have formed of *Six a Penny*. It certainly supports the editor's claim to have undergone "long experience in more pretentious newspaper walks." He is like a small housekeeper at Pentonville, who tries to give a dinner party in the style of Belgrave Square. In the first place, it seems to us unnecessary to mention the names of his subscribers at all. But if this must be done, it might suffice to speak of one of them as a lord who has been Foreign Secretary. The incongruity of this inflated style is heightened by the circumstance that editor, publisher, and correspondents, all concur in recommending that this paper should be distributed by schoolmasters among the more deserving scholars in elementary schools. Some of the more enthusiastic correspondents even go the length of urging that a portion of it might be read in schools as an agreeable, and at the same time instructive, variation from the usual school lessons. It is an alarming prospect that the cooks and porters of the future are to be taught to talk about "the nobleman who has guided the foreign destinies of England." The editor says that he is aware that his talk is different from that of any other daily paper. We can only say that we have not perceived the difference. Some of the writers in this paper appear to be under a wrong impression that it has an exclusive privilege of reaching out-of-the-way towns and villages by post. An imaginary vicar is made to address to his parishioners at the meeting the statement that "this week they had had a daily newspaper every morning when the news was fresh." We say an imaginary vicar, but if we were to judge from the clerical correspondents of this paper we should be prepared to think him a reality. He appears to be unaware that there are several evening papers published in London in time to be sent to the provinces by post. A supporter of the vicar at the meeting hopes that the paper will continue these "nice bits for working-men," which we should say have been produced by taking extracts from Cobbett and spoiling them. No doubt the "little stranger," as doating correspondents call this paper, is a good child, and our only fear is that it may be too good to live. There is a poem in this paper worthy of the prose, called "Measuring the Baby." The height of the baby was that of a tiger-lily that grew by the cottage wall, and its parents intended next summer to measure it again. But before the year was out the baby died;—

And out of the darkened chamber
We went with a childlike moan;
To the height of the sinless angels
Our little one had grown.

Poets and prophets were in old times identical, and it is to be feared that the two characters may be united in the author of these lines. The editor of *Six a Penny* should prepare himself to leave a "darkened chamber" in a year's time with "a childlike moan," and he may console himself with the reflection that his "little one" was too angelic for this wicked world.

THE ITALIAN OPERAS.

THE month which has elapsed since our last reference to the proceedings at the two London theatres devoted to the performance of operas in the Italian language—which, however, in recent years have been very nearly as often adaptations from French and German works as the actual productions of Italian writers—does not offer much food for comment. Rarely has a spring and summer season been so barren in events that call for special public recognition. In short, we can hardly close our eyes to the fact that genuine Italian opera is rapidly becoming a thing of the past. In the olden time, with the occasional appearance of a Garcia, a Malibran, a Sontag, or some years later a Jenny Lind and a Crivelli, whose genius made them cosmopolitan, Italian Opera companies used to be composed almost exclusively of Italian artists *par sang*. But look at them now, and we shall find that they include almost as many non-Italians as Italians. It is unnecessary to enumerate the foreigners by name; and indeed it would be more or less invidious to do so, because just now without their aid Italian Opera would be almost impossible. Whether its extinction would be a thing very much to be regretted is a question which, at present, we do not feel inclined to discuss. But it seems odd that England, the most musically appreciative, if not the most musically gifted, in so far as the creative faculty goes, of all countries, should be the only country unprovided with an opera the verbal medium of which is its own language. We have composers enough and to spare, with operas ready in their portfolios; we have many and excellent singers; but there is not a theatre at command where English opera can be decently presented. That we have ourselves to blame may be taken for granted. There are emulation and activity doubtless among English composers; but a sad want of what is conventionally denominated *esprit de corps* is observable. We do not for an instant deny that at one period Italian Opera was a legitimate reflex of art, and moreover an important element of instruction. But in the present time it is nothing of the kind. Italy unfortunately has now no composers of genius. Had it been otherwise, we should hardly have been condemned to listen from year to year, for so many years, to the operas of Bellini and Donizetti, or to fall back in our destitution upon the spectacular lyric dramas of Meyerbeer and his French imitators—Halévy, Ambroise Thomas, &c.—nor should we be forced to put up with such incessant doses of Giuseppe Verdi, who, whatever his claims as an inventor, has thrust into popularity some of the feeblest and, in certain respects, most degrading pieces that ever served the purposes of a musician.

Such being the actual state of things, it may be urged that we have no right to complain; our duty is to accept what comes and make the best of it. English Opera looks in vain for support and encouragement, while Italian Opera, despite its polyglot elements and the depths of mediocrity into which it has been gradually sinking for a quarter of a century and more, is still "the fashion," and likely to remain "the fashion." In other branches of the art we have manifestly progressed; and it has even become the fashion not only to listen to the sonatas and quartets of Beethoven at the Monday Popular Concerts, but to affect at least to admire them; while at the Italian Opera those works which are intrinsically the best and purest are, for the most part, those which meet with least favour. Exceptions, it is true, may be cited—as, for instance, *Don Giovanni* and the *Barbiere di Siviglia*; but how much of this is due to the singers who take part in those great masterpieces need scarcely be told. Putting aside these considerations, however, it does seem strange that the Directors of our Italian Opera Houses persist in giving their patrons the same things year after year, as if nothing existed in their domain but the *Sonnambula*, the *Puritani*, *Lucia*, *Linda*, *Norma*, the *Favorita*, the *Traviata*, the *Trociatore*, *Rigoberto*, *Marta*, &c. &c.—the very names of some of which in the programme cause genuine amateurs to groan. There is scarcely a season we can recall in our experience of Italian Opera during which so many hackneyed works have been perpetually brought forward as during the one which has just come to an end.

Out of the novelties, or "revivals," promised by the Director of the Royal Italian Opera in his prospectus, only two were forthcoming—Verdi's *Ermioni*, with Madame Adelina Patti as Elvira, and Auber's *Diamant de la Couronne*. To the first we have already referred. Auber's opera was welcome not merely on its own account, but because it gave Madame Patti a fresh occasion of displaying her wonderful versatility. It may be said without reserve that no such Catarina has been seen or heard since this charming opera was first produced at the Opéra Comique, in 1843, with Madame Anna Thillon, and a year afterwards, with the same lady, in an English version at the Princess's Theatre, when under the direction of Mr. Maddox. Madame Patti presents the very ideal of the romantic and self-denying Queen of Portugal, and her performance both in a vocal and dramatic sense is so thoroughly finished and exquisite that it grieves us to have one word of objection to make. Yet to pass over such an offence against good taste as is exhibited in the liberties taken by Madame

Patti in the last act is out of the question. The omission of the beautiful air which the Queen sings alone, while reflecting on her past career and future hopes, is sufficiently reprehensible; but the complete hash made of the *finale*, for the sake of introducing a *bravura* air at the conclusion, is wholly unpardonable. Nor is it rewarded by the looked-for success. On the contrary, it makes the catastrophe as silly and pointless as in the original it is ingenious. Further than this, Madame Patti errs on the point of prudence. Catarina has already more than enough of difficult music to sing in the previous scenes, and she approaches this last self-imposed task comparatively fatigued and unfit to acquit herself as she might otherwise do. Then, lastly, the air itself—from *Leicester*, one of Auber's earliest operas—is little better than a pale imitation of Rossini's least forcible manner. But Madame Patti is not the only sinner in this distorted version of the *Diamant*—a thing of itself so perfectly finished that to change or meddle with it in any way is simply to damage it. What Signor Vianesi, one of Mr. Gye's orchestral conductors, has done in setting the dialogue to accompanied recitative surpasses belief. Anything so laboured and cumbersome connected with a work which of itself is one uninterrupted flow of spontaneous melody, set forth in the most piquant and sparkling manner of the most piquant and sparkling of French musicians, can scarcely be imagined. Auber is almost smothered in these accompanied recitatives. Then the curtainments, by which several pieces are robbed of their native symmetry and grace, demand the most stringent protest; and the interpolations from other operas of Auber, and even of pieces by Signor Vianesi, which having no relation whatever to the plot, were apparently introduced to satisfy the vanity of certain singers at the expense and to the detriment of the composer. Sooner than hear an opera of Auber's thus dished up we would rather not hear it at all. Since the first performance, it is true, some of the interpolations have been dispensed with, and the accompanied recitatives have been considerably abridged; but the whole of them might be omitted with advantage, and—Auber not being alive himself to supply what was wanting—replaced by the ordinary "recitative parlante," which does excellent service in *Don Giovanni* and *Le Nozze di Figaro*, and, if discreetly written, would be just as well placed in *Les Diamants de la Couronne*.

The next opera produced at Mr. Gye's theatre was the *Nozze* of Mozart, with a new Countess Almaviva, a new Count, and a new Cherubino. The Countess was Madlle. Albani, who in this, as in every other character which she has attempted among us, shows high intelligence and an earnest carefulness which more and more fortify her admirers in a belief that she has a great and enviable career before her. We are, and were from the first, of that opinion; and it is further substantiated by her impersonation of Mozart's contemplative heroine—in all respects so different from the ward of Dr. Bartolo, as subsequently depicted by Rossini. The Cherubino of Madlle. Smeroschi is lively—perhaps too lively—and yet not so full of genial life as the Cherubino portrayed by Madame Pauline Lucca. Nor does it show any of the dreaminess appertaining to the character of the half bashful, half petulant boy. It has good points, nevertheless, and may be commended. But why will Madlle. Smeroschi not allow the graceful melody of Mozart, especially in "Voi che sapete," to flow on unimpeded? The effect of Cherubino's two canzoni would be twice as impressive if uttered with the rhythmical measure and unaffected accent which constitute half their native charm. The new Count Almaviva (again so different from the Count of Rossini) is M. Maurel, who is admirable throughout, both in his delineation of the character and in his execution of the music. In this gentleman, and in Madlle. Albani, Mr. Gye has been extremely fortunate. The Figaro of M. Faure and the Susanna of Madame Sinico are well known as the best of their kind.

Little more need be written about Mr. Gye's season. We said in our last notice that we should take another occasion of estimating the talent of Madame Klvira Trisolini, who made her *début* in the *Puritani*; but the opportunity was not granted, her first performance having been also her last. Not more successful was Madlle. Pezzotta, who played once the part of Amelia in *Un Ballo in Maschera*, and, though by no means wanting in good qualities, failed to make a strong impression. Of course we have had *L'Etoile du Nord*, the omission of which, with Madame Patti the best Catarina, and M. Faure the best Peter, now on the stage ready to hand, would have been a strange neglect on the part of the Director; of course Madame Patti has made her annual essay as Valentine, in the *Huguenots*, a character upon which she appears to have set her heart, and which, possibly, in spite of certain physical shortcomings incapacitating her from doing justice to every scene (more especially the duet with Maurel in the *Pré aux Clercs*) she may one day, with her indomitable perseverance, make as much her own as any other part in her varied repertory; and of course, too, there have been the traditional "benefit," counting, as usual, for little or nothing beyond bouquets, wreaths, and frantic demonstrations. Madame Patti chose for her representative night the *Barbiere*; and Madlle. Albani selected *Lucia*. Madlle. D'Angeri, one of Mr. Gye's recent acquisitions, of whom we have already spoken, appeared, in the latter part of the season, as the heroine of Weber's *Der Freischütz*, coming out from the somewhat trying ordeal with a certain amount of credit. This young lady possesses talent of no mean order, and only stops short of the mark which, as *prima donna assoluta*, it is naturally expected that she should reach. As *comprimaria* Madlle. D'Angeri might render invaluable service; but a higher rank in such a theatre as the Royal Italian Opera she has little chance of obtain-

ing. Caspar is not a character to which the means and idiosyncrasy of M. Faure are suited. The music is too low for his voice, and thus his dramatic ability combined with his artistic singing is in a measure thrown away. The merits of the other singers hitherto unknown to London who formed part of Mr. Gye's company have to the best of our ability been estimated at their worth. We have nothing to add, except that the new attraction this season at Covent Garden is unmistakably the French barytone, M. Maurel. Madame Pauline Lucca, announced in the prospectus, with Madame Patti and Madlle. Albani, as one of the three chief *prime donne*, preferred remaining in the United States—a serious disappointment to the habitual frequenters of the theatre where she is deservedly one of the most popular favourites. Madame Lucca has been sadly missed in the *Africaine*, *La Favorita*, *Le Nozze di Figaro*, and other operas—including *Fra Diavolo*, which could not advantageously be presented with any other singer. The orchestra this year, with its two conductors, Signors Vianesi and Bovignani, improves in correctness and precision, if as much cannot fairly be asserted of the chorus; and, regarded as a whole, Mr. Gye's season has been one of more than average attraction.

At Her Majesty's Opera, about which we wrote a month ago, there has been nothing lately requiring detailed notice. Madame Christine Nilsson's enchanting impersonation of Mignon, in M. Ambroise Thomas's opera of that name, was the last opportunity of distinction afforded her; so that in the course of her engagement this accomplished artist has been limited to four operas—*La Traviata*, *Lucia*, *Faust*, and the one just named. The late Mr. Balfe's MS. work, *Il Talismano*, about which there has been so much talk, for which Sir Michael Costa was to furnish accompanied recitatives, and Mr. G. A. Macfarren to compose the *finale*, was at the eleventh hour abandoned. Thus the only absolute novelty advertised in Mr. Mapleson's prospectus was lost to his subscribers. *Il Talismano*, nevertheless, is, if we are rightly informed, to be given early next season, with Madame Nilsson as Edith Plantagenet. Let us hope that this may be really the case. Reports about the Opera, like the Opera prospectuses, are little to be relied on nowadays; but it would be much to be regretted if the last and favourite work of so deservedly popular a composer should be laid on the shelf. True, Balfe set the music to an English text (by Mr. Arthur Matthison) and intended it for the English stage; but better an Italian version than none at all.

We have already endeavoured to appraise the merits of one and all of Mr. Mapleson's new singers, and may fairly repeat that they have done him credit. In Signor Aramburo, the Drury Lane manager has discovered a worthy rival to Signor Campanini, who was the rare last season; and if the others, Signor Medini excepted, are not of an extraordinary character, it is something at least to have found a new tenor and a new bass from whom much may be reasonably expected. When Signor Mongini, the Italian Wachtel—as Herr Wachtel is the German Mongini—went over early in the season to the rival house, Mr. Mapleson's case was not so bad, with Signor Aramburo to fill up the gap. On the whole, indeed, it must be allowed that the director of Her Majesty's has this year exhibited a company more or less strong in every department; and the wonder is that, with such an unrivalled conductor as Sir Michael Costa, an orchestra efficient at all points, and a chorus of more than average excellence, he was compelled to adhere almost exclusively to the old and sufficiently worn-out repertory.

REVIEWS.

JOHN SHEFFIELD, DUKE OF BUCKINGHAMSHIRE.*

SHEFFIELD, so named in Johnson's *Lives of the Most Eminent English Poets*, and best known by his inherited title of Earl of Mulgrave, under which most of his poetry was published, bore a more or less active part as a public man in not less than five reigns—those of Charles II., James II., William and Mary, Anne, and George I. Born in 1649, soon after the execution of Charles I., he lived till February 1721, seven years after the accession of George I. King William gave him the title of Marquis of Northampton in 1694, and Queen Anne in 1703 made him Duke of Buckinghamshire. He is frequently called Buckingham, but the title of Buckinghamshire was chosen because there was fear of a latent claim to that of Buckingham; and it is well to maintain a distinction between the two ducal poets, John Sheffield and George Villiers.

The awards of eminence entitling to admission into Johnson's gallery of eminent poets were made not by Johnson, but by the publishers who retained him to write biography. He has not exalted Sheffield into eminence as a poet; but the collection contains many poets who are not superior to him, and many who are his inferiors. Lord Macaulay, who disliked Sheffield as a Tory, has unjustly depreciated his poetry, and harshly depicted his character. But he allows him to have been distinguished by fine parts, and describes him as "in Parliamentary eloquence inferior to scarcely any orator of his time." This eulogium is chiefly founded on the testimony of Burnet, who describes Mulgrave as displaying,

* The Works of John Sheffield, Earl of Mulgrave, Marquis of Northampton, Duke of Buckinghamshire. The Third Edition, corrected. 2 vols. 8vo. London: 1740.

in a hot debate in the House of Lords, in the reign of William and Mary, a force of argument and eloquence beyond anything he had ever heard in that assembly. His oratory was set off by a fine person and commanding presence. As a poet he was a writer of odes, elegiacs, amatory poems, and didactic essays, which entitle him to rank at least with Denham and Waller, and far above Sprat, Duke, Fenton, Yalden, and many others who swell the collection of "most eminent English Poets." "Mulgrave wrote verses," says Macaulay, "which scarcely ever rose above absolute mediocrity; but, as he was a man of high note in the political and fashionable world, these verses found admirers." A not dissimilar judgment might be passed by many on the poetry of Samuel Rogers, a wealthy banker with a footing in society and in great Whig houses, whom social entanglements and conveniences would have prevented Lord Macaulay from freely criticizing. Mulgrave, amid the distractions of fashionable dissipation and of political life, studiously cultivated literary tastes and accomplishments, and his poetry shows refined scholarship and ingenious thought. His two chief poetical performances are his Essay on Satire and his Essay on Poetry. The first was written in 1675, but did not see the light till 1679, when it was anonymously circulated in manuscript; and Dryden, having the credit of the authorship, got a cudgelling for lampoons of which he was entirely innocent. The Essay on Poetry was published anonymously in 1682. Both essays underwent, during a long life, many and great revisions—*multa dies et multa litura coercuit*. If Horace's precepts are to be admired, neither Mulgrave nor any one else should be scoffed at for following them; the last editions of both poems differ greatly from the first. Both poems contain many lines which remain in the memory and recur for quotation—a practical test of poetical merit. The inferior occupations of a statesman, lately dwelt on by the Duke of Somerset, are hero skilfully told in a word, in summing up the busy cares of the weak-bodied, oger-minded Shaftesbury:—

Yet this vain comfort in his mind he keeps,
His soul is soaring while his body creeps.
Alas! that soaring to those few who know
Is but a busy fluttering here below.

The last line of the following passage is a favourite quotation:—

Reject that vulgar error (which appears
So fair) of making perfect characters;
There's no such thing in nature, and you'll draw
A faultless monster, which the world ne'er saw.

Pope paid Mulgrave the compliment of applying to himself one of his effective lines in the Essay on Poetry:—

Such was the Muse, whose rules and practice tell,
"Nature's chief masterpiece is writing well."

Mulgrave's father, Edmund, a peer of no mark, had been a Councillor of State under Cromwell. John succeeded to the title in 1658 at the age of nine. At seventeen he served as a volunteer in the first year of the great Dutch war, on board the ship which carried the two admirals, Prince Rupert and the Duke of Albemarle. He was again a naval volunteer when the second Dutch war broke out in 1672. His valour was rewarded by an early appointment to the command of a fine ship, the *Royal Katharine*. In 1673 he raised a regiment of foot, and returned to the fleet in command of it as colonel. A permanent regiment was afterwards given to him, and he remained with the command of a regiment after the peace. He received the Garter, and was made a Gentleman of the Bedchamber. These honours had been heaped on him before he completed his twenty-sixth year. Now he turned to poetry, and established a life-long intimacy with Dryden. He endeavoured to persuade the King to improve Dryden's fortunes, so as to give him ease and leisure for the composition of a great epic; the penury of extravagance and the King's laziness probably thwarted this design. In 1679 Mulgrave put into circulation his Essay on Satire, in which the King was scurrilously spoken of. He kept the authorship a secret, but suspicion freely fell on him and on Dryden also. It is extremely improbable that Dryden had anything to do with this satire. But he was beaten on suspicion of it by ruffians hired by the Earl of Rochester or the Duchess of Portsmouth; "praised and punished for another's rhymes," as Mulgrave wrote, a few years after, in his Essay on Poetry. Yet thirty-five years later, Mulgrave annotated this line of the Essay on Poetry with a solemn statement that Dryden was "not only innocent, but ignorant of the whole matter." Mulgrave and Dryden were really associated the year after in a translation of Ovid; and the courtly poet-laureate was in ecstasy at the noble rank of his coadjutor:—

How will sweet Ovid's ghost be pleased to hear
His fame augmented by a British peer!
How he embellishes his Helen's loves,
Outdoes his softness and his sense improves!

In 1680 Mulgrave commanded an expedition, with two thousand men, to defend Tangiers against the Moors. A circumstantial story is told of his having been sent on board a leaky and unseaworthy ship, the Admiralty pretending that they could give him no better one, while Mulgrave made it a point of honour not to refuse to go in any ship that was assigned to him. The King's natural son, Charles, Earl of Plymouth, volunteered to accompany him in his danger. The King's displeasure with him is mentioned as the cause of the bad turn done to Mulgrave. Fine weather carried him safely through the voyage, but it was found necessary to pump the ship the whole way. Mulgrave abstained during the voyage from proposing the King's health at table, and on his being

reminded of it, he replied that he must first get out of his rotten ship before he could make that health go merrily round. Such revenge as this was cowardly; but there had been indeed enough in Mulgrave's Essay on Satire, circulated the year before, to wound deeply the King's feelings and to provoke his resentment. There was also a story—repeated by Macaulay—that Mulgrave had given offence to Charles by aspiring to the hand of his niece, the Princess Anne. Charles in a fit of ill-humour may have counted this presumption; but the Princess's father, James, was the constant friend of Mulgrave, and the Princess Anne, when she became Queen, showed pleasure in favouring and in honouring the admirer of her youth. She made him Lord Privy Seal; she made him a Duke; she made him Lord Steward of the Household; she made him Lord President of the Council; she wanted to make him Lord Chancellor.

During the reign of Charles Mulgrave held no political office, and during no part of his career did he lay himself out for laborious statesmanship. He was a keen politician, without being a slave of politics. His great wealth and dignified accomplishments marked him out for offices of state and ornament; and in the reigns of James, of William, and of Anne, he was successively Lord Chamberlain, Lord Privy Seal, Lord Steward, and Lord President of the Council, in Tory administrations. He was a Tory. He wrote a reply to Halifax's "Character of a Trimmer," which he called "The Character of a Tory." He was devoted to the Duke of York before he ascended the throne, and immediately after the accession of James he was made a Privy Councillor, and soon after Lord Chamberlain. He did not care one way or the other about Popery, but he stood by the sovereign under whom, as Admiral, he had early served at sea. Dryden marshals him in the great Exclusion struggles as a prominent champion of the legitimate succession:—

Sharp-judging Adriel, the Muse's friend,
Himself a Muse; in Sanhedrin's debate
True to his Prince, but not a slave of State.

Lord Macaulay again does injustice to Mulgrave by representing him as simulating Roman Catholic convictions, when James became King, and when he was made Lord Chamberlain and a member of the Ecclesiastical Commission. He had no disguise; he avowed himself a Free Thinker. He openly ridiculed transubstantiation, telling the priests who tried to convert him that he was willing to be taught, and had tried hard to believe in God who made the world and man, but that it would not be easy to persuade him that man was quits, and made God again. Political meanness and abject hypocrisy—these are Lord Macaulay's accusations—were no part of Mulgrave's character, whatever might have been his faults. He had lampooned Charles II., and had met with spirit affront and injury from that King. He disapproved of James's later measures, and freely remonstrated with him. When all was over and not before, when James had fled to France, he took part in the councils of the established Revolution. Some years after King William informed him that there had been a talk of asking him to join in the first invitation to him to come over, but that Shrewsbury had discouraged the attempt by saying that he would never concur; and the King then proceeded to ask him what he would have done if he had been invited. "Sir," replied Mulgrave, "I would have discovered it to the King whom I then served." This was not a mean hypocrite.

In the year 1694 William, finding that the Tory Mulgrave had given an independent and effective support to the Treason Bill and the Triennial Bill, and wishing to redress the balance in his councils as between Whig and Tory, disturbed by the substitution of the Whig Shrewsbury for the Tory Nottingham, as Secretary of State, made important overtures to Mulgrave. He offered to make him a Marquis, to give him a pension of 3,000*l.* a year, and to appoint him a member of the Cabinet Council, by a special exception, without office. These offers were accepted; Mulgrave was made Marquis of Normandy, the pension was granted, but Normanby was not called to the meetings of the Cabinet. Then Normanby wrote a very spirited letter to the King, which is full of interest also, as showing how far the Cabinet, which had an informal beginning at the Restoration, had now assumed form and definiteness. We learn from Lord Normanby's letter, dated July 19, 1694, that it had been arranged that the Lord Keeper (Lord Somers), the Lord President (Marquis of Carmarthen, better known as Danby, and now created Duke of Leeds), the Lord Privy Seal (Earl of Pembroke), and the two Secretaries of State (Sir John Trenchard and the Earl of Shrewsbury) should meet constantly in Cabinet, and that Lord Normanby should join them. The letter states that in Charles II.'s reign Lord Angleson, who had been Lord Privy Seal from 1673 to 1682, had been always excluded, and further that the White Staffs were now to be excluded from Cabinet meetings. These would probably be Lord Godolphin, First Commissioner of the Treasury, as representing the Lord Treasurer, the Earl of Devonshire, Lord Steward, Lord Newport, Treasurer, and Thomas Wharton, Comptroller of the Household. In the Cabinet to which Normanby was to be specially added, Carmarthen was the only Tory, and William's plan of a Ministry had been till now one equally composed of both parties. Normanby's spirited, not to say indignant, remonstrance brought the King to the fulfilment of his promise. Some passages of his letter deserve quotation, for this is a man whom Lord Macaulay has described as mean and abject:—

I beg your Majesty's pardon once more for troubling you upon so trifling a subject as myself, though I must own a sacred promise from a King is of no small importance. But the occasion of my approaching your Majesty again this way, after I found myself obliged to take my leave humbly for ever, is

a discourse I had the honour to have with the Queen yesterday, by which I find all my just grievances capable of being redressed on one word from your Majesty, that I should meet with the Keeper, President, Privy Seal, and Secretaries when they are assembled. . . . It is a real Cabinet without the name, nay, called so generally now, and there was no other in all the late King's time. . . . Your Majesty is and ought to be master, to use me as you please; but I beg leave to say, with all due submission, that this usage, if continued, is not only below so great a King to impose, after all assurances to the contrary, by which I was brought to the Council, because I depended on them; but it is even below me, the meanest of your subjects, to acquiesce in further than patience and my duty oblige me.

The letter was published by Sir John Dalrymple from King William's box. (Appendix to "Memoirs," Part II., p. 243.) The appeal obtained immediate redress for Lord Normanby. It is strange that Lord Macaulay should have been ignorant of this letter, so creditable to Normanby and from a constitutional point of view so interesting. He simply says that Normanby "was named a Cabinet Councillor, but never consulted."

When Anne succeeded to the throne, Marlborough and Godolphin formed a Tory Administration to please her, and the Marquis of Normanby, both as a Tory and a personal favourite of the Queen, was selected to be Lord Privy Seal. A few years after, in 1705, Marlborough and Godolphin veered to the Whigs; and Normanby, now made Duke of Buckinghamshire by the Queen's favour, was removed from office. The Queen struggled against his removal. She even solicited him, but in vain, to remain by her side as Lord Chancellor; thirty years and not more had passed since a layman, Shaftesbury, had held the Great Seal, and it had since, in the reign of James II., been pressed by Anne's father on Arthur Annesley, Earl of Anglesey. The Duke of Buckinghamshire resumed office in 1710, as Lord Steward, when the Whigs fell before Harley. On the death of Laurence Hyde, Earl of Rochester, in the following year, Buckinghamshire succeeded as Lord President of the Council. The death of Queen Anne and the accession of George I. brought the Whigs into monopoly of power, and Buckinghamshire ceased to hold office. He was an opponent of the Court during the remainder of his life. He died in February 1721, in the seventy-second year of his age.

He has left some occasional pieces in prose, including three fragments of historical memoirs, and Johnson gives more praise to his prose than his poetry. "His verses," says Johnson, "are often insipid, but his memoirs are lively and agreeable; he had the perspicuity and elegance of an historian, but not the fire and fancy of a poet." His authorship, whether in prose or poetry, was not more than an amusement, and neither kind possesses vigour. His taste was refined, and his judgment cultivated. Lord Macaulay has blackened his character, giving a ready ear to the malevolence of Maclay and Swift, who are not trustworthy guides. Covetousness is a chief reproach of Macaulay against him, a reproach resting on undignified little-rattle. It is known as a fact that he was bountiful through life to his friend Dryden, and that, when his political rival, the Duke of Newcastle, had failed to fulfil a voluntary and ostentatious promise to erect a monument to Dryden in Westminster Abbey, Buckinghamshire came forward and did it. To Buckinghamshire Dryden had dedicated his *Aeneid*. Dryden had styled him "the Muses' friend, himself a Muse." Such praise of one noted for covetousness would have been ridiculous. Libertinism is another reproach; Buckinghamshire did not conceal it. He had several natural children, and acknowledged them. Some of Lord Macaulay's heroes were at least equal sinners in this respect. In an elaborate will, which is printed in his works, and which is almost a literary composition, Buckinghamshire provided with scrupulous care for his widow, his legitimate children, and those who were illegitimate; and under its provisions, by the failure of his legitimate line in 1735, all his property went among his natural children. He had been married three times, and to three widows. He had children only by his third wife. "He has been often heard to say, since he had legitimate children," writes a family biographer, "that he wished he never had the others, or at least had not owned them, it being in private families an ill example."

Authors of celebrity have joined in praises which, with every allowance for flattery of rank, necessitate an estimate of Buckinghamshire, as a man of letters, considerably higher than Macaulay's. In old age, and finally retired from office, Buckinghamshire wrote a few lines in praise of Pope's *Iliad* immediately after its publication. Pope, full of joy, replied:—

Muse, 'tis enough; at length thy labour ends,
And thou shalt live, for Buckingham commends;
Sheffield approves, consenting Phoebus bends,
And I and Mollie from this hour are friends.

Prior, too, valued highly his praises:—

Happy the poet, best the lays
Which Buckingham has deigned to praise.

Lord Roscommon, a contemporary noble poet, whose *Essay on Translated Verse* is named by Addison as one of three masterpieces of their kind—the other two being Buckinghamshire's *Essay on Poetry*, and Pope's *Essay on Criticism*—thus referred to the *Essay on Poetry*:—

Happy that author whose correct *Essay*
Repairs so well our old Horatian way.

This is a case in which Lord Macaulay has not been just or well informed.

The Duke of Buckinghamshire's widow, his third wife, was a natural daughter of James II. by Catharine Sedley, Countess of Dorchester, and had been previously married to the Earl of Anglesey,

by whom she had a daughter, Lady Catharine Annesley. The daughter, while the Duke of Buckinghamshire was living, married the son of Sir Constantine Phipps, Irish Lord Chancellor; and her son Constantine Phipps was made an Irish Baron, with the title, taken from her stepfather, of Lord Mulgrave. An English earldom followed in the family. The late Marquis of Normanby, born second Earl of Mulgrave, and made a marquis in Lord Melbourne's administration, was, like the Duke of Buckinghamshire—some of whose titles re-appeared in him, but whose blood was not in his veins—an author, clever, but not eminent, and the holder of many high public offices without superlative distinction.

PIKE'S MAURITIUS.*

CONSUL PIKE is right in both the assumptions upon which he set himself to draw up his "Sub-Tropical Rambles." Very little is known even among fairly informed people outside the island concerning the history, the condition, or the resources of the Mauritius; and it is equally true that a large amount of information of a valuable and interesting kind lay ready to hand for any writer who should take for his subject that little known, but in many respects important, island or group of islands. The candid confession of most people who hear the question broached will confirm the first of these two propositions. The mass of instructive and often striking matter which Mr. Pike has set before the public will sufficiently establish the truth of the latter. If somewhat loose and desultory in arrangement, his book shows a width and comprehensiveness of scope, with an amount of pains in collecting details, which must entitle the author to much praise. He has brought to his task a mind keenly alive to the aspects both of nature and of human life, and he has lost no opportunity either of observing the facts within his range or of suggesting judicious and thoughtful reflections concerning them. To the tastes of a student of science he adds the practical sense of a man of business and the shrewdness of a citizen of the world.

To a scientific eye nowhere is the book of nature more widely open than in this "gem of the ocean," as for beauty, variety, and physical wealth the Isle of France has been called. Its rich vegetation, its waterfalls, its natural caverns, its wild forest lands, open inexhaustible sources of pleasure and admiration. Its coasts, its rivers, and its inland scenery afford the zoologist never-ending stores for collection and study. In addition to the valuable notes which Consul Pike gives us in "Sub-Tropical Rambles" we are glad to find him promise a separate volume upon the Flora and Fauna of Mauritius—a subject which, though it has been frequently treated in a detached or fragmentary way, has never been thoroughly discussed. Upon the geology of the island, in its relation to the neighbouring specks in the ocean which group physically with it, the author finds much to record and to suggest. Nowhere perhaps upon the globe are the phenomena of volcanic upheaval exemplified on such a scale of breadth or grandeur. Beyond other islands of the Indian Ocean, though no longer the theatre of active forces, it displays the great drama of igneous action. Endless are the peculiar characteristics of its mountain peaks, and the abrupt gigantic fissures which separate them, by whose disruption the beds of torrents and ravines have been determined. Extinct craters of different eras are abundant, and beds of lava, stupendous in extent and depth, bespeak the violence of their fiery flow. There can be little doubt that the main volcano which formed the island was submarine, and that its formation, far from being sudden, was the work of continuous action for successive ages. In grandeur and extent this geological feat of nature must have vastly exceeded that of which we have contemporaneous proofs at Hawaii in the Sandwich group, where the well-known Mauna Loa rises to the majestic height of 13,750 feet above the sea level; the largest crater, that of Kilauea, being three and a half miles long, two and a half miles wide, and 1,044 feet deep, with a wall of hardened lava surrounding it, and a lake of liquid fire constantly surging up from its depths. The whole interior of Mauritius appeared to the author to have been one vast crater, the remains of its surrounding walls, now water-worn and degraded, forming gentle slopes and filling the valleys with debris as it emerged from the ocean. The enormous fissures made by rivers of liquid fire forcing their way to the sea, leaving behind them large plains of lava, are visible in all parts of the island. From Flacq the flow of lava is distinctly traceable to the grand crater in the central district. Between Mount Ory and the Corps de Garde Mountains, a stream of lava many miles in width flowed to the sea. Between these mountains and the Rempart another torrent discharged itself through a break in the great wall. After the great volcano became extinct, leaving high incurving walls, a number of lesser but very active vents showed themselves on the seaboard side of the walls, similar to those which are to be seen in the case of Vesuvius. Port Louis lies in one such crater, and the Vallée des Frères in another; and ten such are to be counted between that city and the Morne. Rempart Mountain forms the N.E. and Tamarind Mountain the S.W. limit of a crater some miles in diameter, with a good-sized adventitious one in the centre, just at the back of Tamarind Bay. In many parts of the interior, particularly in the neighbourhood of the Chamarel Mountains, our author found corals in a perfect state buried in cretaceous debris, differing in

* *Sub-Tropical Rambles in the Land of the Aphanapteryx: Personal Experiences, Adventures, and Wanderings in and around the Island of Mauritius.* By Nicholas Pike, U.S. Consul. London: Sampson Low & Co. 1873.

species from those now inhabiting those tropical seas. Such beds exist between Grand River and Port Louis over fifteen feet in thickness. Near the river De Poste, at an elevation of more than one thousand feet, is a stratum of plastic clay twelve feet in depth, underlying a thick bed of gravel. These facts supply some index to the range of upheaval, as do the coral masses interspersed with volcanic rocks which rise above the vegetation of Flat Island, forty or fifty feet above the level of the sea. Deposits of madrepores similar to those of Timor, New Holland, and Van Diemen's Land are met with in the Isle of France, one bank twelve feet thick being placed between two currents of lava, indicating the alternate periods of elevation and depression. Huge walls and columns of basalt as at Baie de Cap, three hundred feet in height, tower over and at times fall into the sea; and at Flat Island in particular the fossilized remains of an extensive forest of endogenous trees overlying lava and coral masses show proofs of gradual submergence. The general aspect of the island is such as to suggest the idea of a vast convulsive movement upheaving it, together with the adjacent island Rodriguez Bourbon, perhaps Madagascar itself, in one huge tract of volcanic cones and columnar masses, fertilized probably by germs of life wafted or drifted from older continents. A couple of visits to Round Island, twenty-five miles or so from Port Louis, disclosed a further key to the geology of the group. The layers of ashes and scoriæ interspersed in successive layers of the sandstone give an idea of the process of deposition and of the density in which they must have been emitted, enough to darken the sun. Our author somewhat quaintly seizes upon it as a proof of the Divine forethought for man that these terrific convulsions took place before the era of human life, since it were scarcely possible for man to look on them and live. In the more personal portion of his observations he goes more in detail over the physical features of the island, and gives picturesque illustrations of the more remarkable points of scenery or configuration. Of these the more prominent are of course the famed Peter Both Mountains, the Pont Naturel, the Trois Mamelles, and the Grand Souffleur, where the waves urge a column of water fifty or sixty feet in height through a natural spout or orifice in the dark basalt. The Grand Bassin, approached by way of the Bois Sec, which consists of thousands of blanched and withered trees, rather disappointed our explorer's expectation of a landscape of surpassing loveliness, although it was rich in golden fish and monster eels, and its banks were overspread with elegant creepers and the graceful fronds of the King of Ferns.

The whole island struck our author as being a country of exceeding interest to the geologist and naturalist, and one in which a sojourn might be made very profitable for the advancement of science. The whole of it, with the exception of a few mountain peaks, has been found accessible. Beautiful as it is in part, much of it is wearisome and monotonous, owing to the endless succession of cane-fields. But there are soft landscapes and delicious sea views which leave pleasant memories for life. Besides sugar, the staple produce, the soil yields almost every variety both of tropical and sub-tropical vegetation, from the delicate fern or orchid to the stately baobab, the rival of the sequoia of California in hoar antiquity. On one of these trees there was found by Adamson, on cutting into the trunk, an inscription in English which was covered by three hundred igneous layers, indicating the number of years since its visit by travellers from this country. Calculated by this rate, the growth of the whole trunk must have taken some five thousand years. A specimen of the baobab in the Pamplemousses Gardens measures thirty feet round at the collum. These gardens, founded by M. de Poivre in 1768, contain choicest varieties of all kinds, native and exotic. We are surprised to find a writer of Mr. Pike's general accuracy including among them the mangosteen "of India." There is no apparent freak of nature more remarkable than that this delicious product of Singapore, Java, and the Moluccas should have been found no more capable of being reared in India than in our own country, where the solitary fruit grown at Sion some twenty years ago is said to represent an outlay of nearly 10,000*l*. It is tantalizing to think that this English specimen was pronounced exquisite by connoisseurs from Singapore, which is far from being the case, according to Mr. Pike, with the mangosteen of the Mauritius. Of marine curiosities and wonders, the most noteworthy seem to be the corals and polypes generally; rare shells and eels, innumerable and enormous, one monster caught in New Mapou Bay measuring twelve feet in length. At Baie de Cap an octopus was taken, spreading not less than ten feet across the tentacles. Of the *Aphanapteryx imperialis*, the handsome bird which gives its title to the book, representing as it does in a sense the wingless class which Mauritius no longer retains in the Dodo, the author, we rejoice to see, promises a full description in a future volume.

About a third of Mr. Pike's book is given to the history of Mauritius, from its discovery in 1505 by Don Pedro de Mascareigne during the first year of the administration of Almeida, Governor-General of the Portuguese possessions of India. To the island he gave the name of Cerné; for no reason that Mr. Pike can suggest, save for one which we wholly fail to follow—namely, "a fanciful allusion to the Dodo or to some other bird of the same species that he found on its shores." We should rather imagine the name to refer simply to the roundness of the island.

The island was kept by the Portuguese merely as a place of call for shipping till 1598, when it was found void of inhabitants, and taken possession of by a Dutch squadron under Admiral Wybrand von Warwick, and named after Count Maurice of Nassau. It was not, however, till 1644 that a permanent settlement was founded there, the south-east port being taken as the seat of government.

Abandoned by the Dutch after endless difficulties with the Maroons or descendants of the slaves imported from Madagascar, the island was occupied in 1715 by the French, receiving the name of Ile de France. From Labourdonnais, made governor in 1734, it received its first effective organization, and rapidly rose to its highest pitch of opulence and importance. To him was owing the introduction of the sugar-cane, of manioc, cotton, indigo, and spices, and the construction of public works of all kinds. The seat of government was transferred by him to the north-west port, Port Louis. It was only after a succession of struggles for supremacy in Indian waters that the island was surrendered by General Decaen, the last French governor, to the English under General Abercrombie and Admiral Burtis, December 3, 1810. In 1814, on the restoration of Louis XVIII., Mauritius was definitively ceded by treaty to Great Britain, Bourbon being restored to France. In the interval a great revolution had been effected by the publication of the Act abolishing the slave trade, which measure was, however, only carried into effect after strenuous opposition on the part of the planters in 1834. To meet the demand for labour, which had been immensely stimulated by the opening of the home market to colonial sugar in 1825 and the extravagant schemes of speculation consequent thereon, the import of Coolies from Calcutta and Madras was set on foot, as many as 48,935 male and 7,310 female Indians being returned under the census of 1846. The chequered fortunes of the island, under successive governors, some of them most able and energetic men, are interestingly traced by Mr. Pike. The physical ills to which it is exposed by its peculiar conditions of locality, climate, and soil must contribute to make it one of the most precarious of settlements for European enterprise. The focus, so to say, of the atmospheric forces which issue in the terrific hurricanes of the Indian Ocean, it is swept at no long intervals of time by fever, drought, and flood, and it is highly to the credit of the British planter that he has so long and so persistently made head against obstacles so manifold and so disheartening. Mr. Pike's narrative does ample justice to the energy which has in succession introduced the elements of religious and ecclesiastical organization, together with the main accessories of practical life—water-works, docks, drainage, gas, railways, and so forth—with the latest and most scientific expedients for checking the inroads of disease and insect foes among the chief staple of the island, and for improving the manufacture of sugar. He has some valuable observations upon the course and action of cyclones, made by himself on the voyage and during residence in the island; and the details of the terrible fever which devastated it in 1867 are given by him with the graphic force and the sympathetic tone which none but an eyewitness could well impart. Upon the question of the abuses so vehemently complained of for years past in the Coolie traffic, on which an official Report has been for some time expected, he gives us but scanty materials for forming a judgment. On the whole, we cannot say that his work leaves an impression of much hopefulness for the future of this important dependency, and this depressing influence gains strength from the air of truthfulness, sagacity, and good faith which characterizes his pages from first to last.

ANGÉLIQUE ARNAULD.*

WHEN the secular mind dwells on the circumstances of monastic life, and endeavours to realize a condition so alien from our natural desires, we find ourselves drawing a perfectly distinct line on the question of enduring existence between those who rule and those who obey. There are leaders and followers, masters and servants, rulers and ruled, as much in the world as in the cloister; in no state of life can we escape subordination to mind, rank, wealth, or sex; nor do we always give the palm of happiness to the superior position; but in no state is the difference between ruler and ruled so enormous as in a religious house, and especially in a nunnery in first-rate acting order, such as that described in the book before us. It is not so much the privations of the state which appal the imagination; it is the subjection, the merging of self into a society, until identity is lost and the consideration that goes with it. To judge from all revelations, whether friendly or adverse, a nun becomes more of a chattel in the hands of her abbess—and the more distinguished the abbess the more conspicuously it is so—than a slave that is bought and sold. She must absolutely renounce tastes, preferences, and prejudices at the will of another, who, the more she submits, the more regards her just as so much material suited to a purpose, something to work with rather than to work upon, as a contribution to a whole which is to serve religion and do credit to a system. Thought recoils from the monotonous attitude of submission, of regulating life by another's will, without even the handmaid's privilege of at least thinking freely; and we learn without surprise that in all conferences between the abbess and director, the nun is chased with her fellows as so much power available towards a given result, but in herself a poor simple creature with whom anything may be done, and who fulfils her mission all the better for being ignorant, silent, dull, and uninformed. In a word, she is simply one note of a complex instrument whose sole business it is to keep in tune, and only to sound when played upon. The rank and file of nuns, as far as we are shown them, are treated as simpletons; it is their merit to be so regarded by the world's eye; and as they have no

* *Angélique Arnould, Abbess of Port-Royal. By Frances Martin. London: Macmillan & Co.*

opportunity of telling their own tale, they look so to us. But what a difference office at once makes in the picture! Abbesses, we are assured, constantly groan under the weight of responsibility and the labour of their charge of souls; but at the same time we see mind exercised, judgment kept in working order, the whole character invigorated, powers trained to their utmost, and a keen sense of living a life of which there are witnesses. If the world is a stage, the abbess is one of the players, while her nuns at best are but supernumeraries. To outside observers even failure and disappointment are endurable, as trials inseparable from active life under all conditions. What causes the recoil is the blank stagnation, the void of common interests—varied by puerile excitements, scolded and patronized by turns—which make up the nun's share of this world. Even the picture of her religious peace, joys, and ecstasies fails in the essential point of will; her transports are regulated, snubbed, commended by her abbess, till they lose the character of spontaneous voluntary efforts, not perhaps in themselves, but in our sympathies. We do not mean to express a doubt that the power to rule, a clever woman's turn for management, finds exercise in a convent as elsewhere; but, from such insight as is permitted to us, we judge that most nuns are not clever, and that no pains are taken to make them so; docility is everything; the nuns are only stones in a wall, and must be kept tight in their places.

In the book before us this monotony, as the point aimed at in convent life, is perhaps more apparent than where greater austerities are habitually practised. The good abbess enjoined no severities which she did not practise upon herself, and her early contact with St. Francis de Sales was a safeguard against violent excesses in this direction. But she substituted *silence* for "recreation"; nun's gossip was her abhorrence, and all the trivialities of costume by which a pious nun may indulge unconsciously the tendencies of her sex were her especial scorn; submission was everything, and she had the power to enforce it as a willing and a loving sacrifice. These impressions remain with us after reading this record of a great struggle, and therefore we give them first. Port Royal could not have become famous without these pious, nameless women, some of whose lives closed in a lingering martyrdom for a cause of which they knew little except that their abbess and director upheld it and suffered and were ready to die for it—whose graves were ultimately desecrated and their bones scattered for their simple fidelity to *La mère Angélique* and St. Cyran.

Yet the peculiarity of Port Royal under its reformed aspect is that it was strictly a family affair, and one may say that it could not have spread, whether persecuted or not, when there were no longer Arnaulds to spread it; a condition impossible to be fulfilled, because, however large the families of different branches, they were all eventually absorbed into it. It is for the members of Port Royal who were not Arnaulds that we have been expressing a somewhat, it may be thought, worldly compassion; for Arnaulds, one and all, there was a sphere. We can hardly suppose many of our readers ignorant of the picturesque circumstances constituting the germs of the great religious movement of which Angélique Arnauld was the author and centre. Her father, who belonged to the old noblesse of Provence, while still a young advocate, so impressed the French Avocat-Général, M. Marion, by his eloquence and general powers, that he offered him his only daughter; he was betrothed to her when she was twelve years old, and next year they were married. Twenty children were the fruit of this marriage, of whom Angélique was one of the eldest, and the great Arnauld, the friend of Pascal, the youngest. When she was seven and Agnes five (the elder born in 1591, Agnes in 1593), M. Marion called them to him and told them they would have to enter a convent, while their elder sister would marry and go into society. He saw that Angélique did not like the prospect, so, to please her, he explained, "I shall make you an abbess and mistress of all the others." On this condition she submitted. "I will be a nun, too," said the other, "but I don't want to be an abbess"; and then they ran off, and Angélique began to cry and wish herself the eldest sister, for then she would have been the one to marry. Agnes a few days later held to it that she would not be an abbess, because an abbess is answerable for the souls of her nuns, and she would have enough to do to take care of her own; but Angélique said, "I want to be an abbess, and I shall take good care that my nuns do their duty and behave well." Does not the wisdom of these babes remind one of the Frenchman's saying, "We are not born young, we become so"? P though Angélique was an exception to the latter clause. She was a woman all her life; tremendous in power and will, yet sweet and genial too, and always generous; the very temper to carry through whatever she took in hand. It cannot be said that she had a vocation. She was made a nun and kept a nun against her will, and was cheated by her father into a renewal of her vows. Every one must see that the Arnaulds of Port Royal owed much to their father. They inherited from him intellect, determination, tact, and also a touch of Protestant independence. Till he was twelve years of age M. Arnauld had been trained a Huguenot; when his father was converted by the Massacre of St. Bartholomew, his son went over with him. But he had nothing of the reformer in him; he took the world as he found it, and recognised the Church as "mine oyster"—an honourable provision for his daughters, whom he placed and kept as abbesses by repeated false certificates of age. Nobody thought the worse of him for this; he was eminently respectable in all relations of life, and as long as he lived he laboured for his children's interests, and against his daughter's more rigid notions

of right, with true paternal zeal and affection. Children in those days were allowed no will of their own; they must do what their fathers ordered; but the spirit of contradiction contrived to assert itself all the same. In Angélique's case it possibly helped on the cause of virtue, and imparted a flavour not disagreeable to asceticism. Her father might make her an abbess with one intention, but she might fill the office with another, and so give the lie to anticipation. It was a period when abuses in the Church had arrived at the dignity of institutions. Monks and nuns could stand up for "the good old customs" which turned convents and monasteries into palaces of ease and license. Convent life was "enlivened by music and dancing, and long moonlight walks with gay cavaliers." A few years before Angélique's election (1593) the grand vicar and five abbots had been pleased spectators of a tragedy called *Cleopatra*, performed at Port Royal by the nuns, in which all the male characters were played by the nuns in suitable costume. Such acting was common at Carnival time. Much graver enormities are related. Thus the Abbess of Maubuisson—where Angélique had passed her noviciate—who was a sister of Gabrielle d'Estrées, had twelve children, four of whom were her maids of honour, of whom the youngest, the daughter of a nobleman, was being trained to succeed her. To such practices and abuses as these the child abbess's eyes were gradually opened. At twelve years old she detected her nuns gossiping with a monk in the sacristy, and locked them in. She soon inquired into the forgotten rules of the order, resolved to obey them literally, and entered upon a complete reform, which she had strength and fortitude to accomplish, even to the tremendous act of shutting out her father from the interior of the convent, and only admitting him to the visitors' parlour, where she talked to him through the wicket. This seems to have been the turning point with her family, who were present, a whole carriage-load of them, at the scene. They pleaded, stormed, reproached; they taunted the girl of eighteen "with her canons and her councils," but she stood her ground, though it almost killed her, and, to speak irreverently, ever after had them all under her thumb.

But we have no space to follow her through the changes, honours, trials, and vicissitudes of her life, or through her wars with the monks, with whom she was never in favour. Her unfortunate choice of the Bishop de Langres for a guide led to the great humiliation of her life. His sudden repentance after a scandalous life had won her sympathy; but the change was not worth much. Upon her withdrawing some of her confidence from him, he turned against her; and when, partly at his instigation, she resigned office after twenty-six years of rule, and retired to a nun's subordinate position, we suddenly find her subject to one of those outbursts of contumely in her own convent which puzzle the external world so much, and put the whole monastic system under suspicion. Her nuns were told that her rule had made them stupid; they therefore sharpened their wits by spending whole days in talking with the fathers of the oratory. They were alternately feasted with delicacies and fed for penance with caterpillars and "similar filth"; their cells and dress were smartened up; they were put upon excessive penances, which were alleviated with boisterous recreation; and the nun who had scourged herself in the morning joked and laughed under the eyes of her old abbess, who thought to herself, "Surely she makes fun of everything." In the meanwhile she herself was sentenced to perform penance barefoot on a damp pavement, and was reminded that her voluntary resignation was no merit. A calumnious history of her life was read aloud at meal-times. The letters written to her by St. Francis de Sales were taken from her and used to cover preserve jars; and once, when all the sisters and pupils were in the refectory, she was told to rise from table, and a basket full of the most disgusting filth was put round her neck. She was led in succession to all the refectory tables by a nun, who said, "Look, my sisters, at this wretched creature, whose mind is more full of perverse notions than this basket is of filth." Angélique gravely thanked the sister who had devised this mortification for her; but she said afterwards she thought she should have heaved her heart up at the horrible stench.

Under all this insult, forbidden to see and communicate with her friends, and shut out from the nuns by a wall of silence, the Bishop, who superintended this line of attack, began to grow uneasy:—

One day he said to her, "You are an obstacle in my way." "How can that be," she answered, "when I never even speak to anyone?" "Your very shadow is an obstruction," he replied. "Send me wherever you please," said Angélique, "I will go."

Presently we find this cloud rolled away, and Angélique an abbess once more. It was, however, the Bishop of Langres who first introduced her to St. Cyran, the friend of Jansenius. Angélique found in him the director she had long looked for, and at once, dating from 1635, her "little community" formally placed itself under his guidance. Henceforth she is connected with the Jansenist movement, together with the whole Arnauld family, male and female.

We have not attempted to give any narrative of the events which make the present volume an interesting summary of a great struggle. The Sisters were not long allowed the privilege of St. Cyran's directorship, as Richelieu imprisoned him for five years at Vincennes, which he left only to die near them. Of this imprisonment an anecdote is told. Some German prisoners of war had an opportunity of witnessing his saintly life. On one occasion these officers were liberated and put on parole, that they might be present at a magnificent ballet which represented the triumphs of the arms of France. There were present the confessors, almoners, and other priests belonging

to Richelieu's household. The Cardinal could not refuse himself the pleasure of asking his prisoner guest, Jean de Wert, what he thought of it. He replied that it was fine enough, but that which astonished him more than anything else in the Most Christian Kingdom of France was to see the bishops at a theatre and the saints in prison.

One of the most remarkable and exceptional features of Port Royal is the band of recluses who gathered round that branch of it called Port Royal des Champs. Here within and without the walls assembled mother, sons, grandchildren, at once exciting suspicion by their tenets and reverence by their sanctity. When the great controversy on the Five Propositions came on, it was here that the great Arnauld wrote when not in hiding, and here Pascal, whose sister was a professed nun in the convent, joined the recluse brotherhood outside:—

It was necessary, therefore, to silence Arnauld also, and in 1656 he was censured, expelled from the Sorbonne, and all his writings declared heretical and placed on the Index. Whilst the Doctors of the Sorbonne were deliberating on his sentence, the recluses at Port Royal were urging Arnauld to defend his views:—"Are you going to let them condemn you like a child, without saying a word, and without letting the public know what are the points in dispute?" He accordingly drew up a reply, doubtless very long and learned, and read it aloud to his friends. They listened in silence; no one praised it. Arnauld said, "I see you don't like my paper, and I think you are right." Then he turned to Blaise Pascal, who had recently joined them. "Now you," he said, "who are young, why don't you do something?" Pascal set to work at once, and wrote the first of his "Letters to a Provincial from one of his Friends," or, as they are called, "The Provincial Letters." On the following day it was read to the recluses. "That is excellent," exclaimed Arnauld, "that's exactly what is wanted; we must print that." And on the 23rd of January, 1656, nine days after Arnauld's condemnation, it was published.

If the Jesuits could not answer, they could take vengeance. Port Royal must be put down. Henceforth Angélique lived under persecution, which she met with her wonted courage. When compelled to dismiss her postulants, she herself comforted them and dried their tears at parting. The Duchess de Chevreuse, who waited to take charge of them, wondered at her calmness. She replied, "Madam, when there is no God I shall lose courage; but while God is God, I will put my trust in Him." And to Madame de Sévigné she wrote, "Fathers, sisters, disciples, children, all are gone. Blessed be the name of the Lord." On the 6th of August, 1662, she sank calmly to her rest.

Her labours in the cause of conventual reform had been abandoned, and she and all her nuns were clinging desperately to the one shred and particle of truth that they had discovered. They would not sign a formula stating that five propositions were contained in a book written in an unknown tongue which they had never read and never should read. They would not condemn a man as a heretic whom they believed to be a saint.

Agnes survived her sister ten years, and upon her refusal to sign was imprisoned in a convent of the Order of the Visitation, founded by Madame de Chantal. The last sacraments were refused her; she was threatened that her dead body should be cast out unburied; but she never signed. It was not till 1709 that the King, under the influence of Madame de Maintenon and her Jesuit confessors, finally stamped out the order. Fifty years after Angélique's death there were still twenty nuns at Port Royal des Champs—old feeble women, bedridden, paralytic, dying. They were refused the sacraments, and excommunicated; but still they would not sign. Finally, a troop of horse was sent to disperse them. The nuns, many of them between seventy and eighty years of age, were carried off; some died on the journey, others were imprisoned in cells without windows or fire, and at death their dying or dead fingers were treacherously guided to obtain the signature. These sufferings Madame de Maintenon ridiculed; and it is said to have been at her instance that, when Port Royal, its church, and the Recluses' dwellings were razed to the ground, the graves were rifled, and the bodies thrown together in heaps. When Louis XIV. was dying he remembered this outrage, and turned to the Jesuits at his side:—"If indeed you have misled and deceived me, you are most guilty; for, in truth, I acted in good faith. I sincerely sought the peace of the Church." Some years before he had said to Boileau, "I am looking everywhere for M. Arnauld," and had received the reply, "Your Majesty is always fortunate; you will not find him." His fortune had indeed failed him at the last.

THE MERCHANT ADVENTURERS OF EXETER.*

JUST now that the Archaeological Institute is holding its long delayed meeting at Exeter, anything bearing on the history of that city comes at a fitting time. The Guild of Merchant Adventurers does not help us to anything so stirring as the strife between Church and City—"chorus et turba"—in the valiant days of John Shillingford; still it is part of the municipal history, and it brings out some points which are worth studying. We must remember that the city of Exeter was one which had shown eminent loyalty to the House of Tudor. Two of the many sieges which it has gone through were endured in their cause; one in 1497 at the hands of Perkin Warbeck—if that be his right name—the other in 1549 at the hands of the Cornish insurgents, who sought to undo the religious changes under Edward the Sixth. This second time it would seem that the mass of the inhabitants were not ill disposed to the cause of the besiegers; but the rich merchants showed their loyalty in the most practical

manner with their purses. The reward was characteristic. Queen Elizabeth gave the class which had so well served her grandfather and brother the advantages of a commercial monopoly. The city had the blessing of an oligarchic body set up in the midst of it, which seems to have become at least as powerful as the regular municipal government. The preamble of Elizabeth's Charter by which the Merchant Adventurers were incorporated breathes the spirit of the Act of Henry the Sixth which narrowed the county franchise, or of the famous oath of the Greek oligarchica, *καὶ τῷ δήμῳ κακόνους ἵσταναι καὶ βουλεύσασθαι ὅτι ἐν ἴσῳ κακόν.* The Merchant Adventurers of Exeter are incorporated for divers good reasons; among others,

For taking away, abolishing, and amoving, of many and sundrie oburdities and inconveniences which of late within the said Citie hath crept in and grown by reason of the excessive number of artificers and other inexpert ignorantes and unworthie men which doo take upon them to use the arte seynce and mysterie of merchandize; and trafique of merchant wares to the greates detriment of the commonwealth of this our realme of Englande.

Some way on however Her Majesty does relent so far as to decree that, for the first three years after the foundation of the Company, "all and singler artificers of our said Citie which will exercise, doo, and frequent the mysterie and arte of merceries and marchandize" shall, at their own request, be freely admitted to the Company, with one provision:—

So that after the receavinge or admyssion of any craftes man the same doo desiste and leave the exercise, occupacion and use of his handye craftes and mysterie.

A threat of a "grievous fine" follows for any member or future member of the Company who shall stoop to the practice of "handydes mysterie" or "handye craftes." Then comes a preamble of which the former clause may be looked on as condescending:—

Considering that artificers and users of handye craftes and mysteries be necessarie members of a common welth, and wee desiringe therefore utterlie to take awaye and extinguishe many evils which in time to come may crepe in to the comon welth. Yf every artificer of the said Citie of Excester should be suffered at his owne will and choyse and whensoever hee lyste to be receaved and admytted into the felowshipp and libertie of the said Marchantes Adventurers.

The enactment follows that, after the artificers have had their chance for three years, no one is to be admitted into the Company, except by consent of the greater part of its members and on payment of a "reasonable fine." Certain cases of apprenticeship and of persons, whoever they were, who might claim to be admitted "by reason of their patrimony," are alone exempted. All inhabitants of Exeter not being members of the Company are strictly forbidden to trade with France or the dominions of the French King—no Exeter man, it would seem, just then wanted to trade anywhere else—upon pain of grievous fines or other kinds of punishment. The officers of the Company are authorized to inflict such fines and punishments and to fix their amount, with the advice of the Mayor and four Aldermen of the city. And, to interest the municipal officers in the cause, one-half of the fines are to go "to the proper use and behoofe of the Chamber of the Comynalties of our said Citie of Excester." The rest belongs to the Company, only they are bidden to clothe yearly twelve poor and impotent people with a garment of cloth, and to relieve any of their own body who may fall into distress.

The executive powers of the formidable body thus called into being were vested in a governor chosen yearly and four other officers also chosen yearly, who appear in the Charter and in some other documents as *Consuls*, but in others as *Consules*. One would like to know which was the real form, but, in days when it was doubtless held that *consul* was derived from *consulere*, it was perhaps thought that there was no great difference between them. Anyhow, if Consuls with such powers were to be created, it would have only been reasonable if the unlucky practisers of the mysteries of handicraft had been allowed to choose Tribunes as some check upon them. But the Lesser Arts, as a Florentine would have called them, were to have no such chance. The whole is certainly as neatly contrived a piece of oligarchy as Aristotle could have found anywhere to set down in his lost collection of Constitutions. A monopoly is set up; the infringers of the monopoly are to be punished at the discretion of the monopolists, and the magistrates of the city, who ought to step in on the side of the weak, have their interests ingeniously enlisted on the side of the strong. The weak however did not yield without a struggle. The older Companies of the city, the Tailors at their head, made many suits and petitions before the Charter was actually signed by the Queen. But, as might have been looked for, the oligarchs carried their point, and all that the Commons got was the privilege of listening to an oration by Mr. John Hoker—was he not an uncle of the famous Richard?—proving by various examples from the history of Exeter and of other parts of the world what a blessed thing it is for subjects to submit quietly to their rulers. After all, there is no oligarchy like that of a city—unless it be that of a body of self-elected residentiary canons.

The new Company seems hardly to have come into being before it began vigorously to exercise its powers of fining upon all who came in its way, whether members of its own body or not. The domestic fines, imposed on members of the Company for absence from meetings and such like offences, were not a few, and beyond this there was the greater power, still more pleasant doubtless in its exercise, of fining all those who, without seeking admission to the new oligarchy, dared to exercise their natural right of trading with the dominions of the French King. Some of these by no

* An Elizabethan Guild of the City of Exeter. An Account of the Proceedings of the Society of Merchant Adventurers during the latter half of the Sixteenth Century. By William Cotton. Exeter: Pollard. 1873.

means belonged to the despised class of handicraftsmen, but were found among the men who stood foremost in the city by wealth and office. One of those was as notable a man as was likely to be found in any civic commonwealth. This was John Periam, who had been one of three merchants of Exeter who supplied Lord Russell with money at the time of the siege in 1549. His brother Sir William was Chief Baron of the Exchequer and Sir William's widow is still remembered in Balliol College. John Periam had traded with France before the Company was, and he went on trading with France, without troubling himself to become free of the newly created body. But the Company was too strong even for him. He was fined twenty marks for trading with France without being free of the Company: it was ten years after this before he joined the Company, but Mr. Cotton does not tell us whether he brought upon himself any more fines. He lived however in the end to be thrice chosen Governor of the Company, to refuse the place the first time, and to accept it afterwards only on conditions of his own; to be twice Mayor, to be knighted, to spend part of his days in London, and in the end to die at a country seat of his own near Crediton. Other offenders were also fined who did not rise to such a height of dignity as this. Thus Mr. Cotton tells us:—

John Pyll, who also infringed the rules, was astonished to find a "fardell of dowlas" seized as a security for any fine that might be inflicted. He ridiculed the idea of paying a fine, and "with scoffing and taunting" demanded that his "fardell" should be redelivered together with 13s. 4d. for his charges. An order of commitment to the ward-room of the Guildhall however brought him to his senses, and he thought it best to submit and become free of the Company.

While making this extract, we may as well stop to explain that neither John Pyll nor any member of the Society of Merchant Adventurers was so foolish (perhaps in such a case we ought to write *foolish*) as to spell "fardell" with a double *f*. That absurdity was reserved for people of the name of French and Farrington, who, not being able to read the initial *F* of the Elizabethan handwriting, took it for a double *f*, and thought that there was something fine about the look of the grotesque *ffrench* and the more grotesque *ffarrington*. John Pyll would as soon have thought of writing his name *Ppyll* as of spelling his fardell with a double *f*, really meant to be such. In his case we see that the Company had to take something in pawn on account of his contumacy. In other cases goods were taken in pawn seemingly because the person fined could not discharge the fine at the moment. Among these we are rather surprised to find one Walter Buckman, an Alderman and former Mayor, whose pawn however was of a costly kind being a goblet of silver "parcell pyllt." This happened twice, but the second time an arrangement was made which shows that the Company put some faith in Alderman Cotton after all:—

XCVth Maye 1562.—At which day also a goblet of Mr. Buckmans which remained in pawne for his fine was delivered upon his promise made That he at his death shall and will give to this Companye the said goblet waying aboute xliij oz or some other thinge worthe the same or better.

We have been most taken with the history of the Company as a curious illustration of the notions of the time when such an oligarchic and monopolizing body could have been looked upon by any one as likely to conduce to the advancement of trade and the general good of the commonwealth. But the Merchant Adventurers of Exeter have a direct place in English history, as might almost be expected from the close connexion of Devonshire with the great maritime enterprises of the reign of Elizabeth. The Adventurers soon extended their concerns far beyond the bounds of France and the dominions of the French King. They had a hand in the great expeditions of Drake, Davies, and Gilbert; but Raleigh seems not to have been a favourite in the Exeter Guildhall; we quote what Mr. Cotton has to say on this head:—

History tells us that Sir Walter Raleigh had certain mercantile privileges conceded to him by the Queen, i.e. he was granted permission to export cloth from Exeter; he had the Vintner's licences, and certain Customs' perquisites. These concessions of themselves would cause him to be held in no great regard by the Merchants, but I think we may infer, from what little is recorded of him in our minutes, that he was anything but a favorite with them.

At the Court held 15th April 1586, a defence is instituted against Sir Walter Raleigh and his officers for the taking away of the excessive fees upon cockets and certificates. In the following month, Sir Robert Denmy, Recorder of the City, is entrusted to sit on behalf of the Company on the commission touching Sir Walter Raleigh.

Two years later, returning heart-sick and weary from an unsuccessful expedition to the west, he offered the benefit of all his discoveries in America, retaining one-fifth of the profits, to our Merchant Adventurers, and was met with this rebuff "that they nor anye of them would consent therunto nor put their handes and scales to the said instrument for divers and sundrie special causes then alleged."

This is all that is recorded of the great Sir Walter, but it is significant, and indicates that there was but little sympathy for the great discoverer, and no confidence in his adventures.

Mr. Cotton's book has a good many illustrations, both portraits of leading members of the Company and, what are more interesting, views of old houses and other buildings in Exeter, among them the city gates which have so unluckily vanished. The Guildhall, the special abode of the Company itself, is still the most striking secular building in the city.

BIARRITZ AND BASQUE COUNTRIES.*

WE fancy there are few people who could tell us more about Biarritz and the Basque countries than Count Henry

* *Biarritz and Basque Countries*. By Count Henry Russell, Author of "Pau and the Pyrenees," &c. London: Edward Stanford, 1873.

Russell. He has resided much in these parts, and has made himself a certain reputation as an enthusiastic pedestrian. He must have familiarized himself with all the more frequented valleys, and penetrated into many of those more remote ones which are rarely visited by strangers. He has written one pleasant little book on Pau and the Pyrenees, which quite deserved any success it obtained; and we make no doubt that his present work will prove equally useful and trustworthy. We can answer at least for the accuracy of his information in so far as we have had personal opportunities of verifying it. Whether the small volume will ever become very popular at Biarritz is another question, but if it does not, it need be no discredit to its author. The frequenters of French watering-places seldom sin on the side of activity, and at none of these perhaps is there more of the French *dolce far niente* than at Biarritz. It is not surprising. The place is sufficiently bright and attractive; indeed it is so much brighter and more attractive than anything in its immediate neighbourhood, that visitors very naturally are loth to leave it for its environs. You have gay little streets, where you can take refuge in shady nooks from the floods of Southern sunshine. You have some cool vegetation which has been most carefully cherished. You have cliffs where you catch all the breeze that may be blowing, and a seductive Casino standing high upon its charming terrace, where you may enjoy music and ices, coffee, absinthe, and *cognac*. You command magnificent views over one of the bluest seas in the world, and you take in the whole sweep of the Spanish coast, until you lose the faint outlines of the mountains in the dim distance some seventy miles away. There are generally great rollers in "Biscay's sleepless bay" in the calmest weather, and when it is blowing a gale, or half a one, the ocean becomes very grand. Below the little town is a fantastic foreground of rocks which have been tunnelled out in archways, and wrought into caverns, and in stormy weather these provide you with a continual display of waterworks. You have a choice of bathing-places according as the weather is wild or peaceable. The water is always tepid, and people pass the better part of their lives in it. As the sexes mingle promiscuously in the lightest and most coquettish of costumes you speedily lose all sense of bashfulness, and society establishes itself on the easiest of footings. But naturally the life and the heat generate a certain languor, and strongly predispose you to a lounging existence. There is a large Spanish element, and Spaniards of the upper classes never exert themselves if they can possibly help it. Indeed, by the time the ladies have had their couple of protracted baths, and made their four or five elaborate toilets; when they have enjoyed their four meals, with the siestas that naturally follow them; when they have to look forward to a dance, or a concert, or a gathering at the Establishment of a sultry evening, it is plain there is no great time to spare for distant excursions. The gallant gentlemen keep by the ladies as in duty bound, saunter about in their varnished boots, and take extraordinary care of their fallow complexions.

It must be confessed that it demands a violent effort of resolution to break away from the indolent routine of such an existence. Those lengthy expeditions which Mr. Russell describes are doubtless as pleasant as he makes them out to be. There are agreeable spots not very far removed from the esplanade. It is very enjoyable in the pine woods between Bayonne and the sea, filled with the fragrance of the resin exuding in the warm shade, or by the water that breaks on the sand-banks on the bar of the Adour. But then the little town is girdled on all sides by shadeless chalk and sand; the glare and reflection are always terrible, and if any air is stirring to cool you, you are nearly choked by the penetrating particles with which it is charged. If you ride by the roads, they are invariably hot and dusty; if you prefer trying the beach, you find your horse is labouring heavily in the loose sand, in which he sinks over the fetlocks. Even Mr. Russell, in indicating the expeditions which are within your reach, rather gives you the idea of recommending them as a *pis-aller*. As you are at Biarritz - he seems to say - you may possibly want to find outlets for any superfluous energy, or you may feel it a matter of conscience to explore the neighbourhood of your temporary sojourn. People on whom the monotony of existence is beginning to pall may like the excitement of an occasional picnic, with the semblance of hardship it necessarily involves. Even when you have reached "the boggy shores of Lake Brindos (only a few acres), a deserted and silent sheet of water, on whose brown and barren banks scarcely a tree is to be seen," he tells you that after a few minutes of melancholy contemplation you will be too happy to leave them. We can easily believe it; only it suggests the question, whether it was worth while making the effort to visit them at all. In short, we should be inclined to say that, before deciding on a summer visit to Biarritz, you should make up your mind as to how you mean to amuse yourself. If the life we have described happens to suit your taste, go by all means; if lounging, bathing, and languid flirtation content you, you can hardly hope to find a better place. But we cannot conscientiously recommend it if you are bent upon exercise and pleasant excursions. You will be better off at Bagnères de Luchon, or Bagnères de Bigorre, or moving about among the smaller inland baths of the Pyrenees.

For that reason we could wish that Mr. Russell had devoted more space to his account of the Basque country, proper and its wilder and less visited districts. His notes and indications are quite interesting and valuable enough to make us wish that they had been less meagre. He tells us generally that nothing in France

is more beautiful than the Basque Pyrenees; that their only drawback is the changeableness of the climate. "It is more than redeemed, however, by the scenery, the exquisite verdure of the foliage and fields, and the graceful undulations of the soil, which give the whole country the rich, but pastoral, aspect of a great English park." Water is lacking, of course, as it is in all the landscapes in the Pyrenees. But the country is cheerful, and is thickly covered with bright little dwellings. It has the great merit of being one of the very cheapest districts the tourist can possibly visit. You may dine excellently for a shilling, and Mr. Russell assures us that there is hardly a village but has its neat little inn, which is scrupulously clean; while there is not an inn where you cannot get a capital dinner. Perhaps his having given us this comfortable assurance to begin with is the reason of his seldom subsequently condescending to particulars as to any inn in especial; but we confess that our experience has made us somewhat distrustful of such economical paradises as the one he describes. It is true we have dined very tolerably in very primitive hostels in the Pyrenees, but we have dined very badly too. The Basques are a people apart, no doubt; still we have trenced upon the Basque country, and have carried away indelible impressions of mutton so strongly impregnated with garlic that none but a native-bred mountaineer could venture on it; while we have found one of the great drawbacks to the pleasure of Pyrenean travel to consist in the difficulty of quenching to your satisfaction the thirst that frequently besets you. On the Spanish side, quarters are generally infamous, while grease and lamp-oil are profusely introduced in cooking that is otherwise simple to a fault. So altogether, if we intended exploring the Basque country under Mr. Russell's directions, we could wish that he had been more discriminating in his recommendations as to particular houses. On other, and we suppose we should call them more important, points, although he is very brief, he leaves little to desire. He is very minute as to distances, and except where he advises taking a guide, his instructions go sufficiently into detail to enable you to dispense with one. He indicates the characteristics of the scenery, and in particular valleys points out the spots that will best repay a visit, without providing you with a stock of suitable sentiments and ready-made raptures. There is much that is picturesque, and a good deal that is very grand, where the French Basque country rises towards the Spanish frontier. Although there are few sheets of water of any size, yet you have mountain torrents tumbling down savage gorges in cascades that are striking out of all proportion to their volume. On the slopes of the higher mountains, are endless forests, in which you may wander for days without finding an outlet, should you unfortunately happen to go astray in a fog. There is game if you are a sportsman, and noble game too—bears and wolves and izzards; although we suspect you are not likely to do execution among the former, unless you come in for one of the periodical battues which are organized on an enormous scale. You will find an infinite variety of forest studies if you are an artist, and abundance of views in the more open country if you are not very particular about shade. You may enliven your trip by pilgrimages to the scenes of romantic legends, as to the Pas de Roland, where the immortal Roland kicked a branch in the mountain when he wanted to take a short cut; or to the shrine of Angloul, whose soil, as Mr. Russell informs us, has been hallowed more than once "by miracles beyond dispute" since the birth of St. Vincent de Paul in the middle of the sixteenth century. Then the Basques themselves are an interesting people, and will well repay some ethnological researches. Only to study them satisfactorily you ought to have mastered something of their language, and it is not embraced in the educational course of ordinary English students; while to enjoy their country, unless you have extraordinary resources of your own, you are extremely dependent upon the weather. We know few things more wretched than being stornbound indefinitely in a dull inn, while you are yet outward bound, and several stages from the outskirts of civilized society. Resolution urges you not to retreat. Yet all is doubt and darkness in front, and time as it goes by crushes you under a growing load of *ennui*, unless you are an enthusiastic student of manners, and force yourself on the society that assembles in the Pyrenean taproom. And as Mr. Russell confesses, the climate of the Pyrenees is even more fickle than climates commonly are in the mountains. However, you are comparatively safe if you choose late summer and early autumn for your tour; so from that point of view Mr. Russell's book appears very opportunely. It is very portable and tolerably practical—no small merit in a pedestrian's pocket companion.

ART TREASURES OF LAMBETH PALACE.*

ON the banks of the Thames there remain few more picturesque objects than Lambeth Palace. The public buildings in its immediate neighbourhood, such as the Houses of Parliament, Westminster Bridge, and St. Thomas's Hospital, wear a modern garb, while in appropriate contrast stands the residence of the Primate of all England, venerable in its antiquity. The sky outline, broken by battlements and varied by clustered brick chimneys, is marked by the various accidents which come in the lapse of centuries; the two bold towers of the Gatehouse (date about 1490) nobly crown the composition; in the midst is the hall, now the library, and on the eastern extremity rises the grey Lollard tower, in

which the Lollards were imprisoned. The architectural styles are various; the entrance at the Gatehouse is by a Tudor arch, while the chapel presents a pure example of Early English comparable to the interior of the Temple Church. The inside of the chapel is disfigured by later woodwork put up by Archbishop Laud. From a pictorial point of view, the whole group of buildings, comprising the grey old tower of Lambeth parish church, is rendered all the more effective by the richness and the variety of the colour. On the opposite side of the river stands the Palace of Westminster, cold and colourless, and on the same side is the span-new hospital, altogether crude. But the towers of Lambeth, some of red brick toned down with age, and others of stone, shadowy, acclimatized, and atmospheric, make a picture which an artist might put into his sketch-book without need of alteration. The effect is further enhanced by groups of trees within courtyard and garden, the cool green of which, especially when, as here, in complementary contrast with red brick, brings grateful relief to the eye, jaded by the glare and crudity of modern streets. We scarcely can recall in the whole extent of London so happy a combination. It is as if at this very point town and country had agreed to meet on friendly terms; indeed the old Palace in which for centuries the Archbishops have dwelt remains as untainted by the encroaching city as if it were still planted among fields. The interior, secluded from the turmoil of commerce, and shut out by pleasant gardens from the busy world, is a seat congenial to learning and piety.

The Lambeth Library, consisting of nearly thirty thousand volumes, is placed in the Great Hall, rebuilt in a picturesque imitation of Gothic, in 1661, by fusion on the foundations of the older one which the Parliamentarians had destroyed; the proportions of the hall are symmetrical and noble; the roof, constructed of English oak, may be compared with the timber roofs of Westminster Hall and Hampton Court. It appears that a collection of books existed coeval with the earliest chronicles of the Palace, but the actual foundation of the Library is not fixed prior to 1610, when Archbishop Bancroft gave all his books to his successors for ever, "provided they bound themselves to the necessary assurances for the continuance of such books to the Archbishops successively." Abbot, the next primate, carried out these injunctions, and added his own books to the Library. Then ensued the troublous times of the Civil War, during which Archbishop Laud's bequests of books and MSS. were in great part lost; and for safety the Library was for a time transferred to Cambridge. Ultimately Archbishop Sheldon (1663-78) brought back the collection to the Palace, and bequeathed a portion of his own library "towards the increase and improvement of the publique library of the See of Canterbury now settled at Lambeth House." Subsequent Archbishops from Tenison down to the present day have, by bequest or purchase, added MSS., tracts, theological works, &c. The MSS., numbering in all some thirteen hundred volumes, are divided into seven series, named after their respective donors. Of the illuminated MSS. we will speak more in detail. Most of the volumes, both printed and written, are distinguished by the arms or initials of successive primates and other donors, and the title-pages or fly-leaves often bear autographs and memoranda. Thus many of the Lambeth books contain inscriptions, copious notes, or autograph signatures of Archbishop Tenison. Among the MSS. also may be named a "collection of papers formerly belonging to Archbishop Laud; many of them written by his own hand, and most of them endorsed by him." As an indication of the value of such records we may mention that Mr. Hill Burton, the historian of Scotland, has recently been consulting Laud's MS. notes.

The books have been well cared for by successive librarians, several of whom are known by contributions to the literature of the country. One of the earliest, Henry Wharton, is remembered as "the learned author of *Anglia Sacra*, and a host of works whose titles are too numerous to record," and one of the latest has been Dr. Maitland, the author of *Essays on the Dark Ages*, the Reformation, &c. These and other students have done good work within the Palace by the compilation of catalogues, indices, &c. Indeed so much had been already accomplished that Mr. Kersey, the present Librarian, found little more left to be done than the preparation of the present useful manual. Here, within small compass, has been compressed an account of the illuminated MSS. and other art treasures within the Library. In the introduction these MSS. are "considered in their relation to history, symbolism, and practical uses." Then follows a description of the principal examples, under the distinctive divisions of "Hibernian Art," "Anglo-Saxon Art," "English Art," "French Art," "German Art," "Italian Art," and "Persian Art." The Handbook ends with a slight notice of the printed books with illustrations—about eighty in number—among which prominence is given to "Christian Prayers, &c., small quarto, London, John Daye, 1569." This interesting little book belonged to Queen Elizabeth; the page and border illustrations are after Holbein and Albert Dürer. Another prized treasure is a fine copy on vellum of "*La Danse Macabre*," a composition consisting of thirty-three designs which correspond to, yet differ from, the usual Dance of Death. One of the illustrations, the vision of "*Les trois mors*," correspond to the famous scene in Orcagna's fresco in the Campo Santo Pisa, wherein three young men on horseback came upon three open coffins. Similar representations were common throughout Christendom. One was discovered a few years ago over the Chancel arch of Mattell Church, in Essex. Such correspondences, distant in time as in space, are interesting as showing the interchange sub-

* *Art Treasures of the Lambeth Library: a Description of the Illuminated Manuscripts, &c., including Notes on the Library.* By S. W. Kersey, M.A., Librarian. London: Fleeting. 1872.

sisting between national styles, also as proving that these pictorial narratives, whether reproduced in Italy or France, had cognate ideas and incidents which point to a common origin. Especially the history of Last Judgments throughout the whole of Christendom points to a unity of origin even in the midst of diversified developments.

The Lambeth Library is of easy access under present regulations. It is open three days in the week, extracts from the MSS. or printed books are allowed to be made freely, and permission can be obtained to draw or trace from the miniatures and illuminated MSS. Mr. Kershaw says:—

The author feels that the Archiepiscopal Library contains many treasures of mediæval art but little known to students in general. This fact has probably arisen from two causes—namely, the absence of any detailed description of the illuminated books, and that, up to a recent period, freedom of access and liberty to examine has been beset with unavoidable difficulties, now no longer existing. Under these circumstances, all those MSS. that can in any way merit the attention of art students are now described, arranged under countries and in order of date, and as regards the finer examples, a full description of their contents, both as to subjects and ornamentation, has been given. The number of volumes that can be called “illuminated” is about thirty, and of these about fourteen present examples of art, from the eighth to the sixteenth century, of a very superior description.

An epitome of the chief works may be given in few words. First in order of time, if not of merit also, come “the Gospels of MacDurnan” of the ninth century. This precious MS., comparable in style to the Book of Kells in Trinity College, Dublin, is richly illuminated with figures of the Evangelists surrounded by Runic ornament. The treatment of the human form is that of Northern schools; the influence of the Southern Byzantine, a style diffused throughout Europe, is not here felt. In a wholly different manner is the “Lambeth Apocalypse,” one of the gems of the library, which offers a rare field for study to the artist, archaeologist, and student of Biblical literature.” The date is the beginning of the fourteenth century, the country is France, the style is allied both to the Byzantine and the Carolingian schools. Seventy-eight coloured designs illustrate the chief scenes in the Apocalyptic Vision, and some of the figures have a grace and a beauty not unworthy of the spiritual school. Internal evidence indicates that these illuminations are not all by one hand. Next may be named “the gem of the Lambeth Psalters,” a choice example of French art of the fourteenth century; the style is Gothic, under Byzantine influence. Some of the eleven large initial letters, which occupy nearly half the page, are very beautiful, and a figure of David striking bells is remarkable for its inspired and passionate action. Under the head of “English Art” comes a splendid MS., “the Chichele Breviary,” early in the fifteenth century. “The centres of the larger initials are filled in with exquisite miniature representations of Scripture history.” Classed among French Art occurs “a very fine copy of the work known as the *St. Albans Chronicle*, “profusely ornamented with nineteen large and fifty small illuminations,” representing battles, tournaments, jousts, &c. These compositions furnish the present manual with a couple of well-chosen illustrations. “The Signing of the Treaty of Arras,” and “The Marriage of Henry, Emperor of Rome, to Maude, daughter of Henry I. of England.” Also we have made notes on “the Limoges Missal,” a French work of the fifteenth century, with finely illuminated letters; likewise worthy of remembrance is a profusely illuminated Flemish MS., the “Hours of the Virgin.”

These treasures may be summed up briefly as follows. Of the Sacred Scriptures there are two copies “of what is termed St. Jerome’s version, written and illuminated in Germany in the twelfth century,” also the Gospels of MacDurnan, and the Lambeth Apocalypse. Of Missals, the Limoges Missal is a fine example. Among Breviaries the Chichele Breviary is also renowned. Psalters are well represented, “there being no less than six copies, all more or less illuminated, and chiefly by artists of the French school.” The Library also boasts of five volumes of Hours, “two of which contain very fair specimens of English ornamental art.” Likewise may be enumerated “the celebrated treatise of Aldhelm de Virginitate,” “the meditations of St. Augustine, Ambrose, Bernard, and others,” “the Dictes and Sayings of Philosophers,” and “two fine copies of the Koran in Arabic, richly ornamented by Persian artists.”

The Palace possesses about one hundred portraits of archbishops and bishops, of which twelve were found worthy of exhibition with “National Portraits” at South Kensington. Among the most famous is that of Archbishop Warham, by Holbein, described by Mr. Wornum as “one of the first portraits of importance painted in this country, and a remarkable specimen of the painter’s power.” “This is a picture as well as a portrait; all the accessories are excellent, and especially the jewelled crucifix, which is precise and accurate without being hard.” There is a replica, with differences, in the Louvre; but Mr. Wornum prefers the Lambeth picture, “notwithstanding its less showy colouring.” Other portraits deserve attention, either from the celebrity of the individuals or from the merit of the art. Among the number are Cardinal Pole, painter unknown, the style showing Italian influence; also Archbishop Laud, a tolerably good example of Vandyck, and Archbishop Tillotson, a powerful picture by Kneller. An indifferent portrait of Archbishop Herring is ascribed to Hogarth, and two comparatively mediocre works, the heads of Archbishop Secker and of Thomas Newton, Bishop of Bristol, can scarcely be said to display Sir Joshua Reynolds at his best. We need not dwell on the double interest attaching to these three centuries of portraits from their being

gathered together on this historic spot. The place which once knew so well these venerable chiefs of the Church seems to know them still; in short, the prelates and the Palace form one chronicle.

THE GULISTAN, OR ROSE-GARDEN.*

ANOTHER translation of the *Gulistân*! Considering that we have at least five different translations in English, a Latin one of as old a date as 1650, half-a-dozen or more translations in French, an equal or greater number in German, translations into other languages of Europe, a translation in Hindustani, and a number of Persian glosses and commentaries, we have a right to look for excellence, if not perfection, in the work before us. So far from that, we find only poor mediocrity.

Twenty years have passed since Mr. Eastwick’s translation appeared—a translation not without its faults and shortcomings, but still by far the best which has yet appeared in English. It has no doubt passed out of the memory of many, and many more have at the best only a vague and hazy notion of what the *Gulistân* is; so, before dealing with the translation, we will say a few words as to the original work and its author. Muslihu’d din Sâdi, Shaikh Sâdi, or, as he is fondly called, “the Shaikh,” was a native of Shirâz, and died in that city about the year 1290 A.D., at an age exceeding a hundred lunar years. He was of humble birth, but he showed early marks of ability, and obtained a scholarship and his education in a college at Baghdad. He continued his studies up to the age of thirty, and for thirty years after he seems to have been continually travelling. Fourteen times he performed the pilgrimage to Mecca, and he visited the most distant regions of the Muhammadan world. In Syria he was taken prisoner by the Crusaders, and was forced to work in the trenches of Tripoli. He mentions his visit to Egypt, to Kashghar, and other places, and in his wide wanderings he acquired a great and varied knowledge of men and manners. His poems are chiefly in Persian, but he wrote Arabic verse with almost equal facility. Sâdi was a man of strong common sense and of quick perception, which pierced deep into the springs of human action. His tone of mind was eminently religious and reverential, and he constantly inculcates charity, gentleness, and mercy. Sâdi’s poetry never takes the highest flights; it deals with practical, moral, and religious subjects which come within the grasp and comprehension of all men; and his thoughts are expressed in most graceful and polished language, now lofty and didactic, now playful and witty, always terse and pointed, and frequently epigrammatic. A native writer declares him to be “the most eloquent of writers, and the wittiest author of either modern or ancient times.” No writings have ever enjoyed such a popularity in the East as Sâdi’s; his verses are committed to memory, his sayings are quoted as proverbs, and his works are looked upon as a mine of wisdom in which some maxim or observation may be found applicable to every accident and calamity, every joy and sorrow of human life. Of all his works, *The Gulistân, or Rose-Garden*, is the most popular; it is admired alike by Orientals and by those Europeans who can read it, and it only requires a translator of poetic power to make it acceptable to English readers. *The Gulistân* is written in prose intermingled with verse. It is divided into eight chapters, each treating of a special subject, as “The Duties of Kings,” “The Excellence of Contentment,” &c. These consist of stories and anecdotes, of the most varied character. The eighth chapter on “The Duties of Society,” is composed entirely of short maxims, expressed in prose and enforced or illustrated in verse.

Mr. Platts, in the preface to his translation, declares that “his aim throughout has been to provide students of Persian with facilities for surmounting the obstacles which they are likely to encounter. The language of the translation never aspires to any loftier purpose than to render the original intelligible.” Now, if Mr. Platts had adhered to this determination, and had given us a hard and dry, literal but correct, translation, it would not have been pleasant reading, but it might have been welcomed as a boon to students. But, as we shall presently show, he is not literal or exact, he occasionally indulges in fine language, and is even guilty of the most unpardonable of all sins in a translator—that of attempting to improve upon his author. But there is one point upon which he has claims to gratitude. “The poetry of the original has been translated line for line, without, however (save in one instance), any attempt at versification.” When we find in this one instance such lines as—

Do good, O man, and count thy days a precious boon ere yet the hour
Arrive, when all the cry will raise that such an one is now no more—

we feel it a mercy that Mr. Platts found a poetical version to be beyond his powers. The translation is accompanied by numerous notes, some of which may be useful, but many are of a very trivial character; for instance, in quoting the aphorisms of wise men, the Persian idiom is, “they have said,” not “they say.” Any one incapable of at once appreciating such a trifling difference must be a dullard who had better give up study at once. But Mr. Platts explains this twice in the first two pages, and he does so again and again, probably every time it occurs, as far at least as page 301. We need not go far to find instances of what we complain. At the end of the preface Sâdi gives a quatrain containing the date of his composition. One line says, “That

* *The Gulistân, or, Rose-Garden of Shaikh Muslihu’d din Sâdi of Shirâz*. Translated from a Revised Text, with copious Notes, and a Life of the Poet, by John T. Platts, late one of Her Majesty’s Inspectors of Public Instruction in the Central Provinces of India. London: Allen & Co.

period was a pleasant time for me." This is not fine enough for Mr. Platts; he tells us, "The sense is, 'those were the happy days when the celestial fire burnt bright within me and I was absorbed in the pleasant task of composition.'" Having thus determined what Sâdi meant to say, or ought to have said, he adds, "All the translators appear to have quite missed the sense of these verses."

The first story is of a poor wretch condemned to death, who in reckless despair abuses the King who has passed the sentence, "in accordance with the saying, 'He who despairs of life speaks out whatever he has in his heart'"—this being the way in which Mr. Platts, without any observation, translates the forcible and idiomatic expression "He who washes his hands of life." In some exquisite lines in this story Sâdi expatiates on the futility of worldly possessions. Mr. Eastwick's rendering of these lines is—

The world, my brother! will abide with none;
By the world's Maker let thy heart be won.
Rely not, nor repose on this world's gain,
For many a son like thee she has reared and slain—
What matters, when the spirit seeks to fly,
If on a throne or on bare earth we die?

The fourth line Mr. Platts renders

For it (the world) has pampered and slain many such as thou (thee?).

Now the original word does mean "reared," "nurtured," but it does not mean "pampered." No doubt the translator deemed the latter an improvement, but he was tampering with his text, not translating. It places him moreover in this dilemma—that he must call Providence "the pamparer," for the agent of this very verb is the word by which Providence is commonly designated. Again, in the third book, a story is told of a burly fellow who had made himself obnoxious to the captain and passengers of a boat in which he was travelling. On reaching a ruined building in the river the captain represents the boat to be in danger, and induces him to jump out with a rope and help to keep the vessel clear. Then the captain wrenches the rope from his hand and sails on without him. This statement of the affair does not satisfy Mr. Platts. To say nothing of his having substituted "prow of the boat" for "rope"; in the first instance, he favours us with a note when he comes to the wrestling away of the rope. He translates the word by "severed," and says:—"I prefer this rendering to that of 'wrenched,' given by other translators, for this reason, that, the man being very powerful, a jerk from the boatmen would undoubtedly have pulled him into the water, while it was so much easier to cut the rope." It is nothing to Mr. Platts that the original verb does mean "wrenched" and has nothing to do with the verb "to cut." Ordinary minds too might suppose that the boatmen was much more likely to wrest away the rope and save it than to cut it and lose it; and that, even if he had pulled the bully into the water, he would not have been much grieved. The third story in the book is a good one, but too long for quotation. In it we have several instances of blundering, and of the translator's sweet consciousness of superiority over his forerunners. The story is of a prince who was despised by his father because he was short and ugly, while his brothers were tall and handsome. He expostulates with his father and proves his value by his deeds. "O father," says he, "better the dwarf who is bright than the fool who has height; not all that is largest in girth is greatest in worth." Most of these sayings of Sâdi's are in rhyme, and should be rendered in rhyme if possible. We do not blame Mr. Platts for not having attempted it, but we deny his right to change a negative into an affirmative statement, and translate as "whatsoever is smaller of size is higher of value." In the next page he has three notes astounding alike for the ignorance and the self-complacency which they exhibit. There are some lines which Mr. Eastwick has rendered with great spirit:—

I'm not he that on the battle day my back will meet thy sight,
I'm one whose head thou'lt follow midst the dust and gory fight.

Mr. Platts renders the last line "Such an one am I, that in the midst of dust and blood thou may'st see a head"; but what does he mean by his note—"Translators strangely misunderstand this line when they render it, as they do, 'I am one whom thou wilt see as chief or leader in the midst of dust and blood'?" The first two lines of another quatrain are translated thus:—

O thou, to whom my person appeared small and feeble!
Never regard bulkiness as a merit.

Upon the "O thou" we have this note—"The literal translation would be O so and so! or O the person! The pronoun of the second person has no vocative case in Persian." Now if the "at" in this line is not a pronoun of the second person, we should be glad to learn what it is. The trash about O so and so induces the supposition that Mr. Platts has not mastered the elementary portion of grammar which teaches how the Persian supplies its want of a relative pronoun. Upon the second line he has also a note:—"Mr. Eastwick's translation is 'Think not that roughness marks the bold in war,' wherein he loses the sense of both *durukht* and *âd*." We are not going to defend Mr. Eastwick's translation further than to say that he has translated "*durukht*," whilst Mr. Platts has himself "lost the sense of both *durukht* and *âd*." The true rendering of the lines is—"O thou to whom my person seemed despicable, so long as thou didst think about roughness, not about worth." The "and feeble" which Mr. Platts interpolates in the first line has no equivalent in the text. There is a little difficulty about the two verbs, as, *matrî causâ*, they are in different tenses; but there is no warrant for Mr. Platts changing "not" into

"never," and the *so* into the imperative; nor does *durukht* mean "bulkiness." From the second book we take the following story:—

I remember in my childhood's days I was religious, a keeper of vigils, and eager to exercise myself in acts of devotion and abstinence. One night I sat up with my father, and did not close my eyes the whole night long, but held the dearly prized volume (Korân) in my lap, whilst a company of people were asleep around me. I said to my father, "Not one of them lifts up his head to say his prayers; so sound a sleep has possessed them, that thou wouldst say they were dead." He replied, "My dear boy, if thou also slept, it would be better than backbiting people."

The pretentious man sees nought but self,
Since he has the veil of conceit before (his eyes).
If (Fate) bestowed on thee eyes with sight like God's,
Thou wouldst not perceive any one more wretched than thyself.

We have nothing to say against the general accuracy of this translation, but Mr. Platts here again makes a show of his precision, and seizes the opportunity of cavilling at the work of others. He says, "*Dar khidnati pidar*" is generally rendered 'in attendance on my father.' I prefer taking it as a respectful way of saying 'along with my father.' The verbs in the Persian are in the pluperfect, as the idiom requires; but they must be rendered by the English imperfect tense." This is no new discovery of the meaning; but most people would consider the phrase "in attendance on my father" a very respectful way of expressing what was meant. As to the remark about the tenses, it will be seen that Mr. Platts lays down the rule that the English imperfect must be used, while he has himself employed the preterite. Notes like these and notes upon the merest trifles turn up in almost every page. One more reference to them and we have done with Mr. Platts. In page 174 he has what appears to be a very learned note upon two outlandish-looking words, which previous translators have taken, and correctly taken, to be names. He professes to follow some commentator in making them common nouns. If he has found authority for this he has been misled. One of these words is Turki and another Pushtu, so that the meaning is not to be raked out of Arabic lexicons. If Mr. Platts looks into the *Life of Baber*, he will find how *tash* is used, and any book upon the Afghans will tell him what *khâl* means.

We have been occupied so much with Mr. Platts that we have done but scant justice to Sâdi. We take the following from Eastwick's version:—

A religious recluse became the guest of a king. When they sat down to their meals he ate less than his wont; and when they rose up to pray, he prayed longer than he was accustomed to, that they might have a greater opinion of his piety.

O Arab! much I fear at Mecca's shrine thou'lt never be,
For the way that thou art going is the road to Tartary.

When he returned to his own abode he ordered the cloth to be laid that he might eat. He had a son possessed of a ready wit, who said, "O my father! didst thou eat nothing at the entertainment of the Sultan?" He replied, "I ate nothing in their sight to serve a purpose." The son rejoined, "Repeat thy prayers again, and make up for their omission, since thou hast done nothing that can serve any purpose."

Thy merits in thy palm thou dost display;
Thy faults beneath thy arm from sight withhold.
What wilt thou purchase, vain one! in that day,
The day of anguish, with thy feigned gold?

Sâdi had, as these stories show, a hearty hatred of everything savouring of pretence or hypocrisy. Strong in sincerity and honesty, he shows his contempt for mere worldly censure, and looks upon it rather as beneficial. Thus, a sinful man who had repented and entered a religious order, complained to his superior that the tongues of men still pursued him, and he was asked, "How canst thou return thanks for this blessing, that thou art better than they think thee?" The following is one of his maxims:—"The noblest of created beings in outward form is man; the vilest of living things is the dog; yet, by the unanimous consent of the wise, a grateful dog is better than an ungrateful man." We will conclude with a few lines, rather out of Sâdi's usual style, the version being Mr. Eastwick's:—

A gallant youth there was and fair,
Pledged to a maid beyond compare;
They on the sea, as poets tell,
Together in a whirlpool fell.
The boatman came the youth to save,
To snatch him from his watery grave,
But midst those billows of despair,
He cried, "My love! my love is there!
'Save her, oh save!' he said, and died,
But with his parting breath he cried,
'Not from that wretch love's story hear
Who love forgets, when peril's near."

Our space does not permit us to do more than allude to the Sûfeyism which appears in the *Gulistan*, for Sâdi was a Sûfi, an early member of that race of Musulmân thinkers whose minds have revolted against the trammels of a narrow creed, and have sought to attain a more elevated and spiritual knowledge of the Deity. Many of his lines in this work have an inner and mystical meaning, though wearing a natural dress. Having said thus much in praise of Sâdi, it is only fair to add that he wrote some stories of filth and obscenity most abhorrent to a European mind. Mr. Eastwick wisely omitted these. Mr. Platts has given them, but although he has veiled the filthy language in Latin, he would have done better had he left them unnoticed.

Translations of the *Gulistan* are, it seems, out of print, and difficult to obtain. We have felt constrained to censure Mr. Platts's performance, but we do not condemn it as absolutely useless to the student. It will help as a guide, but it must not be relied upon as an authority.

A PAIR OF BLUE EYES.*

MANY readers of the fresher and truer sorts of fiction will be glad to welcome another story from the author of *Under the Greenwood Tree*, who now for the first time assumes his real name. Mr. Hardy produces rapidly; but the novel now before us is a thoroughly matured work of its kind, and bears none of the traces of viciously stimulated workmanship. He still has a sprinkling of small oddities in style, and of minor errors of taste. He occasionally uses cumbrous words, like "synthesised" and "filamentous," where simpler ones would have served the purpose; and the word "empirically" occurs (II. 86), in a passage where it cannot be said accurately to retain its own meaning or to convey the author's. He puts the phrase "sweetheart" into a position which it does not really hold among the social class which he is describing, although it is hard to assign any good reason on their part for discarding a word of Elizabethan use, before finding a worthy equivalent. He also designs the mode of life led by the heroine and her lovers with a kind of defiance of conventionality, though in each case the circumstances go far to justify what is done. Yet, when all drawbacks have been enumerated, few readers would charge *A Pair of Blue Eyes* with having been produced before its time. It is one of the most artistically constructed among recent novels. And, from considerations affecting higher matters than mere construction, we would assign it a very high place among works of its class.

The distinctive feature of this novel is that out of simple materials there has been evolved a result of really tragic power. The whole centres round the figure of Elfride, bred in the solitudes of the West country, the motherless and only daughter of a Cornish vicar; and the tragedy consists in the operation of quite ordinary events upon her sensitive and conscious, but perfectly simple, nature. By some of his former critics Mr. Hardy has been unwisely compared with George Eliot. In reality, no two writers could be more unlike in their general methods. But in one respect there is a decided resemblance—namely, that Mr. Hardy has in the book before us developed, with something of the ruthlessness of George Eliot, what may be called the tragedy of circumstance, the power of mere events on certain kinds of character. By mere events we mean a sequence in the evolution of which no moral obliquity, no deliberate viciousness of choice, can be said to have had a share. For this is another point of merit in Mr. Hardy's book, that he has kept up interest throughout it at an unusually high degree, not only without a single crime or a single villain, but with men of honest hearts and high aims for the pillars of his story, and literally without resorting, on any one's part, to a single action which, when weighed and sifted, can be condemned outright.

Mr. Swancourt, Elfride's father, is well drawn as a relief and a background to the delicate and tremulous figure of his daughter. He is a worldly, gentlemanlike, commonplace parson of the old school. Belonging to an ancient but impoverished stock, he is prouder of that than of an indirect connexion, through Elfride's dead mother, with the neighbouring peer, Lord Luxellian. While still regarding Stephen Smith, Elfride's first lover, in his actual and personal position of a promising young London architect, he recklessly favours the attachment between the two; but when it turns out that the same Stephen Smith is by parentage son to John Smith, Lord Luxellian's master mason, he as promptly turns his back, and pronounces a characteristic condemnation:—

"I was inclined to suspect him, because he didn't care about sauces of any kind. I always did doubt a man's being a gentleman if his palate had no acquired tastes. An unrefined palate is the irrepressible cloven foot of the upstart. The idea of my bringing out a bottle of my '40 Martinez—only eleven of them left now—to a man who didn't know it from eighteen-penny!"

With this discovery about Stephen Smith the weaving of the tragic web begins. He has gained a favourable footing in the Vicarage, as the responsible emissary of a London house charged with the restoration of the church; and he weakly but pardonably puts off disclosing his real birth to the Vicar until an accident that befalls his father lays everything open. It need hardly be said that this family connexion of Stephen's enables Mr. Hardy to throw in many of those sketches of genuine country life in drawing which he has already shown a master's hand. The rustic circle makes a little gallery of portraiture as distinct as it is lifelike. There is William Worm, a poor "wanbling creature," the Vicar's outdoor man, who is afflicted with perpetual noises in his head, and who "hoped Providence would have found it out by this time, living so many years in a parson's family, too, as I have, but 'a don't seem to relieve me. Ay, I be a poor wanbling man, and life's a mere bubble." With this sentiment Martin Cannister, the sexton, heartily concurs, adding that "The world wants looking to, or 'tis sixes and sevens w' some of us." There is John Smith himself, the master mason, "brown as Autumn as to skin, white as Winter as to clothes," having "too much individuality to be a typical 'working-man'"; and Mrs. Smith, retaining, in the true manner of country matrons, "her personal freshness even now, in the proxy afternoon-time of her life"; and whose features "appeared to carry with them a sort of argumentative commentary on the world's existence." She is critically severe on her husband's stupidity about flowers:—

"Men have no eye for anything nate. He says his favourite flower is

a cauliflower. And I assure you I trouble in the spring-time, for 'tis perfect murder."

"You don't say so, Mrs. Smith!"

"John digs round the roots, you know. In goes his blundering spade, through roots, bulbs, everything that hasn't got a good show above ground, turning 'em up cut all to slices. Only the very last fall I went to move some tulips, when I found every bulb upside down, and the stems crooked round. He had turned 'em over in the spring, and the causing creatures had soon found that heaven was not where it used to be."

The earliest scene in the Endelstow vault, where preparations are making for the funeral of the first Lady Luxellian, though a hint or two has been borrowed from *Hamlet*, is full of genuine touches. The master mason is busied in moving some of the family coffins, aided by an ancient journeyman who cannot restrain his memories of the past:—

"Ah, poor Lord George!" he continued, looking contemplatively at the huge coffin; "he and I were as bitter enemies once as any could be when one is a lord and t'other only a mortal man. Poor fellow! He'd clap his hand upon my shoulder and cuss me as familiar and neighbourly as if he'd been a common friend. Ay, 'a cussed me up hill and 'a cussed me down; and then 'a would rave out again, and the gould clamps of his fuc new teeth would glisten in the sun like letters of brass, while I, being a small man and poor, was fain to say nothing at all. Such a strappin fine gentleman as he was, too! Yes, I rather liked 'em sometimes. But once now and then, when I looked at his towering height, I'd think in my inside, 'What a weight you'll be, my lord, for our arms to lower under the aisle of Endelstow church some day!'"

"And was he?" inquired a young labourer.

"He was. He was five hundredweight if 'a were a pound. . . . 'Ah,' said I to John there—didn't I John?—'that ever one man's glory should be such a weight upon another man!' But there, I liked my Lord George sometimes."

"What do 'em put all their heads one way for?" inquired a young man.

"Because 'tis churchyard law, you simple. The law of the living is, that a man shall be upright and downright; and the law of the dead is, that a man shall be east and west. Every state of society have its laws."

"We must break the law w' a few of the poor souls, however. Come, buckle to," said the master mason.

And when, in the course of their talk, the men have explained Elfride's connexion with the Luxellians, William Worm once more moralizes:—

"Life's a strange bubble, ye see," said William Worm musingly. "For if the Lord's anointment had descended upon women instead of men, Miss Elfride would be Lord Luxellian—Lady, I name. But as it is, the blood is run out, and she's nothing to the Luxellian family by law, whatever she may be by gospel."

But the peculiar position of Stephen Smith serves for much more than the mere canvas on which to lay these scenes from the remote country. In place of an unreal and nonsensical picture of passion defying the social barriers of actual life, the novel conveys (without the appearance of intending it) a powerful representation of what those barriers are in fact, and of what, though perhaps in a modified degree, they are likely to remain. In the case of Elfride herself, though she is as superior to social differences as any fine-hearted girl could be expected to be, yet after the arrival of the second lover these differences work their sure part in the cumulation of her sorrows. To the principal tragic thread of the book we must now recur. We have abstained from any definite analysis of the story, because, where sequence and connexion are so delicately worked as they are here, that is hardly fair to either writer or reader; but we hasten on to the points which are essential.

After the *dénouement* brought about by his father's accident, Stephen takes his departure, and by and by goes to fulfil some commissions in India, which lead to his rapid advance. But before he finally leaves, the young pair plan a sort of escapade, which need not here be further explained, entirely innocent in its design as well as in its imperfect execution, but painfully liable to misconception, and unhappily discovered by a single pair of hostile eyes. In due course the new lover appears. He has the advantage of being several years older than his predecessor, a matured man of experience, a writer in reviews, and withal a relative of the rich widow whom Mr. Swancourt opportunely marries. He is the least natural character in the book, and he inclines here and there unmistakably to priggishness. Yet prigs are, as a matter of fact, to be met with in society; and it was essential that he should be a little stilted, and something of a purist in his notions about women. Little by little, and without a trace of conscious effort, he acquired a complete ascendancy over Elfride. He "swayed her as the tree sways the nest." All the most refined and most thoroughly womanly elements in her nature contend on the side of the new comer. She longs not to be a queen, but to lean and to be governed; to be a necessity indeed, but rather to worship than be worshipped. It must be added that this new man, Henry Knight, has been the benefactor of Stephen, has helped him forward in the world, and has been in earlier days belated to her by his protégé, until she would grow jealous of the clever friend who now dominates her. Yet, even so, she would have remained faithful to her first lover but for an adventure on the cliffs, when the imminent presence of death forces Knight and herself into an unconscious and inevitable avowal. Of the two chapters which record the ten minutes spent by Knight while he hangs between life and death on the edge of the sea-crag, and his final rescue by the despairing wit and devotion of Elfride, we will only say that they are worked out with extraordinary force, and that they recall the intense minuteness and vivid concentration of the most powerful among French writers of fiction.

And now the rather Quixotic notions of Knight work the ruin

* *A Pair of Blue Eyes*. A Novel. By Thomas Hardy, Author of "Under the Greenwood Tree," "Desperate Remedies," &c. 3 vols. London: Tinsley Brothers, 1873.

of his love. Through the contrivance of Mrs. Jethway, a woman half-crazed with maternal sorrow, and who hates Elfride because the death of her consumptive son had been accelerated by a hopeless passion for the young lady, he learns the innocent escapade of Elfride with a lover, whose name is suppressed. She had never served herself to tell the whole story of her relations with Stephen; and, under the circumstances, the case, as it reaches him, looks anything but innocent. In his passion of disappointment and suspicion he takes away from Elfride the power of putting before him the real facts, and strikes her with what is well described as a "despair which not only relinquishes the hope of direct explanation, but wearily gives up all collateral chance of extenuation." He leaves her and departs. Many months later an accidental meeting takes place in London between his old protégé and himself. Then Knight first learns that his harmless predecessor had been Stephen, and hears from his own lips the explanation of Elfride's innocence. The two men, without communicating their intentions to each other, both start for the remembered village in the West. Old ties of friendship snap under the strain; and they exchange looks almost of hatred as each recognizes the other far down on the journey. The irony of the situation is worked with remarkable force. "I think you'll lose your labour," says the elder. "Naturally you do." They had observed, without much special notice, a dark and richly-finished van attached to their train, and this van accompanied them till the station nearest Endelstow was reached. The truth then bursts upon them. The van was bringing the coffin of Elfride, the second Lady Luxellian. Worn out with sadness, and wearied with home reproaches, the motherless girl had yielded at last to the entreaties of Lord Luxellian, whose children had long accepted her as a second parent. From an old family servant they gather the whole story; she had drooped away within half a year of her marriage. We need follow the two men no further; nor need we add more than a word or two about the book itself. The author of *A Pair of Blue Eyes* has much to learn, and many faults yet to avoid. But he is a writer who to a singular purity of thought and intention unites great power of imagination, strong enough to sustain interest at a very high point of vitality, without resorting to mere surprises or descending to what is ignoble.

FRENCH LITERATURE.

M. LÉGER'S amusing volume has the great advantage of being the result of the author's personal observations.* He speaks of what he has seen. A residence of several years in the midst of Slavonian tribes has supplied him with trustworthy means of information; he knows some of the Slavonian dialects; he reads books, reviews, and newspapers written in these dialects; and the friends he has made in the course of his peregrinations keep him constantly informed of what is going on in the political and literary world. Hence we get a series of chapters full of particulars which are likely to have for most readers at any rate the merit of novelty, as the inhabitants of Western Europe know little about the Poles, and still less about the Montenegrins, Dalmatians, and Croatians. M. Léger begins by giving us a description of the vast tract of country which the Slavonians occupy; he then shows us what difficulties we have to encounter if we wish to study the manners and customs of that interesting race—difficulties arising, first, from the nature of the language; secondly, from the fierce conflict of political and religious parties. If the views of the Germans cannot be trusted on the subject of the Slavonians, the conflicting evidence given by different tribes belonging to the Slavonian family must be received with equal caution. The Russians, for instance, are prejudiced against the Poles, and the Poles against the Russians; if the Catholics calumniate the members of the Greek Church, these in their turn speak in no measured terms of the Ultramontanes. The safest plan, therefore, is to examine for oneself; or, if that is impossible, to consult those who, on the point of nationality, have no interest in the quarrels which divide the Slavonian race. M. Léger's book, treating as it does both of literature and of politics, addresses itself equally to the statesman and the man of letters.

The history of the struggle between the Anglo-Saxons and the Celts has never yet, says M. de la Borderie, been described in detail by French writers; and the purpose of the present volume † is to supply this want. Our author aims at relating from the testimony of contemporary chroniclers the terrible contest carried on in England from the fifth to the seventh century, the result of which was the foundation of the Armorican nation. M. de la Borderie is a Breton by birth, and his work is written from the Celtic point of view; it shows an acquaintance with trustworthy documents, and much talent in working out those documents in an agreeable form. The appendix which terminates the volume contains ample details as to the life of the old Bretons, borrowed from the Celtic poems of the sixth century. M. de la Borderie takes care, before consulting these poems, to show that they are really authentic, and not to be placed in the same class as the compositions of the pseudo-Osian. The only genuine poems which have been handed down to us are those by Llinarch-Hen, Anserin,

and Taliesin; these personages lived in the sixth century; but we are left completely in the dark as to the incidents of their history. A number of apocryphal poems have been ascribed to them; the only authentic ones, however, as given in the collection entitled *Myogrian Archaeology of Wales*, are six of Taliesin, twelve of Llinarch-Hen, and one of Anserin.

M. de Pontmartin's *Samedis** are not likely to make us forget M. Sainte-Beuve's *Lundis*; but they have qualities of their own, and, at any rate, they are free from those *coups de griffe* which produced so painful an effect in the articles of the author of *Port-Royal*. It is somewhat curious that two of the essays contained in the present volume should be devoted to M. Sainte-Beuve, and we must say that they give a very faithful sketch of the great critic. M. de Pontmartin endeavours to explain the bitterness which is so characteristic of the last *Lundis*. His personal appearance and certain social drawbacks made his pretensions to gallantry simply ridiculous; and the consciousness of being cut off from enjoyments and luxuries accessible to others made him envious, discontented, and morose. That semblance of modesty for which his friends gave him credit was nothing but the mental self-concentration of a man who spends his time laboriously in noticing the vulnerable points of the people around him; and when attention had enabled him to discover where the armour was at fault, he began his work as a critic with a determination to make the literary celebrities of his time smart for the disappointments which he fancied he had himself met with. M. de Pontmartin is inclined to think that M. Sainte-Beuve was always fond of exaggerating his religious scepticism; and this is also the opinion of a distinguished Protestant writer, M. Charles Secrétan, who in two numbers of the *Revue chrétienne* endeavours to show that the historian of *Port-Royal* calumniated himself in saying that for him Christianity was nothing but a fact to be discussed freely from a philosophical point of view, and independently of all religious associations.

Under the title *Rome et le vrai* † M. Félix Bungener has given us a complete insight into the principal monuments of contemporary Romanist literature. We all know what a reaction has taken place lately, even in certain Protestant circles, in favour of a class of books written under the influence of Ultramontanism. Madame Swetchine, Count de Maistre, M. de Montalembert, Fathers Lacordaire and Ravignan have become household names on this side of the Channel as well as in France. Mrs. Craven's *Récit d'une Seur* has been translated, and extensively sold; "Madame de Montagu," "Madame de Lafayette," the *Dominican Artist*, and the *Épique à Part chrétien* are the fashionable books of the present day. Against all this M. Bungener protests; he places himself at the strictly Protestant point of view, and condemns the whole of the works we have just mentioned. There is no doubt much truth in some of his remarks, especially in regard to the Jesuits; but at the same time his predetermination to find fault with all Roman Catholic writing is too evident to inspire much confidence in his impartiality; he overshoots the mark, and we doubt whether his controversial volume will produce all the effect he expects from it.

Count de Gasparin ‡ is the popular lecturer on the Calvinist side, and he has the talent of interesting his Genevese hearers by historical sketches delivered with much eloquence, although, as we have before pointed out, declamation often occupies the place which facts ought to fill. The volume which he now publishes on Luther and the Reformation of the Sixteenth Century has nothing original about it; it is a dilution of M. Morle d'Aubigny, mixed up with remarks intended for the Roman Catholics of our own times. The portrait of Erasmus is very much what we expected to find; but it is going a little too far to say, as M. de Gasparin does, that the illustrious Dutch scholar had no conscience.

The critics who from time to time have given an account of the periodical exhibitions of pictures held in Paris number several distinguished men, and it will be remembered that Diderot wrote a description of the *salons* of 1765 and 1767. M. Jules Claretie has added his name to the list of the *salonniers* §, and his *Peintres et sculpteurs* will be found a useful handbook for the history of French art. It is unfortunate that M. Claretie should go out of his way to attack the German artists; the execrated fellow-countrymen of Cornelius and Overbeck are dragged into his preface without either rhyme or reason. It would appear that, whatever may be the subject treated, no genuine Frenchman feels that he has done his duty if his book does not contain a proof positive of his anti-Prussian sentiments. M. Claretie's work belongs to the same class as the year-books published by M. Hachette; it contains biographical details which add much to its value, and is completed by an excellent index.

Dr. F. Hofer's interesting volume on botany forms part of the collection of works on universal history published by Messrs. Hachette. || It contains a very full and trustworthy account of the progress made by that science from the earliest days to the present time, and it gives a full description of the principal systems which have successively prevailed. Mineralogy and geology come next, with their correlative sciences, palæontology and crystallography. Dr. Hofer takes the opportunity of briefly enumerating

ting the various local traditions on the Flood, and he explains the geological theories propounded by the philosophers of the seventeenth and eighteenth centuries.

The tenth volume of M. Vivien de Saint-Martin's *Année géographique* * is as carefully done as all those which have preceded it. Amongst other interesting details, it gives us a summary of Mr. Stanley's voyage in quest of Dr. Livingstone, and an account of the scientific observations made to determine the French meridian. The bibliographical and necrological lists are very accurate.

M. Ed. Mailly † has devoted an exhaustive *brochure* to the description of the state of astronomy in the Southern hemisphere and in India. He begins by examining what was known to scientific men about the constellations of that part of the heavens previous to the researches made by Halley at St. Helena, and by Lacaille at the Cape of Good Hope. As his plan embraces only those astronomical studies which require permanent institutions, M. Mailly has left unnoticed Richer's famous voyage to Cayenne, and also the expeditions made for the purpose of observing the transit of Venus, and of determining the shape of the earth. He describes the observatories established at various times in the colony of Victoria, at Batavia, Rio Janeiro, Lucknow, and elsewhere. This essay was originally an academical memoir submitted on March 2, 1872, to the Belgian Académie Royale.

The questions relative to the origin of species ‡ are still exciting much notice, and the volumes which have been suggested by these problems are already numerous enough to fill a large library. Those whose researches lie in this direction may be divided into three groups:—1. The physicists properly so called, who are thoroughly engrossed by their studies, and who do not seem to care to meditate upon the religious and metaphysical consequences resulting from the facts which they observe with such persistent eagerness. 2. The thinkers who, on the other hand, being absorbed by investigations of a religious character, do not possess the means of appreciating with accuracy the complicated movement of natural science and its relations with the study of the invisible world. 3. The crowd of intelligent people who are equally unable to study physics or metaphysics, but who wish to know whether an agreement is possible between reason and faith, and whether a belief in the Bible and the teaching of the Church is consistent with the acceptance of the theories propounded by naturalists. Father de Valroger attempts to answer these questions, and in doing so he starts with the assertion that the arguments which men of science bring forward contain nothing dangerous to the Christian faith; moreover, in order that his conclusions may not be rejected because they are those of a priest, he takes care in all cases to allow the most celebrated *savants* to speak for themselves. The volume begins with an introduction on the genesis of species and the theory of evolution; the first part contains an account of the life and labours of Messrs. Agassiz and Darwin; in the second, which is devoted to the results of French science, we have an examination of the views of M. de Blainville, M. Isidore, Geoffrey St.-Hilaire, Viscount d'Archiac, and M. Godron.

M. Heinrich § wished some time ago to translate into French Fichte's celebrated speeches to the German nation, believing that between the Prussia of 1808 and the France of 1871 the analogy was complete; reflection, however, soon led him to see that, if the humiliation was the same in both cases, the disasters which occurred at Jena could not be traced to the same causes which brought about the catastrophe of Sedan, and that, in like manner, the means of repairing those disasters were not identical. Instead therefore of translating Fichte, M. Heinrich has preferred composing an original work, abstaining even from borrowing the word *discours*, which he considers too pedantic and formal. M. Heinrich is a Conservative, and he says so very frankly. He blames France for the recklessness with which she casts away tradition and repudiates the past. Although M. Heinrich is anxious to see a Conservative Republic proclaimed in France, he looks upon that form of government as essentially provisional, and believes that sooner or later the French must return to monarchical institutions. His argument may be stated at follows:—No political party can found anything permanent unless it contains within itself a majority of moderate elements; now it is a matter of fact that moderate Republicans are, on the other side of the Channel, an imperceptible minority. But, further, in a State which is geographically as well as politically great, the Federal form is the only one which Republicanism can adopt; that is to say, France would have to accept an administrative *régime* entirely at variance with the national sympathies. Constitutional Monarchy, then, is the only possible issue; and M. Heinrich thinks that the legitimate prince, the Count of Chambord, will probably be called upon, by the course of events, to re-establish it.

M. Clamageran's new volume || is a political programme which moderate Republicans would do well to study, for it is not very ambitious, and could easily be carried out. The author remarks on the false views which Frenchmen entertain of liberty, and he

lays the blame quite as much at the door of his political friends as that of the Conservatives, or, we should rather say, the Royalists. Neither these nor the ultra-Radicals look upon liberty as the principle by which society is to be reorganized. The latter want to maintain order, and the former are anxious to realize equality, without the help of freedom. M. Clamageran does not think that the system of two legislative Houses can be adopted by Republican France, for the very reason which leads M. Heinrich to reject Republican institutions altogether—namely, that an Upper House would necessarily open the door to Federalism. The reforms still wanted in the various departments of public instruction, the magistracy, the army, &c., are pointed out with much clearness by M. Clamageran, who admits that the exercise of liberty cannot be considered in any way as absolute, and that the public authorities are often bound to interfere. We question, however, whether some of the cases quoted are those which necessitate the limitation of a citizen's freedom.

The essay on Sully * for which we are indebted to M. Legouvé, is an excellent biographical sketch, founded on the best authorities, such as the *Économies royales*, Bassompierre's "Mémoires," and the large work of President de Thou. Before its publication it was already partly known to Parisian society, for the lecture on Henry IV., delivered some time ago, is part of it. M. Legouvé's style is so beautifully clear and simple that his account of the eminent Minister and friend of the first Bourbon monarch cannot fail to be extensively read.

The two new volumes of Messrs. Sanchez and Laplace's collection are quite worthy of the former ones. Boileau's complete works, carefully annotated by M. Edouard Fournier †, must be noticed first. There are very few authors who require such an amount of illustration as the Paris satirist; allusions to the great men of the seventeenth century occur continually, and he also refers to certain details and trifling facts which, although familiar to his contemporaries, are enigmas for us. We find, for instance, in the Seventh Satire the two following lines:—

Faut-il peindre un fripon fameux dans cette ville,
Ma main, sans que j'y rêve, écrira Raumaville.

Now, who is Raumaville? The name must be a false one, because if Boileau had inserted the true appellation, he would have no doubt been prosecuted for defamation of character. M. Fournier informs us that the person thus handed up to public contempt by the poet was Sommeville, the publisher—"libraire très-décrié," says Boileau himself, a kind of French Curll or Tonson. The best part of the story is that, in an edition of the Satires, the printer unintentionally put *Saumaville* instead of *Raumaville*, and under this very thin disguise the real Simon Pure was easily perceived. Again, in the *Lutrin*, the prelate who is so fond of giving his blessings in season and out of season is identified by M. Fournier with Auvry, who was Bishop of Coutances before he was appointed treasurer to the Sainte-Chapelle and, though no longer a bishop, always insisted upon being called M. de Coutances, and who "avait la manie de répandre des bénédictions," as Boileau said in a letter to Racine. The interesting biographical sketch prefixed by M. Fournier to his volume has been composed with the help of documents hitherto very little known, and a series of coloured engravings drawn by M. Emile Bayard reproduce the principal characters described by the poet.

The second volume ‡ we have to mention is an exceedingly well-selected collection of the choicest comedies written during the eighteenth century. Regnard, with his three best plays, leads the list, and the last author who has supplied specimens of humour and elegant style is Colin d'Harcville. It is interesting to see how different the society described by Regnard is from that which Molière brings before us; with Lesage, Dancourt, Dufresny, and Destouches we come to a lower class of people still, and Piron, who appears next, forms the transition to Beaumarchais, and to the political drama of the epoch which immediately preceded the Revolution. We are almost sorry that the editor, M. Jules Janin, did not either add *Le grandeur* to his collection, or give it instead of *L'avocat Patelin*. The former of these plays is the best which Brueys composed, and the *Forcé de maître Patelin*, reprinted in a previous volume of the collection, rendered the modern imitations useless.

M. Viollet-le-Duc § is one of the great French authorities on the subject of architecture, and his doctrines have been sharply criticized. Some time ago he wished to deliver a series of lectures on the particular subject of his studies, but the opposition he encountered compelled him to give up his idea, and to be satisfied with publishing in a work the substance of his teaching. Hence the *Entretiens sur l'Architecture*, the first volume of which is now before us. It consists of ten chapters profusely illustrated with woodcuts, and accompanied by an atlas of finely executed plates. M. Viollet-le-Duc begins by general questions; he discusses the nature of art, examines how far it influences the civilization of various nations, and states what are the best conditions for its development. He then studies in detail the architecture of the Greeks, the Romans, mediæval Europe, the Renaissance, and shows how, and from what

causes, the monumental structures of the present day betray the influence of intellectual decay. The historical details contained in this work illustrate the author's theory that the history of architecture is intimately connected with the political and religious life of mankind.

The *Études sur le Brésil*, by M. Charles Pradez*, derive much of their value from the circumstance that they are written in the most unpretending manner, and that the traveller to whom we are indebted for them has not the slightest pretensions to be considered an author. The book is divided into two parts, the latter of which, being devoted to an account of the slave trade and of negro emancipation, is particularly interesting. The author supplies us with a number of statistical details on the commerce of the Brazilians, and he pays homage to the energy displayed by the English Government in carrying out the philanthropic views of Wilberforce and his friends.

Novels abound as usual, but we cannot yet see any signs of improvement either in the style of the books or in the phases of life and character which they are intended to portray. Last month we referred to a curious volume bearing the name of Madame de Saman. This lady, encouraged by the success of the *Enchantements de Prudence*, has published a sequel to that work under the title of *Les nouveaux enchantements*.† Here, as in the previous instalment, the names of well-known historical personages, both living and dead, are mixed up with episodes of an exciting kind.

Le sacrifice d'Aurélié‡ is a most unobjectionable tale, considered from the moral point of view, and the author evidently intends us to look upon his heroine as a model of disinterestedness and self-sacrifice; who seems to us, however, to be merely an absurdity.

Under the title of *L'abbé Tigrane*§, M. Ferdinand Fabre has attempted to describe clerical ambition, and to give us an insight into clerical life. The style of the book is unfortunately too declamatory, and the plot lacks interest.

The July number of the *Bibliothèque universelle* is remarkably rich in valuable papers. We have noticed the continuation of M. Naville's essay on Liberty, an interesting article on Beaumarchais by M. Paul Stapfer, and M. de Circourt's biographical sketch of Manzoni.

NOTICE.

We beg leave to state that we decline to return rejected Communications; and to this rule we can make no exception.

The SATURDAY REVIEW is duly registered for transmission abroad.

The publication of the SATURDAY REVIEW takes place on Saturday Mornings, in time for the early trains, and copies may be obtained in the Country, through any Newsagent, on the day of publication.

Nearly all the back Numbers of the SATURDAY REVIEW may be obtained through any Bookseller, or of the Publisher, at the Office, 38 Southampton Street, Strand, W.C., to whom all Communications relating to Advertisements should likewise be addressed.

THE SATURDAY REVIEW

OF

POLITICS, LITERATURE, SCIENCE, AND ART.

Price 6d.

CONTENTS OF No. 927, AUGUST 2, 1873:

Ministers at the Mansion House. Spain.
The Rejection of the Hating Bill. The Prorogation of the French Assembly.
Russia and Khiva. The Treasury and the Departments.
The French Treaty of Commerce. A Happy Family.

The Session. Americans in Europe. The Old Catholics at Lucern.
Womanly Dignity. Mr. Gochen's Difficulties. The Daily Telegraph in Synod.
Evidence taken by the Endowed Schools Committee.
Six a Penny. The Italian Operas.

John Sheffield, Duke of Buckinghamshire.
Pike's Mauritius. Angélique Arnould. The Merchant Adventurers of Exeter.
Blarritz and Basque Countries. Art Treasures of Lambeth Palace.
The Gullistan, or Rose-Garden. A Pair of Blue Eyes.
French Literature.

CONTENTS OF No. 926, JULY 26, 1873:

The Payment of the French Indemnity—The Bishop of Winchester and Lord Westbury—The County Franchise—The Sultan and the Khedive—The Government and the Opposition in France—The House of Lords and the Land—The Zanzibar Incident—Boole's Logical Appendix.

Wilberforce as a Churchman—The Minor Virtues—The Berkshire Downs—Evidence taken by the Endowed Schools Committee—Amateur Monasticism—Life in California—The Duke of St. Albans and the Queen—The Good Templars.

Fyndall on Light—Recollections of a French Page—Indian Travels of Apollonius of Tyana—Stonchoge—Ingo and Ingraben—Bede's African Sketch-Book—Peter's Studies of the Renaissance—Alceus—American Literature.

London: Published at 38 SOUTHAMPTON STREET, STRAND, W.C.

ADVERTISEMENTS.

BIRMINGHAM TRIENNIAL MUSICAL FESTIVAL, in AID OF THE FUNDS OF THE BIRMINGHAM GENERAL HOSPITAL.

THIRTY-FIRST CELEBRATION.

On Tuesday, August 26; Wednesday, August 27; Thursday, August 28; Friday, August 29.
President—The Right Hon. the Earl of SHREWSBURY and TALBOT.

Principal Vocalists—Madlle. Titiens, Madame Lemmens-Siering, and Madlle. Albani; Madame Vesty and Madame Trubelli-Lettini. Mr. Elma Keyes, Mr. Vernon Kirby, and Mr. W. H. Cummings; Mr. Bantley and Signor Foll.
Organist—Mr. Stumpen.
Conductor—Sir Michael Costa.

OUTLINE OF THE PERFORMANCE.

THURSDAY MORNING, August 26.—Elijah. THURSDAY EVENING.—A New Cantata, by F. Schira, entitled *The Lord of Burleigh* (first time of performance); and a Miscellaneous Selection, to include *Inno della pace*, Rossini.

WEDNESDAY MORNING, August 27.—A New Oratorio, *The Light of the World*, composed expressly for this Festival, by Arthur S. Sullivan. WEDNESDAY EVENING.—A Miscellaneous Selection, comprising Beethoven's *Symphony in A Minor*.

THURSDAY MORNING, August 28.—Messiah. THURSDAY EVENING.—A New Cantata, by A. Handeger, entitled *Fridolin* (first time of performance); and a Miscellaneous Selection, comprising *Song of Titans*, Rossini; *Overture to William Tell*, &c.

FRIDAY MORNING, August 29.—Sacred Cantata, *God Thou art Great*, Spohr; *Imperial Mass*, Haydn; *Ave Maria* (first time of performance), Rossini; *Double Chorus*, Cammermeyer (first time of performance), Rossini; *Selections from Israel in Egypt*. FRIDAY EVENING.—*Judas Maccabæus*.

Programmes of the Performances will be forwarded by post on application to the undersigned, at the Offices of the Festival Committee, 17 Ann Street, Birmingham, on and after the 31st inst.

By Order,

HOWARD S. SMITH, Secretary to the Festival Committee.

CRYSTAL PALACE.—PARTICULAR ATTRACTIONS THIS DAY AND NEXT WEEK.

Saturday (August 2).—Miss Blanche Cole's Benefit; Opera, "La Sonnambula," at 5.

Monday.—The Great Holiday Fête; Dramatic Entertainments, Ballad Concert, Military Music, Great Fireworks, &c.

Tuesday.—Opera, "La Sonnambula," at 5.

Wednesday.—The Police Orphanage Fête.

Thursday.—Opera, Production of "Fatalella," at 5.

Saturday.—Special Performance of Opera, at 5.

The Fine Arts Courts and Collections, including the Picture Gallery (the Works on sale), the Technological and Natural History Collections, all the various illustrations of Art, Science, and Nature, and the Gardens and Park always open, Music and Entertainment daily.

Admission, Monday to Friday, 1s.; Saturdays, 2s. 6d.; or by Guinea Season Ticket.

CRYSTAL PALACE.—SCHOOL OF PRACTICAL

ENGINEERING. Principal, Mr. J. W. WILSON, Assoc. Inst. C.E. The Autumn Term will commence on Monday, September 8. The Principal will attend in the School from Ten till Four each day, from this day to Friday, August 8, to pass Candidates for Admission. Students can be inserted only in the Office of the School of Art, Science, and Literature, next the Reading Room, Crystal Palace, where Prospectuses and all other information respecting the School can be obtained.—By Order of the Committee.

F. K. J. SHENTON, Superintendent Literary Department.

DORÉ'S GREAT PICTURE OF "CHRIST LEAVING THE TOMB," with "Night of the Crucifixion," "Christian Martyrs," "Francisco de Rimini," "Neophyte," "Andromeda," &c., at the DORE GALLERY, 35 New Bond Street, Ten to Six.—Admission, 1s.

ELIJAH WALTON EXHIBITION, including "A Storm at Sea" and "Bani Storm in the Desert," and many new and important Drawings, Alpine and Eastern, NOW OPEN at Burlington Gallery, 191 Piccadilly. Ten to Six.—Admission, with Catalogue, 1s.

BRITISH ASSOCIATION for the ADVANCEMENT of SCIENCE,

22 Albemarle Street, London, W.

The next ANNUAL GENERAL MEETING will be held at BRADFORD, commencing on Wednesday, September 17.

President Designate—Professor A. W. WILLIAMSON, Ph.D., F.R.S., F.C.S., in the place of J. P. JOYCE, D.C.L., LL.D., F.R.S., who has resigned the Presidency in consequence of ill-health.

NOTICE TO CONTRIBUTORS OF MEMOIRS.—Authors are reminded that, under an arrangement dating from 1871, the acceptance of Memoirs, and the days on which they are to be received, are now, as far as possible, determined by Organizing Committees for the several Sections before the beginning of the Meeting. It has therefore become necessary, in order to give an opportunity to the Committees of doing justice to the several communications, that each Author should prepare an Abstract of his Memoir, of a length suitable for insertion in the published Transactions of the Association, and that he should send it, together with the original Memoir, by book-post, on or before September 1, addressed thus: "General Secretaries, British Association, 22 Albemarle Street, London, W. For Section If it should be inconvenient to the Author that his Paper should be read on any particular day, he is requested to send information to the Secretaries in a separate note. Information about local arrangements may be obtained by application to the Local Secretaries, Bradford.

G. GRIFFITH, M.A., Assistant General Secretary, Harrow.

ST. BARTHOLOMEW'S HOSPITAL and COLLEGE.— SCHOLARSHIPS IN SCIENCE.

Two Scholarships in Science have been founded at St. Bartholomew's Hospital:

1. An Open Scholarship of the value of £100, tenable for one year, to be competed for in December. The Subjects of Examination are Physics, Chemistry, Botany, and Zoology. The Successful Candidate will be required to enter at St. Bartholomew's Hospital in October next.

2. Preliminary Scientific Scholarship of the value of £50, tenable for one year, to be competed for in October next, by Students of the Hospital of less than six months' standing. The Subjects of Examination are identical with those of the Open Scholarship.

For further particulars and syllabus of subjects, application may be made, personally or by letter, to THE WARDEN of the College, St. Bartholomew's Hospital.

ST. BARTHOLOMEW'S HOSPITAL and COLLEGE.—

THE WINTER SESSION will begin on Wednesday, October 1. The Clinical practice of the Hospital comprises a series of 70 Beds, inclusive of 24 Beds for Convalescents at Highgate. Students can reside within the Hospital walls, subject to the College regulations. For all particulars concerning either the Hospital or College, application may be made, personally or by letter, to the RESIDENT WARDEN of the College. A Handbook will be forwarded on application.

LONDON INTERNATIONAL COLLEGE, Spring Grove, near Isleworth.—THE AUTUMN TERM COMMENCES on September 15. Further information may be obtained by applying to Dr. LEONHARD SCHMIDT, the Principal, at the College.

MALVERN COLLEGE.

President and Visitor—The Lord Bishop of WORCESTER.

Head-Master—The Rev. ARTHUR FABER, M.A., late Fellow and Tutor of New College, Oxford.

There are Two Departments—the CLASSICAL and the MODERN. Pupils are trained for the Universities, the Civil and Military Examinations, and the Professions.

There is a LOWER SCHOOL, preparatory to either Department, a Gymnasium, &c.

There are Five Boarding Houses within the College Grounds, occupied by the Head-Master and four of his Resident Staff.

Board and Tuition under Fourteen, £20; over Fourteen, £25. For Non-Shareholders an extra Fee of £5. Special advantages for Sons of Clergymen and Home Boarders.

Annual EXAMINATION for SCHOLARSHIPS (including at least Two of £50 per annum), in December.

For further information, apply to the HEAD-MASTER.

The Next Term will begin on Friday, September 19.

TRINITY COLLEGE, GLENALMOND, Perth.

Warden—Rev. R. THORNTON, D.D.

A School on the model of the greater Public Schools in England. There is a resident Medical Officer. For particulars apply to the WARDEN. The School will meet on Tuesday, September 9.

Price 6d.

THE BREAKING-UP.

THE Ministry, after going through a Session wearisome and abortive in the highest degree, found that they could not even bring it to an end without difficulty; and the prorogation of Parliament has been immediately followed by a surprising reconstruction of the Cabinet. The vast and tempestuous ocean which divides Portsmouth from Ryde can only, it appears, be crossed even in August with much delay and danger. The QUEEN'S Speech could not be got up in time, and an impatient Parliament longing to be released had to wait until the arduous journey from Osborne to Westminster could be accomplished, and had thus the opportunity of an enforced leisure to reflect once more on the miracles of good management which, under the present order of things, are daily exhibited. At last the desired document arrived, and Parliament learnt that everything is going on smoothly abroad, that the Duke of EDINBURGH is to be happily married, and that the QUEEN confidently expects that we shall thank God like in our words and in our hearts for the Budget, the Judicature Act, the Education and Endowed Schools Amendment Acts, those great measures the Railway and Merchant Shipping Acts, and the continued prosperity of the country. Just as Mr. BRUCE said that the use of the House of Lords is to give the Commons an opportunity of showing their sublime patience, so the use of the QUEEN'S Speech is to give us all an opportunity of showing our thankfulness for small mercies. But the Ministry had no choice. It had to tell the story of what it had done, and, as it had done next to nothing, it had no story to tell. In February it started with a grand programme, and in August it has to confess that but a very slight portion of this programme has been carried out. It was necessary to pass over in silence the sad history of the measure which, in the QUEEN'S Speech at the opening of the Session, was described, with unhappy irony as one for "settling the question of University Education in Ireland." The days of great measures and great things are gone by, and the poorest QUEEN'S Speech was good enough to announce the simple fact that an end had come to the Session, and with it an end to the long-protracted process of making Mr. GLADSTONE ill, the Cabinet ridiculous, and Parliament weary of its life.

The more important announcements of the Government were reserved until Parliament had dispersed, and they were further delayed by a recurrence of the difficulties which attend the tremendous passage of the Solent. It was stated on Wednesday that Mr. BAXTER, smarting from the neglect with which he had been treated by the CHANCELLOR of the EXCHEQUER, had resigned his office at the Treasury, and it had already leaked out that this was only the forerunner of more serious changes. Yesterday morning it was formally made known to the world that the Cabinet, which has been reconstructed once or twice already since it was first formed, was again to be picked to pieces, and built up again. There is a familiar saying as to the inconvenience of swapping horses in the middle of a stream, and the eve of a general election would seem to be scarcely the most opportune moment that could be chosen for a general change of places in the Ministry. Two Cabinet Ministers—Lord RIBON and Mr. CHILDERS—quit office altogether on personal and private grounds. "Very urgent private affairs" have, it is intimated, induced Lord RIBON to indulge himself with the repose which he has for some time desired; and Mr. CHILDERS will also, for the same reason, retire "for a while" from public business. It would appear that in

Mr. CHILDERS's case the retirement is regarded as only temporary, and the urgency of the private reasons which have dictated this step will not prevent him from discharging the duties of the Duchy of Lancaster until Mr. BRIGHT, who is at his own convenience to succeed to the office, feels himself strong enough to resume the burden of Ministerial responsibility. Of two vacancies in the Cabinet only one is for the present to be filled up. Mr. BRUCE is to be made a peer, and will succeed Lord RIBON as President of the Council. Mr. LOWE will be transferred to the Home Office; and Mr. GLADSTONE will take upon himself the labours of the Chancellor of the Exchequer, in addition to those which devolve on him as First Lord of the Treasury and head of the Government. In order to lighten his labours, the experiment of adding another Lord to the Treasury, intermediate between the First Lord and the Junior Lords, which was tried, but without success, when the Government first came into office, is to be repeated. Lord F. CAVENDISH, Mr. GLADSTONE's private secretary, will be the new Lord, and Mr. DODSON, who is to be the Financial Secretary, will add considerably to the strength of the department. Whether Mr. ARTHUR PERL has the necessary qualities for the Parliamentary Secretaryship remains to be seen; but it must be remembered that the success of the holder of this office depends not merely on himself, but on his relations with the head of the Government, and on the manner in which the latter thinks it necessary to treat the House of Commons. It is supposed that the modifications of the Government which are in contemplation have not yet been exhausted. Those who are acquainted with the state of the legal world and the history of the Judicature Bill will learn with regret that the Mastership of the Rolls has been offered to the ATTORNEY-GENERAL. One of the great difficulties that threaten to spoil the working of the Judicature Bill is the numerical weakness of the Equity Judges. This was allowed by the Government, and the ATTORNEY-GENERAL was one of the foremost to recognize it, and to promise to do what he could to repair the mischief; and now directly Parliament is up, the chief Equity Judgeship is offered to a man of whom it is no disparagement to say that he knows nothing of Equity whatever.

It is difficult, if not impossible, to conjecture the grounds on which it has been thought worth while to make these changes in the composition of the Ministry. It cannot, indeed, be said that the retirement of Lord RIBON, Mr. CHILDERS, or Mr. BAXTER, is a loss of strength to the Government, or that they cannot easily be replaced. Lord RIBON has never seemed to recover from the exhaustion of his youthful Radicalism, and Mr. CHILDERS has not fulfilled the promise of his first years in office. It was once the fashion to affect to regret that the commercial intelligence of the country could not be brought to bear upon the administration of public affairs, but the experiment which has been made in Mr. BAXTER's case has not been encouraging. The announcement that Mr. BRIGHT is on such terms with the Government that he is ready to return to office as soon as his health will permit may perhaps be expected to help in healing the breach between the Ministry and the Nonconformists, although Mr. BRIGHT possibly forgot, when he denounced the Education Act as the worst measure ever introduced by a Liberal Cabinet, that he had himself taken part in its preparation. With this exception, the Cabinet remains as it was, although the parts are once more shuffled. The men are the same, and it is only the

ceilings of the rooms in which they sit and not their minds which are changed. The substitution of King STONE for King LOU at the Home Office is, to say the least, a questionable experiment. The Home Office touches at different points of contact all classes in the country, and there is no department in which personal tact and delicate handling are more indispensable. The most successful Home Secretaries of our day were Lord PALMERSTON and Sir G. C. LEWIS, and it must occur to every one how few of the qualities for which they were remarkable are to be found in Mr. LOWE. It is still more doubtful whether Mr. GLADSTONE will be able to endure the double burden which he proposes to take upon himself. It may perhaps be thought that the spell of poetical Budgets will once more revive the fame of the Minister and the reputation of his Government; but it must not be forgotten that the materials out of which Mr. GLADSTONE composed his financial romances have to a great extent been exhausted. Without disparagement of an earnest and laborious statesman, it may be remarked, as a simple historical fact, that both in his Budgets and his Irish legislation he reaped the fruits of previous agitation and discussion. On the whole, the reconstruction of the Cabinet would seem to indicate rather the meanness and disappointment of the men who compose it than any real hopefulness as to the future. The associations of almost every office are at present so disagreeable that the holders are glad of anything for a change.

The truth is that the Government is weak because the Liberal party is demoralized; and the Liberal party is demoralized because it has no confidence in its leaders, no belief in their wisdom or good fortune, no real wish that they should be in office. In such a state of things men who have no other wish than that a Ministerialist should not be returned look on with complacent indifference if a Conservative stranger or an ambitious fellow-townsmen likes to court the barren honour of belonging for a few months to a Parliament which may any day be dissolved, and which in its utter exhaustion has lost the respect of the country. The Session did not close before the new member for Greenwich took his seat, and Mr. GLADSTONE had the mortification of seeing his colleague seated on the benches of the Opposition. At Dundee the contest was confined to Liberals, for a Scotch borough can scarcely be sufficiently divided to give Conservatives a chance. Mr. FITZJAMES STEPHEN had so much the advantage of his rivals in many important respects that success might be fairly presumed to be in his reach. Great, however, as were Mr. STEPHEN'S merits, he had one overwhelming and fearful demerit. He came as the Ministerialist candidate. This was enough to ensure his rejection, and a gentleman of the most exclusively local reputation polled five times as many votes as he did, while one of those aspiring politicians who offer themselves to the newly enlarged constituencies as the special friends of the working-man polled the respectable number of four thousand votes. The parallel between Greenwich and Dundee was equally close and instructive. At Greenwich also there was a Ministerial candidate, a very good candidate as times go, a former representative of the borough, and well known in the party struggles of the county. But the deadly taint of his being an avowed supporter of the present Government was upon him, and he could not get the support of a sixth part of the number of Liberals who had voted for Mr. GLADSTONE five years ago. At Greenwich, too, the only Liberal who made anything like a fight was one of the special friends of the working classes, who had taken the extra precaution of winning the Irish vote by offering to support Home Rule. The apathy which the Ballot has a tendency to produce might have been supposed to be in part the cause of the Liberal failure at Greenwich, had not the very large total of the electors who went to the poll at Dundee cast a doubt on this explanation.

The causes of this alienation of the constituencies from the Ministry are not difficult to discover. In the first place, the Government has managed to arouse the enmity of two powerful sections of voters, the Licensed Victuallers and the Nonconformists. In a great degree this is their misfortune rather than their fault, and the wrongs of the sellers of beer and the opponents of the Education Act are such as to command very little sympathy. But this does not affect the result. Publicans and Dissenters have somehow taken it into their heads that the defeat of a Ministerial candidate

shall be reckoned a source of comfort to them, and they are obstinate and powerful, and find themselves able to do very much to ensure that they shall not be deprived of the comfort for which they are looking. Then there is the general lassitude and indifference as to politics which has succeeded a time of excitement, and the Liberals who felt the excitement most are the readiest victims of the consequent weariness. But the main cause of the discredit of the supporters of the Government is the silent conviction among vast numbers of those who are theoretically friendly to the Government that the sooner the Government goes out of office the better for its own sake. What possible good can there be in prolonging the existence of the GLADSTONE Ministry? It goes on from blunder to blunder, and its internal dissensions threaten at every moment to break it up. No amount of patching or reconstruction can possibly save a Government which has fallen into such a plight. The double functions which the head of the Government has heroically undertaken, the supervision of the magistracy by Mr. LOWE, and other changes which have been announced, make up a complex experiment, the result of which will be watched by bystanders of all shades of opinion with lively curiosity, and by Liberals with a rather painful solicitude.

TRANSATLANTIC RAILWAY SCANDALS.

THE progress of corruption on the American continent has unfortunately extended to Canada, where some members of the present Government are gravely compromised by their dealings with reference to the Pacific Railway. It is not at present proved that either Ministers or members of Parliament have personally received bribes for their services; but there appears to be no doubt that a sum of 70,000*l.* was spent by railway speculators at the last election in support of French candidates who were to return the favour by supporting the Government. The Ministers on their part were pledged to grant a concession of the Pacific Railway to the capitalists who found the money. The negotiations were conducted on behalf of the applicants for the concession by Sir HUGH ALLAN, who publicly acknowledges his share in the transaction. Sir JOHN MACDONALD, Sir FRANCIS HICKES, and the late Sir GEORGE CARTER, are accused of receiving payments, apparently for election purposes. The Canadian House of Commons appointed a Committee to investigate the transaction, and passed an Act to enable the Committee to receive evidence on oath. Unluckily the Act was disallowed at home, as exceeding the powers of the Colonial Legislature, and consequently the Committee is unable to prosecute the inquiry. Sir JOHN MACDONALD and his colleagues have attempted to remedy the miscarriage by issuing a Commission to the same persons who had formed the Select Committee; but the Opposition members have refused to receive instructions from a Government which is, as they allege, itself on its defence. It is perhaps thought that an unproved charge will be more damaging to the party in power than an inquiry which might perhaps have resulted in an acquittal. It is greatly to be regretted that the principal politicians in the Dominion should be subjected to an accusation which affects the honour of the Legislature and the community. The exposure was caused by Sir HUGH ALLAN'S demand on his associates for repayment of the sums which he professed to have spent for the benefit of the Company. Some of his partners were American citizens who, though they may have been neither surprised nor shocked by the character of his operations, naturally desired some assurance that they would receive consideration for their outlay. The stock allotted to the Americans was held in the name of Sir HUGH ALLAN, in consequence of a provision in the Act of Incorporation which rendered foreigners incapable of holding shares. The restriction was intended to prevent a neighbouring American Company from acquiring the control of the undertaking; but any prohibition of the kind is impolitic and useless. Corrupt bargains are familiar to the Congress of the United States; nor is there any proof that Canadian members of Parliament have received payment for services to private speculators; but it had been thought that political leaders in Canada were incapable of conniving at pecuniary corruption. There is some reason to fear that the discovery of the irregularities which have been perpetrated or attempted may discourage the construction of

railways which are indispensable to the prosperity of the Dominion. In the neighbouring States of the Union new theories have lately been propounded which, if they are adopted, will put a stop to all railway enterprise.

The farmers in some of the Western States, having become dissatisfied with the railway rates on corn, have determined to redress the grievance by summary and effective means. In Illinois they have elected judges pledged to decide suits with railways in accordance with the interests of their constituents, and they have also returned a Legislature favourable to their views. The first result of the agitation is an Act against the demand of any but a fair and reasonable rate, including a prohibition of discriminating rates, especially when they result from competition. It is evident that an arbitrary alteration in the conditions on which a railway is conducted may amount to a confiscation of property. The Act appears not to provide any test of the fairness or reasonableness of the charges which it purports to regulate, but popular opinion inclines to a tariff estimated to produce ordinary interest on the supposed cost of the railway. The only moral objection to the scheme is that it is a retrospective alteration of a contract by one of the parties to the detriment of the other. Precautions against excessive rates ought to have been taken when the different Railway Bills were passed by the local Legislature, and not after capitalists have been tempted to expend their money on advantageous terms. There is no reason why any State should not invite Companies to make railways on condition that they shall receive three or two or one per cent. on their outlay in case of success, and that they shall, as at present, incur the risk of possible failure. It is true that such an invitation would not be accepted, but if the State Government failed to procure the construction of public works, it would have the satisfaction of a conscience void of offence. The Western farmers will experience a similar result whenever they happen to require an extension of the railway system. No speculator will engage in a doubtful enterprise unless he sees some chance of a more than ordinary profit. Sanguine projectors may rely on a future increase of trade and population to repay them for ventures which must in the first instance be unremunerative; but if the probability of hostile legislation is added to their perils, they will look for investments in other quarters. For the injustice of their policy the farmers have some excuse. When governing bodies are known to be open for hire or for sale, the bargain is necessarily concluded with the wealthiest and most liberal customer. Railway Companies have, as the most powerful Corporations in many States, practised almost every kind of commercial and political corruption. They have bought up State Legislatures by wholesale, and the directors have in some instances grossly defrauded their own shareholders. There may perhaps be a presumption that the Companies attempt to recoup themselves for illegitimate expenditure by extravagant tariffs; and judges who are elected for the purpose of giving judgments against railways are by one degree more respectable than judges who are returned by the Companies. The large tracts of land which have in many instances been granted to railways cause natural dissatisfaction; and in many cases the opponents of the Companies are probably sincere in their belief that they are acting for the public good. Nevertheless it is absurd to expect that railways will be made in new countries except on terms which are sufficient to cover a wide margin of uncertainty. The total return of railways in America as in England scarcely exceeds the ordinary rate of interest; and the largest receipts are of course obtained in the settled parts of the country.

If the arrangements for the construction of the Canadian Pacific Railway had not involved corrupt practices, the Government might have been excused if it offered liberal terms for a great economical and political benefit. The main advantage of cheap transit is the encouragement which is given to immigration and settlement. A railway is in many respects preferable to a navigable river in the facilities which it offers for travelling and for the transmission of produce. It is scarcely probable that at any time a large number of through passengers will adopt the Canadian route between the Atlantic and the Pacific; but when the interior of the Continent is made accessible, the increase of local intercourse may be indefinitely large. The

Government and the Legislature are probably well advised in following the American example of making large grants of land along the line to the undertakers of the railway. The Company has the strongest inducement for encouraging settlement on its estates, for the purpose of creating the traffic which must feed the railway; and where land is more plentiful than money, the cheaper currency is naturally preferred as a medium of payment. The English guarantee will enable the Government to raise a considerable loan on moderate terms, and the credit of the Dominion is not less negotiable than that of the United States. It will be a cause for grave regret if the recent scandal interposes any impediment in the way of the construction of the railway; but the slur on the reputation of the Government and the community may be worse than any material loss. Although the social conditions and the political institutions of Canada resemble those of the United States, it had been thought that the governing class was more select and less unscrupulous in the colony than in the Republic. When office and power fail to command popular respect, they will generally be used for the personal benefit of the incumbents. The Canadian Ministers have probably at the worst only been guilty of electoral corruption; but their successors may perhaps become as venal as if they were members of a New York or Pennsylvania Legislature.

THE FUSION IN FRANCE.

THE fusion between the elder and younger branches of the BOURBONS which has been so often talked about and so ardently hoped for is at last accomplished. The Count of PARIS has paid a visit to the Count of CHAMBORD, has saluted him, according to an apparently authentic account, not only as the head of the house, but as the sole representative of the monarchical principle in France, and has received from him a visit in return. The significance of this event is not necessarily very great. The Count of PARIS has made no act of abdication, because it has long been understood that he had no pretensions to abdicate. From the moment when the monarchical parties began to raise their heads again in France, it has been clear that the Orléanists have no longer any dynastic interests to serve. The childlessness of the Count of CHAMBORD has settled this point for them. It is not worth while for the undisputed heir to the throne to play the part of a Pretender. This exclusion of dynastic considerations left the Orléanists free to consult the interests of Monarchy generally. It is plain that the chances of a restoration—be they small or great in themselves—are greatest if the partisans of the Monarchy are united among themselves. Legitimists and Orléanists may find it impossible to re-establish the throne, even if they go about it in hearty co-operation, but the impossibility is at any rate not so obvious as it would be if each were labouring to set up a different throne. If the recognition of this fact on the part of the Orléanists had implied that the Count of PARIS was never to be King, loyalty to the younger branch might have led them still to disregard it; but the fact of his standing next in succession removed all difficulty. The delay in the fusion has probably been caused by the desire of the Orléanists to make terms with the Count of CHAMBORD. They were prepared to see the Count of PARIS acknowledge him as the only claimant to the throne of France, but they did not want the concession to be entirely one-sided. The best return that the Count of CHAMBORD could have made for his cousin's submission would have been to abdicate in his favour; but it was very soon evident that HENRY V. was not going to give any such extravagant reward for the performance of a simple act of family duty. Disappointed in this hope, the Orléanists next tried to induce the Count of CHAMBORD to say something which might be twisted into an acceptance of constitutional principles. Before long, however, they would have been glad to compound for simple silence on his part. The more promising the chances of the Legitimists have looked, the more resolute the Count of CHAMBORD has been in committing his partisans to all kinds of damaging declarations. Once at least the Count of PARIS, when he was on the eve of starting to pay his visit, was induced to give up the intention by the unexpected appearance of an ill-timed manifesto. The Count of CHAMBORD may be in the hands of partisans who do not wish to see their own importance lessened by being merged in a larger party, and who have consequently persuaded

him at the last moment to do something that should have the effect of keeping the Orleanists at a distance. Or he may have been honourably anxious that his cousin should not come to him under any misconception as to his opinions. At all events, the same course has been pursued on this occasion, though not with the same results. On the 24th of July M. DE CAZENOVE DE PRADINE proposed that the National Assembly should be represented by a delegation at the laying of the first stone of the new church on Montmartre. The motion obtained no support except from the Extreme Right; but the Count of CHAMBORD has thought proper to associate himself with its ill success. He has written to M. DE CAZENOVE DE PRADINE congratulating him in the warmest language on having sustained a glorious defeat in a glorious cause. This letter was published just when the Count of PARIS was on the point of leaving Paris for Vienna, and it was at first thought that it would have had the same deterring influence on his movements that the publication of the letter to the Bishop of ORLEANS had on a former occasion. The new church on Montmartre is regarded by pious Ultramontanes as a symbolical act of reparation for all the sins which France has committed against the Church and the Pope; and if the Assembly had been formally represented at the laying of the foundation stone, it would have been accepted as an indication that the majority of the 24th of May wastes reactionary in religion as it is in politics. Neither the Right Centre nor the Moderate Right were prepared to go this length, but the letter of the Count of CHAMBORD comes to prove that, in thus separating themselves from the Ultramontane cause, they are separating themselves, at all events in opinion, from the representative of Monarchy in France. This time, however, the Count of PARIS has not been warned off. The Orleanists must be supposed to have learned that the Count of CHAMBORD must be taken without conditions or not taken at all.

The real importance of this interview cannot be measured until we see its effect on the majority of the Assembly. Its first effect will probably be to abolish the use of the words Orleanist and Legitimist, and to unite both parties under the common title of Royalists. But this change, supposing it to stand by itself, will be only a change of names. There will be no more Orleanists in the sense of a party supporting the claims of the younger branch of the BOURBONS to the Crown, and no more Legitimists in the sense of a party advocating the indefeasible title of the elder branch. But the principles which underlie this distinction will survive, though the distinction itself may be effaced. Orleanists and Legitimists will continue to be at issue as to the terms on which a restoration is to be effected. The Count of PARIS has his theory of Monarchy, and the Count of CHAMBORD has his, and the two are far more opposed to each other than the Count of PARIS's theory is to the theory of a Republic. If the Count of CHAMBORD comes to the throne, he will come as the legitimate King, deriving his title neither from the vote of the Assembly nor from popular recognition. He will consent to no stipulation, he will recognize no right on the part of the deputies to limit his authority in any way. How is the Count of PARIS, who believes Monarchy to be only legitimate when the monarch reigns by the free consent of his subjects, and consequently admits that subjects have the right to impose conditions even on their King, to co-operate in bringing about a restoration on these terms? He may withdraw, as he has done long ago, his personal pretensions to the Crown; he may be willing to succeed his cousin instead of displacing him; he may declare that, if the French nation wishes for a King, it must look for one in the first instance to the Count of CHAMBORD. But how is he to accept, either for himself or for his future subjects, a Monarchy which, whatever it may be in action, will in theory be the Monarchy of which the reality was destroyed in 1789, and the restored shadow in 1830? The Count of PARIS cannot forget that he is the heir of LOUIS PHILIPPE as well as the heir of the Count of CHAMBORD; and if the latter succession gives him an unchallenged title to the throne, the former makes him the natural guardian of the principles embodied in the Monarchy of July. The conflict between the political principles represented by the two branches of the Royal House is not at an end because the dynastic conflict is at an end; and the problem which the Royalists will now have to solve is how a restoration can be effected without one or other of the contending principles going to the wall. It is far from certain, therefore, that the internal fouds of the majority

will be any the less bitter because, for the division into Orleanists and Legitimists, there has been substituted a division into Constitutional Royalists and Absolute Royalists. Whether one cause of dissension has or has not been removed, there can be no doubt that another cause of dissension has been introduced. The external reconciliation of Orleanists and Legitimists is an open defiance launched against the Bonapartists, and the Bonapartists have been so important an element in the coalition which has placed Marshal MACMAHON at the head of affairs that their secession may have more serious consequences than the leaders of the Parliamentary majority may be inclined to admit. Between now and the meeting of the Assembly in November there is time for many unforeseen changes in the present combinations of parties.

THE COMMITTEE ON PUBLIC EXPENDITURE.

AT the beginning of the late Session Mr. VERNON HARCOURT, who had for some time past become a zealous economist, undertook to stimulate the Government to the performance of its duty by moving for a Committee on the public expenditure. It was perhaps a little disappointing to find that, on urging Mr. GLADSTONE to reduce the national establishments, he was pressing at an open door. No Minister has ever sympathized less with numerous staffs, with large salaries, or in general with a profuse outlay on the public service. Mr. HARCOURT's original scheme of investigation, which would have included the army and navy, with their supplementary departments, was considered too ambitious. It would scarcely have been possible for the Government, within a year from the introduction of Mr. CARDWELL's scheme of military organization, to sanction an inquiry whether Mr. HARCOURT should be allowed to diminish the numbers of the army by a half or by two-thirds. Mr. GLADSTONE, who lately admitted that, as Chancellor of the Exchequer, he was in the habit of protesting against Lord PALMERSTON's military expenditure, would perhaps even now not be unwilling to reduce the establishments which are considered necessary by his colleagues and by Parliament; but, having acquiesced in the Estimates which were laid before the House of Commons, he could not allow an independent member to reopen the question of the national defences. Accordingly he granted a Committee "to inquire whether any and what reductions can be effected in the expenditure for Civil Services, with special reference to those branches thereof which are not under the direct or effectual control of the Treasury." Mr. HARCOURT prudently accepted the compromise offered by the Minister, although his own previous criticisms had been directed rather against the army than against the Civil Service. The wording of the reference to the Committee was highly significant. The Committee had no power to recommend an increase of salaries, even where it might seem to tend to the benefit of the service; and it was virtually instructed to render the financial subordination of the public departments of the Treasury more stringent and complete. In one of its Reports the Committee ventured to suggest that there is an anomaly in the position of an Admiralty Registrar at Liverpool, who receives no remuneration for his services; but, without transgressing the limit imposed by the terms of reference, the Committee could not propose the correction of a flagrant absurdity. When the Committee was appointed Mr. GLADSTONE had not foreseen that the Government would be defeated on a resolution for increasing the salaries of all the Civil Servants in Ireland. A time of unprecedented dearth seems not altogether a felicitous occasion for reducing the incomes of public functionaries.

In accordance with its instructions the Committee examined some of the permanent officers of the Treasury, who unanimously complained of the want of control by their department of the judicial and legal establishments. As might have been expected, the Treasury holds that independence implies extravagance; and, although it does not appear that the Committee had any means of testing the value of official opinions, it arrived at the conclusion "that the absence of any uniform principle in the regulation of the offices must produce mischievous results." With commendable modesty the Committee contented themselves with recommending the appointment of a small Commission of Inquiry to discharge the duties to which it found itself incompetent. If the suggestion is adopted by the Government, it may be hoped that Judges and legal practitioners will have a voice in the matter as well as the official advo-

cates of symmetry and discipline. The Treasury clerks pride themselves on curtailing expense with little or no regard to efficiency, as when they stint the cost of criminal prosecutions in utter disregard of the indignant complaints of Judges and of local authorities. Unfortunately Mr. GLADSTONE himself is habitually bent on confining within the narrowest limits the remuneration of Judges who have often been making large incomes at the Bar. The reduction of the salaries of the Judges of Appeal under the Judicature Bill was a singularly unwise instance of frugality; and it is even doubtful whether a vacant judicial office will not, in consequence of a reduction of salary, be refused by the person who is universally considered the fittest successor to the post. A device for saving a few hundreds a year in the salaries of judges' clerks was the immediate cause of the most flagrant scandal which has been incurred by the present Administration. A minor error was more recently committed in the attempt to change, to the disadvantage of the County Court judges, the conditions on which they had accepted their offices. Mr. LOWE and Mr. GLADSTONE himself thought it worth while to intervene in a controversy where their subordinates might have been excused for making a mistake. The Commission which is to be the sole result of the labours of the Select Committee will perhaps never be appointed.

Having concluded its inquiry into the judicial establishment by recommending that a Commission should inquire into the subject, the Select Committee next directed its attention to the question "whether economies might be effected in the organization of the permanent and temporary clerical staffs of the civil departments." For the purpose of the investigation the Committee judiciously examined the permanent heads of the great departments, especially of the Treasury, the present and late Financial Secretaries of the Treasury, and the CHANCELLOR of the EXCHEQUER. As long as it was proposed to extend the controlling power of the Treasury to the judicial establishments nothing could be more harmonious than the official testimony; but when the Committee approached the more delicate question of the Civil Service, great differences of opinion were found to prevail on almost every branch of the subject. Recent disclosures will fully explain the conflicts which were likely to arise between the CHANCELLOR of the EXCHEQUER and his subordinates. A Financial Secretary of the Treasury who, according to Mr. LOWE, is incapable of distinguishing between a Minute and a Memorandum, could scarcely be expected to share the opinions of his supercilious superior. The Committee and Mr. GLADSTONE himself might have been less strongly impressed with the necessity of extending the controlling power of the Treasury if it had been known that the CHANCELLOR of the EXCHEQUER was in the habit of administering the affairs of the Post Office without communicating his resolutions to the POSTMASTER-GENERAL, and of altering the Estimates for Public Works without consulting the CHIEF COMMISSIONER. Some of the statistical facts collected by the Committee are more or less interesting. It appears that the charge for superior office clerks in the Civil Service is no less than 3,000,000*l.* a year, and that the number of clerks on the establishment is about eleven thousand. In the opinion of the Committee the rates of salary are not generally excessive, nor is any reduction in this respect recommended; but it is alleged that an unnecessary number of clerks is employed, partly because many of them do too little work, and partly "from the waste of time occasioned by employing well-educated men on merely mechanical duties." One of two or three alternative modes of reduction is an entire cessation of new appointments, which seems a crude and inconvenient mode of effecting the object. The Committee found, "with regret, that harmonious action between the Treasury and the departments concerned has not always accompanied the endeavours to apply the existing rules to the re-organization of particular offices." The Treasury appears not to be distinguished by the quality of harmony, either in the internal relations of its members with one another or in its dealing with other branches of the public service. When the head of a department finds that a change is proposed with little or no regard to the efficient conduct of business, he may be expected to remonstrate. Two conflicting schemes of providing for the necessities of the services were suggested by different witnesses. Either two classes of clerks were to be kept permanently distinct, or a rise from the inferior rank was in special cases to be permitted. On this, as on nearly

all other questions, the Committee found itself unable to form a decision. The competitive system was considered as, on the whole, the best method of providing for the admission of young men into the service. It is satisfactory to learn that a Committee of which Sir STAFFORD NORTHCOTE was a principal member should regard the device of competitive examination with so moderate a feeling of admiration. Twenty years ago, Sir STAFFORD NORTHCOTE, then a zealous pupil of Mr. GLADSTONE's, was one of the first authors of the practice of competition. During the interval some jobbery has been prevented, and much trouble has been saved to Secretaries of the Treasury and to members of Parliament; but it is not known that any improvement has taken place in the character of the Civil Service. The Committee finally propose that they should be reappointed in the next Session to continue an inquiry which has not been discredited by any display of precipitancy or rashness. Nearly the only confident recommendation is that copying-machines should be introduced into all the offices, and that no copying should henceforth be done by hand. If five months have sufficed to produce such a result, it is easy to calculate the value of another inquiry of equal length.

THE INDIAN BUDGET.

THERE are various theories as to the utility of going through the strange process of presenting what is called the Indian Budget to the House of Commons. Some theorists say that it is done to please the natives of India, and we should be glad to think that this is the true explanation; for if the natives are pleased with it, they must be extremely easily pleased, and of course it is agreeable to think that the distant millions over whom we rule are of a facile and contented disposition. Others think that the British taxpayer likes to know how things stand in India; for if there were any deficiency, there is a very great probability, if not a certainty, that he would be called on to make it good. It would show great good sense in the British taxpayer if he devoted so much anxiety to the consideration of his possible liabilities. India has not as yet cost England anything, but it is impossible to be blind to the fact that the Indian guarantee of past debt and of the money borrowed for public works is really an English guarantee, although this guarantee is given in a form just sufficiently indirect to make India pay nearly five instead of a trifle over three per cent. for what she is told to borrow. India is also taxed up to the limits, or very nearly up to the limits, of what she can stand; and if any great crisis came, and large sums of money had to be found, England would prefer finding them herself to letting India go without them, or subjecting India to so burdensome an amount of taxation as to place the Indian Government in constant difficulty and danger. Others, again, think that the House of Commons itself likes to have the Indian Budget presented to it, because it feels responsible for the government of an immense dependency, and is proud of the task, and wants to have sufficient information in order to be able to discharge its duties properly. But, whatever may be the best theory to account for the production of the Indian Budget, the fact is that the proceeding in real life is a complete farce. The Government waits till every one is gone out of town. It then gives a few odd hours, now one day and now another, to Indian affairs, and limits in the strictest manner the flow of talk which it considers utterly idle. By a great stroke of good luck, it has for the present got Mr. FAWCETT to give a little air of seriousness to the proceedings. Mr. FAWCETT is the one Englishman not connected with the official world who has taken into his head to interest himself in Indian affairs, and to plead what he considers to be the cause of the mismanaged natives in the House of Commons. No one else, except persons officially connected now or heretofore with India, cares in the slightest degree about Indian finance or the dangers to which bad management in India may give rise. There is a general belief that India is very well governed at present. It has had three Governor-Generals in succession—Lord LAWRENCE, Lord MAYO, and Lord NORTHBROOK—who have commanded great confidence both in India and in England. Not to speak of former Administrations, it has now Mr. GRANT DUFF to take care of it here, and no one doubts that Parliament could scarcely furnish a more liberal, industrious, and enlightened official for the purpose. English stockholders get their money regularly

if they invest in Indian securities, and those who have had most to do with Indian law are constantly informing the British public that the administration of law in India is ten times better and more scientific than the administration of law in England. If it were not that Mr. FAWCETT is at hand to suggest that there are black spots in the Indian sky, every one would take for granted that it was a heaven of unclouded blue; and even he, with all his energy, does little more than give Mr. GRANT DUFF an opportunity of proving over and over again that such a blue sky was never seen before in the world.

According to Mr. GRANT DUFF, Indian finance is in the happiest possible condition. Since 1868, when the present Ministry came into office, the expenditure has been decreased by five millions sterling; or, if the sum spent for Provincial services is deducted, by considerably over four millions; and the interest on the debt has been diminished by something like a quarter of a million. On the other hand, the revenue has largely increased. The land revenue, the salt revenue, the opium revenue, and the excise revenue have all increased, and the total increase on these heads reaches nearly to two millions; and all of this increase is due to the natural elasticity of the revenue, except that on the one head of salt there has been an augmentation of the duty. Then India has about twenty millions sterling in the way of balance to its credit in India and in England; and these balances are so much larger than is necessary that the Government intends to take out of them four millions, which will suffice for the total expenditure on what are called remunerative public works during the current year. The only weak point that the UNDER-SECRETARY could discover was the smallness of the estimated surplus, which is put down at about one hundred and fifty thousand pounds, and this, he could not help acknowledging, was but a tiny balance for so great an Empire. But then whose fault was that? It was the fault of those who managed to get the Income-tax repealed. An Income-tax of one per cent. would have given another half-million, and then India would have had a most respectable surplus. Mr. GRANT DUFF much regrets that the Income-tax has been abolished, and he had the courage to say so, and further to express his belief that before very long it would be put on again. The mistake of taking off this tax has, however, been made, and it is interesting to learn to what causes Mr. GRANT DUFF ascribes it. He says that the Income-tax was taken off, not because those charged with the government of India thought it right or wise to abandon the tax, but because the native press was against it, because Indian officials dislike paying it, because the wealthy natives wished to keep the poor natives as poor as possible, and therefore hated a tax which fell on the rich and so eased the poor; and, lastly, because the mischief-making member for Brighton had made so much noise about it that the Indian Government got alarmed. According to this, the Indian Government abandoned a tax which they thought necessary and just, for four reasons, not one of which ought to have had the slightest weight with it. Mr. GRANT DUFF does not shrink from owning this. If there is no interference with the official management of India, then everything, he intimates, goes on perfectly well. The authorities have nothing to learn and nothing to gain from the criticism of outsiders. The Chairman of the Committee which has been sitting so long to collect evidence and make suggestions about India has indeed recommended a new form for the accounts submitted to Parliament, and this form Mr. GRANT DUFF owns is an improvement; but this is a purely English matter, and does not in any way affect India itself. The Indian Government knows what is best for India, and carries it out. Unfortunately the Indian Government cannot quite do what it likes, for the House of Commons will occasionally interfere; but this interference is all so much loss to the welfare and happiness of India. Foolish as the practice of pushing scraps of a debate about India into odd corners of time in the last few days of the Session must seem to every one else, to the UNDER-SECRETARY it must seem worse than foolish. It not only causes an unnecessary pause in the working of beneficent officialism, but the pause is one which, if it produces any consequences, must produce bad ones.

Mr. FAWCETT set himself to lower, so far as possible, the exultant spirits of Mr. GRANT DUFF. The weak points in Indian finance are not very difficult to discover. We spend the land revenue, which was the chief and almost the only kind of revenue in old times, in paying the interest of the

debt and providing for the costs of the army. We thus use up the old revenue of the country in paying for our having a footing in India, and then we want new taxes in order to govern the country. We think it right to give India high-class officials, scientific law, an adequate police, drainage, canals, railways, and all that goes to make up our European notion of what good government means; and for all these varied and most necessary and useful purposes we have to get money out of the natives by other means than that of the income from land. We have managed to get a great deal out of them; but then we have two difficulties to face. We appear to be getting out of them all they have to give us, and one source of our revenue is very precarious. Lord LAWRENCE was examined before the Committee on Indian Affairs, and was asked the following question:—"In case the revenue should fall short, is there any existing tax you know of which can be increased with safety to the State?" Lord LAWRENCE's reply was, "I know of none." Then he was asked, "Is there any new tax which could, in your opinion, be levied?" And Lord LAWRENCE answered, "I am not aware of any." This is a very serious state of things, and though Mr. GRANT DUFF questioned the proposition that no new tax could be invented, he treated with little respect every proposal he had heard of for new taxation, except the restoration of the Income-tax. That the balancing of Indian finance depends in a very large degree on the opium revenue is universally allowed to be a matter of much regret. Recently the opium crop has been good, and the revenue from this source has increased largely. The crops, however, may some year, or in some series of years, be bad, and then the Indian Budget will be a different affair from what it is now. The market does not appear in the least to fail, and the Chinese take our opium as freely as ever. Sir WILFRID LAWSON, who will not read up his *Hanbards*, gave notice that next Session he would protest against our getting our revenue by debauching the Chinese. Mr. GRANT DUFF cannot be expected to go over the same ground year after year, but if Sir WILFRID LAWSON had but taken the trouble to know what the UNDER-SECRETARY had stated in former years, he would have learnt that by furnishing the Chinese with opium we are doing them the greatest kindness in the world; for the Chinese take a great deal too much tea, just as people in England would probably do if the Permissive Bill were passed, and they absolutely need opium as a corrective. It is of course a matter of regret that the instrument by which we confer this benefit on the Chinese is one which bad weather may cause to fail us, as then, not only should we have to deplore our inability to tranquillize Chinese nerves as much as we should wish, but our revenue accounts would show a dismal deficit. But, in spite of all this, what is the Government of India to do? It does not do as it can pay its way with existing taxes, it must do so without considering too keenly what it would do if it had to pay more than it received; and as the opium crops are good, it can but take the money which these crops provide. The only easy and practicable source of economy that can be suggested is to spend less on public works. If the natives cannot pay for material improvements, they cannot have them; and the system of making such improvements on borrowed money, on the speculation that they will themselves create the resources to provide the interest, is one that seems to have reached its limits in a country so poor and so slow to change as India. The second field of saving on a large scale which is said to exist is that of the army. We spend, it is said, too much on making India safe. Perhaps this may be so, but no one not possessed of the most accurate information could undertake to say that it is the case. The very first thing we have to do is to make ourselves safe in India at whatever cost may be necessary; and the very worst thing we could possibly do for India is, from motives of short-sighted economy, to weaken our army so as to invite an attack from within or without which would entail an expenditure that would in a few weeks sweep away all that could be saved by the economy of years.

POLITICAL AGITATION UNDER DIFFICULTIES.

THE Ballot, which has up to this time operated less mischievously than might have been expected, will perhaps produce an incidental advantage in discouraging political agitation during the autumn and winter. Before demagogues and philanthropists commence a clamour they

are naturally careful to ascertain whether anything is to be got by the particular disturbance which they are about to promote. It has generally happened that the tendency of popular inclination has been so far susceptible of calculation as to admit of being accelerated or applauded under the name of progress. Traders in politics have consequently had little difficulty in selecting the winning side, although it has not always been possible to ascertain how soon the game would be won. At present the most vigilant waiters on Providence and popular favour must be greatly puzzled in choosing the most profitable outlet for patriotic energy. Four years ago Mr. GLADSTONE could have determined the fate of half the elections in the kingdom if he had thought fit to express a preference for one Liberal candidate over another. It was only among rare and eccentric constituencies that the profession of revolutionary doctrines might have seemed a better speculation than a loyal allegiance to the Minister. In the course of the present week two populous boroughs have expressed their feelings towards the Government by leaving the Ministerial candidate in an insignificant minority; and an important county election has also ended in a Conservative triumph. Mr. ANGERSTEIN was a respectable nominee of the orthodox Liberal party; and it would be absurd to compare the pretensions of Mr. STEPHEN with those of his successful competitor; but at Dundee, as at Greenwich, an avowed intention of supporting Mr. GLADSTONE seems to have been regarded by the electors as a conclusive disqualification. Mr. YEAMAN, indeed, will on occasion vote for the Ministers, but it was probably thought that he might be only a moderately effective supporter of the Liberal cause. The effect on political adventurers will perhaps be to reduce them to temporary silence, as if they were frequenters of the Turf who had just learned that on the eve of a race all the favourites were withdrawn from the contest. It is indeed easy for the flatterers of the mob to turn their backs on a discredited courtier; but the further difficulty of ascertaining which quarter of the heavens contains the rising sun will not readily be overcome. The Ballot renders it impossible to determine the identity of the voters, or of the electors who abstained from voting; and consequently there are no grounds for conjecturing the reasons which may have influenced any portion of a constituency.

The easy process of professing extreme doctrines is no longer a certain road to popularity. It appears, indeed, that four thousand electors of Dundee approved of a mawkish system of semi-socialist philanthropy, and that a third of the number at Greenwich inclined to revolutionary theories. As some men have achieved reputation by a single expression, Mr. BAXTER LANGLEY is best remembered by the exultation which he expressed at the destruction of a large quantity of butcher's meat in consequence of a railway strike which he had promoted. Some of his clients on that occasion were probably numbered among his supporters at Greenwich, while the remainder must be supposed to approve of his social and economic doctrines; but the anarchical propensities of one-eighth of the constituency of Greenwich afford no safe guide to agitators in search of popular principles. Denunciation of Church and State, of Railway Companies, and of butchers might not improbably be rewarded by indifference or general disapproval. Even if it were thought prudent to attack the Government, the question remains open on which side the Ministerial policy is to be assailed. The electors who declined to vote may have thought either that the Government had gone too far or that it ought to go further. Prudent and dispassionate politicians, not closely attached to any party, will regard with regret and with disapproval the caprice of the Liberal electors in England and in Scotland. Mr. GLADSTONE has undeniable faults, and his Government has incurred many miscarriages; but his vast knowledge, his commanding ability, and his great public services entitle him to the support of all who are not forced to differ from him on some great question of principle. There is no reason to suppose that the opposition or abstention of his former supporters is caused by any well-founded objection to his policy. The worst form which a party can assume is that of individual or cantonal isolation.

The Nonconformists will probably prosecute as before their sectarian quarrel with Mr. FORSTER and his colleagues, but they can scarcely take credit for the unforeseen weakness displayed by the Government in the recent elections. There are no English Dissenters at Dundee, and the sects are far less powerful in the metropolitan boroughs than in

the manufacturing towns of the Midland and Northern counties. In the last Session of Parliament, when all members constantly kept in view the chances of a general election, Mr. DIXON and Mr. MIALI were supported by diminished minorities. The country, as far as a judgment can be formed, cares but little for the 25th Clause of the Education Bill; and Mr. GLADSTONE was probably in the right when he told Mr. MIALI that the Established Church would be stronger in the next Parliament than in the present. The more ardent Dissenters, lay and clerical, will honestly make the most of their grievances, but agitators unattached will at present hesitate to join the sectarian banner. The advocates of Permissive Bills and contagious diseases have derived but small encouragement from recent events; and, although the House of Commons discredited itself by allowing Mr. RICHARD's resolutions on arbitration to pass, declamations on the advantages of peace excite no enthusiasm. On the whole, the choice of demagogues will probably fall on the demand for Mr. TREVELYAN's new Reform Bill, which has been openly sanctioned by the PRIME MINISTER, while it is faintly opposed by superficial Liberals and by insincere Conservatives. The danger of transferring to the agricultural labourers the control of the county representation has been imperfectly appreciated even by serious politicians. Attacks on landed property are comparatively innocuous when the agitation is confined to the populace of the towns. Artisans are not likely in any circumstances to covet a kind of property which they would be incapable of using. The political advisers of the farm-labourers would succeed far more easily in exciting their discontent and cupidity. Any declaimer against the exclusion of the labourers from the franchise is certain of a favourable audience. The revolutionary faction anxiously desires the accession of allies who would be serviceable in proportion to their ignorance and their violence.

Candidates for county seats will hesitate before they give their adhesion to the plan for rendering household suffrage universal. Many attempts have been made of late to separate the tenant-farmers from the landlords, and the success of the same experiment in Scotland naturally encourages the hopes of election managers in England; but it is a blunder to combine the seductive process of baiting a trap with the deterrent operation of a scurrow. The farmers may in some cases have been tempted by the blandishments of Liberals who held out to them hopes of fixity of tenure, of readjustments to their advantage of rates, and of the abolition or modification of the Game Laws; but on the other side are Mr. ARCH and his Labourers' Unions, and Mr. TREVELYAN with his Bill for disfranchising both landlords and tenants. Although the result of conflicting motives is not yet known, fear is a more potent passion than hope, and dread of mutinous labourers will probably prevail over jealousy of landlords. The county elections will probably, as in East Staffordshire, not be favourable to the Government; but the most sagacious observer can only guess at the working of the Ballot. Private dislikes, political crotchets, and anomalous motives of every kind will disturb political calculations. Perhaps Buckinghamshire may witness a revolt against Mr. DISRAELI not less unaccountable than the rebellion of Greenwich and Dundee against the lawful authority of Mr. GLADSTONE. In the general uncertainty, an interval of quiet may perhaps not be excessively disturbed by political agitation. The Government may be, as Mr. OSBORNE said, effete; but it is by no means certain that a revival of its early energy would not involve more unpopularity than its actual relaxation of activity. It would be more satisfactory to trust Mr. GLADSTONE than to rely on the judgment and patriotism of miscellaneous adventurers and deserters from their party.

THE WIGAN DISASTER.

THERE is, we believe, a prevalent idea that the safest time to travel is immediately after a very bad railway accident. It is supposed that an occurrence of this kind must naturally bring home to railway officials a sense of their responsibility, and must make them, for a day or two at least, particularly careful and diligent in attending to their duties. The events of the present week would seem to show the fallacy of this reasoning. The shocking catastrophe at Wigan has been immediately followed by a number of

other accidents. On Saturday afternoon there was a collision at Redbill, on the South-Eastern Railway. On Monday a passenger train ran into a coal train on the London and North-Western Railway, near Ashton; and on Tuesday, there was a more serious collision on the Great Western at Salisbury. On Wednesday again a Leeds train was run into at Bradford. Collisions are, of course, an inexcusable form of railway accident. It is impossible that they can occur if ordinary precautions are observed; but it is known that the paper rules of the Companies are habitually violated by working officials, with, it is to be feared, the connivance of their superiors; and the really accidental part of railway travelling is the arrival of trains in safety at their destination. It is thought to be enough if the chances are rather in favour of the lives of passengers. It need hardly be said that this is a matter in which gambling of this kind ought not to be tolerated, but there is a difficulty in dealing with powerful and reckless Companies. It has been stated on high official authority that by far the great majority of so-called accidents on railways are not accidental at all, and might be prevented by the adoption of well-known means of safety; but "the most important, most powerful, and most 'wealthy Companies'—we are quoting from the latest Report of the Board of Trade on this subject—"are just those 'which have too much neglected the application of such means, and frequently in those parts of their district in 'which for the heaviest traffic they were the most needed.'" On one occasion, after an accident on the London and North-Western Railway, it was discovered that "the distance-signal lamp had been broken for some time, and reported 'as broken,' while the gas supply at the signal-box had failed, and there was no clock or timepiece. Yet the Company which was guilty of this miserly neglect is one of the richest in the country."

The Wigan accident is perhaps the more alarming in consequence of the mystery which at present surrounds it. On Friday night the tourist express from London—an unusually heavy train of twenty-five carriages, drawn by a couple of engines—reached Wigan soon after one o'clock in the morning. Seventeen of the carriages passed through the station safely, but the rest got detached and ran into a siding, where they sprang from the rails and were dashed against each other with fearful violence, three or four of the carriages being piled one above another. It is impossible to describe the horrors of the scene. Thirteen passengers were either killed at the time or have since died, and some thirty or more were seriously injured. The marvel is, that any escaped alive; yet one man was found fast asleep and unhurt, and could not understand why he should be disturbed. A Board of Trade inquiry has been opened, but as yet it is impossible to say what was the cause of the disaster. It was at the "facing-points" that the train was broken into two parts; but these points, it appears, are worked on the interlocking system, and it was ascertained, after the accident, that they were properly set, uninjured, and in good working order. The station-master states that he found the points and the signals interlocked, and the pointsman declares that he never touched them after the accident until the station-master arrived. It cannot be doubted, however, that the cause of the accident must be sought at this point. It has been suggested that one of the carriages was not a North-Western, but a Caledonian carriage, and of a slightly different gauge from the North-Western rolling stock. No doubt a very slight difference in this respect, or in the height of the coupling-chains, would be sufficient, in connexion with the oscillation of a heavy train, to jerk the carriage off the metals, and, when one carriage left, the rest of course would follow. It may be said that, as Caledonian carriages frequently form part of North-Western trains, it is strange that no difficulty should have arisen on this account before; but a jerking which would be trifling under ordinary circumstances may have been intensified in this instance by the motion of a heavy train. We should be disposed to look for the origin of this accident not so much in any isolated incident as in a combination of circumstances. In the first place, there are the length and weight of the train. Last Friday night there was a general rush of people from town. August is the favourite and most convenient holiday month, and people in business like to throw the Bank holiday, with the preceding Saturday and Sunday, into their vacation. Anybody who happens to go to Euston Square or King's Cross about this time of year when the heavy trains of the day are starting can hardly fail to be startled by the number of

carriages, all closely packed, which are despatched at a time. The trains are of a composite character, and include detachments for a great many places on the way. At Crewe the train which met with this disaster had probably been a good deal reduced, but at Wigan it still comprised twenty-five carriages. Of these, seventeen passed smoothly and safely through the "facing-points"; it was the eighteenth carriage that went wrong, and, supposing that this was not due to the exceptional construction of the carriage, it is not unreasonable to conjecture that the length of the train had something to do with the disaster. There is always a tendency to oscillation in the last carriages of a very long train, and the prolonged strain may also have had a bad effect on the points. Facing-points, even at their best, are by no means in favour with careful engineers, and at Wigan they must be put through a severe trial. About two hundred trains a day pass through Wigan station, and a large proportion of these trains pass through the points now in question. If there were any tendency to weakness or irregularity about the points, a particularly long and heavy train following at a rapid pace after such a succession of trains would be very apt to bring out the mischief. The engine-driver states that in this case the train was going at the rate of thirty-eight miles an hour. The extraordinary thing is that, if the points had gone wrong, they should have spontaneously recovered themselves after the accident.

We forbear to express any opinion on evidence which has not been completed. A case has been cited in which, under somewhat similar circumstances, the pointsman's declaration that he had not touched the points after an accident did not command confidence; and another case of the same kind will be found in the latest batch of Board of Trade Reports on railway accidents. In the meanwhile there are one or two points on which we have no hesitation in expressing a confident opinion. In the first place, trains of twenty-five carriages which require two engines to pull them are clearly too long, and ought to be divided. One of the great mistakes of the Railway Companies is their perversity in not offering facilities to passengers to book their places beforehand. If this were done, those who were booked should in a busy season be sent off first, and the late comers should take their chance of a second train. Some limit should at least be placed on the length of quick trains. In the next place, trains should not be permitted to dash through stations at the rate of thirty-eight miles an hour; and the safety of facing points demands searching investigation. It has been stated that within a few hours after the terrible disaster of Saturday morning another accident of a similar kind was very nearly happening at the same spot, and would, an eye-witness asserts, have happened but for the slow pace at which the endangered carriage was moving. And, finally, it is obvious that every train should carry, as a matter of course, torches, saws, pickaxes, and other instruments which may be required in case of accident, and that these should also be kept at every station. Nothing can be more disgraceful than the difficulty which occurred at Wigan of obtaining lights and saws.

EPISCOPAL LETTER-WRITERS.

THE present motto of the Church Association seems to be—Take care of the curates and the incumbents will take care of themselves. It may be that a late-born distrust of the soundness of the decision in the PURCHAS case has indisposed them to prosecute those among the beneficed clergy who have not conformed to it, and that they think it safer and cheaper to attack men who have no freehold which the civil courts will protect. At all events, they show an extreme anxiety to egg on the bishops to "deal summarily" with such High Church curates as are already licensed in their dioceses, and to refuse to grant any further licences to men of the same way of thinking. If any of the bishops come to grief in this magnanimous crusade, they will not be able to plead that they have entered upon it unwarned. Three weeks ago the Bishop of LLANDAFF told the Council of the Church Association that to deal summarily with curates while leaving incumbents untouched would only lead thousands to array themselves on the side of the weaker party, and to resent with passionate indignation such an abuse of episcopal jurisdiction. It is a pity that the Bishop of DURHAM has not taken example by the Bishop of LLANDAFF. It seems, however, from a letter which he has addressed to Dr. DYKE, that he is too much impressed with

"the extent to which some of the clergy of the present day" in their public ministrations disregard the law which they "have pledged themselves to obey" to be very scrupulous as to the means he employs to bring them to their senses. If he had declared his intention of enforcing the law by taking proceedings against every beneficed clergyman in his diocese who either wears coloured stoles or takes part in, or is present at, the burning of incense, or turns his back to the people during the communion service—which are the three Ritualist crimes that seem most to excite the Bishop's indignation—his decision might be matter for regret, but it would furnish no occasion for criticism. The Bishop would be acting strictly within his rights, however injudicious, from any point of view but his own, his mode of exercising them might be. Instead of this, he has undertaken to do what he can to "protect curates from the unlawful requirements of some incumbents, and to protect parishioners from the follies and lawlessness of some curates." It is pleasing of course to see so heroic a determination to protect the weak, but its value in the present case is a little impaired by the fact that one of the classes mentioned by the Bishop has never invoked his aid, while the other, when it has asked for protection, has asked it against a different enemy. Where, except in the Bishop of DURHAM's fervid imagination, is the unwilling curate whom a cruel incumbent has compelled to wear coloured stoles, or to be present at the burning of incense, or to stand with his back to the people? If such a being exists, his fortune is made. The officers of the Church Association will be happy to organize a series of public meetings at which the victim will be the chief attraction, and it will be his own fault if he does not receive a sufficient percentage on the tickets to make the narration of his sufferings—illustrated by a real stole, real incense, and an enlarged photograph of his back as it appeared when turned to the congregation—supply him with all the comforts of life until such time as some Protestant patron presents him to a living.

Where, again, are the parishioners who need no protection against the lawlessness of incumbents, and are yet unable to protect themselves against the lawlessness of curates? If the Bishop of DURHAM really wants to help aggrieved parishioners, he is beginning at the wrong end. He intends in future to require of every incumbent who applies for a licence for a curate a written promise that he will not require such curate to offend in any of the three specified ways, and of every curate who applies for a licence a written promise that he will not so offend of his own mere motion. Putting aside all considerations of the justice or legality of thus setting up a standard of orthodoxy utterly unknown to the law, and making readiness to give these unauthorized pledges a condition of clerical employment in the diocese of Durham, how does the Bishop suppose that this policy will answer its alleged purpose? Those sensitive spirits who cannot say their prayers because the clergy wear green ribands round their neck instead of black will not be soothed because they will in future see only one coloured stole instead of two. If the sight of a clergyman's back is repugnant to their religious principles, the shock will be no less severe because the back is always the rector's, instead of, as heretofore, being alternately the rector's and the curate's. The only effect of the episcopal ukase will be that, while the ritual which the Bishop wishes to check will go on unchanged, the work in the parish to which he must be supposed to wish well will be shorn of half or two-thirds of its vigour.

The Bishop of LONDON also has been tempering the heats of summer by a little indulgence in letter-writing. The letter to the Rector and Churchwardens of St. George's, Hanover Square, which appeared in the *Times* of Wednesday, is a conspicuous instance of episcopal fondness for blowing hot and cold in the same sentence, and saying nothing while appearing to say much. The first three paragraphs combine the demerits of a sermon and an Article of Religion, while the statement of the "mind of the Church of England" which follows reads like an opinion of a counsel who feels that he has nothing to say, but has received too large a fee to admit of his decently saying nothing. The conclusion of the letter appears almost wise by comparison with the pre-eminent folly of the Vestry of St. George's. This remarkable corporation has, it seems, besought the Bishop of LONDON to exert all his power and vigilance to protect them and their families from the threatening danger of the restoration of auricular confession. There is about as much sense in this petition as there would be in a prayer that the Bishop

would exert all his power and vigilance to protect them and their families from the danger of marriage. The proper way to console these terrified petitioners would have been to remind them that, even if St. George's were lined with confessionals, the united strength of the Anglican clergy would be insufficient to make a vestryman confess. When they ask that their families shall be protected against confession, there is a little more meaning in the entreaty. Even that imposing being, a vestryman of St. George's, Hanover Square, occasionally finds that his wife and children do not think him so admirable as he thinks himself, and, in particular, that they have learned to question his omniscience in matters of religion. They have dared to become High Church while he has contentedly remained Low Church, and he does not know how to bring them back to his own views. It is the old story of the hen and the ducklings, only in this case the hen has a bishop to cackle to instead of addressing her supplications to the universe generally. The Bishop of LONDON has for once had the courage to tell the petitioners that he can do nothing for them:—"A bishop's power," especially in regard to the matter of confession, is very limited." Of course he does his best to destroy the force of his words by an intimation that the remedy "must be mainly sought elsewhere"; he would hardly be an Anglican bishop if he had not sought to qualify the force of so plain and sensible a statement. But the qualification does not amount to much, for it turns out that elsewhere is, in this instance, only a synonym for nowhere. A charge brought against a clergyman of "teaching the doctrine of sacramental confession might," probably, the Bishop thinks, "elicit from our courts a clear statement of our Church's teaching"; but even then "the rules of judicial interpretation in penal cases" might prevent the condemnation of the accused for "contradicting it." In other words, if the vestrymen of St. George's like to take proceedings against some High Church clergyman, they may probably get the doctrine of Confession condemned in the sense in which the doctrine of the Real Presence was condemned in the BENNETT case. We do not pretend to hold the wits of the Vestry of St. George's in very high esteem; but they will probably be keen enough to keep their owners from using their liberty of prosecuting. Even if they were unexpectedly successful in this way, they would only be able, as the Bishop goes on to remind them, to get at one of the guilty parties. "The laity who habitually confess, and whom the law cannot touch, are at least as culpable as the clergy who hear habitual confession."

If the law is thus imperfect, the Bishop of LONDON had better introduce a Bill to amend it. Perhaps the work of preparing it might lead him to choose his words with more accuracy. What is meant by a layman who habitually confesses being "culpable"? What law does he break in going to confession? and if there is a law against it, does he break it knowingly and wilfully? If the Bishop of LONDON would take the trouble to put these questions to himself, he would soon see that the only guilt which a layman can possibly incur by going to confession is the guilt of thinking differently from the Bishop of LONDON. No man goes to confession believing it to be wrong; no member of the Church of England goes to confession believing that the "mind of the Church of England" is opposed to his going. Of course, if the Bishop of LONDON has special authority to declare what the mind of the Church of England is upon all subjects, the laity are "culpable" for presuming to doubt his interpretation. But, before rating them for preferring another interpretation to his, it would be as well if he would make good his title to the office of infallible expounder of the Book of Common Prayer. On the whole, the Bishop of LONDON is seen at his best in the region of such safe truisms "as There would be few confessors if there were not many ready to confess;" and we should advise him in any further correspondence he may have with the Vestry of St. George's, to confine himself to judicious amplifications of this and equally indisputable propositions.

SECULAR PROPHETS.

ALTHOUGH prophecy is usually supposed to be the special gift of inspiration, nothing comes more glibly from secular pens. Half of the leading articles in the daily newspapers are more or less disguised predictions. The prophecies of the *Times* are more numerous, more confident, and more explicit than those of

Jeremiah or Isaiah. "Secular Prophecy Fulfilled" would be a good title for a book written after the model of those old and half-educated divines who zealously looked through Isaiah, Jeremiah, Daniel, and the Apocalypse for shadowy hints that Hildebrand would enforce celibacy on the clergy of the Latin Church; that Luther would cut up the Christianity of the West into two sections; that Cromwell would sign the death-warrant of Charles I.; and that the Stuarts would become wanderers over the face of the earth. There are still, we believe, devout, mystical, and studious sectaries who find such events as the disestablishment of the Irish Church and the meeting of the Vatican Council plainly foretold in the Book of Revelation. They also find Mr. Gladstone's name written in letters of fire by inspired pens that left their record while the captivity of Babylon was a recent memory, or while Nero was the scourge of the Church. Nay, Dr. Cumming, who is as different from those mystical interpreters as a smart Yankee trader is from Parson Adams, sees that the Prophet Daniel and St. John had a still more minute acquaintance with the home and Continental politics of these latter days. But "Secular Prophecy Fulfilled" would show a much more wonderful series of glimpses into the future than we find in the interpretations of Dr. Cumming, and it would certainly bring together a strange set of soothsayers.

Arthur Young, Lord Chesterfield, and William Cobbett are not exactly the kind of men whom we should expect to find among the prophets. Arthur Young was a shrewd traveller, with a keen eye for leading facts, and a remarkable power of describing what he saw in plain, homely words. Chesterfield was a literary and philosophical dandy, who, richly furnished with the small coin of wisdom, and fearing nothing so much as indecorum, would have been a great teacher if the earth had been a drawing-room. Cobbett was a coarse, rough English farmer, with an extraordinary power of reasoning at the dictate of his prejudices, and with such a faculty of writing racy, vigorous English as excites the admiration and the despair of scholars. It seems almost ludicrous to speak of such men as prophets. And yet Arthur Young foretold the coming of the French Revolution at a time when the foremost men of France did not dream that the greatest of political convulsions was soon to lay low the proudest of monarchies. And the dandified morality of Lord Chesterfield did not prevent him from making a similar prediction. Cobbett made a guess which was still more notable; for, at the beginning of the present century, he foretold the secession of the Southern States. But the most remarkable of all the secular prophets who have spoken to our time is Heine. He might seem indeed to have been a living irony on the very name of prophet, for he read backwards all the sanctities of religion and all the commands of the moral law. Essentially a humourist, to whom life seemed now the saddest of mysteries and now the most laughable of jokes, he made sport of everything that he touched. His most fervid English devotee, Mr. Matthew Arnold, is forced to admit that he was profoundly disresponsible. He quarrelled with his best friends for frivolously petty reasons, and he repaid their kindness by writing lampoons which are masterpieces at once of literary skill and of malignity. Neither Voltaire nor Pope scattered calumnies with such a lack of scruple, and Byron himself was not a more persistent or more systematic voluptuary. Yet Heine was so true a prophet that his predictions might have been accounted the work of inspiration if he had been as famed for piety or purity as he was notorious for irreligion and profligacy. He predicted that Germany and France would fight, and that France would be utterly put down. He predicted that the line of fortifications which M. Thiers was then building round Paris would draw to the capital a great hostile army, and that they would crush the city as if they were a contracting iron shroud. He predicted that the Communists would some day get the upper hand in Paris, that they would strike in a spirit of fiendish rage at the statues, the beautiful buildings, and all the other tangible marks of the civilization which they sought to destroy; that they would throw down the Vendôme Column in their hate of the man who had made France the foe of every other people; and that they would further show their execration for his memory by taking his ashes from the Invalides and flinging them into the Seine. All these predictions, save the last, have been fulfilled to the letter, and it would need a bolder prophet than even Heine himself to say that the last will not be verified also. For nothing is more remarkable in France than the success with which the International is teaching the artisans that the first as well as the third Napoleon was the worst enemy of their class. Although they still regard his achievements with pride, they fervently believe that he was the foe of their order, and the acts of the Commune showed their eagerness to insult his name. And there may be another Commune. Intrepid prophets would say that there certainly will be another. If that should happen, it is quite possible that the fanatics of the International may fling the ashes of the great soldier into the Seine to mark their abhorrence of military glory.

Prevost-Paradol was as different from Heine as a gifted voluptuary can be from a polished, fastidious, and decorous gentleman. Yet the refined, reserved, satirical Orleanist, who seemed to be uncomfortable when his hands were not encased in kid gloves, and who was a master of all the literary resources of innuendo, would be as much out of place among the Hebrew prophets as Heine himself. He would find a place, nevertheless, in "Secular Prophecy Fulfilled," by reason of the startling exactness with which he foretold the outbreak of the war between his own country and Germany. In a passage which promises to become classic, he said that the two nations were like two trains which, starting from

opposite points, and placed on the same line of rails, were driven towards each other at full speed. There must be a collision. The only doubt was where it would happen, and when, and with what results. De Tocqueville better fulfilled the traditional idea of a prophet, and there is a startling accuracy in some of the predictions as to the future of France which he flung forth in talking with his friends, and of which we find a partial record in the journal of Mr. Nassau Senior. Eighteen years before the fall of the Empire, he predicted that it would wreck itself "in some extravagant foreign enterprise." "War," he added, "would assuredly be its death, but its death would perhaps cost dear." M. Renan also aspires to a place among the prophets, and he has made a prediction which may be a subject of some curiosity when the next Pope shall be elected. The Church of Rome will not, he says, be split up by disputes about doctrine. But he does look for a schism, and it will come, he thinks, when some Papal election shall be deemed invalid; when there shall be two competing Pontiffs, and Europe shall see a renewal of the strife between Rome and Avignon.

It may be said, no doubt, that the verified predictions which we have cited are only stray hits; that the oracles make still more remarkable misses, and that, since guesses about the future are shot off every hour of the day, it would be a marvel if the bull's-eye were not struck sometimes. Such a theory might suffice to account for the hits if the prophecies were let off in the dark and at random; but that is not the case. It is easy to trace the path along which the mind of Heine or De Tocqueville travelled to the results of the future, and their predictions betray nothing more wonderful than a rare power of drawing correct inferences from confused facts. A set of general rules might be laid down as a guide to prophecy. In the first place, we might give the negative caution that the analogy of past events is misleading, because the same set of conditions does not appear at two different times, and an almost unseen element might suffice to determine an all-important event. Forgetting this fact, Archbishop Manning has ventured into the field of prophecy with the argument that Catholics should not be made uneasy because the Pope has lost his temporal power, for they should remember that he has again and again suffered worse calamities, and has then won back all his old authority. Between 1378 and 1418 the Church witnessed the scandal of a schism, in which there were rival Popes, and in which Rome and Avignon competed for the mastery. That calamity is worse than any which has come to the Church in our days, yet the Papacy regained its old power and glory. So late as within the present century the Temporal Power was reduced to nullity by the first Napoleon, and Pius IX. himself had to flee from Rome in the beginning of his reign. Why, then, should not the robber-hand of Victor Emmanuel be paralysed in turn, and the Papacy once more regain its old splendour? Not being ambitious to play the part of prophets, we do not undertake to say whether the Papacy will or will not again climb or be flung into its ancient place, but it is not the less certain that Archbishop Manning's prophecy is a conspicuous example of a false inference. When he argues that a Pope in the nineteenth century will again be the temporal ruler of Rome because a Pope triumphed over the schism of Avignon in the fifteenth, he forgets that the lapse of centuries has wrought a vast change of conditions. At the end of the fourteenth century a keen onlooker, a Heine or a De Tocqueville, might have confidently foretold that a Pope of unquestioned authority would soon govern the historic city of the Papacy, because the political and the social interests of Europe, no less than the piety or superstition of the times, required that the Pope should be powerful and free. The current of the age, if we may use the philosophical slang, was running from Avignon to Rome in the fourteenth and fifteenth centuries, and now the current of the age is not less distinctly running against the temporal power. The very reasons which would have led a prophet in 1400 to predict that Rome would again be the unquestioned seat of the Papacy would lead the same soothsayer to affirm in 1873 that the Temporal Power has been shattered for ever.

It is in general causes that we find the guide of prophecy. Mr. Buckle attached so much importance to the physical conditions of a country, the food of a people, the air they breathe, the occupations which they are forced to follow, and the habits of thought which they display, that he undertook to tell the end of a nation from the beginning. Spain was no mystery to him when he remembered that it had originally been a country of volcanoes; that the people had consequently been filled with a dread of the unseen and inscrutable power which reveals itself in convulsions of the earth; that their diseased fear of shadowy influences made them resent the teachings of science, and hence left them an easy prey to the Holy Office and Ignatius Loyola when Luther, Calvin, and Zwingli drew away from sacerdotalism all the Christianity of Northern Europe. There can be no doubt that Buckle's theory did rest on a basis of truth, and that it erred simply by trying to account for everything. In fact, it is not specially his doctrine, but simply that rigid and systematized application of a principle which is as old as speculative curiosity. We apply it every day of our lives. If a family goes into a badly drained house, we say the chances are that they will have typhus, diarrhoea, or cholera. If a rich and foolish young man bets largely on the Turf, the probability is that he will be ruined. And the statistician comes to help us with a set of tables which throw an uncomfortable light on the mechanical character of those mental and moral processes which might seem to be determined by the unprompted bidding of our own wills. Mr. Buckle was no doubt beguiled by a mere dream

when he fancied that we could account for every turn and winding in the history of a country if we had only a large knowledge of its general conditions, such as the temperature of the land, the qualities of the soil, the food of the people, and their relations to their neighbours. He paid too little heed to subtle qualities of race, and he did not make sufficient allowance for the disturbing force of men gifted with extraordinary power of brain and will. Still it is a mere truism that the more correctly and fully we know the general condition of a country, the more does mystery vanish from its history, and the successive events tend to take their place in orderly sequence.

It is impossible, however, to prophesy by rule, and such system-mongers as Mr. Buckle would be the most treacherous of all oracles. Their hard and fast canons will not bend into the subtle crevices of human life. Men who are so ostentatiously logical that they cannot do a bit of thinking without the aid of a huge apparatus of sharply cut principles always lack a keen scent for truth. They blunder by rule when less showy people find their way by mother-wit. Hence they are the worst of all prophets. It was not by counting up how many things tell in one way, and how many tell in another, that Heine and De Tocqueville were able to guess correctly what was coming, but by watching the chief currents of the age, or, as more homely folk would say, by finding out which way the wind was blowing. They had to decide which among many social, religious, or political forces were the strongest, and which would be the most lasting. They had to give a correct decision as to the stability of particular institutions and the strength of popular passions. General rules could not be of much avail, and they had to rely on their knowledge of human nature, their acquaintance with the forces which have been at work in history, and their own sagacity. Most likely Heine could not have given such an explanation of the grounds on which he made his predictions as would have satisfied any average jury of historical students. But he could have said that he knew the working-men of Paris, that his power of poetic sympathy enabled him to see how their minds veered towards socialism, that he also knew what forces were on the side of order, and that a mental comparison of the two made him look with certainty to a ferocious outbreak of democratic passion. Being thus sure that the storm would come, he had next to ask himself which points the lightning would strike, and he looked for the most prominent symbols of kingship, wealth, refinement, and military glory. The Tuileries would be a mark for the fury of the mob, because that was the palace of the man who had destroyed the populace. The public offices must go, because they represented what the *bourgeois* called order and the workmen called tyranny. The Louvre must go, for the mere sake of maddening rich people who took a delight in art. And the Vendôme Column must go, because it glorified a man who was the incarnation of the war spirit, and who was consequently the worst foe of the working classes. To a Select Committee of the House of Commons such reasons would have seemed the dreams of a moon-struck visionary, and they certainly did not admit of being logically defended. No prophecy does. The power of predicting events is the power of guessing, and those guess best who are least dependent on rules, and most gifted with the mother-wit which works with the quietude and unconsciousness of instinct.

THE BANK HOLIDAY.

THE Bank Holiday begins to be a nuisance to those who do not share in it. Business has not only to be done by large classes on that day, but has to be done under considerable difficulty. The Assizes have been held during this week at Croydon, and as judges, counsel, attorneys, parties, and witnesses belong for the most part to London, and go up and down by train, it may be imagined how their movements were impeded by the excursion traffic of last Monday. The *Times* states that, "owing to the great confusion on the railway in consequence of the Bank Holiday, Baron Pigott was unable to get away from London Bridge station, and did not arrive till half-past one," his sitting having been appointed for eleven. Another report was that the learned Baron was not detained at London Bridge, but put into a wrong train and carried to Three Bridges, and thence brought back to Croydon. After a little more experience of Bank Holidays we shall form the habit of allowing in our arrangements for an entire interruption of ordinary railway traffic, and thus we shall in some measure guard ourselves against serious inconvenience. But an effectual remedy would be to extend the holiday to all public business. This would be a less evil than being obliged to do business under difficulties, although lawyers and members of Parliament would doubtless complain that the commencement of their long holiday was delayed by the interposition of a short holiday which they could not conveniently use. It becomes only too manifest in August that these classes are working under an intense desire to finish work, and if an attempt were made to apply the Bank Holiday Act to Parliament, we believe that Parliament would disobey it, and thus a strike of a new kind would be, as the penny-a-liners say, "inaugurated" by impatient legislators. The general feeling in London in favour of these holidays suffices, however, to drown individual grumbling; but we are told that in Manchester the Act is not altogether popular. At the recent monthly meeting of the General Purposes Committee, the Town Clerk of Manchester announced that on Monday the Town Hall would be closed. "This

led to a lively discussion, in the course of which the Bank Holiday Act was denounced as one of the most absurd Acts that ever were passed." It was urged that the street pavements had as much right to a holiday as the rate-collector. We are transcribing almost literally from the report in a daily newspaper of the arguments urged in Manchester against the Bank Holiday, without intending either to adopt or reject them. But it certainly appears to us that a proposal to give a holiday to the rate-collector would be received with satisfaction by a large number of persons liable to pay rates. That hardly-worked functionary must certainly require the recreation which could only be afforded by an entire suspension of the business of his office. The argument that the seventeen Inspectors of Nuisances ought to have a holiday would also, we think, obtain a large amount of support from those who might expect to be thus left to enjoy their dirt for a single day in peace. The Act was primarily intended for the relief of clerks in banks and other establishments who are dependent on the pleasure of their employers. It has been made the occasion of a general holiday by tradesmen and other classes who, if they combine, can do pretty much as they please. "Throughout the metropolis nearly every shop was closed." This we believe to be a correct statement, and it represents a condition of things slightly irritating to those persons whose business cannot be suspended, and compels their presence in London. This annoyance, however, will be diminished when we all get into the habit of remembering and providing for the effects of a Bank Holiday. We shall gradually fix in our minds a few practical rules, such as "If you want to come to town on Monday, start on Sunday night." The enormous mass of population which a general holiday puts in motion renders the railways almost impracticable for twelve hours. Excursionists to Bath, Bristol, and other distant places must be exceptionally fond of the interior of a railway carriage, since they are liable to arrive at their destination only in good time to start upon the return home. It is, however, fortunate that variety of tastes distributes the holiday-makers over nearly all the railways. Some accounts state that London was almost deserted on Monday, while others represent that there was a considerable influx of visitors from the country. It is difficult to calculate what might be the effect of a wet day, but if we suppose that the excursionists of last Monday suddenly determined to remain at home and concentrate their attention upon the ordinary sights of London, we shall arrive in imagination at a considerable block near the British Museum and the Tower. However, the day was fortunately fine in London and for a good many miles around. An enthusiastic supporter of holidays even represents that, with some exceptions, the line of fine weather throughout England would include all the districts where business was generally suspended.

It certainly was fortunate that the weather was fine at places like Southend, where on Saturday and Sunday night people slept in bathing-machines, in a slaughter-house, and in the open air. It might be a profitable speculation in such places to erect spacious tents, where rest and shelter might be guaranteed to considerable numbers. An account has been published of the condition of Southend which probably represents with slight embellishments the actual truth. It is the most accessible point from the East of London of what may be called by courtesy the seaside, and it is no great exaggeration to suppose that within forty-eight hours all the clerks and shopmen of Bethnal Green and Whitechapel transferred themselves to Southend. Unexpectedly and almost suddenly the town became full on Saturday night, and no beds were to be had. The bathing-machines, slaughter-house, and cliff slopes were occupied as already mentioned. Then, says the writer, by way of piling up the agony, "On Sunday night all these difficulties were multiplied." Those who could not sleep in the open air walked the streets till morning, and doubtless enjoyed a magnificent view of the rising sun. A third and larger army of excursionists arrived on Monday morning. The pier, which is a mile and a-quarter long, was crowded. The fields were dotted with couples and groups of lazy dreamers, half buried in the corn, or enjoying the shade. It does not seem to occur to the author of this pretty description that farmers do not grow corn to make beds for lazy dreamers on a Bank Holiday. Sir John Lubbock is supposed by the writer to be capable of exulting at the sight of these excursionists trooping back to the station on their return to town, "laden with field flowers and handfuls of wheat and barley." It seems probable that in course of years Sir John Lubbock will come to be regarded as the patron saint of the holiday-makers of early August, and thus the Calendar will receive the name of a third St. John. The owners of the trampled and despoiled wheat and barley around Southend will perhaps be tempted to adopt the words applied to a King of Scotland who enriched the Church at the expense of his successors, and say that Sir John Lubbock was "a sair saint" for the farmers. Seriously it appears possible to have too much of a good thing. We began by suggesting that, as the holiday has gone so far, it should be extended even further. But we shrink appalled from the practical application of our own principle. Suppose that it was a fine day, and everybody determined to go out of town. Or suppose that it was a wet day, and everybody determined to remain in town and amuse themselves. The prophetic image of the army of locusts is equally applicable to either case.

All the descriptions of this holiday proceed upon the same idea of "the more the merrier," which we should think was carried to its limit at Southend. If one had to choose between business under great and pleasure under greater difficulties, inclination

would probably point toward the former. One writer expresses indignation that the clerks at Somerset House were compelled to attend at their several departments on Monday. It may be, however, that the clerks did not partake of this indignation. If a system exists by which they get so many holidays in the year, they gain nothing by fixing one of these holidays for a particular day. If a man goes for forty-eight hours to Southend, and still more if he takes his wife with him, he likes to start with some assurance of a bed to sleep on. The traffic to Margate and Ramsgate is stated to have been so heavy that it was doubted whether the last train would reach London before four o'clock on Tuesday morning. This would be something like a holiday. All the accessible points of the East and South coast, from Harwich to Portsmouth, seem to have been favoured, and the more enterprising excursionists probably select the more distant places, where certainly they would have the best chance of accommodation if they had any time for making use of it. By an odd caprice, an association of working-men of large towns call themselves Foresters, and their officers assume the title of Rangers. The talent which these names imply seems likely to be useful on a Bank Holiday. Another association called Odd Fellows went to Richmond Park, where a sufficient entertainment had been provided by the circumstance that a brutal attack had been committed on a girl last week. The scene of the assault was visited by Odd Fellows of both sexes, who picked eagerly at the grass in hopes of finding a trace of blood. But, says the reporter, there was little chance of any fresh discovery, "inasmuch as similar investigations had been ardently pursued by the multitudes who had visited the Park on the previous afternoon." The reporter adds that the Park was in excellent order, and nature appears to have done what she could on a fine day in August to compensate the Odd Fellows for the entire absence of blood stains from the grass. Still it is much to be regretted that some benevolent person could not have contrived to cut his finger near the scene of the assault. By the expenditure of a few drops of blood he might have diffused happiness among thousands of Odd Fellows. It is true that he would have done good by stealth, and although he would have improved a Bank Holiday, he could not hope to share the popularity of the author of it.

THE ARMY OF THE PARIS COMMUNE.

THE difference between the conception of romance and the hard truth of reality has been seldom more striking than in the case of Cluseret, as idealized in Mr. Disraeli's well-known cosmopolitan general, with his romantic and yet practical nature making him the natural leader of enterprises which to others were hopeless, and the real Cluseret as revealed to us in his own writings and the confessions of his fellow-traders in rebellion. The luckless Rossel may be said to have almost atoned for his own folly and crime in deserting the flag of his country to throw in his lot with the mob of Paris, by the honesty with which in his "Posthumous Memoirs" he painted the men of the time for the advantage of the community on which they had sought to impose. His portrait of Cluseret in particular is so complete as to leave little to be done by others; and, though drawn with some natural bias—since the two were in a manner rivals—it agrees too faithfully with what is known of the career of the self-styled General in America and his relations with Fenianism to allow us to doubt of its accuracy.

The times at present are sadly turned against Cluseret's favourite occupation of treason-mongering. No secret Committee of revolutionists or General Council of insurgents exists at present, at least in a capacity to remunerate his services. But his old profession as journalist appears to stand him in good stead at his need, and he wields against the cause of order a busy pen which is happily almost as harmless as his sword. Having told us lately through one of our magazines how he failed in Ireland, he now undertakes the story of his ill-success at Paris; and his revelations in the *Fortnightly Review* have all that value which those of an eyewitness, however biassed, however disinclined to tell the whole truth, must ever possess to the eye of the historical critic. Napoleon himself, as is well known, managed to damage his reputation severely whilst attempting to defend it in his later writings; but the general results of his labour and that of those who followed him proved largely in favour of historic truth. And so—to compare very small things to great—it will be found with the memoirs of the charlatan of the barricades whom Mr. Disraeli's pen for a short space gilded as a hero.

Cluseret's story opens, of course, just before his own arrival at Paris. Among the large-tricks or delusions of the writer—one or other it plainly must be—is the idea that he is perpetually being sought for by the police, and escaping them by a hair's-breadth; and those who read his statements that he was "haunted like a deer" all the winter before by the orders of Gambetta need take the figure for no more than it is worth. The Dictator of Tours had, we may be sure, quite occupation enough in those days of ever-recurring disaster, without troubling himself overmuch about the fugitive revolutionist who imagined that the eyes of all Europe were on his movements. What is certain is that, as soon as the Commune had gained its fleeting triumph on the 18th of March, he made his way to Paris, and at once came into communication with its members. This was on the 22nd or 23rd. The members of the Central Committee in power—who were all, we are told, suited for their parts, "with the exception of two men, one of whom was

always drunk, and the other one of the most dangerous of blunderers"—felt already their coming need of military strength to maintain the position they had seized, and turned their eyes on Cluseret as the proper man for their Minister of War. On the 2nd of April, after the firing from Mont Valerien had begun, he was appointed to the office of Minister, or, in the slang of the hour, Delegate, which he occupied until late in the siege. As this period of office was one of continued disasters to the Commune forces, it is naturally an object with the chronicler to show that the fault was not his own; and to his efforts to lay the blame on others we are indebted for such revelations of "ignorance and presumption"—the words are Cluseret's own—as even Rossel's Memoirs had hardly prepared the world for.

The attack on Versailles had already been resolved upon when Cluseret assumed office. "Three young men, improvised generals, only one of whom, Bergeret, had served in the army as a sergeant," were about to "stake the fate of Paris upon the die of their presumptuous ignorance." Eudes, the chief of these heroes, a chemist by trade, is sketched for us as "a man of plain speech, and devoted to the cause. But his simplicity did not extend to his dress. He had a cap ornamented with I do not know how much lace and how many stars." To do him justice, it is added, he did not come up in this matter of dress to Bergeret, who wore his red scarf crosswise upon his breast, so as to imitate the Grand Cordon of the Legion of Honour. Of Duval we do not get so particular an account. But as he was an actor of the fourth class by profession, one may suppose that he was at least as theatrically silly in the trappings of his new post as his two associates.

Cluseret would at first, according to his own statement, have prevented the movement, but he yielded to the representations of Eudes that this was impossible, as the orders had been already given, and "the troops" were on the march. So the new Minister tells us that he confined himself to the endeavour "to mitigate the evils which I foresaw as its result," by sending out written orders, to which no one appears to have paid the smallest attention. That this was not quite the only way in which the head of an armed force could act appears not to have occurred to him. Of course to have gone to the head of the columns to use personal efforts with the leaders instead of written remonstrances, to have insisted on taking individually the command of the disorderly mob who were being led out of Paris by either bank of the Seine, would have involved serious hazard to himself. But then, as revolutions are not to be made with rose-water, so neither is their leadership to be gained, we should think, by keeping out of harm's way.

Cluseret, however, did not choose to accept the risk, and he plainly speaks of the events that followed very largely from hearsay. We shall, therefore, not follow him through them. His description of the start of "the troops" is, however, too vivid to be omitted, and that of the position he voluntarily assumed is so characteristic of the man that it deserves to be added. "The march," he tells us, "was to begin at six o'clock in the morning. There had been no previous reconnoitring; there was no line of battle; there were neither brigades nor divisions; there was no vanguard, and no reserve; there was nothing at all. No measures had been taken for camping on the road, if Versailles were not reached at a bound, nor for beating a retreat in case of defeat. 'Go as I push thee,' comprised all the plan of battle. For a moment, calling to mind the God of drunkards, I almost had doubts as to the result. Perhaps there might also be a God of the ignorant! *Deus ignotus*. In any case, I determined to join the march as a private person, in order that I might become better acquainted with men the responsibility of commanding whom I had just accepted, and also in order that I might, in case of need, do my utmost to prevent disaster." The account with which he follows this of his own personal efforts to rally some of the beaten Communists near Meudon may be exaggerated. But from Rossel's evidence it is known that Cluseret did not, when tested, lack the personal courage necessary to lead others under fire. What he was found wanting in from first to last was the moral fibre which would have enabled him either to extricate himself from the inferior position to which the suspicions of the real leaders of the mob continually thrust him back, or if that proved impossible, to manfully resign his functions. That morning of the 3rd of April which began the series of Communist disasters was plainly his special opportunity, had he had the least genius for controlling the demon of disorder that prevailed. And this opportunity he wilfully resigned, or allowed to slip from his nerveless fingers. It needs no other evidence here than his own to convict him of gross incompetence for the position he had the ambition to fill, but not the courage to use, even for his personal advantage.

The defeat once told, Cluseret goes much out of the way of his narrative to attack the Versailles generals for their failure to use it, and the Versailles troops for their barbarities. As he does not utter any disapproval, however, of the deliberate murder of the two generals at Montmartre, which is now known to have been perpetrated in order to make complete the breach between the mob and the side of authority; and as he mentions the imprisonment of the hostages—"obscure officials," he terms them, the Archbishop being one—chiefly to add his own opinion that the Communists did a very foolish thing not to keep General Chanzy to add to the number, we may well decline to enter into this part of the subject. No doubt the crowd at Versailles was very violent towards the

prisoners; but this very crowd was in great part composed of refugees who had fled from Paris to save their lives, and whose property was being despoiled by the petty tyrants of the Sections who had driven them away. No doubt, too, soldiers and officers of the Versailles army were disposed to treat their prisoners summarily, and a very slight license of tongue on the part of one of the latter might, as in the instance quoted of the self-styled General Duval, prove his immediate death-warrant. But these officers and soldiers both knew of the shameful murders of the Rue des Rosiers, perpetrated in defiance of them just before, and of the slaughter in cold blood, in the Rue de la Paix, of those whose only offence was to shout in favour of peace. It does not therefore much surprise us that, with this provocation to start with, they treated their captives with such severity as was certainly the case. Let Englishmen not look too nicely at this matter. No one thought of impugning the severity which quenched the fearful Bristol riots in the blood of those who raised them. For we, too, then had had our taste of the amenities of Communism. Special Correspondents whose task it may be hereafter to chronicle such events on this side of the Channel as would bring Cluseret and his friends into prominence, will possibly find that Englishmen are not a whit less hard than Versaillesists in putting down professional traders in revolution, or the meaner rascals who would seek in public disorder the opportunity for private plunder.

The second part of Cluseret's narrative, just published, opens with a verbose argument on that most impracticable of all notions, the proposing to "the people"—that is, to that fraction of it which the long saturnalia of drink and political harangues during the German siege had inflamed into Communists—the blowing up all Paris and burying themselves under the ruins. This, the writer tells us seriously, would have been his suggestion had the Prussians joined the antagonists of the party he worked with; but he kindly saves the trouble of commentary by the foot-note which adds, "To propose blowing up Paris! Would it not have been a dramatic expression?" It would indeed; and no one understands this better than the writer of the note, who takes pains to show, and succeeds in showing, the impracticability of the very course of which he writes in the same page that he "should have voted in favour of it," as it would have been "an immense example and warning." Fortunately for such heroes as Cluseret, to whom the getting out of a revolution with a whole skin seems a necessary condition of their joining in it, such an "example" would need a larger number of personal examples to be made first than are usually to be found, even when—to use the expressive phrase of Lullier—"the men of the streets have had their throats well warmed" with their favourite eau-de-vie.

On the conduct of the defence, as Cluseret describes it, it is not necessary to dilate. He abuses Bergeret, whom he got imprisoned, which is natural enough. He tells us the weaknesses and incapacity for command of Dombrowski, whom he put into Bergeret's place. He declares that Rossel deceived him. He complains of the conduct of the wretched Raoul Rigault, fit head of the Commune police, who probably behaved no better to the War Delegate than to any one else. He of course finds the Versailles generals at every turn incapable, and their troops cowardly. He hints darkly at the great things he would have done if he had had "a general and a dozen good officers to put at the head of the brave soldiers of the Commune." But for any new view of the siege as a whole, or of the progress of the Versailles cause to victory, we look through his pages in vain. His own utter incapacity to understand the situation at the beginning of the siege is attested by the assertion that "every day gained added to the prestige of the Commune, and diminished by so much the confidence in the troops of Versailles"—a statement as completely opposed to proved facts as it is possible to put in words. But then he is by these misstatements seeking to excuse his own tactics, which, as he tells us, were simply to gain time. So, too, when he would extenuate the mistaken show of fighting on the Neuilly side, he is found reviving the old stories of those desperate contests there which never had any historical existence, save what is due to the inventive brains of the Special Correspondents who mistook Ledmirault's false attack for the reality which fell on the southwestern angle of the city. Indeed, the chief novelty offered us in this part of his story is the publication of certain orders of his own against private plunder and unauthorized arrests—the utter inattention shown to these by the Communists affording a fresh proof, if any had been needed, that the War Delegate had all the mania for rule, without any accompanying moral power, which seems to be the distinguishing mark of the modern revolutionist. As to the picture of the civic government and civic troops which he has undertaken to draw for us, we would here only say that we have always held that the reign of the Commune was justly painted in dark colours, but we never knew how thoroughly black these should be until we met with this portrait from the hand of their favourite commander.

"HECKLING" AT DUNDEE.

AT Scotch elections candidates are usually made to undergo a process which is known by the highly significant name of "heckling." Heckling is the combing, or teasing to which hamp and other stuffs are subjected in order to prepare them for manufacture; and a candidate who has once been through the hands of a body of Scotch electors will understand the painful appropriateness

ness of the title. In the shroud North set speeches go for very little. It is taken for granted that they have been prepared with a view to effect, and that awkward matters have been discreetly veiled or shirked; and the speaker has no sooner finished his formal statement than he is pounced upon by a host of eager questioners and put through a rasping cross-examination on all sorts of personal and political subjects. Mr. Fitzjames Stephen, after his first experience of this ordeal at Dundee, likened it to being in the position of a man who had to play cricket with twenty people bowling to him at once. He has no sooner sent one ball flying from his leg than he has to be on his guard against one descending on his nose, and as the game gets warm the volley thickens. The practice is justified on the ground that it is the most effectual means of dragging the truth out of a candidate, as he must answer offhand without having time to dodge the questions, or to prepare round-about phrases. But in reality the electors evidently take a good deal of malicious pleasure in the sport. Now that dumb animals are protected against baiting by law, speaking animals seem to be thought fair game. Whether it was that Mr. Stephen's opponents had made hostile preparations for his reception, or that there was something stimulating and provocative in the vigour with which he flung himself into the encounter, we cannot say, but it is certain that he was heckled to an extent scarcely known before. It was, as one of his friends plaintively observed, heckling by machinery. It is impossible not to suspect something like conspiracy in the particularly warm play to which Mr. Stephen was exposed on his very first appearance in Dundee, but at the same time one can understand that he was a tempting antagonist. The electors must have felt that it was not every year they had such a good subject to operate upon. He beat off the shower of questions with the greatest readiness and good-humour, and occasionally he sent a ball back again in the face of the bowler in a way that was rather disconcerting. As his examiners insisted upon categorical replies, he insisted upon straightforward questions. He pointed out that one of them had mixed up the Criminal Law Amendment Act and the Master and Servant Act as if they were one; and when another inquired whether he would abolish the Game Laws, he asked for a schedule of them, in order that he might know which statutes were meant. We are afraid that Mr. Stephen must have been very much shocked to find that even in Scotland, where there have so long been parish schools, the political conceptions of working-men are sadly vague. But at least he did all he could to enlighten them. He delivered an instructive lecture on a digest of the law, which it is to be hoped did them good; and he was even sanguine enough to attempt to explain to them "what we in England call a device for specific performance." After one of his meetings a working-man came to discuss conveyancing with him, and he seems for a moment to have imagined that he was stirring up a great spirit of law reform in Dundee. But soon afterwards, at the end of a series of inquiries as to hares and rabbits, the law of patronage, and other matters on which it was suggested that legislation was urgently required, we find Mr. Stephen assuring his hearers that there was no Bill so urgently wanted at the present moment as one providing for the decrease of fools in the world.

It is impossible to imagine a more refreshing contrast to the ordinary attitude of a candidate in the presence of electors than that of Mr. Stephen before the electors of Dundee. "I do not come here," he said, "to beg for a place. If you like some one else better than me, if either the matter or the manner of what I have said is displeasing to you, well, so be it. I don't care. Take me or leave me. I have lived a good many years in the world without being in Parliament, and I can live a good many more, I hope, in the same condition." We are forced to think of Coriolanus in the market-place, begging for the "most sweet voices." Mr. Stephen had even the hardihood to declare that, in his eyes, the working-man was not a mysterious, sanctified being, somehow set apart from other classes of human creatures, but only a man like the rest of us, and that he did not see how one class could be really benefited unless what was done for it was also for the good of the community at large. Mr. Stephen has not been successful in his visit to Dundee, but it may be hoped that his visit has done Dundee good. He gave it a supply of some strong, wholesome truths which deserve to be considered by what are called popular constituencies; but whether they were exactly the sort of truths which a candidate should be at most pains to inculcate in the bluntest language upon those whose votes he is asking for is another question. In the way of popular instruction nothing could be better than Mr. Stephen's teaching, but it was hardly electioneering. It is quite time that we should have a change in the note of sycophancy and self-obliviation which has become habitual on the part of public men addressing their constituents; and it will perhaps be a happy day for the country when the majority of men are sufficiently aware of their inferiority to allow themselves to be talked to by those who are wiser and know more than they do, as Mr. Stephen talked to the spinners and weavers of Dundee. But, after all, in a matter of this kind, even the most superior persons must, we suspect, be content to take human nature as it is; and Mr. Stephen's independence was perhaps unnecessarily unconventional and demonstrative. It is unfortunate that the experiment of putting the relations between members and constituents on a new footing more consistent with the self-respect of both should have been marred by being pushed too far to begin with. We observe from the reports in the local papers that Mr. Stephen was at times euphuistically spoken of as "the gentleman from a distance," and possibly the electors of Dundee were some-

what impressed by a sense of the remoteness of a digest of law and other legal subjects in which Mr. Stephen is chiefly interested, as compared with the petty but near-at-hand grievances of hares and rabbits and the law of patronage which he treated with contempt.

At Dundee, as has lately been the rule elsewhere, a local candidate of moderate opinions has been successful. Mr. Yeaman had more votes than Mr. Jenkins and Mr. Stephen together; but of the two latter Mr. Jenkins was considerably in advance. If Parliament is regarded as a legislative body whose chief business is to pass laws which are capable of being practically carried into effect, there cannot possibly be two opinions as to the comparative fitness of Mr. Jenkins and Mr. Stephen for a seat in Parliament. Mr. Jenkins, we need hardly say, is, as he boasted at Dundee, the author of that great satire *Gina's Baby*. He was also modest enough to say that there was an important distinction between himself and those other great satirists, Butler and Swift. It might not have occurred to any one except Mr. Jenkins to couple his name with the names of the authors of *Hudibras* and the *Tale of a Tub*, and the distinction which Mr. Jenkins suggests as existing between himself and those writers is not exactly that which would first suggest itself to many minds. Mr. Jenkins, however, has been good enough to explain that there is this difference between himself and Swift and Butler, that the latter are purely destructive in their efforts, whereas he is constructive. As far as we are acquainted with Mr. Jenkins's writings and speeches, we should have said that his strongest point was the gloomy desperation of his views of human misery, and that he was rather weak in regard to remedial proposals. He has drawn terrible pictures of the general wickedness and cruelty of capitalists and employers, who, it seems, are chiefly engaged in flaying labour alive in the streets, and of the universal corruption of modern society on this side of the Atlantic. The only specific remedy he has suggested that we are aware of is that the Government of this country should apply its funds to transporting the population to the United States, though what it is to do when all the able-bodied inhabitants have been carried thither he does not explain. Mr. Jenkins described for the benefit of the people of Dundee "the streets of pretty houses, with marble steps leading up to them," in which American working-men live; and he left it to be understood that his hearers might also look forward to "pretty houses with marble steps" if they would only help to get together a House of Commons of Jenkinses. At present the hand of every class is raised against the poor man; he is cheated, robbed, and oppressed on every hand; and there is no such thing as honesty or humanity in the nation outside of the victimized class except in the heart of Mr. Jenkins and a handful of other righteous men. How this general demoralization is to be cured by a few or many Acts of Parliament it is difficult to understand; but Mr. Jenkins has apparently great faith in legislation for removing mountains or doing any other wonders. It is impossible to conceive a state of mind more remote from that of a practical legislator than Mr. Jenkins's, and yet he is held up as the type of a popular candidate for a "popular constituency." He has "heart" and "feelings," and these are supposed to be the essential qualities of statesmanship, rather than practical sagacity and sound common sense. One of Mr. Jenkins's strong points was, of course, his opposition to class legislation; but it turned out that the legislation he objects to is that which tends to prevent working-men from intimidating and persecuting members of their own class and defrauding their employers. Recent legislation in regard to offences committed by employers and working-men has been scrupulously impartial, and has been carefully worded so as not to refer to any class in particular. It happens, however, that there are certain offences for which working-men are more frequently punished than other people, for the simple reason that other people scarcely ever commit them. Mr. Jenkins's idea of class legislation is that it is unjust to punish working-men for offences which they commit, because other classes who do not commit these offences are not punished too. Mr. Jenkins may be a great satirist, but he would seem to be a very poor statesman. In these days of universal examinations, it is surprising that candidates for admission to Parliament should so long have been left free from any tests. One would like to see the author of *Gina's Baby* set down to answer a list of questions which Mr. Stephen could easily draw up for him, and to supply the outlines of the Acts of Parliament by which the working classes of England and Scotland are to be provided with "pretty houses with marble steps" like their brethren in the United States.

SIR W. FERGUSSON AND DIRTY WATER.

THERE is an old saying that every man in the course of his life must eat a peck of dirt, and Sir W. Fergusson, the eminent surgeon, now gives us the comforting assurance that we must inevitably wash it down with a gallon or two of dirty water. It is impossible, he says, to get absolutely pure water, and therefore it is idle to take the trouble to procure approximately pure water. As we must drink dirty water, the best thing we can do is to shut our eyes and hold our noses, and gulp it down, regardless of the consequences. This is really the gist of Sir W. Fergusson's address, as President of the British Medical Association, and no more mischievous public utterance has, we venture to say, been made in our day. The personal authority of the speaker, the occasion on which his address was delivered, and the moment at which it has been launched against the public mind, all combine to

intensify its mischief. It is impossible to exaggerate the amount of harm which may be done by this thoughtless and uncalled-for disparagement of pure water. Unhappily people are, as it is, only too much of Sir William's way of thinking. Among the great body of the population the most shocking and dangerous carelessness and recklessness prevails on this subject. It takes trouble to procure clean water, and not only occasional, but constant and continuous, trouble. Vigilance must never be relaxed; and the value of checks and precautions depends upon their being uninterruptedly exercised. All the lazy, careless, stupid people will now have a fine excuse for their neglect. Here is a great physician, addressing a distinguished body of medical men, who can hardly find language strong enough to express his contempt for pure water, or to impress on the profession and the public the utter hopelessness and uselessness of trying to get it. The great thing, says Sir W. Fergusson, is to have plenty of water; never mind whether it is clean or not. And this advice is thrust upon the public at the very moment when we are in dread of an outbreak of cholera, and when the health, not of one place or another, but of the whole country, may be said to depend on the care which is taken to guard against the pollution of the water supply, and to prevent people from drinking contaminated water. Sir W. Fergusson has thrown all the weight of his great authority into the scale on the side of dirt and disease.

There is a sense, of course, in which what Sir W. Fergusson has said is perfectly true. It is true that absolutely pure water cannot be obtained, and it is also true that water may contain impurities and yet be not unhealthy. Water may, as Sir William said, be filtered, boiled, distilled, and yet, in spite of all, certain so-called impurities will either hold their place in it, or, if apparently dispelled for a moment, will speedily return. Again, it is also true that, even supposing a glass of really pure water to have been obtained, it no sooner passes the lips than it gets mixed up with mucus, saliva, gastric juice, pancreatic and biliary secretions, and so on. If meat and the usual adjuncts are consumed with the water, it is further combined with animal and vegetable substances. Salt, too, is taken with water to an extent far beyond the saline matter of which the chemical analysts make so much. The doctors themselves add saline, mineral, and vegetable matters to the pure water in their potions, and send their patients to far-away places in order that they may drench themselves with nasty liquids, which are equally offensive to taste and smell. The point of Sir W. Fergusson's remarks is, that people make a great fuss about certain things being in water as supplied by the Companies, although they do not in the least object to consume water containing those things when they are added by themselves or by the doctors. But all this does not really touch the question at issue. When people help themselves to salt, or swallow the medicines ordered by their doctors, they know what it is they are consuming. Again, when the water gets mixed up with mucus and other impurities in the mouth and stomach, that is a result which cannot be prevented; but at least it is something to know that, when it passed the lips, the water was as pure as could be obtained. It is impossible to expect scientific discrimination on the part of the general public. If you warn them to be on their guard against all impurities, they may possibly object to some things which are not necessarily noxious, and which in any case are more or less unavoidable; but at the same time the chances of their swallowing other impurities of a dangerous character will be considerably reduced. But if you assure them that it is all nonsense about drinking pure water, and that it is really not worth their while to trouble themselves as to its quality, the chances of people drinking a contaminated and poisonous supply will be tremendously increased. Sir W. Fergusson will have the satisfaction of reflecting that his thoughtless passion for paradox will have powerfully contributed to this result. There is a story of another Scotch practitioner in England whose favourite medicines were, as he called them, "laudamy" and "calomy," and who, when remonstrated with on the reckless use of such dangerous drugs, replied calmly that, whatever happened, it would never make up for Flodden. It is not to be supposed that Sir W. Fergusson cherishes a similar passion for national revenge; but there is too much reason to fear that his light words may have fatal consequences.

It is easy to sneer at chemists, and possibly some of the chemists in their scientific enthusiasm may have rushed into extremes; but there is an overwhelming mass of evidence to show that in this matter the chemists are working in the right direction. It has been established with almost the certainty of actual demonstration, that cholera may be spread by the use of tainted water. Consequently the more careful people are about the purity of water, the less will be the probability of choleraic and other infections; and the more careless people are, the greater will be the scope for the dissemination of the poison. We should like to ask Sir W. Fergusson what practical good he expects will be done by the protest which he has just raised against the supererogation of pure water. Suppose it is a piece of fanaticism, what harm does it do? One of its results has been to make the Water Companies more particular as to the quality of their supplies. The official Report for last week shows that the metropolitan waters were all clear and colourless when drawn from the Companies' mains for analysis during July, and that in one case the water exhibited a considerable reduction in the traces of "previous sewage contamination." Partly this was no doubt due to the dryness of the weather; but it was also, we may assume, partly due to the increased care and attention of the Companies on this point. Sir W. Fergusson will hardly venture to assert that, even

though the matters which make the water turbid and dirty are not in themselves noxious, the water is less wholesome without them, or that the diminution of traces of sewage contamination is to be deplored. If care is taken to keep out what may be called innocent impurities, other impurities of a by no means innocent character will probably be kept out too. But after Sir W. Fergusson's noble vindication of dirty water, the Companies will have an excellent and ready excuse for falling back into their old practices; and when consumers complain of impurities, they will be told that it is all nonsense, and that "the faculty" have decided that there is no harm in them, and that, in fact, they rather improve the water by giving it body and flavour. The Medical Officers of the Privy Council and the Local Health Officers generally will find their efforts to impress upon people the necessity of securing a supply of pure water in a great degree neutralized by Sir W. Fergusson's hasty and inconsiderate observations. He says he attaches more importance to the quantity than to the quality of the supply; but there is no reason to suppose that the passion for pure water which Sir William deposes has led to any diminution of the general supply, or to any relaxation of efforts to extend it. Absolutely pure water may be beyond our reach, but it does not follow that we should not try to reduce the impurities to a minimum. Nor is there any inconsistency in resorting to certain medicinal waters on special occasions, and yet objecting to a strong ferruginous or alkaline element in our ordinary domestic supply. Sir W. Fergusson, we suppose, would scarcely recommend Pullna or Friedrichshall for everyday family use. For an eminent doctor to lift up his voice against fastidiousness in regard to pure water strikes us as pretty much the same thing as if the Bishops of Bishops were to take to preaching against undue sensitiveness in regard to sin. Absolute purity, they might say, is quite unattainable; the best of us are had enough when put to the test; and therefore it is not worth while making ourselves uneasy about a few spots more or less. "Surely the profession expect too much for themselves, and lead the public to expect too much, on the score of purity." If sermons to this effect were preached from the pulpit, it would lead to the remark that this is hardly the side on which humanity is most likely to err; and the same remark applies to Sir W. Fergusson's warning against being too particular about the purity of water. This is really not an imminent danger; indeed we wish it were. We wonder whether the prejudice against adulterated food is to be discarded along with the ignorant impatience of dirty water. All food is more or less adulterated, but this has not hitherto been considered a sufficient reason for abandoning all precautions on the subject.

With all that Sir W. Fergusson has said about the value and necessity of a copious supply of water we heartily agree. Water is wanted for a great many purposes besides drinking, and a large addition to the existing supply might be obtained by proper arrangements for catching and storing the supply that falls from the clouds. It is to be regretted that the President of the British Medical Association could not have directed public attention to this part of the subject without dragging in a paradoxical warning which, in the sense in which it will popularly be understood, will be interpreted as an excuse for all sorts of carelessness and neglect in regard to the purity of drinking water. The temptation to say something odd and startling was, we presume, too much for the medical orator. A little loose talk may be allowed to politicians without much fear of the consequences, but doctors, of all people in the world, should be careful what they say.

SPORT IN SCOTLAND.

THE beginning of the shooting season makes a great many men happy, and a good many envious. It is not every enthusiastic sportsman who can spare his hundreds or his thousands to rent a range of barren mountains, who can afford to kill his own venison at the price of fifty guineas the stag, or to lay in his grouse at a couple of guineas the brace. Highland cousinships go a far shorter way than they once did in helping relations more or less remote to a week or two of shooting upon other men's ground. In the good old times, if you had the luck to count kindred with a Highland laird, you were sure to find his doors standing hospitably open, even if you chanced to time your unannounced visit somewhere in the second week of August. Now there are very few native-born mountaineers who afford themselves the luxury of keeping their best shooting in their own hands. They make it matter of nice calculation how few acres will suffice to supply them with amusement or their tables with game; they have to rough it themselves on short commons of sport; and so long as the sport is good, and while their birds are sitting, they close their doors against promiscuous visitors. It is almost worse perhaps in the establishments of those wealthy Southern strangers who go North to recoup themselves the fabulous rents they pay. They are unembarrassed by the inconvenient traditions of old Highland hospitality, and, on the other hand, they often are seriously hampered in the narrow accommodation of their confined shooting-boxes. They arrange their snug little parties long beforehand on principles that are at once exclusive and mercenary; their guests are generally the proprietors of well-stocked Southern pheasant coverts, or, at any rate, they are friends who can repay their civilities in one shape or another. The result is that many keen, but penniless, sportsmen who have been buoying themselves up through the summer on sanguine anticipations find their hopes collapse of a sudden in the beginning of

August. They are left out of the game altogether, when up to the last moment they had been counting upon a pleasant expedition and plenty of sport. They must resign themselves to read reports of the heavy bags that are being filled by others, and must listen in fancy to the rattle of their acquaintances' breechloaders. Yet one thing or another often attracts them still to the North—fondness for the scenery as well as for the sport, and the seduction of the cheery associations of their more fortunate years. If they yield to the attraction, in place of sensibly seeking a total change of scene and thought elsewhere—if they wander northwards through scenery that reminds them of familiar haunts, on the forlorn hope of some unforeseen bit of good fortune befalling them—they are only preparing a season of wretchedness for themselves. They fancy they can keep their cheerfulness alive on the memory of the vanished past, and enjoy the country they used to love apart from the sport that once gave it its charm. Each day of their autumn holiday brings them a fresh reminder of their error. What can blunt the keenest appetite more effectually, or interfere more objectionably with the soundest digestion, than the sight of the sportsman who have appropriated the best of the guest chambers in the inn where you have taken up your night quarters, as they return weary and heavy laden from a long and successful day on the hills? How can you appreciate the grandest of Highland scenery from the seat where you fidget on the coach-roof, if you must look away to the magnificent mountains over the jolly parties of men and dogs who are voluptuously quartering the heather in the foreground?

We have been led into this somewhat melancholy train of reflection in consequence of lighting upon a little volume which bears the lengthy title of *The Sportsman's, Tourist's, and General Time-tables and Guide to the Rivers, Lochs, Moors, and Deer Forests of Scotland*. After giving a very complete list of the trains, coaches, and steamers, the Guide goes on to discuss the matters that come more immediately within its special scope. It professes to give a pretty exhaustive catalogue of the various Scotch shootings, especially in the Highland counties, affixing to those that are thrown on the market the rents they are supposed to bring in. It is a novel idea, and the editor has undertaken a somewhat difficult task. For a variety of reasons it may be imagined that neither landlord nor tenant are always disposed to publish the exact terms of their bargain from year to year. We happen to know a good deal about certain districts and shootings from actual experience, and we can detect, in running over the list, some very obvious errors. We see, for example, one famous Ross-shire deer-forest set down at about a twelfth part of the rent which used invariably to be paid for it, while we are sure that a certain Aberdeenshire grouse-moor would be cheap at four times the price at which it figures in the Guide. Yet, take the book all in all, it gives a fair idea in outline of the market values of the different Scotch shootings, and our personal knowledge enables us to class them roughly in a couple of categories. There are the costly Highland shootings, with their very excellent sport, which are beyond the reach of all but the wealthy; and there are those Lowland shootings which are cheap enough if you are disposed to content yourself with small things and tame entertainment. The first, of course, are altogether beyond the reach of the gentlemen whose case we have been compassionating; the second—with their scenery, for the most part flat and bleak, with their thin sprinkling of partridges over limitless fields of rank turnips, and the stray hare or two that the village poachers have missed—would never tempt them. So far as shooting is concerned, then, the Guide is discouraging enough to the sportsman adventurers who look wistfully northward on the approach of the 12th. Yet, if they turn over its pages, they may get a useful practical suggestion from what is certainly by far the most valuable part of the book. Its information as to shootings is necessarily brief and vague; and even were the estimates of rents exactly accurate, it could tell but little as to the season's head of game. This may be changing from year to year, thanks to such circumstances as the ravages of epidemics among the grouse, or the encroachments of sheep upon the deer. But the editor goes on to treat of fishings, and there he is evidently most thoroughly at home. We do not refer so much to his notes on the great salmon rivers, or the famous pools in the Tweed and the Tay—these are as much beyond the reach of the poor as the best forest in Braemar or Blair Athol—but to the countless lochs and streams which abound everywhere in outlying districts, and which are often neglected and almost forgotten. A man who is devoted to the rifle and the gun is generally an amateur of the rod as well. He would rather, of course, be after the red deer in the season, or having a busy August day in the thick of the grouse coverts; or, if he be a fisherman, he will think the weightiest of trout small deer indeed compared to the lordly salmon. Still, failing the one sport, he is very ready to be happy with another. He might tell you, indeed, if he searched his own heart, that those odd days when he fished the loch or the burn from the shooting-box passed almost as pleasantly as the most successful which he had enjoyed on the hill. Unless a man has the instincts of a butcher, half the joys of the mountain life lie in the freshness of the air and the glories of the scenery. Nobody except an apoplectic banker from Lombard Street, or an alderman touched in the wind after a life of dinners in the halls of his Company, would prefer the drury heather flats of lower Inverness-shire to the wild mountains that lie towards the Ross-shire frontier; yet there is much more deadly execution to be done on the former than on the latter. And, even in spite of changing weather and shifting lights, the most glorious

scenery begins to pall upon a man when he is perpetually plodding over beats that are almost identical.

Now, reading the list of the various Scotch fishing waters in this Sportsman's Guide will launch most men in an altogether new world of ideas, with the prospect of constant change and never-ending variety. You may pack up a rod or two, with your flies and your minnows and a pair of fishing-socks, and start away on a fishing tour to wander where taste or fancy guides you. Go where you will in the Highlands or on the Border, you can hardly go wrong. Even many of the counties that are more strictly Lowland have much to tempt one. There are, indeed, some of the waters which are closely preserved, unless one can make private interest with the proprietors. But, independently of the many which are advertised by hotel-keepers as open to visitors who patronize their establishments, it is surprising to find how many more are practically free to the public. Some are so remote from centres of busy life, or even from high roads or beaten paths, that it seems hardly worth while warning strangers off; others are accessible to all respectable comers who choose to ask permission civilly. It is not as in England, where the privilege of whipping a stretch of stagnant river is adroitly used to bribe half a constituency, and where the jealous Waltons of half-a-dozen parishes are out for a whole season after the same old muddied trout. In Scotland trout fishing is not much in favour among the landed gentry, who generally follow what they consider to be nobler game. So, by addressing yourself to certain noblemen and gentlemen or their agents, the Guide-book assures you that the best of the land lies before you. You may make fishing your object, yet combine other pursuits with it. If you are an antiquary or archaeologist, or have the romance of every true sportsman in your nature, you may shape your course for the spots that will live for ever in old Scotch song and legend. The wilder part of the country's history was enacted in its most picturesque districts, and there you are sure to find trout streams rushing along in the bottom of each dell and valley, fed by the countless mountain rills that come trickling down from the lochs in the uplands. Go over the Cheviots and you are fishing the Liddell and the Ettrick; the Teviot and the Yarrow, strolling past towers like Hermitage, and away into the lonely green hills by brooks like the Douglas burn. Or you may go into Rob Roy's country and the land of the Lady of the Lake, and find fair sport at "lone Loch Ard" and Aberfoyle, or among the hundred isles of beautiful Loch Lomond. Except in Ross or Sutherland, it is difficult to get out of the charmed circle traced by the Wizard of the North; you find he has been before you at Kilchurn on Loch Awe, where the trout are extraordinarily heavy; at Loch Leven, where they are altogether unrivalled in flavour; in Badenoch, Lochaber, even in remote Skye and the Hebrides. Nay, it is hinted that the fishing embraced in the scenery of the *Thyre* and the neighbourhood of Sunburgh Roost and Fitful Head would well repay one for the long sea journey, and the Guide only preserves reticence on these parts in consideration for the clergymen who have to welcome strangers in the absence of innkeepers. Or, if you prefer to shun the tracks followed by tourists, and do not object to roughing it a little, you may strike out any number of paths of your own and find your way to stream heads and mountain tarns where the smallness of the trout is partly compensated by their number, and still more by the intoxicating buoyancy of the air and the sense of savage solitude. With a fresh breeze rustling in the foliage and bending the heather tops, with a bright sun shining after a Highland shower on the white stems of the birch-trees and the glancing waters of the stream, it really becomes a matter of secondary consequence whether you are playing a smolt or a salmon. We strongly recommend sportsmen at a loss to try such a trouting tour this season, before the occupants of shootings take alarm and become more jealous of their piscatorial rights.

THE WESLEYAN CONFERENCE AT NEWCASTLE.

THE Wesleyan Conference has held its annual meeting this year at Newcastle. And as most of the Committees appear to have been regarded by those present as "a little dull," we may be pardoned for saying that, so far as can be judged from the report in the *Times*, the proceedings have on the whole struck us in very much the same light. There are, however, some points to which we shall call attention presently, as supplying a curious illustration of the present theological, or rather polemical, tendencies of the Wesleyan mind. John Wesley, it will be remembered, was an ordained clergyman of the Church of England, to whose ministerial commission he always appealed for his authority, and from which, up to his death in 1791, he persistently declared his resolve never willingly to separate himself. The separation, however, very soon became an accomplished fact, and for some time past the Wesleyans have formed one of the largest and most strongly organized of the hundred and twenty or so of Dissenting sects into which English Protestantism is divided. At present there are said to be not less than twelve million persons receiving Methodist instruction in various parts of the world; while in Great Britain alone there are more than six thousand Wesleyan places of worship, and about fourteen thousand ministers or local preachers. The Report read at the recent Conference informs us that 85 chapels, 35 ministers' houses, and 20 school-rooms have been built during the past year, besides various alterations and enlargements of existing buildings, and that sums have been voted for the erection of 135 new chapels, 14 ministers' houses, and 26 school-rooms during

the next year. The net amount raised during last year, including grants, was stated to be 244,226*l.*, and there appears also to be a very flourishing Wesleyan Methodist Trust Assurance Company (Limited), which will commence the second year of its existence free from any encumbrance whatever. It was not till after these business details had been disposed of that the discussion began. And it certainly leaves rather an odd impression on one's mind as to the sort of uses to which the Conference is anxious to devote the considerable moral and material resources at its command. The question almost inevitably suggests itself, how far their views on the proper methods and objects of evangelization tally with those of their founder. At all events, they are quite superior to any such petty scruples as St. Paul modestly refers to, about building on another man's foundation. On the contrary, it is precisely "where Christ is named" already, and not where His name is unknown, that they feel it to be their peculiar mission to preach the Gospel. Their motto appears to be "*Nemo me impune lacessit*," with the understanding that to attack them is to teach any other form of Christianity than their own. But it is time to let them speak for themselves.

Mr. Mowburn and the Rev. C. Prest spoke about the immorality prevalent in some of the rural districts—of which, however, we do not hear again—"and also of" what was perhaps held to have some occult connexion with rustic immorality, and was evidently felt to be a more serious danger, "the Romish tendencies of the Ritualists." After the transaction of some intermediate formalities, Mr. Prest again returned to the charge, and observed that "they would have to fight the battle of Popery over again in the rural districts," and as we gather from his next sentence, would have to fight it with that doughty champion of Protestant orthodoxy who might deservedly be designated *malleus Papistarum*, the Bishop of Lincoln. "He spoke," we are told, "in condemnatory terms of the Pastoral which the Bishop of Lincoln had recently addressed to the Methodists, and he thought that one good answer to the Pastoral would be to send two earnest evangelists into the rural parts of the country." We do not happen to have seen Bishop Wordsworth's Pastoral, but we believe it contained an affectionate exhortation to Wesleyans, grounded on the avowed principles of their founder, to reflect on their "schismatical" position, and the advantage of returning to the Church of their fathers. If the Bishop was sanguine enough to expect that they would, to adopt Mr. Chadband's pet formula, receive his overtures "in the spirit of love," he must have learnt his error by this time. It is when he speaks unto them of peace that they make them ready for battle, by proposing at once to carry a guerilla warfare into the country villages of his diocese. For the earnest evangelists seem to be a kind of roving missionaries, whose business is to stir up strife against the parochial clergy wherever they can. Dr. Johnson, who spoke next, left no doubt about what was intended. He, too, like Mr. Prest, "was specially anxious for the rural districts," but his anxiety was not attributed to any such trifles as the prevalence of immorality. "He could not trust them to the care of the Ritualists," which appears to be a Methodist sobriquet for the clergy of the Church of England in general; "the children in the villages would not be sufficiently protected by the Conscience Clause, and it would be needful for the Methodist pastors to be with their flocks to protect them." In short, the great duty of the Wesleyan pastorate is not so much to teach the people as to prevent their being taught by any one else, much as Louis XIV. was shocked at the notion of giving his son a Jansenist tutor, though he had no particular objection to an Atheist. Now this may be all quite right, but it sounds like a complete inversion of John Wesley's policy. The standing excuse proffered for his irregular ministrations was the apathy and indifference of the Church; he could not bear to leave the sheep in the wilderness in charge of dumb dogs who could not or would not bark. But now the Church is no longer apathetic, and John Wesley's modern successors find the justification of their ministry in the fact that it is much too active and requires to be repressed. If the dogs were dumb, things might be left alone without much danger; it is because they bark so loud that the flock requires protection against their troublesome importunities. In short, whereas John Wesley wore his life out in the vain endeavour to rouse his brother clergy to a sense of their responsibilities, till he turned at last in despair, but not in defiance, from the Church he never ceased to love, his followers think it is time to turn their attention to the rural districts, not because the clergy are asleep, but because they are so wide awake. "They must have village circuits," and make them good circuits," and for this purpose the preachers in the rural districts must have "a good stipend, a good horse, a good house, and a good garden." The preachers would be more or less than men if they did not consider this, like justification by faith only, a very comfortable doctrine. And it is gratifying to learn that the lay members of the Conference so far shared their conviction that they passed a resolution for raising ministerial stipends to a minimum of 150*l.*

But the Conference did not dissolve without another and more striking testimony to the nature and extent of its evangelizing work. It would be a great mistake to suppose that the energies of modern Methodism are exhausted by an organized aggression on English villages—with minister, stipend, horse, house, and garden to match—especially in the benighted diocese of Lincoln. The Newcastle Conference was not exactly an Ecumenical Council, but its aims are cosmopolitan; and accordingly we are assured that the most "lively interest of the audience" was kindled by the appearance of no less a person than Signor Sciarelli, Italian Wesleyan

minister in Rome, who introduced himself as "once a priest of the Church of Rome, who had been behind the scenes, and could speak from experience." After this ominous beginning, it is rather a relief to find that Signor Sciarelli did not offer to illustrate the method of effecting transubstantiation, or perform any other of the little *jeux d'esprit* in which these converted hierophants who have been behind the scenes are rather apt to indulge. Indeed the result of his boasted experience must have been somewhat disappointing to his audience, for he seems only to have discovered, what persons who have never been priests or even Roman Catholics had discovered before him, that the Italians have ceased to attach much value to the benedictions or maledictions of the Pope, and that many of them are sceptics. But then he had the gratifying intelligence to communicate that there is now a regular Methodist Society in Rome, and moreover that "it was their intention to make Rome the head of a circuit, and he hoped the Roman circuit would be a model one," furnished, we may presume, with stipend, horse, &c., as in a model English village. We can well believe that the prospect of erecting an *επισκοπή*—to borrow an untranslatable and most expressive Greek term—in the shape of a little Ebenezer under the very shadow of the Vatican, and thus boarding (tant Pope in his own den, was too exhilarating an idea to be easily suppressed. It was only natural that the next attempt to create a lively sensation should fall rather flat, though it consisted in the introduction of "a converted Brahmin of the highest caste from South India, who gave an account of his conversion." Nor does the report of the Chinese missionaries, that there were about two thousand native Methodist converts in China, appear to have elicited any comment. On the other hand, Mr. Gregory, the Fernley lecturer for the year, selected "the Catholic Church" as the subject of his deliverance, and had a very large audience in Brunswick Chapel to listen to it. We should perhaps ourselves have been disposed to think that the "evangelists" would be more profitably, and not less hopefully, employed in grappling with the vast mass of unrepentant heathenism, whether at home or abroad, after the example of their founder, than in browbeating English incumbents and preaching to the Romans, who may be very sceptical, but are extremely unlikely to become Wesleyans, a version of the Gospel which they are pretty sure not to relish. No doubt they understand their own business best. But, as Convocation is often severely criticized for its multiplicity of idle verbiage and its narrowness of ideas, we may venture to remark that in both respects the debates in the Jerusalem Chamber seem to us to contrast not unfavourably with the Methodist Conference at Newcastle. It only remains to add that next morning the Conference received a deputation of nine Nonconformist ministers of various denominations in Newcastle, who presented an address expressing their desire to aid the Wesleyans in "defending the freedom and purity of the Gospel against all sacerdotal corruptions and rationalistic negations." It was graciously received, and the Rev. W. Arthur observed that "it was the Lord's work," and he trusted it would prosper.

NOXIOUS BUSINESSES

THE roast beef of Old England is produced most perfectly in Scotland. This is the purport of the evidence lately given by Mr. McCombie, M.P. for Aberdeenshire, before a Committee of the House of Commons. The choice sirloin for Christmas comes from a Scotch ox brought up alive to London, and if Londoners desire to remove slaughter-houses from their neighbourhood, they must content themselves with a quality of beef inferior to that to which they have been accustomed. Even a public slaughter-house is unsuitable for the treatment of a prime ox. He ought to be received into a small well-ordered establishment at Kensington or Notting Hill, where he may be recruited after a fatiguing journey, and treated with the most distinguished consideration until the moment that he is knocked upon the head. It is not, however, the highest class of society in London that gets the very best meat that comes to market. The class which does not disdain to visit the larder and the kitchen is able to insist upon being supplied with meat having that beautiful bloom upon it which can only be obtained from cattle killed where they are destined to be consumed. The class which never sees its meat until it comes to table may be supplied by cattle killed in Scotland and brought by rail to London. Mr. McCombie says that almost all the best animals bred in Scotland are sent alive to the London market, and are bought by the great retail butchers and slaughtered at their private slaughter-houses. The best animals are not slaughtered in the North; it is only the second-rate meat generally that is sent dead. Many Irish beasts are imported into Scotland, killed, and forwarded to London as "primo Scots"; and old cows and bulls are, for an obvious reason, sent to market in the form of beef. The prime meat comes from the four-year-old Scotch bullock, which is much preferred by London butchers to the short-horn. Prize cattle do not pay either the breeder or the butcher directly, and it is thought that unless the butcher is allowed to slaughter on his own premises he will lose the *scot* which he has hitherto derived from purchasing a prize bullock at Christmas. But if the butcher will not buy, the breeder will not produce, and thus, says Mr. McCombie, the abolition of private slaughter-houses in London will affect the breeding of cattle in Aberdeenshire. This witness takes a special and rather limited view of the question considered by the Committee. Other witnesses allege that prize cattle are not commercially profitable, and that, although they yield meat of the

finest quality, it is accompanied by an undue proportion of unprofitable fat. They allege further that beasts driven through streets to a private slaughter-house, which they require strong persuasion to enter, are dangerous to passengers, and that the places where they are kept and killed are nuisances to the neighbourhood. It is, however, open to argument whether a few large public slaughter-houses may not be as great a nuisance as many small private ones; and slaughter-houses there must be, unless London is to depend entirely on dead meat brought by railway, which in hot weather would be liable to spoil.

This Committee owed its appointment to a circumstance eminently characteristic of our system of legislation. It appears that a Building Act was passed in 1844 containing clauses which would in effect render slaughter-houses and establishments dealing in various ways with bones, fat, and offal illegal in densely populated districts of the metropolis after thirty years from the passing of the Act. These clauses have been lately disinterred from the mountain of legislation accumulated in the intervening years, and it is said that, if they are allowed to take effect, very serious consequences will follow. The butchers and other tradesmen whose business would be interrupted by these enactments contend that their trades are necessary and must be carried on somewhere, and that, if they are to be moved on as London grows, they will be liable to perpetual disturbance. On the other hand, it is contended that slaughter-houses, even when well managed, emit an odour which, although butchers appear to thrive upon it, is disagreeable and perhaps pernicious to the rest of mankind. The Committee have fairly examined the difficult question thus arising, but the title of their Report, "Noxious Businesses," rather indicates a foregone conclusion, in the same way as did the Licensing Act when it proceeded to regulate the sale of "Intoxicating Drinks." The businesses to which the epithet "noxious" has been applied are those of blood and bone boilers, fellmongers, soap-boilers, tallow-melters, and tripe-boilers, as well as slaughterers of cattle and horses. They are all dependent on each other; and as long as cattle are killed in London there must also be in London places where the products of killing, other than meat, may be converted into soap or candles, or otherwise prevented from being more than temporarily a nuisance. The tripe-boiling part of the question was considered by some witnesses before the Committee from the poor man's point of view. If cattle are slaughtered in the country, only the "two sides" of the bullock will come to London, and all that lies between them will remain behind, and perhaps perish, instead of becoming food for man. If the soap-boiler emits—not to put too fine a point on it—a stink during his process, it must at least be acknowledged that he turns out an article necessary to cleanliness and health. We can of course clearly see that we would rather not have these trades carried on in our own immediate neighbourhood, but beyond that point we encounter difficulties. Causes other than prohibitory legislation have diminished the number of private slaughter-houses, and these causes are likely to operate still further. The supply of dead meat is increasing upon the supply derived from live animals slaughtered in the metropolis, and we cannot carry our enthusiasm for prize cattle so far as to regret this change. The Committee recommend that additional private slaughter-houses, varying in size, should be constructed, and other conveniences provided, at the Copenhagen Fields market, and other markets, if established, so as to induce butchers to slaughter animals on the spot, and not drive them through the streets to their own premises. A retail butcher is obliged to consider his customers, and undoubtedly that meat looks best which is carefully killed and cut up by the butcher on his own premises. But it seems to be admitted that the Scotch meat is the best, and that in suitable weather it is not injured by being killed in Scotland. In nine months out of twelve travelling does not affect it, except in appearance. A witness stated that this meat would not do for many businesses. At the West-end of London it does not matter how the meat looks. Ladies and gentlemen never see it until it comes on the table, consequently they do not judge from the appearance. There are hundreds of shops in London where they dare not take the Scotch meat, not because it is not good, but because the bloom is off, and it does not look tempting. Scotch meat is bought principally by West-end tradesmen, whose object is simply to obtain quality without reference to appearance. This statement is made by a butcher in large business at Notting Hill, who may be supposed to speak from actual experience. It shows that there is some need of educating the middle classes in sound principles of marketing. There are probably many of this butcher's own customers who take the trouble to inspect the meat which is to be cooked for their own table, and the effect of this praiseworthy vigilance is sometimes to exclude from their tables the best quality of beef. A wife chooses her husband's dinner as her husband chose her for his wife, by the eye. Education may perhaps correct the former of these errors, but the latter is probably inherent in human nature. The meat that comes up dead is duller in appearance than that which is carefully killed in London; "the bloom is off," and fastidious customers like to see the bloom upon the article they select. The butchers who can sell Scotch meat charge a higher price for it, because it is considered by their customers to be superior to any other. But "if you were to have Scotch meat in the East-end of London, where the consumer goes to market to buy his own joint, it loses its appearance, and looks bad." Not only at the East-end, but in the North-West, or any district where persons go to buy their own meat, there would not be much sale for it; but

when it is sent into hotels and large establishments, and not seen until it is cooked, there is not the same objection made to its appearance. There really seems to be a call for lectures at South Kensington upon this important subject of Scotch meat, which, after all, is chiefly Irish. Customers do not choose the best meat if they have an opportunity of choosing it themselves. The Scotch meat loses its appearance very fast. It does not look at all inviting, and it is very difficult to induce people to take food that is not inviting. But, if they would take it, they would find it very good. Young ladies must be taught not to value the giddy pleasure of the eye when they become housekeepers and order a sirloin for dinner. They should choose their meat on the same principle that guided Hassanio to the leaden casket which made him the husband of Portia—a principle that has been followed by very few suitors since that time. They must not be influenced by an ignorant preference for "bloom," but must remember that meat which has been "muddled" on a journey may have been fed on the finest pasture of Aberdeenshire.

When witnesses are examined as to the details of their own business their evidence is useful to correct the prejudices of ignorant outsiders. Thus Mr. McCombie treats with contempt the suggestion that cattle ought to be taken out of their trucks and watered on the journey by railway from Aberdeenshire. He does not object to watering the cattle in the trucks, if it could be done, as we certainly think it might; but he urges that if the cattle are taken out, they all got mixed together just like first and third class passengers returning from the Crystal Palace on a fête day. He suggests that the speed of the cattle trains might be accelerated, but we doubt whether that would be consistent with the arrangements for traffic on the railways. The fellmongers described the business which they have carried on from time immemorial at Bermondsey, and they obliged the Committee to report that "the population of that neighbourhood has been generally created by it, and is interested in the continuance of it." The people of Bermondsey might say of the fellmongers as the song says of women, "We may live with, but not without, them." In this business, as in others, the same precautions which diminish a nuisance tend to the more efficient and therefore more profitable conduct of it. Habit in these matters counts for much, and those who are not to the manner born can probably contrive to keep their nobility to the windward of the fellmongers. As long as slaughter-houses exist in London there must be places near at hand to prepare the skins of beasts for tanning, and those places may as well remain at Bermondsey, which is used to them, as be moved elsewhere. But when, in the progress of education, we cease to care for the bloom upon our beef, the fellmongers may be transferred to Aberdeen, where perhaps they may be found equally objectionable. Pedestrians will scarcely desire that, by restrictions on trade, shoe-leather should be made dearer than it now is.

ART AT THE VIENNA EXHIBITION.

WE propose in this and following papers to give some account of the arts as displayed at the Vienna Exhibition. We shall begin with the pictures, go on to the sculpture and the architecture, and after that to such examples of decorative art and of art industry as merit attention. Furthermore, scattered about the Exhibition there are rooms filled with miscellaneous archaeological contributions from Austrian monasteries, Hungarian territories, Switzerland, Scandinavia, &c. These loans, though the reverse of systematic or complete, offer interesting points of study, especially in the sphere of the ecclesiastical arts. On the collective merits of the entire Exhibition it is hard to pronounce in a single sentence; but we may venture to say that, though this latest attempt at international competition is far from a complete success, neither is it an absolute failure. It is true that in Paris, London, Munich, and elsewhere, better illustrations of certain masters and schools have been exhibited; on the other hand, it is but fair to admit that Vienna has the advantage within the immediate range of her geographic position in central Europe.

A separate building has been erected for the fine arts. This structure, like the larger one devoted to industrial products, inclines to mongrel classic and Italian styles; but so little art has been brought to bear upon any of the buildings that we recognize the hand of the engineer rather than that of the architect. Yet the galleries designed for the pictures and statues have at least the merit of being well adapted to their specific purpose; the works displayed are for the most part seen to advantage, and the space allowed has been sufficiently liberal to avoid the necessity of overcrowding. Little or no attempt is made at internal ornament—in fact, the works hung on the walls or ranged upon the floor constitute the fitting decoration. The general aspect of the galleries leaves little to be desired.

The international character of the collection is strictly borne out; no less than twenty nations are represented, and of the four quarters of the globe, Africa alone is absent. From the opposite ends of the earth, from China and from Brazil, contributions have been received; but in order that too great expectations may not be raised, we may at once state that the art loans from those two Empires do not exceed three objects. France, notwithstanding the crisis through which she has passed, is the most voluminous of exhibitors; she sends no fewer than 636 pictures, 208 pieces of sculpture, which, with numerous miscellaneous objects, make a total of 1,527 works. At a distance follow united Germany

with 1,017, united Italy with 625, and disunited Austria with 811 works. Formerly the Austrian Empire was able to swell her numbers from Hungary on the one side and from Lombardy on the other; now the arts of Northern Italy are ranged under the Italian flag, and at the same time Hungary, as a consequence of her newly acquired political status, claims, for the first time as her right, an independent position in the world of art; she has a gallery to herself. Another change consequent on the altered condition of Europe is that the Roman States, hitherto conspicuous, especially in sculpture, are effaced from catalogues and galleries. Rome, like Lombardy and Venice, now joins her forces to the collective power of the Italian Kingdom. And in like manner the scattered States of Germany are brought together under one empire. Thus Bavaria is merged, and even Prussia does not assert an individual existence. Two nations appear to exceptional disadvantage. The one is the United States, which shows herself barely in advance of semi-barbarous nations; and yet, strange to say, Americans in numbers even beyond the accustomed influx have crossed the Atlantic in order to witness their humiliation; the other nation which suffers cruelly is, we regret to say, England. This discomfiture bears the mark of being due to the procedure characteristic of the department at South Kensington. Friends find favour, and, as usual, the best interests of art are sacrificed to nepotism. The collective contents of the galleries may be briefly summed up as follows:—Total number of pictures above three thousand, total number of statues above one thousand, total of miscellanies, including architecture, water-colour drawings, engravings, &c., nearly another thousand. In all 5,092 works, of which more than four-fifths come from five nations, in the following order—first, as we have said, France, and then in succession the German Empire, Austria, Italy, and Russia.

Austria and Hungary, which collectively display 537 pictures, rightly claim precedence; they are here at home, and experience has shown that the nation which acts the host takes care to be as strong and attractive as possible; accordingly the Austrian Empire has on no other occasion appeared to equal advantage. The Viennese school of painting was for long far in the rear of other nationalities; indeed, towards the close of the last century it had fallen into so dead-alive a condition as to provoke the revolt which subsequently, under the leadership of Cornelius, Overbeck, and Veit, led to one of the most signal revivals in modern times. But this movement also now belongs to that dead past which Germans of the present generation seem only too eager to bury and forget. Scarcely a vestige of the so-called Christian school remains anywhere within these galleries, and in the Austrian territories there are to be seen two weak efforts, "Christ and the Young Man," and the Madonna walking in the midst of angels, by Ritter von Führich, an artist to whom years ago King Ludwig of Bavaria entrusted the decoration of the Cathedral at Spire with frescoes. To the past also may be said to belong the "Sketches for the Frieze of the University in Athens," by Herr Ruhl. These compositions, which are more than sufficiently traditional and conventional, would appear to be considered indispensable to each successive International Exhibition. We have met with them times out of number in various parts of Europe.

For the older phases of Austrian arts it may be justly pleaded that, though the pictures produced were mostly bad in point of art, yet the ideas embodied had nobility. But Austria, in common with the other great Powers of Europe, has been subject to a revolution. She seems to have felt that mere form was hard, dry, and unemotional, and she is already in danger of surrendering this, the primary and noblest element of art, to the romance of colour and the illusion of light and shade. By an unpardonable error the artist to whom, of all others, we should have pointed as the shining star in the new constellation—Herr Makart, trained in the school of Professor Piloty in Munich—is only to be studied in a separate exhibition set up elsewhere. Two years ago we saw in the studio of this creative and facile painter a large composition designed as a decoration for a ceiling, which went far to establish him as the Rubens of Southern Germany. When some three or four years ago he removed from Munich, it was anticipated that his presence in the Austrian capital would accelerate changes already impending. Accordingly, as we look around these walls, not only do colour and romance, but naturalism and realism, meet the eye.

Herr Matejko, by birth and residence a Pole, has brought to a climax the proclivities of the new school. A large picture exhibited at Kensington a year ago at once arrested attention; and whatever promise might then be given of power, and whatever fear might be felt as to the developments of a dangerous extravagance, are more than realized in the eleven brilliant, not to say blatant, works which throw into shadow all their surroundings. The painter is fired by the passion of patriotism, and seems to feel bound to uphold the rights and liberties as well as to proclaim the injuries of his native land. His figures are ready to leap out of the canvas; his colours burn as with fire, as he portrays the "Union of Poland under King Sigismund in 1569," and "Stefan Bathory, King of Poland, seeking peace from the Russian Ambassadors." We are sorry to find that the artist's patriotism does not procure purchasers for him; the trenchant and animated portraits of which examples are here shown are doubtless more profitable. Herr Matejko resides in his native city Cracow—a city eminently picturesque in situation, and peopled by a race which for proud bearing might be descended from dethroned kings. We

have seen peasants in the market-place, gay in costume as gipsies, treading the ground as if the world were a stage and they the actors; out of such good pictorial stuff does Herr Matejko form his compositions. It is of further interest to observe how this Eastern province imports Orientalism into the Empire. When we come to speak of Hungary we shall find that painters born on the Asiatic side of Austria have a fiery ardour and erratic fling which do not belong to the races of Western Europe. Yet in London a class of artists known as "Bohemians" would seem to affect at least the lawlessness of nomadic tribes.

A post of distinguished honour is given to a large religious picture purchased by the Emperor. The child Christ stands in the midst, supported by Moses, and surrounded by St. John the Baptist and others; in the foreground two Kings have in reverence just cast off their crowns. The painter, Herr Canon, has no special vocation for sacred art; at one moment he throws himself into the spirit of Italians of the time of Raffaele, and the next instant he appeals to the taste of the nineteenth century. Overbeck and his followers were, like Fra Angelico, exclusively Christian; but German painters of the present day are more of libertines and latitudinarians; they pass with the utmost impartiality from Christ to Apollo.

In Austria, as already indicated, the arts are divided between romance and realism. Herr Schönn paints a fish-market with the utmost naturalism. Herren Kurzbaier, Leopold Müller, Pettenkofen, and others, show themselves more than mediocre in the humble sphere of *genre*. Then there are others, such as Herren Herbsthofer, Angeli, Fux, and Koller, who rise out of the domestic and the purely naturalistic into historic, poetic, or dramatic compositions. It would be tedious to multiply names of which none or few will be recognized; it is enough to say that there are in Austria two or more battle-painters—Herr L'Allemand and Herr Fmele, for example—who in a style about equal to that of the Bavarian Herr Adam and of the Russian M. Kotzebue are engaged in celebrating the incidents of recent wars. Of portrait-painters there is no more lack in Austria than in England, and the art has reached pretty much the same point in the two countries; speaking generally, the Viennese are stronger in form but cruder in colour than Londoners. Herr Rodakovsky always takes a foremost position in international competition; Herr Lenbach, claimed by Austria, rightly belongs to Bavaria; he too is of the highest rank. Lastly we have noted eight landscape-painters who reach a good European average; indeed, the studies by Herr Schindler and Herr Lichtenfels are nothing short of first rate. The styles, however, which have been developed of late years have little or no claim to distinctive nationality; the landscapes here shown belong to the general Germanic stock, on which here and there has been engrafted a branch from the soil of France. It will be inferred that the non-Austrian elements are as conspicuous in art as they are in the sphere of politics.

The large room assigned to Hungary presents a different aspect from that of adjacent territories occupied by Austria and Germany, partly no doubt because there art is emerging out of barbarism. But just for this reason phenomena are presented and problems are solved which it is instructive to watch. Moreover Pesth, the chief city of Hungary, is one of those three easternmost capitals of Europe which have deliberately espoused the form and the fashion of the Western arts. But while Moscow and St. Petersburg, which share with her this honour, are freezing in the cold North, the city of Pesth, seated among vineyards, is basking under a Southern sun. Hungary, it is well known, is fired with a spirit of nationality; Pesth, and her twin sister Buda, already rank among art capitals. Pesth has secured the famous Esterhazy picture gallery; and she has also built a handsome Academy and a noble National Museum. Hungary has passed through phases analogous to those of Austria; she exhibits cartoons somewhat in the old conventional and eclectic style—compositions designed to be painted by Herren Lotz and Than on the walls of the National Museum in Pesth. She also displays certain religious works after the traditional manner which has elsewhere become obsolete; in fact, in this, as in some other departments, she still remains a generation behind nations that commenced earlier. Hungary also, following the example of Austria on the one side as well as of Russia on the other, has striven to make each department of art commensurate with the wants and desires of modern civilization. She has reared painters who supply the demands of the Church, others who are qualified to execute historical commissions from the State, and others again who, within the range of portraiture, landscape, and *genre*, supply the requirements of well-to-do people in private life. In none of these departments are the Hungarians quite first-rate, and yet, when measured with such nations as Greece or Brazil, we need scarcely say that they show to advantage both in talent and in training. On the other hand, when compared with the Russians, they prove as much inferior in academic education as they are undoubtedly superior in natural ability. The best trained men, such as Professor Wagner and Herr Lietzmann, are of the Piloty school in Munich. But though Hungary has wisely borrowed what she did not possess, the present Exhibition shows that she is not without national characteristics essentially her own. Her imagination is wild and fervid, her fancy voluptuous; nymphs and nudes are in excess. Yet there is a pure and lovely vision of night peopled by sprites, one of the many creations of that prolific painter, Herr Moritz Than. We recall a similar fantasy by the Swede, M. Mulstroom, in the King's Palace at Stockholm; indeed there are interesting points of contrast between the arts of Hungary and of

Scandinavia; less, however, in the direction of romance than of naturalism. In this last phase we incline to think lies the strength of the Hungarian school both in the present and for the future; nowhere within the whole Exhibition are to be found such astounding manifestations of rude, relentless power, of barbarous unmitigated character, as in various naturalistic works by that perverse child of genius, Herr Munkacsy. Nothing in the past by Caravaggio, nothing in the present by the French artist Ribot, approaches the pictures of "The Old Woman Making Butter," and of the vagrants of the night led as prisoners handbound through the streets of an old town. A Rembrandt depth of shadow throws grandeur across the scene. Another demonstration of race and of region, varied as it is vicious, comes from that most lawless genius, M. Zichy, now naturalized in St. Petersburg. M. Zichy is known to England; he has for his patron the Prince of Wales, who owns one of the ten drawings here exhibited, a *capriccio* on our fat King Hal, a work not sufficiently clever to excuse its falsity. M. Zichy is a typical artistic "Bohemian."

We recognize in the 155 pictures, engravings, and statues here collected a future for the arts of Hungary. It is well known that the nation has shown high musical genius, and, in the sister art of painting, signal and eccentric talent has made for itself an unassailable position. In sculpture, as long ago as the Great Exhibition of 1854, when Hungary first struck out boldly for rights she has since won, Herr Angel of Pesth, now represented by four marble groups in Vienna, aroused sympathy for his country. During the last twenty years the Hungarians have made as much progress in art as in liberty; all that they need is to join knowledge to natural impulse.

RACING IN SUSSEX.

THE presence of so many illustrious visitors helped to raise to the highest pitch the popularity of Goodwood as a fashionable gathering, and served also to distract attention from the tameness of the racing, which is showing every year unmistakably increased signs of weakness. When it is evident that the old-established sweepstakes, such as the Ham and the Gratwicke, are fairly dying of inanition, it certainly seems strange that it should be thought worth while to establish a new race of the same class. The Prince of Wales's Stakes, for two-year-olds, two hundred sovereigns each and no forfeit, will be run for the first time next year; and though Lord March has succeeded in obtaining twelve subscribers for it in 1874, there are only eight for 1875, and there will probably be a further diminution in succeeding years. The present generation of racing men has the greatest possible aversion to putting down a large stake of money, and very much prefers small subscriptions and a good lump of added money. The patrons of rich sweepstakes at Newmarket and Goodwood were always a small and select band, and the retirement of Mr. Merry and Sir Joseph Hawley takes away two of the number. Nothing save a liberal increase of added money can, in this mercenary age, revive the fading glories of Goodwood. Only one hundred sovereigns, for instance, are added to the Goodwood Stakes; and almost the largest entry for the week was for the Chichester Stakes, the only event of the meeting to which two hundred are added. The continuance of the meeting is a question for the consideration of the Duke of Richmond and his successors, and we have nothing whatever to do with it; but its rapid decline is a fact that cannot be gainsaid, and it is our duty to point out what appears to us the only method of restoring it, even partially, to its pristine vigour.

The first day at Goodwood is usually considered, as at Ascot, the strongest of the four, as far as racing goes; but this year, if it had not been for the Stewards' Cup, it would have been inexpressibly tame. The fields were wretchedly small; there were only four runners for the Gratwicke, three for the Ham, four for the Lavant—once a two-year-old race of some importance—three for the Halmaker, and two for the Rous Stakes. We may briefly note that the meeting was commenced with the Craven Stakes, which resulted in a splendid struggle between Winslow and Tourbillon, the latter receiving 2 st. for the year, Fordham on Winslow ultimately defeating French on Tourbillon, and thus beginning a series of successes in some of which the great jockey's fine riding and unrivalled judgment were displayed to the greatest advantage. He won the two races immediately following the Craven on Chivalrous and Tambour, the former beating Wild Myrtle by a neck, and the latter defeating Coronet in a canter. He also secured the Lavant Stakes for M. Lefevre with La Coureuse, who proved quite good enough to take the place of Ecosais, reserved for later engagements, and at present being indulged with a rest. The Stewards' Cup was as popular, and deservedly so, as ever, and although several horses whose appearance at the post had been reckoned on were struck out at the last moment, a good field of thirty-one faced the starter. In quality it would favourably compare with that of most previous anniversaries. Modena, the heroine of the Nurseries of 1871, Oxonian—last year's winner—Oxford Mixture, a filly whose abilities deserve a better name, Drummond, Chandos, Azalea, Countryman, Glowworm, Khedive, Madge Wildfire, Surinam, Highland Fling, and a dozen others of some repute for speed were among the runners. Where so many had a chance it was natural that there should be great delay and confusion at the post, and the start was unusually protracted. The starter's patience also seemed to be quite exhausted, for he certainly did not choose a favourable moment for dropping his flag.

Three-fourths of the field were out of the race as soon as the race had begun, and Modena came down the hill with that commanding lead which in former years has so often secured the victory for the Stewards' Cup. Whether, however, from too much use being made of her, or from want of a little nursing in the last two hundred yards, Modena lost ground rapidly at the finish, and, being vigorously challenged by Sister Helen, was ultimately defeated by half a length; Oxford Mixture, who has an unfortunate knack of running into a place, but of missing the first place, finishing third, and Boatman fourth. The remainder were widely scattered. Sister Helen has shown fair racing speed, but was hardly credited with sufficient ability to win in such good company. Moreover, though lightly enough weighted, she got a bad start, and had not Modena raced herself to a standstill, she could hardly have secured the victory.

The second day of the meeting began rather spiritedly with a dead heat, and then Glenalmond, the high-priced son of Blair Athol and Coimbra, beat Lemnos and secured the Finton Stakes for Mr. Merry. A large field of nineteen—the largest since 1857—came out for the Goodwood Stakes; but the less said about the quality of the competitors the better. One is getting quite tired of the names of Catherine and Wolfball—animals always going to carry off a large handicap and never accomplishing their destiny; Duke of Cambridge is as great an impostor as Hurlingham, and comes from the same stable; Houghton, at best only a moderate horse, had incurred a 9 lbs. penalty; and certainly the best horse in the race was the winner, Uhlán, though even he cannot claim to be more than a second-class performer. But he is indifferent to a distance of ground, as was proved by his easy victory in the Ascot Stakes; and when the Goodwood weights appeared it was obvious that Mr. Savile had a great chance of winning again either with Uhlán or Lillian, both of whom were not unfavourably weighted. As events have turned out, he could have won with either. Uhlán, however, had a much more difficult task at Goodwood than at Ascot, for he was so closely pressed by Baron Rothschild's filly by Young Melbourne out of Hippia that he only won just in the last stride by a head. Both first and second were well ridden, and the result must have been gratifying to the handicapper who so accurately estimated the relative merits of the pair. We ought, by the way, to have coupled Mozart with Uhlán, as being a horse of fair racing calibre; and, indeed, he was going well, and would undoubtedly have been one of the first three, had he not unfortunately broken down. The following race, the Goodwood Derby, was only remarkable for another piece of splendid riding on the part of Fordham on Tambour, and Cannon on Victor, the former getting the best of it by a head. The Colonel, despite a 7 lbs. penalty, had no difficulty in beating Eve and Mr. Winkle—the latter similarly penalized; and over his own course, from five to six furlongs, the son of Knowsley and Vexation is well able to hold his own against most opponents.

The Cup was a most melancholy and miserable failure, and ended practically in a walk over. There were only three competitors, Flageolet, Favonius, and Cremorne; and of these Favonius had done only insufficient and intermittent work for months past, and Cremorne had done nothing whatever since Ascot. It was no wonder, therefore, that Flageolet, a perfectly sound horse, and the only trained one of the trio, had the race to himself from beginning to end, and trotted in as he pleased. It was a sad pity to start a really good horse like Cremorne in such condition, and deliberately expose him to a humiliating defeat; and Baron Rothschild must have been ill advised if he thought that the Favonius of 1873 was within stones of the Favonius of 1871. It might have been a satire on the assumed glories of Goodwood if the Cup—that much prized trophy—had been won by a walk over; but, for our own part, we see little difference between a walk over and a race that is only a race in name. Had Favonius and Cremorne been in their true form, nothing could have been more interesting than a fair fight between them; but we have long ago given up the hope of seeing a Derby winner take his part in Cup races two years subsequently. The Visitors' Plate was won by Moorlands, Lillian and Soucar being the most noteworthy of his eight opponents. The easy defeat of Lillian made a good many people scoff at the idea that she could have won the Goodwood Stakes; but a mile race and a two-miles-and-a-half race are very different things, and a horse expressly trained for a long course will very often perform very indifferently over a short one. The result of the Brighton Stakes last Tuesday proves to us pretty conclusively that, in the absence of Uhlán, Lillian could equally have secured the Goodwood Stakes for Mr. Savile. There was an astonishing reversal of public form in the defeat of Ohivalrous by Wild Myrtle, Mr. Bowes's horse having, only two days before over a similar course at similar weights, beaten Mr. Crawford's filly easily. And the three-miles-and-a-half race at the end of the day ended, as such affairs usually do end, in an absurd farce. Protomartyr and Simon set forth to traverse the dreary Queen's Plate Course, and both lost their way during the journey. The rider of Simon found out his mistake the first, and got back into the right course before the rider of Protomartyr, who was a hundred yards in front, had time to realize his position and turn round. Under these circumstances pursuit was hopeless, and Simon came in alone. One of the prettiest and best races of the week, the Chesterfield Cup, was the only event of importance on the last day. There were nineteen runners, and, as usual, there was a fair proportion of heavy weights, and the heavy weights showed conspicuously at the finish. The field included Drummond, Hannah, Winslow, Morn-

ington, Shannon, Oxonian, Neapolitan, Chandon, and other celebrities of more or less note. A much fancied filly from Danbury, Castalia, was unlucky enough to lose start, but made up lost ground so rapidly at the finish as to justify the belief, if all had gone well, she would have been very near the winner. Drummond also was seriously disappointed during the race, which at one moment seemed a match between Hannah and Louise Victoria; but Fordham got him through at last, and then steadying him and biding his time with consummate judgment, gradually caught up the leaders, and won by half a length, a head separating Louise Victoria from Hannah. The Queen's Plate ended in a walk over; therefore one was spared the tedious mixture of walk, trot, canter, and gallop which usually make up together a race for Her Majesty's guineas.

Mr. Savile's pair did him good service at Brighton, Lillian carrying off the Brighton Stakes, and Uhlán the Cup. Both these races deserve particular attention. Lillian's defeat at Goodwood over a mile course proved nothing, as we have before remarked, as to her chance for the Brighton Stakes, for she had evidently been trained for a longer distance. Mr. Savile also could estimate the probability of her success to a nicety through the running of Uhlán and the Hippia filly at Goodwood. Had Lillian run in the Goodwood Stakes, she would have had to give 24 lbs. to Baron Rothschild's filly, while at Brighton she had only to concede 12 lbs. Of course Mr. Savile knew the relative form of Uhlán and Lillian at two miles, and hence he possessed the key to the Brighton Stakes. The result was, that Lillian bent the Hippia filly with such ease as to demonstrate the correctness of the Goodwood handicapping. At 24 lbs. the Hippia filly might have made as gallant a struggle at Brighton as at Goodwood; but at 12 lbs. she had not a chance. Protomartyr ran a fairly good horse, and to these three, out of six competitors, the race was confined. In the Cup Uhlán also had a great advantage over Flageolet in the weights, compared with what their relative positions would have been at Goodwood; and it would have been a great feat for M. Lefèvre's horse, receiving only 6 lbs. for the year, to defeat a hardy, well-tried horse like Uhlán. Besides, as we have hinted, Flageolet's victory at Goodwood was no matter for extraordinary jubilation. Cremorne could hardly raise a gallop, and Favonius has either lost his form or was insufficiently trained. We must look at Flageolet's running at Ascot and Paris—at both which meetings he was in good condition—as a more correct measure of his abilities, and that running was certainly not good enough to justify the belief that he could give away weight to a horse like Uhlán. As it happened, Uhlán always was in front of Flageolet, and after the first half-mile made the whole of the running. Flageolet ran gamely enough, and tried hard to catch the leader; but Uhlán had the best of the struggle throughout, and won—with a few pounds in hand, we think—by a neck. Thus, though the casualties of training deprived him of the Goodwood Cup, the Goodwood and Brighton Stakes and the Brighton Cup fell to Mr. Savile, whose series of successes no real sportsman will grudge. M. Lefèvre also was as formidable at Brighton as at Goodwood. The speedy La Couronne carried off the Corporation Stakes—thanks to the fine riding of Fordham—and the Bevenclan Stakes, and Drummond had no difficulty in winning the Stewards' Welter Plate. In the Champagne Stakes and Sussex Cup Tambour and Roquefort frightened away all opponents; but altogether the fields were up to the average strength, and Brighton racing might compare favourably with Goodwood. In the general management of the meeting, and especially in the refreshment department, Brighton has always been far superior to Goodwood, and this year it fully maintained its superiority. If anything could mar the enjoyment of the Sussex fortnight, it would be the endless blundering and hopeless confusion of the managers of that feeblest of Railway Companies, the London, Brighton, and South Coast.

REVIEWS.

LAHORE TO YARKAND.*

THIS work is the record of the adventures of three enterprising Englishmen on a journey, undertaken in the year 1870, from Lahore to Yarkand, the capital of the Atalik (Ghazi), Yacoub Khush Begi. The leader of the expedition was Mr. Shaw, who had already attracted attention by his account of a visit to Yarkand and Kashgar in 1868. Mr. T. D. Forsyth, a well-known Indian civilian, represented the Government of Lord Mayo; and observations were made, specimens were collected, and a narrative of the journey was written, by Dr. Henderson, the medical officer attached to the deputation. The writer of the account has found an able coadjutor in a son of the late member for Montrose, Mr. Allan Hume, who, however, never left his desk in the Indian Secretariat to explore mountain passes or shoot specimens of rare birds. The plan of the work appears to have been as follows:—Dr. Henderson set out, armed as well as was possible on so short a notice with photographic apparatus, meteorological instruments, sextant, compass, and powder and shot. On his return he expanded his notes of the journey into one hundred and fifty pages of print. The specimens of birds and plants and the scientific and miscellaneous observations were

* *Lahore to Yarkand.* By G. Henderson, M.D., and Allan O. Hume, Esq., C.B. London: Reeve & Co. 1873.

arranged, so as to form an appendix to the narrative, by Mr. Hume, by way of recreation in the intervals of his onerous duties as Secretary to the Government of India for Agriculture, Revenue, and Commerce. The birds have been identified with those of Dr. Jerdon's work, or with the catalogue which Mr. Hume himself possesses. Various scientific gentlemen, whose labours are gracefully acknowledged in the preface, have conferred an additional value on the volume either by comparing the drawings of the botanical specimens with those existing at Kew, or by working out the observations of the barometer, or generally by supervising the letterpress and the plates. The liberality of Dr. Hooker in this matter might even disarm the criticism and win the acknowledgments of the Chief Commissioner of Public Works. The result is that we have before us a valuable addition to our imperfect knowledge of the passes of the Himalaya, of the condition of Eastern Turkestan, of the difficulties of transit, and of the manners and customs of the Yarkandis. The work, though chiefly attractive to botanists and ornithologists, is by no means unsuited to the general reader. It has neither padding nor pretentiousness. The irrepressible Special Correspondent never appears at all. We get no glimpses of any mysterious old man on the edge of the eternal desert; we are never called on to speculate as to the epoch when Western civilization will introduce moral pocket-handkerchiefs and pickaxes, either to wipe away or to dig out a corrupt and savage despotism; and we are not treated to vague or lengthy disquisitions about the advance of Russia, the apathy of the Foreign Office, or the duties of the Indian Government. The Indian medical service has not only turned out experienced surgeons and physicians who have performed operations which appear to Hindus and Mohammedans like magic, and who have laid down correct hygienic theories calculated to save whole English regiments from decimation, but Indian doctors have also often distinguished themselves in diplomacy, in Oriental literature, in the spread of English education, and in adventurous travel. The present volume is another proof that this important branch of our Anglo-Indian Administration may be relied on to produce men who can take effective measures for preserving the health and lives of camp-followers, who can write down accurate memoranda of intelligent observation at the close of a wearisome day's march, and who can get the whole reduced to a compact volume on their return to civilized life.

The party started in the middle of May from Kashmir, and reached Yarkand on the 23rd of August. Mr. Forsyth was not fortunate enough to obtain an interview with the ruler, who was absent from his capital, though the place of the chief was fairly supplied by the Dad Khwah (literally plaintiff or claimant), the second dignitary in the kingdom. They remained only thirteen days in the city, during which they could scarcely be expected to add much to the amount of information already published by Mr. Shaw; and they returned to Ladak, as far as we can make out, some time in October. The accurate information acquired as to the climate, the fauna and flora, the aspect of the country, and the peculiarities of the inhabitants is a sufficient justification of the expense incurred by Lord Mayo in sending a party across desolate passes, and into unknown regions, where more than one European had previously lost his life.

In some respects, there is something peculiarly seductive in the descriptions of the climate of some of those high lands over which Mr. Forsyth and his party travelled. Ladak, like Egypt, has little or no rainfall. The total yearly amount does not exceed four inches, and even snow, which falls to the extent of eight inches at a time, evaporates "without perceptibly liquefying." In the same tract the atmosphere is so clear that hills fifty miles distant appear to be within a short day's march. At a higher elevation animal flesh "desiccated" instead of putrifying, and it was the practice of travellers to leave horseflesh hanging by strips on the bushes, so as to serve as food for future caravans. On the other hand, in spite of the exhilarating clearness of the atmosphere, and the purity of the air, the travellers were exposed to occasional discomforts, and even to serious hardships. Floods came down, without any notice, from rains in the highest passes; severe winds blew all day in one direction and all night in another; the cold was so intense that the baggage animals thrust themselves into the sleeping tents; and though water was generally wholesome and abundant, vegetation and fodder entirely failed. The eyes were blinded and the skin was taken off by a violent wind, which raised sulphate of magnesia in clouds, and writing ink froze on the top of the passes. At one place a quail and a species of rail were caught, completely exhausted, and the Tibetan porters appeared to be able to withstand the low temperature only by means of filthy sheepskins and incrustations of dirt. The conclusion would seem to be that, owing to the great height, the want of vegetation, and the violent winds, this lofty region, lying between the Pangong Lake and the descent to Sanja, is not fitted for the permanent quarters of either man, beast, or bird.

Yet during the summer immense flocks of migratory birds were seen and shot at, chiefly divers and waders. In Ladak blue pigeons collected in enormous numbers, near and beyond the Pangong Lake; waterfowl and sand-grouse were counted in thousands; hares were as plentiful as blue hares on the top of a moor in Ross-shire; and on both sides of one pass snow pheasants and marmots were found in abundance. If the expedition had resulted in nothing beyond a contribution to natural history, there are some who may consider the money not ill spent. Those who enjoy descriptions of plumage and a lavish expenditure of epithets

such as fulvous, rufous, albescent, mottled, bronzy, and so forth, by which a naturalist strives to give a life-like character to his descriptions, will here find abundant matter for reference and comparison. We question, however, whether it is quite correct even poetically to represent the cuckoo as "trolling a jocular lay" at any altitude. But this bird and other familiar friends were doubtless as welcome to the travellers in snow-covered passes as ever "the wandering voice" could have been to Wordsworth.

The term *dasturkhan* is probably new to all but professed Orientalists. Literally, it signifies *table-cloth*. At Sanja, and indeed all through Yarkand, it means not only the cloth which covers the board, but a substantial meal of several courses. In point of profusion and variety few Oriental banquets surpass a Yarkand dinner, except of course those which we read of in the *Arabian Nights*, or which are given when a first-class mandarin at Canton or Shanghai entertains the British Commissioner and the Admiral commanding in the Chinese waters. The guests were seated on *rugs*, and water was poured over their hands, in Homeric fashion, by an *amphipolos*, from a "large copper jug shaped like a coffee-pot." The first course was fruit—melons, grapes, apples, pears, and apricots, with marmalade and jams. Then came biscuits and fancy bread. Next, were two national dishes—one of minced mutton flavoured with sweet herbs and onions, and enclosed in a delicate film of soft paste; the other, a baked leg of mutton buried in rice and carrots. These were termed respectively *muntos* and *ash*, and must have rivalled the lamb fed with pistachio nuts of the Parmecide. Last came soup, or *ash* and water, which was little else than rice and mutton minced. Dr. Henderson pertinently remarks that the order of serving the dishes was exactly the reverse of our own. The viands were washed down with copious draughts of tea, and, if the Englishmen swallowed the contents of many of the Yarkand teacups, which are described as equal to three ordinary English breakfast cups, and which a lad refilled as soon as they were emptied, we can only compare the drinking bout to that of the Brick Lane Branch of the Temperance Association which excited the amazement of the older Mr. Weller. The Yarkandis themselves dispensed knives and forks, and used cakes of bread instead of plates. We are not told exactly whether

Vertere morsus
Exiguam in Cereem penuria adogit edendi;
Et violare manu, nullisque audacibus orbem
Fatalis crusta, patulis nec parcere quadris,

or whether any one was found to jest on the subject, like Iulus; but it is quite certain that the reception given was very hearty, and that the travellers could not have been more hospitably received had they come to fulfil a prediction or to obey the voice of an oracle. The Valley of Yarkand is highly cultivated; all the winter and summer crops of the Punjab, with the exception of sugar-cane, were seen, and most European and some Oriental fruits were ripening at the time of the visit. Mutton, of good flavour, was plentiful, and the native troops were said to get meat twice a day. Every man rode a pony or a donkey, and no one walked if he could help it. The penal code of the country was severe and simple, the ruling powers having no weak or sentimental theories about reforming criminals, or allowing them to flourish at the expense of the community. In cases of theft, the first offence was treated with a warning, the second punished by flogging, and the third by amputation of one or both hands. A hardened offender for the fourth offence had his throat cut. On the whole, there seemed to be a fair amount of prosperity and comfort in the city and its neighbourhood, and though religious mendicants were met with, there was neither pauperism nor wretchedness. We gather that, in spite of the hospitable treatment accorded to our envoys, the local authorities did not wish the travellers to take down too many notes or to ask too many questions. Dr. Henderson had to conduct his photographic operations in secret, and when he wanted specimens he was put off with divers excuses. It is also quite clear that the Dad Khwah was not willing to allow the Englishmen to take rides in the environs, and he contrived that their time should be spent in paying and receiving visits, and in making preparations for their return journey. Most Oriental potentates have an innate conviction as to our ulterior objects, and a rooted belief that what begins in commerce may end in conquest.

And this brings us to the political aspect of the mission; for it is impossible for us to endorse Dr. Henderson's dictum, that his was a "friendly visit," and was "to have no political objects." It is quite out of the question that any such fine distinction should ever be drawn either by the rulers of the Central Asian principalities or by the natives of India, who watch and comment on every move on the diplomatic chessboard. Doubtless commercial intercourse may be legitimately promoted to some extent by all such expeditions. But it is of far more importance that Mohammedan potentates should draw correct conclusions as to our wealth, resources, and rigid determination to abstain from all territorial aggrandizement than that they should encourage the exchange of some pedlars' packs of dried apricots for a few loads of Himalayan tea. Such expeditions will do real good if they can convince the Ameer of Oabul or the Atalik Ghazi that there is between the mountains and the sea a first-class Power, just, beneficent, and unaggressive, which is ruling over millions of Hindous and Mohammedans with all the force that can be imparted by disciplined armies and by moral ascendancy. By all means let merchants and traders be encouraged to climb difficult passes, to wade through snowdrifts, and to despise biting winds in the interests of trade. But we must

remind ardent and impulsive Chambers of Commerce that there never can be any real analogy between the huge bales of merchandise which they are accustomed to see in steamships and railways, wharves and jetties, and the moderate quantity which must be carried for centuries to come over such a land route on the backs of half-starved ponies or Yaks. It would, perhaps, be too depreciatory to compare the profits of these ventures to the yearly gains of Sawyer, late Nockemore, which might be put into a wineglass and covered with a gooseberry leaf. But it may be doubted whether the widest expansion of the whole Central Asian commerce will approach the total of exports and imports at one second-rate Indian seaport; while in the eyes of statesmen who rightly understand our position in India and in the East, the results of such a risk of English life and energy will not be measured simply by facilities for sending from India tea and piece-goods, and for receiving in return carpets, gold-dust, and fruits packed in cotton-wool.

ST. JOHN OF NEPOMUK.*

THERE is a current story about a meditation on St. George, Patron Saint of England, being read out in the English College at Rome, divided under these three heads—"Point 1. Let us consider first that we know very little about St. George." After due time allowed for reflecting on this circumstance, follows "Point 2. Let us consider, secondly, that the little we do know is very uncertain." Finally comes "Point 3. Let us consider, lastly, that we are never likely to know any more about him." Whatever may be thought of the religious uses of this singular meditation, it is tolerably true to fact. Scarcely anything is known about St. George, except the fact, for which there is good evidence, that such a person really was martyred towards the end of the third century, and that Gibbon's ingenious attempt to identify him with the infamous George of Cappadocia, the persecuting Arian Bishop of Alexandria, will not hold water. Both the Greek and Latin Acts and the various mediæval legends about him are alike apocryphal. St. John Nepomucen, or of Nepomuk, who is alleged to have been drowned in the Moldau at Prague in 1483, by order of King Wenceslaus, for refusing to betray Queen Joanna's confession, is in worse plight than St. George. If we may credit the Bull of Canonization and the Breviary lessons for his festival, of which more presently, there is a great deal known about him; but then the whole of it happens to be pure invention. In short, as the Bohemian historian Palacky expresses it, "*Saint John Nepomucen belongs solely to legend, in so wise to history.*" On the other hand, a good deal is really known of a certain John of Pomuk or Nepomuk, who was thrown into the Moldau in 1493, but who has nothing in common, beyond the fact of being drowned by order of King Wenceslaus, with the legendary hero who was canonized in 1729 as a martyr for the sanctity of the confessional, through Jesuit influence, and at once became the Second Patron of the Order. The true state of the case has long been familiar to scholars; but Mr. Wratishaw has done good service in putting together the evidence and tracing the genesis of the myth in a compendious form, though we could wish he had contrived not to make a dry subject unnecessarily tedious by his way of telling the tale. However, the book makes no pretence to literary graces, and what it does profess it performs with an incisive clearness which leaves nothing to be desired. We will try, as briefly as we can, to put our readers in possession of the main outline of the case. No one who has visited that most interesting and uncomfortable city will forget traversing at Prague, on his way to the Hradschin, the quaint old bridge over the Moldau, "where the Saint who sank beneath its flow still wears his five-starred crown." And throughout the Roman Catholic Church St. John of Nepomuk's feast is observed on May 16 with much devotion, especially by the Jesuits, as the first champion and martyr of the confessional.

We will first give a summary of the lessons for the day in the Breviary, which are based on the Acts and Bull of Canonization. John was born at Nepomuk in Bohemia, like his prototype St. John the Baptist, of parents advanced in years, and, among other early tokens of sanctity, his life was miraculously preserved in infancy by the help of the Blessed Virgin. From the first he had shown marks of extraordinary piety, and after completing his secular and theological studies he was ordained priest and devoted himself entirely and with eminent success to the ministry of the Word. He became Canon of Prague, and preached before the King Wenceslaus, who, like Herod of old, did many things because of him, and pressed on his acceptance various dignities which he persistently refused. He also became confessor to Queen Joanna. The King, however, fell into vicious courses, and, affecting to suspect the fidelity of his virtuous Queen, insisted on John's revealing to him what she had said in confession, but no threats or blandishments could induce the holy man to break the seal of confession. He foretold his approaching end and the judgments impending on the kingdom in a sermon preached in the cathedral, and soon afterwards, on his return from a pilgrimage to an ancient image of Our Lady at Bunzlau, he was again seized and interrogated by the King, and on his continued refusal to answer was, by the royal command, thrown that night from the bridge over the Moldau and drowned. But the body

floated down the stream with supernatural lights flashing over it, and in the morning was found on the bank and solemnly conveyed by the canons to its burial in the cathedral. After a constantly growing cultus, illustrated by innumerable miracles for more than three centuries, St. John was canonized by Benedict XIII. in 1729.

So much for the Saint and Martyr. We now turn to the history of John of Pomuk. The date of his birth is unknown, but in 1372 he is mentioned as a cleric and notary in the Chancery of the Archbishop of Prague, and he was ordained priest about 1380, when he obtained the rectory of St. Gallus "by favour of the Apostolic See," which appears in this case to mean by simony, for he paid half the first year's proceeds of the living into the Roman treasury. But he still devoted himself to his legal studies, leaving the duties of the rectory to be discharged by a curate, and in 1387 took the degree of Doctor in Canon Law, and became a canon first of St. Giles's and then of Vysehrad, and in 1389 Vicar-General of the archdiocese of Prague, Canon of the cathedral, and Archdeacon of Saaz, while still retaining his former canonry of Vysehrad. In short, in direct contrast to his saintly namesake in the Breviary, he was a greedy pluralist, and wholly neglected the spiritual duties of his office. The next thing recorded of him is his violent death in 1393—seven years, we may observe, after the death of Queen Joanna, and when Wenceslaus had been four years married to a second wife, Sophia. It was caused by a quarrel between the King and the Archbishop, John of Jenstein, with which John of Pomuk himself had no direct concern, and in which the Archbishop appears to have been chiefly in the wrong. They had first quarrelled in 1384 about a weir on the Elbe, near the Archbishop's property, erected by a favourite of the King's and destroyed by the Archbishop's servants. But matters did not come to a crisis till 1393, when the Archbishop excommunicated Sigmund, an under-chamberlain of the King, and opposed his scheme for carving a new see out of the overgrown diocese of Prague, apparently with the consent of Rome, and certainly not at all before it was wanted. The Benedictine abbey of Kladrau was to be converted into a cathedral on the death of the old abbot, but the monks lost not a moment in electing a successor, who was as promptly and secretly confirmed by the Archbishop's vicar. The King was naturally indignant, and the Archbishop gives his own account of what followed—which is the only one extant—in a long letter to the Pope, who took very little notice of it, and remained on friendly terms with Wenceslaus. All that need be stated here is that the Archbishop, with three of his officials, John of Pomuk being one, was summoned before the King, and the three priests were cruelly maltreated and tortured, "and they would all have been drowned" had they not promised never to reveal what had taken place, and to side with the King against the Archbishop. But "the venerable John, because he could in no wise have lived any longer," was thrown from the bridge of Prague about the third hour of the night, and drowned. This is the only contemporary evidence for the death of John of Pomuk, given, be it remembered, by the Archbishop, who calls him "a holy martyr," and bitterly reviles the King, in an official complaint addressed to the Pope. It will nevertheless be seen that it contains no hint of his being the Queen's confessor—Queen Joanna indeed had long been dead—or of any reason for putting him to death more than the others who had been tortured with him, except that the ill usage had told more severely on him, so that he could not anyhow have survived it, and it was therefore thought safer to put him quietly out of the way by drowning at night. Nor is a word said about any miraculous lights on the river. Some years later, in 1400, the Archbishop of Mayence, in the name of the Electors, pronounced sentence of deposition on King Wenceslaus, in which he refers to his "having murdered, drowned, burned with torches, and inhumanly put to death honourable prelates and parsons, and spiritual persons," not even mentioning John of Pomuk by name. In 1401 Archbishop John of Jenstein's life was written by his chaplain, who records the drowning of "the venerable John," and refers vaguely to "remarkable miracles," but gives no hint of any special cause for his martyrdom. The fact is again mentioned in a *Tractatus de Longævo Schismate* of 1420, preserved in St. Mark's Library at Venice, and in 1425 by Andrew of Ratisbon, but without any further explanation of the King's motives or any hint of miracles. In the list of the Abbots of Kladrau John is expressly said to have been drowned on account of his confirmation of the newly-elected abbot, which led to the quarrel between the Archbishop and the King. Several other chronicles, as well as a History of Bohemia by Aeneas Silvius, written in 1448, also mention the fact. So far then there is no shadow of evidence to identify the drowned Vicar-General with the Saint and Martyr of the Confessional, nor does history know of any other John of Nepomuk. How did the legend originate? On this wise.

A certain John of Haselbach, writing in the middle of the fifteenth century, first speaks of John as being the Queen's confessor, and of a report he had heard (*ut fertur*) at Prague in 1433, forty years after the real, and fifty years after the legendary, date—that he was drowned for refusing to violate the seal of confession; and his testimony has been quoted by modern writers with the significant omission of *ut fertur*. But the manuscript of Thomas of Haselbach has only quite lately been discovered by Palacky, and till then the earliest known authority for the legend was one Paul Zidek, in a controversial work written in 1471, which, as Palacky says, is full of "demonstrably false accusations"; and indeed his

* Life, Legend, and Canonization of St. John Nepomucen, Patron Saint and Protector of the Order of the Jesuits. By A. H. Wratishaw, M.A. London: Bell & Daldy. 1873.

biographer, the late Jaromir Erben, says that Zidek "undoubtedly gave himself no concern about historical truth." This, however, and Thomas of Haselbach's "report," are the only shreds of evidence for the legend for one hundred and fifty years, when we come in 1541 to Hajek, author of a Bohemian Chronicle full of fictions, who gives the first detailed account of the martyrdom as now commemorated, but places it in 1483, during the lifetime of Queen Joanna, and describes the drowning of the Vicar-General in 1393, with sundry embellishments of his own, as quite a distinct event. This "dualization of the Saint," to which later writers have adhered, and which is assumed in the process of canonization, of course cuts the knot of all historical difficulties attaching to the murdered Vicar-General; but it involves the somewhat serious difficulty that our earliest witness, not only for the martyrdom, but for the existence, of the canonized John of Nepomuk is Hajek himself, who lived a century and a half later, and who is called by Palacky, in a pamphlet on Bohemian history, *der ärgste Schädiger seiner Geschichte*. It was not till the beginning of the next century that John of Nepomuk began to be made into a Saint. In 1602 a hymn was addressed to him by Pontanus, and in 1621 he is reckoned among the patron saints of Bohemia, in a work dedicated to Lohelius, then Archbishop of Prague, who consecrated an altar in his honour. Soon afterwards his fame was secured by the all-powerful patronage of the Jesuits, one of whom, George Ferns, wrote a pious life of him in 1641, while some fresh miracles were added by another Jesuit, Tanner, and a third Jesuit, Balbinus, compiled an elaborate Life, from which the *Acta* and Bull of canonization and the Breviary lessons are summarized. It is of course a pure romance from beginning to end, and was looked on with so much suspicion at the time that the Chapter of Prague, in 1671, declined the dedication of the work, and the Archbishop Ferdinand, though he eventually succumbed to Jesuit influences, was at first vehemently opposed to the canonization. A still more serious obstacle was found in a Bull of Urban VIII., laying down conditions with which it was impossible that the now popular *cultus* of St. John Nepomuk could ever be brought into harmony. The Jesuit Father Emmanuel adroitly suggested that the Chair of Peter should be "taken by storm by petitions," but he put forward no evidence at first beyond the fact—which was a pure fiction—that his *cultus* had lasted about three hundred years. The canons of Prague were induced to sign a document in this sense in 1675, and soon afterwards pilgrimages began to be made to Nepomuk. Early in the next century the matter was being pressed at Rome, but the *Promotor Fidei*, who had to cross-examine the evidence, was Lambertini, afterwards Benedict XIV., one of the ablest and most honest of modern pontiffs, who exposed the imposition in a way which ought to have made all further proceedings simply impossible; and the Court of Rome, to do it justice, required a good deal both of pressure and payment. The *Acta* prove abundantly that the personage intended to be canonized was not the Vicar-General drowned in 1393, but the fictitious John of Nepomuk supposed to have been martyred for refusing to violate the seal of confession in 1483. Some of the alleged miracles are unpleasantly illustrative of the Jesuit morality of the day, as e.g. the following:—

In p. 187 we find that a young gentleman of family had seduced a maid-servant. The child which she bore was secretly put out of the way in the house. The matter being, however, known to several of the servants, became noised abroad, and a criminal inquiry was at hand. The guilty youth vowed to make a pilgrimage to the grave of St. John Nepomuk if he would help him out of the scrape, and when the witnesses came to be examined, all those who could best have given evidence were passed over, and a scamp of a boy (*scurrilis puer*) was severely scolded for having invented and spread the calumny, which caused everybody to hold his tongue, and some of the servants actually begged pardon. The young gentleman was saved, and the saint received a present of silver plate in addition to the pilgrimage.

However, the Jesuits were omnipotent at Rome, and they were determined to have their way. In 1721 the Saint who owes his existence to Hajek was beatified by Innocent XIII., and in 1729 the final Bull of Canonization was issued by Benedict XIII. What makes the matter more scandalous is that the Court of Rome knew, or certainly had every means of knowing, at the time that the story was a mere fabrication; for the letter of Archbishop John of Jenstein to the Pope, which gives the only contemporary account of the actual occurrence, is laid up in the Vatican, whence a copy of it was procured for another purpose some years afterwards.

Those were days when criticism was held in salutary check by the Inquisition, the Index, and the censorship; and it was not till ten years after the suppression of the Jesuits that the Chevalier Von Steinsberg, in 1783, first called in question the existence of the martyr of 1483 as distinct from the Vicar-General drowned in 1393. An ex-Jesuit, Pubitschka, replied that "it was irreligious" to doubt that the two persons were distinct—which, on infallibilist principles, is true enough—and in 1828 one Zimmermann wrote to the same effect, that Rome could not have canonized a person who never existed; but the then Archbishop of Prague thought it prudent to suppress this work. When Palacky first published his *Bohemian History* in 1845, he spoke cautiously on the subject, as he has since explained, on account of the censorship, but we have already seen that his real opinion is clear enough. In 1855 appeared the posthumous *Legend of St. John of Nepomuk*, by Otto Abel, which contains a merciless exposure of the fraud, and last year Professor Reimann published an excellent and exhaustive essay on the subject in Sybel's *Historische Zeitschrift*. The

result is well summed up by Mr. Writslaw in the following passage:—

We have found that there is no contemporary evidence whatever to sustain the claim of the so-called saint to canonization, as the protomartyr of the confessional, but that everything tends to exclude the supposition, and to prove him to have been the mere victim of a quarrel between the king and the archbishop, and not even a martyr for the immunity of the spiritual power. We have found that the first mention of him in connexion with the confessional, is a simple report, the existence, but not the authenticity of which is vouched for by a respectable writer, and that in terms which separate the post of confessor to the queen from the refusal to violate the seal of confession, to which common fame about forty years after his death appears to have partly ascribed it. We have found also that the first mention of the Queen's confession as the cause of his death is made by an author, Paul Zidek, on whom little reliance can be placed, and who in other respects notoriously calumniated King Wenceslas IV. We have found that, after the first excitement of the cruel murder had passed away, no traces appear of any special honour paid to the martyr, as such, till the latter half of the fifteenth and the beginning of the sixteenth centuries, when, under the Jagellon dynasty (1471-1526), an unwillingness to tread on his gravestone is noted, and his grave seems to have been more or less protected by a slight railing. We have found that, fifteen years after the accession of the Hapsburg dynasty, an unconscientious writer (1541), divided him into two distinct personages, an impossible queen's confessor and martyr of the confessional in 1383, and a genuine victim of the confirmation of the Abbot of Kladrau in 1393. We have found that, at the commencement of the 17th century (1602), an ecclesiastical poet proposed his elevation to the rank of one of the patron saints of the country, and that this suggestion was, after the complete destruction of the liberties of Bohemia, followed up by the Jesuits, who wanted a patron for their favourite engine the confessional, until by dint of the most unscrupulous forgery and lying, in spite of the warnings of an honourable member of their own order, they succeeded (1729), in forcing his canonization upon the reluctant Church of Rome, and then proceeded to inaugurate him as their second patron.

How far the contents of the Breviary are held to be sealed with the "irreformable" guarantee of pontifical infallibility we will not undertake to discuss; but there have been, we believe, several tolerably searching revisions of the Roman office books. And if the Court of Rome can find such a measure consistent with its lofty pretensions, we might humbly suggest that it would best consult its own credit for truthfulness, and for desiring to promote habits of truthfulness in its clergy, by making a clean sweep at the earliest opportunity of the Mass and office of St. John Nepomuk, who owes his existence to a long course of pertinacious imposture, and his place among the Saints to the culpable weakness or more guilty complicity of the highest authorities of the Church.

CUSSANS'S HISTORY OF HERTFORDSHIRE.*

THE mind of the writer of a County History—as a County History is commonly understood—must be a curious study. He starves in the midst of plenty; he shuts his eyes in the midst of light. He lives surrounded by the materials of history; but it is against his principles to make any effort to use them, or even to understand them. He is not like the teachers of language and history who go blundering on in the hard unscientific way instead of the easy scientific way. For many of these are blind simply because they have never come near the light; if the light were brought near to them, they might some of them begin to see. They do not drink, because they have never heard of the fountain; the county historian knows the fountain, in some sort he draws water from the fountain, but he obstinately refuses to drink. He has for instance Domesday before him; it is his traditional business to read it, to copy it; but it is no less his traditional business not to use or to understand it. He is something like the people who read the Old Testament over and over again as a kind of *opus operatum*, but who think it a sin when anybody tries to point out the historical bearing of the narrative or the human aspect of any of the characters. They, we know, would not presume to understand, and we can only guess that, in the like sort, the county historian would not presume to understand his Domesday. It must stand there, like the Bible in an unsectarian school, without note or comment. The writer makes his salaam to the venerable record, and that is all. He turns away to business which is more to his mind, and in doing which he seems to be quite happy. He traces out all the pedigrees, real or imaginary, of half-a-dozen obscure families; he sets down their real or imaginary coats of arms; and diligently copies out the fulsome inscriptions in which their virtues are commemorated in the disfigured churches in the neighbourhood. When he has gone through this process in all the parishes of the shire, the result is called a "County History."

It is of course true that in many counties a County History is simply impossible. No man can write the history of a thing which has no history. Now nothing can have a history which has not a real life of itself, a kind of personal being apart from others of the same class. A town has a history; so has a monastery, a parish, even a family; a history perhaps worth preserving, perhaps not, but still a history of some kind. A county may have a history or it may not. It has a history when it is marked off by any definite boundaries, physical or linguistic; when any peculiarities, either in its earlier or its later condition or government, give it a distinct being which can be made the subject of a continuous narrative. But when the county is a mere artificial administrative

* *History of Hertfordshire, containing an Account of the Descents of the various Mannors, Pedigrees of Families connected with the County; Antiquities, Local Customs, &c. &c. Chiefly Compiled from Original MSS. in the Record Office and British Museum, Parochial Registers, Local Archives, and Collections in possession of Private Families. By John Edwin Cussans, Paris I.—IV. London: Hotten. Hertford: Austin. 1870-1872.*

division, it can hardly have a history. Its towns, parishes, monasteries, may each have its own history; some of the great events of English history may have happened within its borders; but the shire, as a shire, has no history. Kent, Sussex, most of the Western and Northern counties, really have histories; we doubt about Norfolk by itself, but Norfolk and Suffolk together, that is, East-Anglia, have a most remarkable history. But the midland shires, named after towns, have for the most part no history. It may so happen, as in the case of Northamptonshire, that an unusual number of the great events of English history may have taken place within a particular county; still the county itself has no history. Of such a county no history, properly so called, can be written. The history of its separate towns and parishes may be written and bound up together, but this hardly comes to more than a topographical dictionary of the district, which would be more convenient if it were put in alphabetical order. And, if a list is given of those events in general English history which happened within the limits of the county, still that does not make a history of the county itself.

Hertfordshire strikes us as being one of those counties of which a history is impossible. A history of the Abbey of St. Albans might be written; we have no doubt that a history of the borough of Hertford might be written; but we cannot see that the county of Hertford, as a county, has any history at all. We may indeed record that such and such battles happened within it in the days of Alfred and in the wars of the Roses. But this is just because those battles must have been fought somewhere, and they do not make a history of the county of Hertford as such. As for two other events which Mr. Cussans tells us happened in Hertfordshire, we cannot make them out at all. He tells us that "at Hertford Henry Duke of Lancaster held his regal court, at the time Richard the Second was deposed." As Henry was at Westminster ready to assert his own claim, we do not see how he could be holding a court, regal or other, at Hertford; and it is still more mysterious when we are told that "at Theobalds Charles the First received the deputation from both Houses of Parliament calling upon him to assume the command of the Royal army against the forces of the Commonwealth." We have no doubt that both these two descriptions mean something; but, without searching specially into the matter, which is Mr. Cussans's business and not ours, we cannot see what they do mean; at all events, supposing such things ever happened, they too happened in Hertfordshire simply because they must have happened somewhere, and do not make up a real local history of the shire. At all events, if there could be such a thing as a history of Hertfordshire, Mr. Cussans has certainly not written it. The four Parts which we have been to us—we know not how many more are to follow—are tall and costly, and well got up, and would make a very handsome library book, and we have no doubt that all the modern pedigrees and modern inscriptions are given to the full satisfaction of the people whose grandfathers are commemorated in them. But, from a more general point of view, the book simply shows how little the true object and method of local history is still understood by the mass of those who undertake to write it. Mr. Cussans, writing in 1872, has got very little beyond the level of Bridges and Collinson generations back. There is only one point in which we can see that he has at all got beyond their level. His architectural descriptions are not very intelligent, but he has got beyond the stage when it was thought enough to say of a mediæval church "the pillars and arches are old and of no order." And he sometimes puts in notes explaining in a kind of way what a rood loft is, or sedilia, or a chantry, which, if not very novel or always very accurate, at least show an advance on the eighteenth century. But in the historical and philological departments Mr. Cussans seems to have made no advance at all upon the genuine old dull style of thing. The account of each parish begins, according to rule, with a translation of the entry in Domesday about it. It does not seem to have come into Mr. Cussans's head that anything could be found out about the places before Domesday. We really think that there is not a single reference to the *Codex Diplomaticus*. We have not thought it our business to hunt them all up; but it is hardly to be conceived that, of so many parishes as are described in these Parts, not one should have anything about it, no mention of its boundaries or its owners, or anything pertaining to it, in the whole course of Mr. Kemble's six volumes. We remember that Hertfordshire is in Mercia, and that we cannot expect to find Hertfordshire documents so thick upon the ground as documents belonging to Hampshire or Berkshire; still there are a good many Mercian documents in the *Odoex*, and, if it should so happen that the part of Hertfordshire which Mr. Cussans has surveyed really finds no mention there, that is of itself a fact which is worthy of being recorded. But when Mr. Cussans gets to Domesday, he seems not to know what to make of it. It does not seem to come into his head that the men, Norman and English, whose names are found there were real living beings who did deeds, and some of whom even had pedigrees, though to be sure they had not the advantage of living late enough to have coats of arms. Men of both nations who played a great part in the great drama of the Conquest of England held lands in Hertfordshire, and their names come in Mr. Cussans's extracts; but it seems never to come into Mr. Cussans's head that they were anything but names. Here and there a Norman is honoured by the mention of some little fragment of his genealogy, but the notion of searching out the landowners, Norman and English, tracing them through other parts of Domesday, seeing who they really were and what they really did, is

a thing which never suggested itself to Mr. Cussans as any part of his business. Large estates in Hertfordshire belonged to Esgar the Staller, the grandson of Tufig the Proud, the Sheriff of the Middle-Saxons, the man who came back wounded from Senlac to command the defenders of London against William; but with Mr. Cussans his name is just the same as any other name. The Domesday entries in which it is found are copied without comment or explanation; copied, to be sure, in not quite the right word, for they are translated, and translated after a fashion in which the "man"—*homo*—of Esgar, or of anybody else, is turned into his "vassal," a word which we do not remember to have seen anywhere in the Survey. And it is only the Domesday names which are treated in this fashion; as soon as he gets even a very little later, Mr. Cussans is ready enough to tell us all he can about anybody whose name is found in any document that he quotes. Perhaps he looks upon "Saxons" as a set of beings so apart from modern Englishmen that it is dangerous to speak of any of them as having any kind of distinct personal being, while the Normans perhaps had so much to do with the "Saxons" that it is almost as dangerous to say anything about them.

We look through the Parts before us and note a few things as we go on. One who seems to give special attention to genealogy, heraldry, and such matters ought not to talk about "Philip, Archduke of Burgundy," nor should he call the eldest son of an Earl of Bedford "Lord William Russell." In p. 10 we are told that the Danes sailed up the Lea "as far as the town of Hertford," and that "Alfred caused the dykes of the river to be cut, thereby rendering it unnavigable." The time meant is in 896, but the *Chronicles* simply say that the Danes went up the Lea twenty miles from London, without mentioning any particular place, and, as we understand it, Alfred did not cut the dykes, but barred the river. Directly after we are told that Edward the Elder fortified Hertford in 905, whereas the real date is 913. In p. 151 we hear of "the monks of St. Ebrulf at Utica, in Normandy," which suggests that Mr. Cussans is not very familiar with the dwelling-place of Odoeric. In p. 164 we are told that, "according to John Norden, the earliest historian of Hertfordshire, the signification of the word Standon is *stone or stony-hill*," a fact for which we need hardly have been sent to John Norden. A little way on Mr. Cussans does try a bit of history, and gives the queerest account of the rebellion of Odo against William Rufus. When the paging begins again in the third part, we read that Edwinstree signifies "the town (*Tref* or *Tre*), of Edwin or the victor." What has "the victor" to do with Edwin, and how came they to talk Welsh, and such bad Welsh, in Hertfordshire? a true Briton would doubtless have said *Tre Edwin*. In p. 30, under the manor of Hadleys, we read:—

This manor probably takes its name from Edgar Adeling, who at the time of the Norman survey, held with Godwin, under Hardwin de Seulers, three carucates of land in this parish, worth four shillings a year.

There is nothing whatever of the kind in Domesday, though there are some very remarkable entries under the lands of Hardwin of Seulers, and it would almost seem as if Mr. Cussans did not know who "Edgar Adeling" was. In p. 65 however he has found out that "he was the grandson of Edmund II." In the description of a parish called Buckland we are told that

The parish derives its name from its being formerly *boe-land*, or free-land, a term used by the Saxons, nearly equivalent in signification to the modern copy-hold.

And in a note we are told on the authority of Cowell's *Law Dictionary*—Allen and Kemble do not come within the range of county historians:—

Foleland was the land of the vulgar people, who had no estate therein, but held the same under such rents and services as were accustomed or agreed, at the will only of the lord the thane, and it was therefore not put in writing, but accounted *predium rusticum et ignobile*.

In pp. 70-71 we hear a great deal of an otherwise unknown foundation called "Christ's College, Oxford," but for the gem of the book we must turn back to the description of Bishop's Stortford. There Mr. Cussans has an argument to prove that Harold was buried at Bishop's Stortford. It is too long to quote, but it is almost worth while turning to the book to look at it. Mr. Cussans evidently does not know that there has been any discussion on the matter from the day when the *De Inventione* was written till now.

THE KING'S OWN BORDERERS.*

THE 25th Regiment, or King's Own Borderers, originally called Leven's, was raised in Edinburgh for the service of King William III. in 1689, by the Earl of Leven, who, with other Scotch noblemen and gentlemen, his officers, had been obliged to take refuge in Holland during the persecution under King James II. The records of the older regiments of the army are interesting, not only in themselves, but for the light they shed upon the political and social history of the United Kingdom. Thus the 2nd Queen's, or Kirk's Lambs, hanged the adherents of the Duke of Monmouth at Taunton; the Scots Greys slaughtered the Covenanters at Bothwell Bridge; and the 25th Regiment and the 26th, or Cameronians, were what the name of the latter regiment implies. Speaking shortly, the earliest regiments in the army were Tories, and the next in order were Whigs. The 1st Regiment, or Royal Scots, faithful among the faithless, attempted to march under the standard of King James II. from London to Scotland, and were pursued and forced to surrender in Lincoln-

* *The Records of the King's Own Borderers, or Old Edinburgh Regiment.* Edited by Captain R. T. Higgins. London: Chapman & Hall. 1873.

shire. The 25th Regiment shared the defeat which the adherents of King William III. received from Claverhouse at Killiecrankie. But perhaps the strongest claim of this regiment on the modern reader's interest lies in the fact that Uncle Toby and Corporal Trim served in it. Twenty officers and upwards of five hundred men of Leven's were killed by an explosion in an assault upon an outwork of Namur, and Sterne has told how Uncle Toby, a captain in Leven's, was wounded in the groin on this occasion. The siege of Namur was the one completely successful undertaking of King William III. against the French. In the battles of Steenkirke and Landen he was overmatched by the skill of Luxembourg and the numbers of his army. Yet a warlike sovereign must have derived pleasure amid defeat from the military qualities displayed by his new subjects. Leven's was one of the British regiments which showed most valour and suffered heaviest loss at Steenkirke, and among its casualties at Landen Corporal James Butler, otherwise called Corporal Trim, was wounded.
